From this point the name and character of the stream change; henceforth it is the Apalachee River, and the banks, which have hitherto been high or at least dry, now assume a swampy nature; vegetation becomes more tropical, palmettos and Spanish bayonets giving the woods somewhat of the appearance of a Floridian forest as represented in the typical woodcuts of a school geography. Cypresses, with their curiously contorted roots and straight, columnlike trunks, are on every hand. Herons and cranes spring up and awkwardly fly away at the noise of the approaching steamer, and at last some one cries "Alligator!" and the first of the hundreds of these saurians is greeted with a volley of pistol shots from the deck passengers below. This served as a pointer to our party, and the Winchesters were forthwith drawn from their covers and made ready for future opportunities. These occurred to our heart's content after the sun had made his rays more felt, and we kept popping away with our rifles with great regularity throughout the day; but shooting at a moving object from the deck of a moving boat is rather uncertain work and the number of slain was totally disproportionate to the quantity of ammunition used. We did kill quite a number, however, and had the satisfaction of seeing them turn their white bellies upward for a moment and then sink slowly. When wounded they would disappear under water amid a tremendous splashing, and one huge fellow that was hard hit sprang, during his struggles, completely clear of the water, showing a great length of body. Several times during the day, on rounding sharp bends, a half dozen would be seen stretched out in the warm sand of some bar; these were "pie" opportunities for us, and our battery seldom failed to score. One little fellow, about four feet long, was discovered securely ensconced in the fork of a tree overhanging the water, thus forever cutting him out of a place in that riddle the answer to which is, "Because neither can climb a tree." I know that it is a common impression that the alligator is impregnable in all but certain places—the eyes, nose and just under the shoulder, besides of course the breast and belly—but during a somewhat extensive experience in Florida and other tropical lands, I have killed a great many of these reptiles, and my experience has been that, if properly aimed, a .44-cal. bullet will lay low the most gigantic of the species. Of course, a rifle ball striking the scales at a very acute angle will often glance, as is the case with the breast of a turkey or goose; but if the striking angle is anything like 45°, the distance not too great, and the charge of powder 40grs., I think the chances of brute versus rifle are poor. It is so easy for one to think he has struck his alligater, when he has in reality made a miss; the ball strikes the water a few inches from its mark, makes a splash and rouses the dormant animal, who violently strikes out with his tail and disappears, leaving the rifleman, who is always loth to acknowledge a miss, shaking his head and making comments on the toughness of the scales and the beauty of his last shot.

About 10 o'clock we came upon a large flock of wild turkeys grazing along the edge of the water. This was the signal for a most terrific fusilade and several fell to our fire, though the captain was unable to stop and bring our game to bag. From this point we frequently passed droves, and had a dozen good shots at these magnificent birds—which we could have taken advantage of—and the day's sport would have shown a large score had we shot them and stopped to collect.

Occasionally during the day we passed long rafts of logs slowly wending their way by the force of the current to Apalachicola, where there are extensive saw-mills. These rafts were generally manned by three or four hands, rough, semi-barbarous fellows, who spend nine-tenths of their lives in these swamps, cutting out the timber, and who are as much inured to the miasmas, and almost as amphibious as their only companions, the alligators and turtles.

There was an old lumberman on board with whom I scraped up quite an acquaintance. He was one of the real "old timers," and had spent his entire life in these wilds cutting timber and hunting. He was a typical specimen of the class, with his long, gaunt form, yellow, parchment-like skin and piercing black eyes that looked fiercely at you from under a veritable jungle of eyebrows; to complete the picture, in addition to wearing his hair long, he carried one of the old-fashioned muzzle-loading rifles, which he upheld as to its superiority with his whole heart, evincing a great contempt for everything modern, and the Winchester repeater in particular. I argued long with him, but, of course, could no more change his mind than I could have altered the course of the river. Now, my experience has been that the much vaunted accuracy claimed for the muzzleloader at short range is all absurdity, when—understand me—that arm is in the hands of a hunter. The accuracy of any weapon depends largely upon the invariable uniformity of the charge, and I hold it to be almost impossible for any one in the woods, while in the excitement of the chase, to load with the accurate precision absolutely necessary to accurate results. For match shooting it is different. When one has ample time to measure precisely the charge of powder, and weigh exactly the ball, it is very probable that they are the equal of the more modern and certainly more convenient arm. My swamp friend and myself had a match during the day, when we stopped at a landing to take in an unusually large load of wood. I managed to beat him rather badly at a distance of 100yds., but did not ascribe my success so much to his bad shooting as to the fact that he measured his charge of powder by pouring it in the palm of his hand.

The lower river is very tortuous, winding through the never-ending forest and twisting and doubling on itself in a way that bids defiance to all points of the compass. In places these bends are so sharp and the river so narrow that boats are obliged to stop and back in order to fetch. At times all progress seems barred by an impenetrable wall of foliage, when a narrow way opens to one side, into which a skillful turn of the wheel neatly rounds us. Everywhere is swamp, mysterious and impenetrable, stretching away on either hand, utterly impassable except in places by boats, and utterly unexplored. Half a mile away from the borders of the stream are doubtless vast sections that have never been seen by man.

I remarked a very curious feature on the lower river; sometimes for miles the flowing water would be separated from the swamp and back water at the sides by a regular rampart some five feet high, and so perfect as to resemble the earthworks of an army; it was very curious; and on the summit of these breastworks were found the flocks of turkeys of which I have spoken.

Every few miles a stop would be made at some settlement; here we always had to pass quite a siege of scrutiny, the whole population grouping around the one store would gaze at us with bovine steadfastness, interrupted only by our departure. The Florida "cracker" was in all his glory, leaning against a pine tree, his slouch wool hat pulled over a face that "'twere better to hide," one hand deep in his trouser's pocket and the other hanging by the thumb to the one suspender—not an interesting nor even picturesque character.

Iola, now consisting of only five or six houses, was at one time the northern terminus of a railroad between it and the old town of St. Joseph; the road was abandoned and torn up long before the war, and the southern point has now disappeared as completely from the earth as if it had never existed. I once camped several days on the site of St. Joseph without knowing there ever had been a town within twenty miles of the place; however, of this more in the future.

Three miles back from Iola is a widening of the Chipola River, that goes by the name of the "Dead Lakes." The fishing here certainly exceeds anything I have ever heard of or seen; it is the only place that I have ever visited where the hackneyed talk of fish "biting at a bare hook," "pulling them out till you tire of the sport," and "biting as fast as you put your line in the water," is literally true. Parties go to this point every spring from Eufaula and Columbus, and camp to enjoy the exceptional sport.

Just after leaving Iola, the mate called out from the upper deck, "Look at that bear," and sure enough, there on the bank, not thirty yards away, was a good-sized specimen of Bruin. As fortune would have it, none of us had our rifles handy, and notwithstanding a most frantic dive for weapons by all three, he escaped into the forest in safety, leaving us in a most discontented frame of mind.

We passed several logging camps in the afternoon. They generally consisted of a box-like shed 6x6ft. in size, perched upon piles 10ft. above the limited area of dry ground that formed their base, and accessible only by a pole with pieces of wood nailed across it for steps, like the ascent to a chicken house. In these hovels the hardy timber getters spend most of their sleeping hours, surrounded by miasmatic swamps and vast wastes of forest.

About 6 o'clock we sighted Apalachicola, across five miles of salt meadows, at which distance it has quite a city-like appearance, and remoteness, ever kind to ruins, throws on its walls and brick piles an air of magnitude and magnificence that a nearer acquaintance does not sustain.

Apalachicola has a past greater than her present, a future greater than either. Some twenty-five years ago this was the principal outlet for almost the entire cotton product of that fertile country adjacent to the Chattahoochee River; it was from here that before the building of the network of railroads which now cross and recross the cotton belt, some 200,000 bales were annually shipped direct to Europe. In those days it was a booming city, in size the third cotton market in the world, with vast warehouses overcrowded with cotton, wharves lined with steamboats, and a fleet of vessels constantly in the offing. Old inhabitants smile and shake their heads as they recall to memory those flush times, and tell with a "has been" air of the past glory of their city. The winter society was charming, the town being always full of foreigners and representative buyers from the principal commercial houses of the world. Money was plentiful and flowed like water, and everybody kept open house and entertained on a scale of magnificence that seems fabulous. As an old resident said to me with a mysterious wink, "The agents bought a great deal that was cotton and a great deal that was not cotton." So heavy was the influx of the staple that the vast warehouses, of which we can now but see the ruins, were totally inadequate to house it, and streets and wharves were so encumbered with bales as to make the passing of wagons difficult. Real estate brought great prices, and every one predicted a metropolis of the Gulf.

Over this "Pompeii" gradually came the rumbling from a Vesuvius. Railroads were built, rail communition established with other seaports; and Apalachicola, thrown on her own resources, died a natural commercial death. The surrounding country was productive of naught save lumber. The cotton receipts fell to nil, and the metropolis of yesterday became the "busted boom" of to-day. Disasters followed; fires and hurricanes came and overflows destroyed many of the warehouses and stores; and to-day the appearance of the business portion of the town is desolate. Great heaps of blackened ruins and crumbling walls attest indeed the former greatness of a trade that now is confined to some half a dozen stores rising above the surrounding ruins. Somehow there is something about the place that always brings to my mind Pompeii; rather a case of the sublime and the ridiculous, I know, but really walking through these deserted, grass-grown streets, and among the heaps of brick covered with a rank growth of years' standing, gives me a feeling of melancholy—it seems like the ghost of a dead civilization.

But notwithstanding all this Apalachicola is on the upward path once more, and though the streets are grass-grown and nearly deserted, and ruined cellars and foundations yawn on every side, the town is steadily pushing ahead, this time on its own resources, which, neglected though they were during the great cotton era, are immense and more than sufficient to support a population of ten times that of the present time. I refer to the vast reserves of pine and cypress, and to the products of the sea, here abundant and profitable. There are several very large sawmills in the town and a number of smaller ones about the surrounding country. As a point for this industry Apalachicola possesses singular advantages, being at the mouth of a river whose banks and swamps literally teem with the finest of timber; the stream is always an available means of transport, and when the logs are converted into the lumber of commerce, direct and easy shipment is at hand to all ports of Europe and Central and South America. The anchorage ground for vessels of any size is some fifteen miles away, but the sound leading to this haven is so protected from the south by the outlying islands of St. George and St. Vincent, that it is passable in the roughest of weather for the tugs and lighters by whose aid all of the cargoes have to be loaded. The sea, however, with its vast oyster beds, myriads of fish and unsurpassed sponging grounds forms the principal source from which the inhabitants draw their support; life on the Gulf is indeed rather a *dolce far niente* sort of existence. There is not much inducement for the unambitious to labor, where one can catch a dinner by a few minutes' fishing or tong up, during the winter months, oysters sufficient to insure life and laziness for the rest of the year, and so the lower classes doze and doze away the long hot summer in peace and idleness.

There are two oyster canning establishments that are a great boon for the fishermen, as during the cool months they can always find a ready market for their products. Oyster beds literally are on every side, and the quality is said to be unsurpassed for the purpose for which they are used.

The fishing trade does not amount to much, outside of supplying the local demand, as the facilities for transportation are entirely confined to the river boats, a means far too slow for the well-known "rapid" qualities of the fish; though there is, I believe, a small trade in salted fish. The sponge reef lies some fifty miles away, and this is one of the principal industries of the town, almost the entire product from that part of the coast being marketed in Apalachicola, the amount yearly brought in is said to exceed a value of fifty thousand dollars.

We spent three very pleasant days in Apalachicola, stopping at the Fuller House, a hotel kept by a colored man for the exclusive use of white patrons. It is certainly a model house of the kind, and never have I fared better on a strictly fish and oyster diet than here. We wandered pretty much all over the town. It is an old, old place with an air of peace and quiet about it singularly attractive; there is no telegraph, and very meagre mail accommodations almost isolate it from the outside world, and one may here be in perfect peace, undisturbed by market reports, wars or rumors of wars; nothing more exciting ever occurs than the arrival or departure of a fishing smack.

The houses are most of them old and of a fashion now out of date, but are all set in the midst of flower gardens that would be the envy of any millionaire. Never have I seen more beautiful vegetation than there is here; not the stunted, pruned and pampered growth we are accustomed to, but great vigorous trees of roses, which cover an entire wall with their blossom-decked vines. The population is very mixed, the fishing class being composed largely of the Dagoes, stout, swarthy young fellows who, notwithstanding their years of residence in prosaic America, yet preserve much of their native Italian grace and picturesqueness.

The advent of the opera company caused quite a stir. A barn had been fixed up for the performance, and on the first night the sale of seats far exceeded the anticipations of the manager; in fact, I think that a list taken of the audience would have been a fairly correct census of the place. The crowd was very amusing, and there was evidently a large portion of it which beheld a play for the first time. Everybody was dressed in their best store clothes, with shoes painfully blacked and heads of hair plastered to the lustre of looking glasses, shirts with excruciatingly high collars of a pre-adamite style appeared to an alarming extent; stout, red-faced fish-wives, more used to the oyster knife than the parquet, showed off toilets not usually seen in the Casino of New York. Everybody came the first night to witness the perform-

ance of the "Mikado"; and while I think the finer wit of the play was in a measure lost, a more appreciative audience could not have been asked. One good thing about the crowd, that some of our more civilized audiences would do well to copy, was the total absence of that "trial" who has "seen the play before" and will insist upon humming the airs and telling you what comes next.

The second night "Mascot" was presented to a crowded house. Now, this opera, as we all know, is one in which the skirts of the ladies are by no means long enough to impede free action, and if I remember aright, certain characters appear as pages in a garb in which the skirts are—well—wanting. The entrance of these not unusual adjuncts to the drama of the day, had a most amusing effect upon that somewhat verdant audience. Sweethearts giggled, blushed furiously and hid behind fans, escorts stared straight before them with stony gaze, while the "boys" encored the appearance of the chorus with a vigor that showed their appreciation.

It is needless to add that the third performance was witnessed by an overwhelming majority of the male portion of the population, but the female element was almost entirely wanting, held back by the primitive ideas of a primitive people. ALEX. M. REYNOLDS.

GAME IN TOWN.

LET me add another to the notices you have already published, of the appearances of ruffed grouse in the borders of civilization.

I had been out for a stroll over the hills last Monday afternoon, and on entering the village on my return, just before sunset, my opposite neighbor, Sherman Paris, called to me from his piazza, where he was sitting, and at the sound of his voice, a fine ruffed grouse sprang out from under a Norway spruce within 10ft. of him, and touching the rail of the piazza, and whirling across my face, disappeared in the direction of the woods, which approach the village very nearly at the lower end of the principal streets, between which no house is situated. After Mr. P. got over his astonishment at the sudden rise of the bird so close to him, he told me that he had picked up one a week ago under a horse-chestnut on his lawn, dead, but still warm, which had apparently been killed by flying against the tree, as there were no wounds on him. He said that he ate that one for his breakfast the next morning, and found him all that a grouse should be on the table. I do not know whether the one I saw had come in town to vote or not, but he did not put in appearance at the polls the next day.

The appearance of so many of these birds in our New England villages this season is rather remarkable, and I do not know to what cause to attribute it, unless it may be that the almost continual rainfall of the last two months, which may have prevented the ripening of the usual crop of berries in the woods, and driven them into the towns in search of food. There have been plenty of butternuts, chestnuts and acorns for the squirrels, but no gray squirrels to eat them, although there are enough red ones and chipmunks, but the raspberries dried up on the bushes in July. Blackberries were not much better, and I have seen no fruit on the thorn trees or cornels.

CHARLESTOWN, N. H., Nov. 9. VON W.

Oct. 29, while the Harvard Freshman field sports were being contested, a flock of quail flew across the track in Holmes's field, and just over the heads of the audience, alighting in the yard back of the Jefferson Physical Laboratory. There were ten of them; they were small, not over half grown. Of course some of the crowd must run over there, and scatter them, but it was not long before we heard them calling themselves together.

CAMBRIDGE, Mass., Nov. 6. J. G. L.

A few days since a Mr. Pearson from the country brought to my son to be mounted a grouse that had flown against his house and been killed. A day or two after one flew through an open window and against the opposite wall of the Holly Manufacturing Co.'s building, which is situated in the very center of this city. I have reported to the FOREST AND STREAM within the past few years a number of such instances of self-destruction of our noblest game bird. In 1886 a law was passed prohibiting the killing of grouse and quail for three years (it should have been five years) in this county. The time does not expire until Sept. 17, 1889, and the prospects are good for grouse and quail shooting at that time.

LOCKPORT, Niagara County, N. Y. J. L. DAVISON.

A PECULIAR RUFFED GROUSE.—E. T. Smith brought to bag, Wednesday, a most peculiar ruffed grouse, which differs most remarkably in color from the generality of birds. This bird is of a brownish color, especially well-marked on the ruffs, which are generally dark-colored. The bird closely approaches some of the Western varieties of the ruffed grouse, and is entirely different from anything which has been shot in this vicinity within the records of sportsmen. The bird is in the hands of the taxidermist, and will be mounted for Mr. Smith.—*Fitchburg (Mass.) Sentinel.*

ARRIVALS AT PHILADELPHIA ZOOLOGICAL GARDEN IN OCTOBER, 1888.—Received by purchase—Two axis deer (Cervus axis) ♂ and ♀, two polar bears (Ursus maritimus) ♂ and ♀, one manaril (Cynocephalus mormon), one sooty mangabey (Cercocebus fuliginosus), two long-tailed weaver birds (Chera progue), one golden oriole (Oriolus galbulus), one Alexandrine parrakeet (Palæornis alexandri), two Arizona diamond rattlesnakes (Crotalus adamanteus atrox), two giant salamanders (Sieboldia maxima), one carpet snake (Morelia variegata), four banded rattlesnakes (Crotalus horridus). Received by presentation—One opossum (Didelphys virginiana), three common deer (Cervus virginianus), one herring gull (Larus argentatus), one golden eagle (Aquila chrysaetos), one common bittern (Botaurus minor), one banded rattlesnake (Crotalus horridus), one horned lizard (Phrynosoma cornuta), eight worm snakes (Storeria dekayi), four alligators (Alligator mississippiensis). Born in the garden—One American elk (Cervus canadensis), one Indian buffalo (Bubalus buffelus), four slow worms (Anguis fragilis), three spotted salamanders (Diemyctylus miniatus).

ADIRONDACK DEER HUNTS.

Editor Forest and Stream:

I have just returned from a hunting trip at North Elba, and some incidents connected with it might be of interest to others. It certainly would be if my pen could picture what I saw. We were a party of five, two natives and three "city folks." It was just dark when we emerged from the woods at Freedman's Home, and still five miles of very bad road before us. The plan of staying at some house on the road was discussed, but all favored reaching Jake Wood's that night, and a little past eight we reached his house. When I saw the little house I wondered where it was possible for so many to sleep. But after a consultation with Mrs. Wood, Jake bade us come in, they would find some place to stow us away. Mrs. Wood proposed to give up her room and spread a bed on the kitchen floor. But Jake gave a very decided no to that. There was one other bedroom, that I afterward suspected was vacated by some of the family for two of us; the rest and Jake's four boys went into the loft over the living room. In a very short time the table was spread with a very substantial supper, and then gathered round the fire we discussed the morrow's hunt.

I wish I could give you a picture of that family. Jake Wood is a man of about fifty years of age, 6ft. 4in. in height and weighs 180. He reminded me very much of Abraham Lincoln in figure and manner. A very intellectual face, a clear blue eye, and a voice as mild and gentle as a woman's. Mrs. Wood is a rather delicate-looking woman, but with plenty of energy, and we voted her the best cook in the Adirondacks. There are four sons, fourteen, sixteen, eighteen and nineteen years of age. Two daughters, one fourteen and the other but a baby. In the time we spent there I did not hear a cross or impatient word; every request for aid from any one was complied with quickly and cheerfully, and sometimes a little hesitation would have been excusable. For instance: One very dark night, when we were having a merry time with cards and stories, and all were a good deal fatigued after the day's hunt, there came a rap at the door, which was answered by Mr. Wood. He came back to know if any of the boys felt like taking a lantern and showing a gentleman the way to "The Lodge," five miles through the woods. Two of the boys promptly responded, and one was sent.

At another time we were on our way to the hunting grounds, when Mr. Wood suddenly remembered that he had told the lame boy to go on horseback to Lake Placid to inquire for a dog that had driven in that direction the day before and had not returned. He said: "Now he may take the colt, and she is apt to shy, and with that lame foot I fear he may get hurt. One of us ought to go back and tell him to take old Billy." One of the boys at once sprang out of the wagon and ran back two miles to warn his brother, leaving the rest of us to ride on to the hunt, and he to follow on foot with the chance of being too late for the first race. I think there are few boys who would have obeyed such a request with no sign of impatience.

Jake decided where each was to watch. He and one of our party went with the dogs on to the side of Mount McEntire. The first day my post was at a point in the river, where in previous races nearly all the deer had crossed. There was a very cold north wind blowing and a slight fall of snow. Every one who has watched a runway near a stream knows how many times the sound from the water startles you with the idea that the dogs are coming, and how for the first two or three hours every sense is alive and the rifle kept ready for a hasty shot. As the hours wear away hope dies out, and the notes of the wood birds, or the antics of a squirrel, or other animal, are a welcome relief. Thus the hours passed with me till the sun had gone below the mountain (though its face had been hidden all day). I was hoping for a signal that the hunt was up, when I was sure I heard a splash in the river above the bend. At once my rifle was ready, and I gazed eagerly through the bushes in the direction of the sounds, when there came a whistle, and immediately after I saw one of the boys wading the river and drawing behind him a deer. He had shot it early in the day two miles above me and had waded all that distance in the water, ice cold, in preference to carrying it through the woods. He advised me to remain half an hour longer, as he had heard the dogs while on his way down.

I remained till called away by a shout from the road. There I found two of the party and a large doe that I had seen before being towed down the river. It was so cold we decided to walk toward the lodge, as our team had been taken there. We reached there after a two-mile walk and found that Mr. Wood and one of the party had not come in, and as shots had been heard, there was hope of another deer. In half an hour a shout from the edge of the woods made us rush out, and we found Mr. Wood and our friend with a fine buck.

This was my good luck for the first day, and there was still a chance of finding another at the house, as the "lame boy" was to keep a lookout there. On reaching the house we learned that a large doe had run across the open lot north of the house, but too far off for a shot.

On entering the house we found an addition to the family, a gentleman and wife on a visiting trip had come there for the night. I wondered how the house could hold one more. But the family appeared in no way disturbed, and after supper I noticed Mrs. W. quietly removing bed clothes to the kitchen, where she and Jake made their beds on the floor, giving up their room to the visitors.

The next day we started out confident of success. The starters had found enormous tracks the day before, and could start them with "no trouble at all." But when we met at night it was to hear of deer that had crossed where they never did before, just out of sight of the men on the runways. The bucks had run up stream, and no one had a shot.

Saturday morning, with the snow falling fast and the north wind still blowing, found us on our watch grounds. I had barely reached my station, when I heard six shots in rapid succession in the direction of the west branch of the river. An hour later one of the dogs came to us, and remained half an hour, then he leisurely walked round the large rock beside which I stood, and giving one or two short barks, he started off on a track. He "worked" near by for ten minutes, then took a straight course for the point on the river where I had watched the day before. I learned later that he drove the deer some two miles and then lost it.

At night I learned that the six shots I had heard were fired by one of the Wood boys. The first one was aimed into the woods ahead of the deer to turn it back into the river it had just crossed. It succeeded, and a large doe gave a great leap into the middle of the stream, and the second shot had wounded her, but she still ran, but was brought down by one of the later ones.

I had nearly forgotten the point of my story, the one circumstance that led me to write this rather long letter. Perhaps some of the gentlemen who like to testify before game committees could use it as proof of the humanity of hounding. A large fawn was started by one of our dogs and driven to another party who were hunting near us. It was shot at, and a .44 ball struck it in the lower part of the abdomen. Some of the small intestines ran out and caught on bushes as the little thing ran. They were jerked out till, before it reached the river, sixty rods from where it was shot, all the small intestines had been pulled out, and a portion of the paunch. It then swam the river, but the ice-cold water entering the cavity of its body was too much for it. It ran two rods further; and as it fell the dogs sprang upon it, and before the hunter could beat them off, they had mangled it so badly it was unfit to use. It made me ashamed of hunting with dogs.

I have been interested in letters in some late numbers of FOREST AND STREAM, relative to bears and bear hunting. I have never believed that a bear could be provoked to attack a man, unless it was wounded so that it could not run away. But in this town a week or two ago we had evidence that there are exceptions. A man living three or four miles north of here went to look at a bear trap, carrying a light muzzleloading gun, loaded with fine shot. He found a bear cub in the trap, and while bending over it, suddenly saw the old bear rushing at him. He turned and sprang into a small spruce tree, and the old bear caught his boot with one paw, but he got away and up the tree out of her reach. There were no branches large enough to support him, and he had great trouble in holding on. Twice the bear climbed up the tree far enough to bend it nearly to the ground, but by kicking and clubbing her with the gun that he had held on to, he managed to drive her back. He was unable to fire his gun, whether from fright or fault with the lock I don't know. But he was kept up the tree from 4 in the afternoon till 11 at night. Then his wife became alarmed and sent men to find him. They found the old bear near by, but feared to shoot in the dark. The man was so chilled that he was unable to walk when they helped him down. He will probably take some other weapon with him the next time he visits a bear trap.

Another of our hunters and trappers was out a few days ago setting traps and was followed by a bear and cubs (attracted by the bait he carried probably). He shot the old bear twice, but she escaped with one cub; the other he killed. He has before now killed a bear with a club, and I've heard it remarked many times that there was no bear could tree him, gun or no gun. They are very numerous this year; or probably not more numerous than usual, but there are so few beech nuts this season that they are driven nearer the settlements for food.

We still hear talk of deer being very thick; but I notice that all over the woods the hunters do not hunt near home as formerly, but go thirty or fifty miles to some place far from any settlements and dogs; and they come back with fewer deer than they killed in half the time ten years ago without going out of hearing of their own dinner horns.

I have been urged by many native hunters to try and get a law forbidding the killing of does at any season. If we cannot have a law forbidding hounding that would be the next best thing. Something must be done or the deer will be as scarce as buffalo in a very short time.

AU SABLE.

ESSEX COUNTY, New York.

A PLEA FOR THE CHASE.

Editor Forest and Stream:

It has been a great surprise to me that with all the facilities and material for field sport, so little of it should be practiced by the young people who spend their winters in the South. I am sure you will sympathize with me in lamenting the departure from those good old days of yore, when the hunter's horn would awaken the echoes at early morn to rouse the lagging out from their downy beds, to take the saddle and away to the woods while the dew still holds the scent of the deer or the fox, which always feed at night, or rather very early in the morning.

What a gay sight it would be to behold a group of well-mounted ladies in suitable dress, with each her attendant, just as the sun peeps above the horizon of a Southern sky; the hunter, with his trained pack of hounds, all wild to trail and start his majesty of the forest. Can there be any recreation, or any exercise, more conducive to exuberant health than an early start, when the frost lies crisp on every blade of grass and shrub, and the air is filled with the flight of all manner of winged creatures seeking their feeding grounds for the day, guided thither by an unerring hand.

How tame seem the tennis or the croquet grounds. Yet they need not be entirely ignored. The timid ones, who delight in dancing backward and forward to catch a ball, might fill up the leisure moments that otherwise might hang on their hands, or quarrel over the order of play at croquet, which seems to be more frequent than the gaining a conquest. But those who would course in an exciting ride, when twenty hounds were in full cry, perhaps see the antlered beauty for a moment as he dashes through some thicket, would hardly tame down to any of the games of the day.

When a young man, many a day it was my delight to follow the hounds in full chase, after both fox and deer. This may be why I am surprised that the fancy does not attach itself to the young men of this generation. Stir them up, Mr. Editor. One good ride of twenty miles will do more to harden the muscles and send the blood coursing on with new life than all the automaton games ever invented. H. C.

TARRYTOWN, N. Y.

AN ELK HUNT IN THE ROCKIES.

Editor Forest and Stream:

Agreeable to promise I herewith hand you a few hastily written notes of our ten days among the elk, bear and deer:

At 3:30 A.M., Monday, Sept. 3, our party consisting of Messrs. J. E. Brown, Dall De Weese and myself took the train at this point for Dotsero, a station on the Denver and Rio Grande R.R., at the junction of Eagle and Grand Rivers, where we had saddle horses and pack animals (jacks) awaiting us. We arrived there at 11:50 A.M. of the same day.

We soon packed our bedding and supplies on our jacks and started at once into the very heart of the Rocky Mountains, each feeling like a school boy let loose. Crossing the Grand, we plunged at once into the cedars and pinons, and made across the country to Sweetwater (Turret Creek), then following up the stream still higher to the quaking asps, we went on and up to the spruce covered mountain tops and timber line peaks. We rode leisurely along, now gazing in wonder and admiration at some dark and weird cañon, and at the next turn in the trail feasting our eyes upon the grandest panorama of mountain range, hill and dale ever presented to the view. Nature in her wildest moods has never excelled her handiwork here. It is only amid such scenes that one can appreciate the vastness of the universe. But we must move up the trail, for this is bigger game than I can handle.

We reached the Sweetwater Lake the evening of the second day, distant from Dotsero 15 miles, and camped for the night. This lake lies in a deep basin between two great mountains, and is a beautiful little sheet of water, being about a quarter of a mile wide by three-quarters long, and its waters are alive with the beautiful speckled mountain trout.

The weather being clear and fine, we did not put up our tent. Our animals were soon relieved of their loads and picketed for the night. Our rods, lines, flies, etc., were quickly adjusted and seventeen of the speckled beauties were landed and prepared for supper. Such a supper! And such appetites! The inference would only have been natural that we, as is the custom with the Utes, in the midst of plenty were taking a meal which should last us for three or four days.

Bright and early the following morning we again took the trail, with here and there some very steep ascents to make, but passing through groves of quaking asp and beautiful parks, covered with a luxuriant growth of bunch grass—so long as to reach the sides of our pack-animals. Higher and higher wended the trail, and steeper and steeper grew the grade, like the path to fame, till at last we gained the flat tops. What a scene lay before us! An immense water shed, from which you can see the source of the Eagle, Grand, Piney, Gore, Lake, Gypsum, Roaring Fork, Muddy and Bear rivers, while at the western base rises the White River. In the distance were Turret and Shingle Peaks, whose summits rise some 12,000ft. above sea level, and probably 2,000ft. higher than the flat tops; while to the north and east lay Trappers Lake, Egeria Park and the Williams Fork country.

Even though we are now at an elevation of near 10,000 feet, we have just reached the hunter's paradise. Here are dense groves of the stately spruce, where the sun never penetrates, beautiful undulating parks, waving with a heavy growth of nutritious grass, springs of water as pure and cold as ever flowed from old mountain side; while here and there, both in grove and park, are large pools of water left by the melting snows, which furnish excellent watering places for the herds of elk, deer, mountain sheep, etc., which here abound. And this is not all. Step down to the edge of this water hole with me and inspect the tracks which are so plentiful here in the soft earth, and you will at once see that it is also the home of the grizzly, silver-tip, cinnamon and black bear. (The marks of the claws of the grizzly and silver-tip show plainly in the tracks, while with the cinnamon and black bear they do not.) This locality has long been known as the Ute Indians' great summer and fall hunting ground, and even after they were restricted to the limits of a reservation, their attachment for this locality has been so great, that while many have visited here by consent of the Indian agents, many more have done so in violation of agency orders, and finding themselves once more in their old haunts, and in the midst of game of all kinds and in countless numbers, have dared to dream that they were again a mighty people and the sole masters of this broad domain.

Three o'clock P. M. found our jacks and horses unpacked and picketed out, tents up, dinner over and our hunting equipments in place; after which we started out for fresh meat for supper. Sundown found us all in camp, with three deer packed in and hung on the spruce back of camp, Mr. DeWeese having had the good fortune to kill a fine buck which dressed 260lbs., with fat 1½in. thick over the rump. His horns were large and very uniform and in full velvet, making a fine trophy.

The next day we spent looking for elk sign through the spruce, along the breaks of the flat tops and around the watering places, and so locating the bedding places as well as watering places and feeding grounds of the many bands of elk which it was plain to be seen were ranging there. On our return to camp, after comparing notes, taking our evening smoke and listening to the experiences of the day, we retired for the night, fully convinced, as Mr. DeWeese expressed it, that "we were in the land of the wapiti."

The next day more prospecting discovered to us a chain of small lakes about six miles to the north, and judging from the elk, deer and bear sign in their vicinity, these were their principal watering places. We saw scores of fine fat deer at short range, but did not molest them, for we were not out to slaughter game to lie in the hills, as is too often the case.

We returned to camp early, boned our meat, salted it down in the hides under the thick shade of the spruce, and covered it well to secure it from the flies. The remainder of the afternoon and evening was spent in arranging little conveniences in camp and planning the next day's hunt, for we had decided that it was about time we should introduce ourselves to the elk. We finally decided to do just a little more prospecting in the morning, return to camp about noon, get dinner and rest an hour or two, then mount our horses and ride to near the point where we should decide to make our evening hunt (one hour at about sundown is worth the whole day for elk shooting).

While sitting around the camp-fire that evening we were treated to a splendid serenade, which was nothing less than the musical "bugling" of a bull elk. At first half a mile distant, then nearer and nearer, until within 200yds. of camp. Again and again he struck the notes in a loud, clear, shrill, whistling tone that echoed from park to woodland. Hastily catching up our rifles we crept down the edge of park near by and secreted ourselves, but there being no moon we could not see him, though he came so close that we imagined we could hear him breathe, and we could plainly hear the rustle of the grass beneath his feet. After passing us and gaining the edge of the spruce across the park from us he again stopped and bugled. One of our party attempted to answer him, but his bugle was so badly out of tune that the old fellow did not deign to notice it, further than to bugle us an occasional ta-ta as he wandered further and further away, until his notes were entirely lost to us.

In the morning we were out early, and keeping together followed along a high ridge near the lakes. Fresh sign was plentiful, and we kept a sharp lookout. Presently our attention was attracted to the splashing of water near at hand, and looking in the direction whence the sound came we could see that at the foot of the hill on which we were standing, and in the midst of a dense growth of spruce, was a lake which we had not discovered before. Knowing it to be the habit of elk to wallow at these water holes, we were at once satisfied that there was an old bull not very far from us, and to reach him we must take a roundabout course, and over ground which we did not know; so hastily retracing our steps to the covering of spruce we cautiously stole down the hill toward the lake. When within about 300yds. of the lake an unusual commotion in the midst of them told us that the elk had either heard us or scented us. Halting and peering through the dark spruce, we sighted a band of about forty elk, all cows and calves but one, and that a good-sized bull with fairly good antlers. They were restless and moving about so that it was nearly impossible to get a shot; however, as soon as the bull stopped where we could do so, we fired on him, taking care not to hit any of the cows or calves. Then a mad race began, they to gain the dense spruce cover at the head of the lake, and we to gain the open ground before they should do so, which resulted in a complete victory for the elk. However, on taking the trail we found that at least one of us had put his mark on the old fellow, for he was leaving quite a trail of blood. After trailing them nearly a half mile and finding that he would neither leave the band nor spread his toes wide apart in running (both being almost sure signs of a death shot), we abandoned the trail and returned to camp, feeling almost tempted to shoot down some of the dozens of deer we saw on our way.

Arriving at camp about noon we found to our disgust that our "San Juan canaries" (jacks) had pulled their picket pins and "lit out." Mr. Brown at once volunteered to take their trail and follow them until found, fearing they would, if given a little time, return to Dotsero; so, hastily partaking of dinner, he saddled his horse, taking an extra blanket, started, but with an expression on his face which told us plainly that it would afford him infinitely more pleasure to shoot those jacks than to bag all the bighorns that ranged the hills.

Toward evening Mr. De Weese and myself saddled up and started out for an evening hunt. It is quite evident that we had much the best of Mr. Brown in this matter. After having ridden a mile or more from camp, we sighted a band of eleven elk just emerging from the spruce at the head of a long park about a mile to the north. The sun was just sinking and the long shadows were fast creeping out over the parks, which told us that we must act quickly. They had evidently sighted us, so sitting quietly in the saddles until they began feeding, and hastily dismounting and leaving our horses for a "blind," we began to steal a march on them. The ground being somewhat in our favor, we made good time, and just as dusk was fast approaching we peered cautiously through the spruce boughs into the park. There lying down, and evidently on guard, was the very monarch of the hills, while the band had passed just over the hill into the spruce. He was lying in tall grass which nearly or quite concealed his body, but nothing short of a forest of spruce would have hidden that magnificent head of horns from our view. At the instant we sighted him he sprang to his feet, but as he rose from the ground we both fired. Another instant and he was over the crest of the hill and out of sight. Hurrying to the top of the hill we found he had plunged into the thick spruce. We found no trail of blood, and stood and stared at one another, wondering if it were possible to miss such a monster. Mr. De Weese was invited to kick me back to where we had left our horses, and in return I volunteered to kick him from there into camp. However, we still had reason to believe that we had hit him, and pretty hard at that, for he had not followed the band, and every footprint showed the toes well spread. It was now too dark to attempt to follow him, so we retraced our steps, wondering if either of us could hit an elephant if one should get up before us. I don't think we slept like babes that night; at least I did not, for as soon as I closed my eyes I seemed to see that old bull, and the fact is I drove sleep away trying to frame some excuse for having missed such a mark.

As soon as it was light we were again in the saddle, and rode over to where we had left the trail. Leaving our horses, we started at once to follow it up. Although the woods were tracked in every direction by elk, it was not difficult to trail him, his tracks being so much larger than other tracks. Soon, however, we found a plainer trail—a light trail of blood, and at that moment we were absolutely certain that old big horns was ours. After trailing him a mile or more into the very heart of the dense dark spruce forest where the fallen trees were thickest, and where the ground was thickly covered with moss, which prevented the sound of footsteps, suddenly he broke from the cover of a dense mass of fallen trees. In less time than it takes to tell it we had sent five shots after him, which had the effect of checking his speed somewhat, and turning him to the left. As he turned we gave him two more. He suddenly stopped, tottered and fell.

We were soon at his side, and though we knew him to be a monster, we could but stand and gaze in astonishment at his gigantic proportions. Lying naturally on his side, with one hindleg extended, he measured 15ft. 4in. from hoof to point of antlers, and girthed 9ft. just back of the shoulder. He would certainly dress, as you would dress beef, 800lbs. His antlers were very fine and heavy, the beams being 6ft. long and 5ft. spread, and having nine points on one beam and eight on the other, the front fenders being long and very heavy.

An examination showed that Mr. DeWeese had hit him in the neck the evening before, while I, much as I dislike to own it, had missed him. Mr. DeWeese used a Winchester .40-60, while I used a Sharps .40-70. After jumping him that morning we had put five balls into his right hip, one ball breaking the bone, and as he turned we had put one ball through his side, and another through his shoulder. After dressing him we returned to camp, and as we rode into camp we could not restrain ourselves longer, but gave three rousing cheers for the "Monarch bull elk, Harrison and Morton, and the flat tops."

The following day Mr. Brown returned with our "mocking birds," and we packed in our elk and boned the meat, all the while Mr. Brown's looks saying plainer than words that he considered it decidedly underhanded for us to have such sport while he was on the trail of such game as three miserable runaway jacks.

The next morning we broke camp and started to move over to the brakes of White River, more with the view to see the country than to hunt. After having proceeded a half mile from camp, I stopped to re-sinch my saddle, the others moving along the trail with the jacks in the lead. Presently, and when they were some 300yds. in advance of me, I heard them shoot. Again and again the sharp report of their rifles rang out, and hastily springing into the saddle I dashed along the trail through the woods, and as I emerged therefrom into a gulch thickly grown up with low willows, and probably 100yds. in width, I espied two silver tip bears making their way down the spruce ridge on the opposite side of the gulch. My companions having dismounted, were giving them chase and firing whenever they could get sight of them. Off to the right was another bear, which they had wounded so severely that he could not get away, and the way he was making those hills and woods ring was a caution. Riding as rapidly as the ground would permit some 200yds. down the ridge and along the edge of the spruce, I dismounted and ran into the spruce a short distance to where a small ravine headed. Scarcely had I gained this position when the two bears showed themselves on the break of the ravine. They were climbing a steep embankment and presented the full line of their backs to me. Dropping on one knee I fired, and at the crack of my rifle the hindmost bear rolled over and died without a struggle, the ball having broken his neck. The other bear escaped into the thick forest and we were unable to again get sight of him, although he was wounded. This was indeed a picnic. The crack! crack! of our rifles, the unearthly squalling and rushing hither and thither of the bears, the terror-stricken bray of our jacks as they fled through the woods and over fallen timbers, regardless of their heavy packs, and our shouts to each other to "stand your ground and give 'em fits," made up a very exciting scene.

After it was all over, we started in search of those confounded jacks, and after trailing them through the woods for a half mile we found them, two of them with the packs turned and all nearly frightened to death. Soon everything was put to rights, and returning to where we had killed the bears, we removed the pelts carefully with the view of having them made into rugs, as mementoes of a most thrilling experience. We took the trail for the west fork of Sweetwater Creek, camping there for the night.

The following morning we began preparations for our home trip, and about 3 P.M. we were again in the saddle and started down the stream to middle Sweetwater, reaching there a little before sundown. Crossing this stream the trail ran along a high and somewhat broken plateau, lying 200ft. or more above the creek. Just as it was growing dusk we approached a salt lick where we had previously seen a band of mountain sheep. Mr. Brown was in the lead, Mr. De Weese and myself following with the jacks. As Mr. Brown neared the summit of the ridge forming the western boundary of the basin in which the lick was located he quickly dismounted and motioned us to him. Following as quickly as possible, we left our horses and crept to a point where we could look over into the basin, and as we did so, we saw a band of eleven elk standing around the licks, some 300yds. distant. It was now too dark to see their antlers at that distance, and located as they were in the basin below us, but we were satisfied that several of the larger ones were bulls, so selecting the largest ones for our targets we opened fire. At the first volley they rushed wildly up the hill which formed the northern boundary of the basin, and which is very steep and destitute of timber, save here and there a clump of scrub oaks. We continued firing until each of us had brought down an elk, Mr. Brown securing a bull having a particularly fine set of antlers. They were not so large as the one Mr. De Weese and myself had killed, but very uniform and handsome, securing to him a trophy of which he is justly very proud. We dressed our game and placed it on poles where it would cool, and again took the trail, arriving at the mouth of East Sweetwater at 11:30 that night, where we camped and prepared supper from the "fat of the land." Late as it was we ate heartily, for indigestion doesn't stay out on a two weeks' hunt.

The following morning, feeling that the "swelling" had left our necks, we started for home, reaching Dotsero on the 16th. We sent two packers and eight pack animals back for our game, and at 4:30 that afternoon boarded the train, reaching Cañon City at 12:20 that night, all feeling more than satisfied with our trip, and feeling that we had secured a new lease of life, which could be had only through an elk hunt in the Rocky Mountains.

L. E. FRANCK.

CAÑON CITY, Colorado.

DAKOTA DUCKS.—Milnor, Dak., Nov. 9.—I have been shooting in this place for the last three weeks. There are lots of ducks in the ponds, and they are shot by wading around in the rushes for them. Decoys are not used to any extent. A great many brant and geese are shot in the wheat stubble. Bags of from forty to fifty ducks are every day affairs. The principal ducks being shot now are the mallards.—A. C. K.

THE DRAM.—"Seneca" is correct in his statement that the dram is a unit of avoirdupois weight. There are 256 drams in a pound avoirdupois, containing 7,000 grains. Therefore a dram equals 27$\frac{11}{32}$ grains.—T. H. G.

AN INCIDENT ON THE STANISLAUS.

I WILL try to give your readers an account of a little experience I had one summer among the California black bears. We had driven a band of cattle and horses from the range on the upper Joaquin plains into the Sierra Nevadas, keeping along just below the snow line. The 4th of July found us in camp on the head of the Stanislaus River, a wild rough mountain country, but with many amper glades and grassy meadows, which made it a paradise for cattle. Game was plenty, and we lived right royally on fat venison and grouse pie. Bears were plenty but hard to hunt, as they put in the day time down among the rocky bluffs of the Stanislaus, coming up at night to prowl around and stampede our horses; and in more than one case getting away with our venison. One afternoon Hawkins and myself concluded we would set a shotgun up the creek near where we had killed a deer. The bear came there we knew by the tracks. So there we put the gun, staking it in and baiting it with a deer liver. It was nearly half a mile from camp, but along in the night we were awakened by the noise of the gun. Hawkins could hardly wait until daylight, and was up and had breakfast before we could see. I had to ride over the mountain that day to see about some cattle, so Hawkins went to investigate the bear. So eager was he to be off, he forgot to take his cartridge belt. His rifle was a Sharps .45-70, and this with one shot and his six-shooter, with one round of six, were all his stock of ammunition.

About 4 o'clock in the evening I was returning over the mountain and thought I would come round by the gun. When about a quarter of a mile from the spot, I heard some one hollowing. I soon came upon my "pard," Mr. Hawkins, perched up in a tamarack tree, and about twenty steps from him lay the bear. Now and then bruin would raise his head and growl, while Hawkins would swear like a trooper. When the bear saw me he tried to come for me, but he was so badly crippled he could not get up. Seeing this "Hawk" came down the tree, keeping a wary eye on bruin. I gave him my Winchester and he soon finished his bearship.

"What did you go up that tree for, Hawk?" I asked. "Thunder, you ought to have seen that bear come for me," he replied. "You see I came up here and found him about 200yds. further on, I supposed he was dead. When I was within ten steps of him he got up and came for me. I banged it to him with the rifle, but he did not stop. Then I ran for this tree and went up. He came to the tree, and I tried the six-shooter and hit him, for after he went off that distance he lay down. I emptied my gun, but didn't hit him right. Then every time I started down he would rear up and growl, so I just staid up there and yelled till you came. You bet I won't forget my ammunition next time. Let's go to camp, I'm hungry."

Picking up our guns and getting some bear steaks for supper we went on. Hawk was a little sore for several days when any one spoke to him of being treed by a bear, but I may tell you some time how he retrieved his honor by killing a big grizzly with a six-shooter.

J. J. FULTON.

MAINE DEER.

Editor Forest and Stream:

It is a fact that dogging deer in Maine is not practiced, except in extreme cases. In the Upper Narragaugus, where the most of the hunting mentioned in my last was done, dogs are not used, except that Jonathan Darling is still accused of tolerating dogs at Nickatous Lake. The Boston hunters were at one time within a few miles of that celebrated lake, and they heard hounds, and their guides informed them that the dogs were being used for running deer. The guides also explained that a certain cook had lately killed a couple of dogs found hunting deer, and the dogs belonged to the Nickatous camps. Since that time this cook has not been in favor with the guides in the employ of the proprietors of the Nickatous camps. But dogs are not being tolerated in the neighborhood of Beddington, nor further up on the waters of the Upper Narragaugus. At Collins's camp, some twenty-six miles up into the forest from Beddington, dogs are not allowed, but a curious method of hunting the deer is being followed. The country is being thoroughly hunted. Deer are plenty, but excessive hunting is making them very wild. When a deer is started, even by the most careful still-hunting they know how to practice there, he immediately is thoroughly alarmed, and breaks from one swamp to another. These swamps, in the section where the most deer hunting is being done, are divided by what are termed "burns." By a series of forest fires the dry ground between the swamps has been denuded of timber. Across these "burns" from swamp to swamp the deer have numerous runways. These runways or paths are known to the guides. The hunter is posted beside of one of them, and the guide enters the swamp and beats around till the deer is driven out, and the sportsman may be so fortunate as to get a shot. This is precisely the plan that some of the hunters in this section would like to follow with dogs. They would prefer a good hound to beat the swamp to a man, but the law says no. Respect for the law has been a good deal increased in that section of late years; for be it remembered that it is not far from the scene of the game warden slaughter, for the crime of which one hunter is now serving out a life sentence. And the trouble in this notorious case all grew out of the attempt to use dogs in hunting deer.

Among the guides there is a better sentiment prevailing in that section. One of the best in the woods freely expresses himself that he prefers to help a number of sportsmen in trying to take a deer to helping one to get one in a few hours with dogs. It pays better, and especially better since some of these guides have really become camp proprietors. The guides in some parts of the country there would be very glad to see the Nickatous boldness in defying the law broken up. Even if no dog hunting is being permitted there, these guides believe that it is being done. They have not forgotten that Mr. Darling has defied the law, or at least has explained the law to suit himself. I think that I am right about this feeling among the guides, for the Boston gentlemen, mentioned above, heard such sentiments freely expressed by them, and the gentlemen had never been into the woods of Maine before the whole subject was news to them. Nor did they know Jonathan Darling from any other man. If Mr. Darling has not tolerated the hounding of deer this fall, he certainly has the name of doing so.

But there is one bad feature about this method of hunting deer by driving them out of the swamps. There is more or less of danger from the rifles of the hunters. They all take rifles, and some of the sportsmen, or would-be sportsmen, know very little about a rifle, or any sort of a gun. Hence a gun in their hands, especially when there is a man driving a deer out of a swamp, across an open space, for the green hunter to shoot on the run, is really a dangerous weapon. There is another feature connected with this shooting of deer in the open "burn." It does not give the deer a fair chance. He must be shot at on the run, and hence more often badly hurt than killed outright. If wounded, the chances are that he crawls away, only to suffer and die a miserable death—perhaps of starvation. I have two cases in mind of bad shooting on these barrens this fall. One was where the deer's under jaw was carried away, by a shot aimed at the head. The other was where a wounded deer was found and killed, with a ball embedded in the hipbone. The rifle was not of sufficient caliber, it was not powerful enough for such shooting. In still-hunting, such as is explained by Van Dyke in that admirable work, "The Still-Hunter," I think there is opportunity for a good shot, and hence the pleasures of deer hunting need not be connected with cruelty to one of the most beautiful creatures God has made.

Still another feature connected with the hunting of these barrens may yet work trouble. The barrens are not natural, but are the result of a severe forest fire three or four years ago. The "burns" have sprung up to young twigs, and grass in some spots, and here the deer delight to feed. Hunting them has already rendered them so wild that they come out to feed only at night. But to the guide these "burns" are looked upon with a good deal of favor. They are something that has come to them. But how are they to be kept up? It only takes four or five years to render them, where there is any soil left, a most impenetrable thicket; the worst place in which to hunt a deer imaginable. Fire will again fix the matter, and of these fires the forest owners of to-day are very much afraid. It is always hinted by some of the less responsible guides that the "burns" can be kept up; that fire will do it. Certain timberland owners are on record as declaring that it would be better for the lumber interest of Maine if there was not a deer in the State, and the fear is that they may hinder any wholesome legislation on the subject this winter.

SPECIAL.

ST. LOUIS DUCK SHOOTING.

ST. LOUIS, Mo., Nov. 9.—*Editor Forest and Stream:* A drizzling rain has been falling without cessation for two days and the Signal Service reports a cold wave as due here by to-morrow. This is good news to the patient duck shooters, because it will put animation into the ducks which have been making their stay up north and start them on their southern migration tour. Duck shooting in this section of the country so far this fall has been very poor and unsatisfactory. But the prospects are just now very promising for some good sport on them in the near future. That the web-feet have all given this valley the go-by and taken their course further west, can hardly be accepted by the Nimrods in this city, consequently they are keeping up hopes and expect some good shooting on them before the lakes in this section are frozen over.

Duck shooting such as your hunters of old times were accustomed to when this section of the country was thinly settled, has disappeared never to return again. Many of the lakes about here which were at one time famous for duck shooting are now of no value whatever for this sport, and not visited by the duck shooters at all. This is also the case with the snipe grounds. Not so many years ago it was a common thing for parties to visit what is known as Wet Prairie, a few miles above here in Illinois, and make good bags of the longbills. But now this is all changed, and a bag of a dozen is considered big, whereas formerly four, five or six dozen consituted an ordinary bag. In those days the land was a good-for-nothing swamp, but since then has been reclaimed by under-drainage and is now mostly under cultivation, and the snipe have given the localty the go-by. To get good sport on ducks and snipe it is necessary now to go quite a distance, or join one of the various clubs which own game preserves in this part of the country, and then the sport cannot be compared to what it was in the days of the old muzzle-loading shotgun. Breechloading shotguns are now so cheap that nearly every farmer throughout the country owns one. Game of all kinds is in season when the farmer's work is the lightest, and he has plenty of spare time to devote to the pursuit of it. The increase in the sport of field shooting in the cities is also large. Taking all these reasons into consideration, is there any wonder that the game in this section is rapidly decreasing? It will be only a matter of a short time until duck and snipe shooting will be almost entirely played out around here. Nothing will be left for the nimrods to shoot but a few quail and rabbits, and probably these will have been reduced to such a small number that it will be very unsatisfactory to spend any time in quest of them.

Postmaster W. Hyde, James O. Broadhead, Col. J. G. Prather, member of the National Democratic Committee from this State, John A. Scudder and Dan Catlin are down at Black River, Arkansas, enjoying the pleasures of a camp hunt. The party expect to remain two weeks, dividing their time between angling and shooting. Bear, deer and turkeys are said to be quite plentiful in the locality where they have cast their fortunes, and no doubt some grand sport is in store for them.

Fishing is reported to be excellent at Black River just now, as is evidenced by the fact that several parties that have recently returned from there have been most successful.

The Jumbo Fishing and Hunting Club broke camp at Black River, near Peach Orchard, last Tuesday and arrived in this city on Thursday, after being in camp ten days. Their luck was something unusual, having killed 5 deer, 340 squirrels, a number of ducks and considerable other game, such as rabbits, quail and turkeys. The gentlemen report fishing fine, having succeeded in catching a fine string of fish. Among the trophies was a jack salmon, caught by a Mr. McClure, which weighed 11lbs. 4oz. Four of the deer which the party brought home succumbed to the rifles of Mr. Peckington and Mr. Grille, who are most excellent shots with a rifle. Mr. Thomas McMahon, one of the crack shots of the party, shot at a wild turkey, and by mistake killed a hog, the cost of which swelled the expense account of the Jumbo Club. The usual luck of the club will enable Messrs. Peckington and Grille to serve squirrel potpie at their Leadquarters for the next six weeks.

Mr. Nic Dolese and Chas. Thoman spent ten days at Harrisonville Landing, which is about twenty miles south of this city, in Illinois, and enjoyed some excellent sport on ducks. They returned yesterday with eighty-five ducks, the greater number of which were mallards.

UNSER FRITZ.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 6.—A telegram received to-day from Henry, Ill., by a member of the Swan Lake Club, reads: "Plenty of birds—killed 77 yesterday—mallards.—WOOD." The telegram is from Wood Bros., local market shooters, who have the Illinois River pretty well "spotted."

Mr. W. B. Chatfield, one of Chicago's wealthiest and most enthusiastic sportsmen, has just returned from his trip into British America, and is now active in the campaign against the Illinois ducks. Mr. Chatfield reports that two days ago there were thousands of ducks along the big marshes to the south. English Lake marsh is beginning to show a little more water. It has been very low. Swan Lake country was looming, and not enough shooters down to keep the ducks scared up and moving.

Local hunters at Morgan Park, one of the city suburbs, report fair bags of ducks and a few geese at the "Sag," four miles west of that place. A large flock of Canada geese passed over the town yesterday, heading for Calumet Lake, and flying not higher than the roofs of the houses.

OCT. 7.—Mr. A. W. Knox starts at the end of this week for a full week's trip in the Fox Lake country, and will probably meet with good shooting.

The men about Spalding's, and also the knots of sportsmen who gather there, all report the flight coming in well in the Fox Lake region. Everybody is outfitting, and the present raw and cloudy thick weather is luring out a great many shooters who rarely go until the right time comes. I got John Gillespie to stop packing orders for decoy ducks long enough to tell me that he had fair success last week, and that he will go again this week, either to Fox Lake or English Lake.

South Water street begins to show great quantities of game in market, and the dealers report the flight of large flocks now well down into this country. There would seem to be little doubt that the time has at last come to get ready.

Weather prophets and others wise in weather lore predict a severe winter. The sign of the "goose bone," they say, clearly indicates that. Doubtless all readers of FOREST AND STREAM understand the goose-bone prophetic tokens. This year the bone is very dark at both ends, much mottled and broken into dots, breves and lines, which mingle along the keel, indicating changeable weather. The downward bend of the curves indicates heavy and falling weather. The bone further indicates a late and cold spring. Farmers say the corn husks are thick; and trappers declare that the squirrels and muskrats predict a hard winter by their activity in storing and building. I don't know about the justice of the predictions and can tell better in the spring, but it certainly has been a wonderfully warm and pleasant fall, all through the West.

The Illinois State Sportsmen's Association is a quiet but not by any means defunct institution. At the last meeting a game warden for Chicago was appointed, with a salary of $150 a year. His duties are to quietly watch the markets of South Water street, and to report any illegal shipments or selling of game. It was this association, I believe, which once arrested that very good, gray old man, Mr. A. Booth, of fish and oyster fame, and thereby made that gentleman mighty angry. If I remember rightly, Mr. Booth was experimenting in the preservation of meats, and had bought some quail exposed for sale out of season, to pack away under his hermetical process, and keep untouched for two or three years. Nothing very serious came of the matter. A great many worse offenders than Mr. Booth might well be prosecuted. It is to be hoped that the association's warden will not meet the same fate in any attempted arrest that State Warden Pipino and his colleagues experienced at the hands of the doughty Peter Rodenbauer and his shotgun.

Considerable numbers of ruffed grouse are to be seen among the other game now displayed at the stalls.

During a recent trip in Kansas the report seemed general that the prairie chickens were growing so scare in that State as hardly to be valued in the estimates of a shooter; to the contrary, quail will be very plentiful in that State this fall, owing to the observance of the wise protective law and to the closeness with which the farmers have posted their lands and watched their local coveys.

The three-years' law in this State has resulted in marked increase of prairie chickens. Next year they will be abundant in localities not far from here.

OCT. 9.—Mr. Chas. Carhart, of this city, with two friends, Mr. Wm. Bunn, of Springfield, Ill., and Dr. F. S. Papin, of Colorado Springs, Col.; will next week start on a novel and singularly interesting trip, making the last-named place their point of departure. They will travel by wagon and on horseback through southern Colorado, across New Mexico and into Arizona, journeying leisurely and taking such sport as each locality may afford. Dr. Papin, who is the animating cause of the excursion, writes in a letter of directions to his friends in regard to outfit, which shows him to be thoroughly posted on the requirements; and this, coupled with the fact that the party will have a cook and two other men, would indicate that they will be comfortable even if they meet what they may well expect, some pretty cold experiences among the big snowy peaks. No limit is put on the time of this trip, which may last for six months or more. If the travelers really do undertake to traverse by wagon the country indicated, they will be likely to have some unique experiences; and of these, together with the record of deer and turkeys, FOREST AND STREAM has the promise of the news.

The weather is very cold and wet. Rain has fallen steadily for the past few days. Thousands of ducks are reported on Fox Lake, and a rattling trade is doing in guns and shells.

E. HOUGH.

THE WOODCOCK FLIGHT.

Editor Forest and Stream:

Since my letter of last week there has been a small flight of woodcock through the Connecticut Valley, showing that some of the birds attained comparatively northern breeding grounds.

The fringes of the flight just touched Berkshire, and only touched it.

A singular peculiarity of the flight this year and last is the finding of the birds in the wettest of cover, with comparatively none on the high grounds and in the sprouts. What occasions this change? Why do the birds, this extremely wet season, haunt the flooded summer covers, and desert the high birches and maples? Is it a matter of food, temperature or caprice? Who can interpret these mysterious, large-eyed, nocturnal fliers?

I hope yet to hear through FOREST AND STREAM from our Northern and Southern sportsmen who have noticed the movements of the birds. E. H. LATHROP.

SPRINGFIELD, Mass., Nov. 7.

RIFLES FOR SMALL GAME.

Editor Forest and Stream:

I have been in precisely the same predicament described by "N. Orleans" in FOREST AND STREAM of this date, and believe that, from my own experience in solving the problem, I am competent to tell him what to do. If your correspondent will invest in a .32-cal. Colt lightning magazine rifle, chambered for the .32-20 Winchester cartridge (115 grains of lead) and fitted with the Lyman front and rear sights, he will find himself equipped with just the arm he wants. I have shot ducks on Long Island with such a rifle under the precise conditions described by "Orleans" and found that arm to "fill the bill" in every particular. The rifles (whether repeaters or single-shot) adapted for the .32-40 cartridge carry too far, besides which the ammunition is comparatively expensive; but the .32-20 Colt comes within the desired limit of range, and, while not the gun to select for fine target shooting, is sufficiently accurate to kill a duck as dead as a door nail within 150 or 200yds. Of course, that is under the supposition that one knows how to shoot, for it takes a tolerably fair shot to hit a black duck, or even a black swan, at 200yds. with any kind of a rifle not shot from a rest. LOUIS BAGGER.

WASHINGTON, D. C.

Editor Forest and Stream:

You published articles a short time ago on "Rifles for Small Game." I have since made experiments with a .30-40 for rabbits, squirrels, partridges, etc., and I load with 20grs. powder and a round ball of about 50grs., sold here as (S. G.) buckshot. I found this very accurate up to about 50yds., but have not had a chance of trying it at any longer range. I loaded one shell with 40grs. powder and a round ball, and at 10yds. shot clean through a poplar log 14in. in diameter, which was cut last winter; and with the full charge I shot through an ¼in. iron plate and 1¼in. spruce board behind it at 100yds. I think this rifle will fill the bill for all-round work. H. C. BROWNE.

MANITOBA.

Editor Forest and Stream:

In reply to 'N. Orleans," I would say get a .32-cal. rifle. There are several good ones made that might answer his purpose—Winchester, Colts, Ballard or Marlin. I think if he wants to shoot ducks at 150 to 200yds., and with the wind blowing, let him choose a Winchester single-shot .32-cal., using the Marlin and Ballard .32-40 cartridge, and costing $11.25. This is a very accurate rifle, and he need not be afraid of killing a man a mile away, either. I have been using a rifle of this kind for some time and find that it gives satisfaction every time. BULLET.

CARLISLE, Pa.

ELK HUNTING ETHICS.

Editor Forest and Stream:

In the November number of *Harper's Magazine* is an article on "Elk Hunting in the Rocky Mountains," by G. O. Shields, if that is a genuine as distinguished from an assumed name. I commenced the perusal of the article with anticipations of pleasure, which were realized as I progressed, until the author recorded the fact, that after shooting a cow and a calf, which it would be fair to presume would be game enough of that kind at one time for one small hunting party, he had a long chase of miles "through the thickets of underbrush and over the rocks and beds of frozen leaves," and finally came up with and brutally shot a large bull, which apparently he did not want, except that his magnificent antlers might grace the shooter's library. No wonder the writer says: "As I walked up and stood over his prostrate form my soul was filled with remorse and regret at having caused the death of this majestic monarch of the forest." He would have had, as it seems to me, a much finer exhibition of good taste if the "remorse and regret" had continued long enough to prevent the telling in print of so unsportsmanlike a story.

And then for a writer to proceed as this writer does, to criticise and condemn the "skin-hunters" whose shots are rapidly exterminating the few remaining bands of elk. This is too much! He calls it "ruthless slaughter." Was his shooting of that "majestic monarch of the forest" anything but "ruthless slaughter?" The "skin-hunter" shoots for a living, and Mr. Shields calls him "nefarious." Mr. G. O. Shields apparently did not have even the excuse of the "skin-hunter" when he shot three elk, two one night and one the next morning. If "nefarious" is an appropriate adjective to apply to one who shoots that he may live, what manner of epithet would it require adequately to describe a man who after his wants for sport and meat are supplied by shooting a cow and calf, continues to shoot, apparently from pure "cussedness," or to get a pair of antlers? I will let Mr. G. O. Shields select it for himself. Perhaps sometime when he is looking at that pair of antlers with a new "pang of sorrow for the part I played in that great tragedy," he may be able to conjure up an epithet which will fit the case. At least he can try.

There seems to be an idea prevalent among a certain class of so-called sportsmen that the indiscriminate slaughter of even non-ravenous game is all right, provided it is done for fun or in pursuit of pleasure; but that it is all wrong when done for purposes of livelihood. My own training has been in another school of sportsmanship. I do not approve of, and, had I the power, would gladly stop the "ruthless slaughter" of the skin-hunter; but I would get up earlier, stay up longer and work harder to arrest the worse than "ruthless slaughter" of the man who, going out shooting for pleasure, first shoots all he needs or can possibly use, and then keeps on shooting as long as game can be found. And the worst man of all, in my estimation, is the man who after doing all this, comes home and sheds crocodile tears over the narration of his own base exploits.

May the God of sportsmen have mercy on such an unsportsmanlike soul! INDIGNATION.

APPLETON, Wis., Nov. 5.—In this section game is not very abundant. Partridges (ruffed grouse) have been fairly plentiful this fall, but the writer failed to find many woodcock. Was one of a party in camp south of Florence, Wis., for about ten days; found deer rather scarce, and the brush covered with leaves, making rather poor hunting. The weather in October was very warm for this country. I think the best hunting will be after Nov. 10, when the close season begins in Wisconsin. Ruffed grouse were fairly plentiful, but unusually wild. I succeeded in getting enough to supply the table while in camp. The railroad men say that less deer were sent out up to Oct. 25 than for a number of years. One of our party killed a pure white deer, a yearling doe, in rather poor flesh. It attracted a great deal of attention. It was killed near Iron River, Mich. One was killed near there some five years ago, said to have been much larger. The weather was delightful and much enjoyed by our party, alth ugh there was some grumbling at the poor hunting; "but it isn't all of hunting to shoot game."—C. V. Y.

TOWANDA, Pa., Nov. 10.—Four sportsmen from this place made a bag of seven ruffed grouse, two red and one gray squirrel in a day's hunt. Your correspondent, being in luck and having the best shots, brought four out of the seven birds to bag. The number of grouse put up were in the neighborhood of twenty-five, but owing to the thick bottom in which most of them were found not as large a bag was made as should have been, although a number got off with the loss of a bunch of feathers. After another day spent in the woods with a friend our bags on returning home consisted of two ruffed grouse, one rabbit, two red and one gray squirrel. We put up at least twenty birds, but, as hunters of grouse are aware, always in places where it taxes the skill of our most expert shots. One of the birds killed starting directly over my head in the topmost branches of a very tall hemlock on a side hill, and making for the bottom like a rocket. Ruffed grouse are found in fair numbers, but it takes a good shot and keen sportsman in our hills and gorges to make a good bag.—SUS. Q. HANNAH.

CAROLINA QUAIL GALORE.—New York, Nov. 10—*Editor Forest and Stream:* Just after October 15, I happened to be in the town of Fayetteville, North Carolina. The quail season had just opened, and at the invitation of a local sportsman I made one or two hunts. My surprise was so great at the number of birds, the open beautiful fields to shoot in, and the many opportunities for good sport, that I determined to write a line for the benefit of our traveling sportsmen that they may visit this section. They can be lodged very comfortably, a new and excellent hotel being in the town, and railroad facilities are equal to any of the Carolina towns. I must speak a word of thanks for the kind, courteous treatment of the local hunters, who are always willing to guide strangers to the finest fields and largest coveys. A new field is always a good field. This must be my apology for trespassing upon your space.—E. D.

FROM CANADENSIS.—Jersey City, Nov. 2.—Dr. Vreeland, John Metz and party have returned from a five days' sojourn at Spruce Cabin, Canadensis, Pa. They brought back a goodly pile of grouse—some score—and a gobbler. I suppose I ought, in sporting parlance, to say so many brace. They were out two days for deer, started four and had two shots, but failed to score. The Doctor don't say anyting about buck, but Dr. Levering says they intimated malarial, fever. They also got after a bear, but bruin made for the swamp, and the laurels were too much for the dogs and they refused dogmatically the job. Where the dogs could not go neither Milt Price nor the Doctor felt like sacrificing themselves. Their party report a good time, and are going again.—JACOBSTAFF.

QUEENS COUNTY, New Brunswick, Nov. 5.—Game has been fairly plenty this fall, especially ruffed grouse, but shooting has been poor on account of almost incessant rains since Aug. 1. The year 1887 showed us the highest spring freshet since the country was settled. Not to be outdone, 1888 has given us an unprecedented fall freshet. It destroyed nearly all the lowland hay in the valley of the St. John, and the damage is estimated at a quarter of a million. It is going to squeeze people who have good stock which they do not wish to sacrifice.—L. I. F.

WINNIPEG, Man., Nov. 2.—Two Toronto men were fined $25 each and costs at the City Police Court to-day for shooting in the Province of Manitoba, not having a domicile in the Province. The action was taken by Mr. C. A. Boxer, secretary of the Manitoba Game and Fish Protection Society. The game laws of Manitoba state that no game shall be shot, taken nor trapped by any person not having a domicile in the Province, nor shall any game be exported from the Province at any time.

ONE HUNDRED DOLLARS REWARD is offered for John Evers, Esq.'s "Private Letter Book" of the years 1788 to 1794. The late John Evers, A. N. A., is supposed to have loaned it to a De Peyster, or an Onderdonk, a historian. Apply to this office.—*Adv.*

PAULDING, O., Nov. 4, 1888.—*United States Cartridge Co., Lowell, Mass.:* Dear Sirs: I recently used some of the U. S. cartridges which my father has had for about ten years, and they shot well at 50yds. (.22-cal.) and without keyholes. Yours truly (Signed), LOREN KIRK.—*Adv.*

Camp-Fire Flickerings.

"That reminds me."

243.

WE had met to determine when and where we should pitch our tent this fall. One member suggested that we start either before or after Circuit Court met, for some of us would surely be summoned on the jury. Then H. C. S., the genial captain of our party, said, "Did you ever hear how I was excused from serving some time ago? While Judge Buckner presided over this district some time ago, I was summoned, and after Court was called I went to the Judge and asked to be excused, as I had urgent business to attend to at home which required my presence."

The Judge replied, "There are no doubt twenty-five men here who would want to be excused for similar reasons. I cannot excuse you."

"Your Honor, I have served as juror in this court for three consecutive terms, and you ought to excuse me this time for these reasons."

"That," answered the Judge, "only proves your value to the county as a juror. I cannot excuse you."

"Your Honor, I have still others. You ought to excuse me for old acquaintance's sake. When I was quite a small boy you used to camp on my father's farm every spring to keep from serving on the jury in the adjoining county, and I used to supply you with fishing worms."

"You are excused," cried the Judge, amid the roars of laughter that followed from the officers of the Court.

LITTLE SANDY.

NORTH MIDDLETOWN, Ky.

Sea and River Fishing.

HIS HIGHNESS SALVELINUS NAMAYCUSH.

THE lake trout is the *Salvelinus namaycush* of (Walbaum) Goode. It is the identical fish, according to Jordan, that was called *Salmo confinis* by DeKay, *Salmo amethystinus* by Mitchell, *Salmo adirondacus* by Norris, *Salmo toma* by Hamlin, and *Cristivomer namaycush* in Jordan's "Manual of the Vertebrates." The lake trout has been or is known by such common names as Mackinaw trout, great lake trout, lesser lake trout, forked-tail trout, longe or lunge, togue, tuladi, red trout, gray trout, lake salmon and salmon trout. Prof. Goode in his recent work, "American Fishes," says: "The Mackinaw trout or *namaycush* is a non-migratory species, inhabiting the chain of Great Lakes from Superior to Ontario * * * and many other smaller lakes of the United States and of British America. * * * Every lake of northern New York and New England has its own variety, which the local angler stoutly maintains to be a different species from that found in the next township. Some are as black as a tautog, some brown with crimson spots, some gray with delicate reticulations like those of a pickerel. The usual type is brown or gray, dappled with lighter shades of the same general tints. Naturalists have been sadly mistaken by their protean modifications. The 'namaycush' of the North, the 'togue' or 'tuladi' of Maine and New Brunswick * * * the 'trout' of Winnipiseogee and that of the Adirondack lakes, have each been honored with a distinct binominal. The angling authorities still refuse to admit that the lake trout of the East is identical with the Mackinaw trout or *namaycush*, supporting their views by accounts of their very different habits. A careful study of the dead fish is sufficient, however, to convince a trained observer that there are no structural characters by which these different forms may be separated into species."

I think that the above quotation from Jordan and Goode, trained scientists as they are, with all possible means at their command to insure accuracy, will serve to identify the fish now under discussion.

The lake trout has not taken high rank as a fish to be angled for with rod and reel, and this, I think, is owing largely to the teachings of what Prof. Goode terms the angling authorities. Some have evidently written of the lake trout without ever having taken one, others after taking them with coarse tackle only, and still others after taking them at the wrong season for sport. There has been such confusion of opinions among the authorities regarding the game and food qualities of the fish, that its reputation has suffered in consequence. Some writers have denounced it for lack of activity on the hook, some because it would not take a fly, others because it did not leap like the salmon and black bass, and because it lacked in food qualities; but it has also had some defenders, although the weight of evidence seems to have been against it. Thaddeus Norris, the author of one of the best of our angler's text books, was sufficiently interested in the lake trout to give it a specific name, all his own; chiefly because of the color of the flesh of some specimens he caught in Long Lake, Hamilton county, N. Y. Still I think he was unjust to the fish. He wrote of the same fish under two different names, and said: "The lake trout are generally caught in gill nets sunk at the bottom, on set lines, and by fishing with hand-lines in deep water, as well as by trolling at certain seasons of the year. As far as sport goes, they bear about the same relation to the salmon and brook trout that a wagon horse does to a full-blooded racer."

Mr. Norris fished for lake trout on one occasion by trolling with two 2 0-0 Kirby hooks fastened together, "but the hooks in every instance but one were straightened or broken, and the fish lost." Yet he thought when he wrote his book that such a fish "could scarcely be enumerated among what are strictly called sporting fish." Of their food qualities he thought "the flavor is nothing to boast of." Genio C. Scott, contemporary with Norris, differed with him regarding the lake trout in this wise: "This beauty is very gamy, displaying much muscular force and propulsive power in its runs and leaps. It is fine sport to use salmon tackle and take him on the fly until fatigued, when the exercise may be changed to trolling." Nevertheless, Scott says the lake trout are generally taken "with large hook, heavy sinker and cod-fish line." He also says the meat of this fish is highly prized by epicures. Scott, like Norris, wrote of the same fish under two different names, and while the former

says they will rise to an artificial fly the latter says they will not.

J. J. Brown gets into the same rut as regards tackle for lake trout fishing: "They are mostly taken with gill nets and set lines in deep water. The lines used are as large as the largest sized cod lines, and the hooks, which are generally made by the blacksmiths in the vicinity of the lakes, are equal in size to the biggest cod hooks." Brown thinks well of the table qualities of the lake trout, for he bears testimony that by good judges it is considered equal in flavor to any fish that swims.

A contributor to Dr. Bethune's first edition of Walton's "Complete Angler," says of the lake trout, when "tried by the ordeal of fire, a bright carnation glow is spread over those taken from the lake, and they present an Apician morsel fit for the gods." As an offset to the above favorable comment, the writer of which was a member of that old time famous club of statesmen, soldiers, jurists, journalists, good citizens and good anglers, all that met in Walton Hall and fished Lake Piseco before the lumberman's axe was heard on its shores, I borrow this from Lanman: "The salmon trout are of much less value as an article of food than the real salmon, there being nothing at all delicate in the texture or flavor of a mammoth fish. As a sporting fish, too, they are of little value, for they love the gloom of deep water, and are not distinguished by their activity." The lake trout is no more a mammoth fish than the sea salmon, and I never heard of one of the latter being thrown away because it was too large.

Herbert, "Frank Forester" in the earlier editions of his "Fish and Fishing," gave evidence of how little he actually knew of the lake trout when he put himself on record regarding it in these words: "These great, bad, coarse and unsporting fish lie for the most part in the deepest parts of the Great Lakes, seeking their food in the depths, and very rarely rising to the surface, either for food or play. They will scarce ever rise to a fly, and can rarely be taken with a spinning minnow." Herbert describes the usual stout line and cod hook tackle, and the hauling in by force, and says the lake trout is very indifferent eating.

Later, availing himself of that privilege which all anglers have in common with angling authors, and which they should have the courage to exercise, Herbert admitted that he was wrong in his estimate of the lake trout, and for the table pronounced them, "better than trout; better than salmon; the best fish in the world!" In the supplement to Herbert's work, a correspondent of his protests against his unfair judgment regarding the lake trout and says: "I never had hold of a fish of the same size that showed more game, power or endurance, and the only difference I could discover in his mode of action from a salmon was that he did not show himself or leap. * * * For the table I prefer the lake trout to the best brook trout."

Roosevelt sums up the qualities of the lake trout thus: "So little particular is this voracious fish that he will bite at a white rag attached to the bare hook. Once struck, however, he surrenders without an effort. * * * A handsome fish to look at, he is also excellent to eat, and with the peculiar conformation of the trout he combines the elegance and the rich redness of flesh of the salmon. * * * A common hand line of 50 or 100yds. is sufficiently good tackle."

Milner, as was natural perhaps, seems to have pursued his investigations as to the capture of the lake trout among the market fishermen only, for he says: "At other times than their spawning period they remain chiefly in deep water, a depth of thirty fathoms being the most favorable ground for their capture. They are readily taken with a hook baited with a piece of fish. They are a sluggish fish to pull in, taking hold of the bait with a tug at the line, and then allowing themselves to be pulled to the surface with no more vibration in the line than if a heavy sinker was the weight at the end."

There is excuse for the confusion of opinions respecting the game and other qualities of the lake trout that existed among the angling writers of twenty-five or thirty years ago, for the fish was comparatively little known except as a fish of commerce, taken in nets and with rude tackle by market fishermen, and it is not surprising that the indictment drawn against it as a game fish should have contained many counts. At a time when the scientists groped about in semi-darkness regarding its identity, specific characteristics and nomenclature, it is not strange that the anglers should have been equally in the dark concerning its game qualities, habits, mode of capture as a sporting fish, and of its edible qualities; but in the year of grace 1888, when modern ichthyological science has turned its search light on the lake trout, classified it beyond cavil, described its home and habits so that all may know them, and modern anglers with modern tackle have given the fish a place among the game fishes of North America, there would seem to be no excuse whatever for the serious mistakes of a writer in a March number of *Land and Water*. The article is written from and purports to describe the *Salmonidæ* of the Province of New Brunswick, and is the more open to criticism because the author conveys the impression that he is historically and scientifically correct and speaks by the card. The letter, which does not give the author's name, is marked to be continued—which it never has been—and is very interesting except for such gross errors as totally disinheriting and cutting off from the family tree one species of trout, and out of another making four distinct species. This subtraction and addition may be amusing to one mathematically inclined, but it certainly is worse than confusing to the angler who in the text books is told that New Brunswick has but two species of trout, the *namaycush* and the *fontinalis*, and that of the latter there is but one variety, the so-called sea trout. This is the gentleman's case as stated by himself in *Land and Water:*

"The genus *Salmonides* furnish what strictly may be termed the game fish of this Province, although in this category we may include the bass. [The writer means, probably, the black bass.] Salmon, as a rule, are found in the larger streams, conjointly with the trout, where obstructions, in the shape of dams, have not interfered with access to their spawning grounds. The different species of trout in New Brunswick I class as follows: First, the brook or river trout, rarely exceeding 3lbs. in weight, flesh white; second, the salmon trout, flesh pink, attaining the same size and inhabiting the same locality; third, the lake trout, sometimes turning the scales at 8lbs., rarely exceeding 5lbs., flesh pink, sometimes white, making two varieties; fourth, the silver or migratory species, common to both lake and river. Various writers on this subject have mentioned a number of other so-called varieties, but I have been unable to detect any anatomical differences in the many specimens I have examined from various localities to warrant the assertion. These variations (if they may be so termed) are chiefly owing to the condition of the bottom and color of the water. I can account for much of the conflicting testimony as to the number of the varieties of trout in this way. Careless observers class the togue among the *Salmonides*, than which nothing can be more erroneous. To external appearance this fish has almost a perfect resemblance to the trout, with the exception of its spotting. An investigation of its habits, teeth, gills, etc., reveals the fact that it does not belong to this order. It is found in many of our large lakes, and I have taken them 20lbs. in weight. A specimen weighing 18lbs. is now in the Museum of Natural History, St. John, presented by me. This cannot be considered as a game fish, as, being a bottom feeder, it can only be taken with bait."

I enter an earnest protest against this attempt to rob the togue, which is but another name for lake trout, of its birthright. I would not object to this gentleman's attempt to make four species of trout out of the *Salvelinus fontinalis*, for that is what is attempted, habitat and food producing the variations that he notes, if he did not at the same time ruthlessly expel the *namaycush* from the family to which it belongs; and I can but wonder that he should present a specimen of the fish to a museum of natural history and not discover his error. "The lake trout is not a game fish because it can only be taken with bait." This statement is not correct, for I will show that lake trout have taken the fly under like conditions and in same water with the brook trout; but admitting it, what is the status of the tarpon and large striped bass which are taken only with bait, and of the landlocked salmon, more of which are taken in Maine with bait than with the fly, if published reports can be relied upon for comparison. The mascalonge and pike are caught on the same lures that are used in lake trout fishing, and there are people who think that these two species are entitled to the appellation of game fish.

It strikes me that the gentleman's feeling upon the merits and demerits of the *namaycush* are decidedly arbitrary. It is not entirely safe, in matters pertaining to fishing, to set down one's own experience as a hard and fast rule for the guidance of others. I had fished for lake trout for at least twenty-five years without once seeing one—under any circumstances— jump from the water; and it is possible that I have stated in public prints a half a score of times, that the lake trout did not jump out of water under any provocation. Two years ago I saw, within two hours' time, three lake trout jump entirely clear of the water; two of them were in the air at the same time, and since then I have seen a dozen or more jump in the same way. I must admit that the lake trout is not a fish to be depended upon to rise to an artificial fly when cast on or drawn just beneath the water, still there is abundant evidence to show that they do under some conditions take the angler's artificial fly. The most striking instance, and that's not a pun, is, perhaps, that related in "Fishing with the Fly," by Mr. H. H. Vail, of Cincinnati, which occurred during a trip to the Nipigon River:

"At several points on the river, particularly in the wild water at the foot of falls, the Mackinaw trout (*Salvelinus namaycush*) was abundant, and took the fly with as much vigor as any *Salvelinus fontinalis*. We could not tell which we had struck except from a flirt of the caudal fin. The 'well-forked' caudal fin of the Mackinaw trout was frequently distinguished by our guides at a great distance. They do not play toward the surface so much as the brook trout. They were fat and lazy, two or three long runs generally wearied them so that they led peacefully into the net."

In a personal letter to the writer, Mr. Vail says, "The lake trout in Nipigon River took the fly beautifully in the wildest water," and noted the catching of same species of fish with a fly by his brother in Megantic waters, Canada; but in the latter instance he applied the local name of togue. Possibly the lake trout lacks opportunity to take an artificial fly more than it lacks the desire. One frequenter of the Adirondack wilderness has related in the angling papers how he has taken lake and brook trout indiscriminately on a fly at each recurring visit in early spring. These fish, however, were small, while Mr. Vail's averaged 8lbs. each. It is not necessary to multiply instances of the lake trout taking the fly, the angling papers frequently record them; but even as a fish that takes bait only, it is entitled to rank as a game fish.

There is a fishing article in a recent issue of one of the New York daily papers in which an angler of three score years and ten addresses a younger man thus: "You can catch black bass and brook trout when they are hungry, but you do not possess knowledge of lake trout nor do you know how to catch them; it requires intelligence as well as bait, and bullhead luck don't count in lake trout fishing." I would not dare say that, but I am glad some other fellow did. Fortunately, all anglers do not think alike about the various fishes which are found in our waters. One friend tells me he would rather catch one black bass than a dozen brook trout, and he considers the time I spend in fishing for lake trout as simply thrown away. Another friend, when I had trolled two days for mascalonge in Hay Bay without getting a fish, said that should be the fate of every one who would fish for the blamed sharks; all of which may confirm the statement in the New York *Sun* that "almost any angler has a certain kind of fish that he takes the greatest pleasure in capturing." Personally, I do not think I am hidebound in my preference for any particular fish of half a dozen species, and this article is not written because I esteem the lake trout above other fish. A. N. CHENEY.

[TO BE CONCLUDED.]

ST. LOUIS FISHING NOTES.—St. Louis, Mo., Nov. 9.—Fishing just now at Gillied's Slough is excellent. A party of gentlemen returned from there a few days ago with a fine string of croppie and bass. They had considerable more croppie, though, than bass, the latter being not inclined to take the minnow as quickly as the croppie. Some of the croppies which they succeeded in enticing on the lines weighed fully 3lbs., and were undoubtedly the finest lot, taking them collectively, that were brought into this city this fall. The slough in question is about eighty-five miles above this city, and is connected with the Mississippi River. Fishing is always good at the slough in the fall when the water is low, and many old-time fishermen can recall some grand sport had with the rod up there. The catches of the party above mentioned has enthused quite a number of the fishing cranks, and many of them will depart in a few days for the slough to cast their lines with hopes of big catches of bass and croppie.—UNSER FRITZ.

A HOUSE WARMING.

AN account of an angler's house warming comes to us from over the sea, and is so filled with a spirit of fraternity and of the best bond of brotherhood between the followers of the gentle craft, with which the older angling books are filled, that it deserves more than a passing notice. What we refer to is a small sixteen-page souvenir, on fine paper and in good type, with illustrations, which bears the following on its title page: "Our House Warming. An account of the proceedings on taking possession of our new rooms, July 12, 1888, with two illustrations, and a prefatory poem by Cotswold Isys, M. A. Edited by C. H. C. London: The Fly Fishers' Club, 19 Arundel street, Victoria Embankment, W. C., 1888." In the preface the editor informs us that his modest little book is only intended to perpetuate the memory of the event in the club's history of moving into new quarters, but the collector of angling literature will long to possess this little gem when he learns that only 350 copies were printed.

Eighty members of the Fly-Fishers' Club sat down to dinner to commemorate the removal to the new premises. The chair was taken by the Hon. Sir Ford North, and although the meeting was in the height of the fishing season, the fact that testimonials were to be presented to the founders of the club, W. R. B. Marston and W. D. Wilson, the treasurer and secretary, brought out a large attendance. In his after dinner speech the chairman said that the idea of a club of fly-fishermen was not a new one; he remembered mentioning the matter to the late Francis Francis nearly twenty years ago and found that Mr. Francis had talked of such a scheme to others, but they had not seen their way to carry it out, and the first person who combined the conception of the happy thought with the power and will to carry it into execution, was Mr. R. B. Marston, and it had occurred to some of the members that it would not be right to pass the occasion by without asking him to accept a small testimonial. This consisted of a solid silver tea and coffee service of five pieces and a solid silver flask, with an appropriate inscription. The testimonial to Mr. Wilson was an English semi-hunter gold watch, a double Albert gold chain with a gold crystal-faced compass, and a silver flask. Afterward the company went upstairs into their own room, which is one of the best ventilated club rooms in London, is handsomely furnished, the walls covered with excellent paintings, a few fish pictures, etc. The connection between the club and the Arundel Hotel is profitable to both, the members having a special tariff for refreshments.

A similar club has been proposed to be formed in New York, and there is certainly plenty of good material here to form it and make it successful. A nucleus for it might be found in the National Rod and Reel Association, which contains a few jovial and companionable men, although they have never succeeded in getting up more than one dinner after their tournaments, mainly because of the geographical position of the city where so many city men live a few miles in the suburbs; or perhaps those few scholarly gentlemen who dine once a year and "endeavor to tell a truthful fish story" might enlarge their circle and lay the foundation for a club something like their brothers of the angle in "Merrie England." Such an institution ought to bring together many congenial spirits who would appreciate such an institution, especially when the streams are frozen and the tackle is laid away. The jolly Ichthyophagous Club seems to have exhausted all its resources in finding new and horrible aquatic monsters to astonish and appal their guests with, and has not met in over two years, but among all the members of these different organizations there is surely no lack of sound angling timber from which to make a club that could be useful as well as enjoyable, and, if the right persons take hold of it there is no doubt of its success. The London club of fly-fishers is a young one of only a few years growth, yet it has 270 members and is on a sound financial basis.

SKUNK RIVER.

NEWTON, Iowa, Nov. 1.—The boys say they are catching good strings of wall-eyed pike in Skunk River. If so, I don't know how they do it. My father and brother were out yesterday, and didn't get a bite, and they ought to know how to fish. The river is low, and the fish are to be found only in the very deepest water. Skunk River near here was until lately a wonderfully good game fish stream, but has run down. The main causes are illegal seining, the use of dynamite by a few fiends at Colfax, just above here, the great waste of young fish life by the drying up of bayous after overflow, and the recent freezing almost to the bottom of Mud Lake, in Hamilton county, Iowa, which is the main head of the Skunk River, and probably an important breeding ground for it. Intelligent work by the Fish Commission, such as is done in Illinois, would again make this a grand stream. It would cost very little to dip out of the shallow bayous millions of little game fish which annually die in the mud, and which could just as well be replaced in the river. I suppose the State Commission would rather monkey with carp, or try to plant trout in Iowa mud-bottom streams. Nothing like science. It's pretty tough on fishing, though. E. H.

THE PARADISE FIN AND FEATHER CLUB was organized in this city last week. The organizer was Mr. Kit Clarke, who, it will be remembered, wrote of Lake Edward in Quebec last summer; and it is there that the Paradise Club will have its headquarters. The officers and the charter members are: President, Judge Gildersleeve; Vice-President, J. Charles Davis; Treasurer, Kit Clarke, and Secretary, J. Kline Emmett, Jr. Charter members, Judge Gildersleeve, Charles B. Jefferson, Dr. W. F. Duncan, John Wood, James F. Davis, H. S. Taylor, Kit Clarke, J. Charles Davis and J. Kline Emmett, Jr. The club is limited to twenty members, and the Committee on Membership have already more applications than they can grant,

FISH PROTECTION IN DELAWARE.

A MEETING called by Dr. E. G. Shortlidge and others, was held at the rooms of the Board of Education in Wilmington last week for the purpose of taking steps toward forming an organization for the protection of fish and game. A temporary organization was formed by the election of Ellwood Garrett as chairman and Mr. J. Travers Jones as secretary.

The object of the meeting was stated to be the formation of a society for the better preservation of fish, especially in the Brandywine River, and of game throughout the State. It is a notorious fact that the statutes protecting fish and game are continually transgressed. A large pecuniary expenditure is made annually and at considerable effort of time and care to stock the streams of the State, but no protection is afforded whatever. The way the game laws are broken, especially in the region of the Brandywine, demands the attention of the authorities as well of the citizens.

Dr. Shortlidge, who has done the work of fish hatching for the State for some years, said that the catching of infant bass, planted by the State, was an evil that should be remedied. These fish are taken before they have had time to reach maturity, and in this way the work of the Fish Commission is neutralized. As the majority of these small fish are taken by boys, the Doctor said that he fully realized the fact that the protection of these fish would deprive the youthful angler of a pleasure, but in this case, such a deprivation would be a benefit to the whole people. Boys naturally cannot comprehend such an injunction. But the necessities of the case, the increasing paucity of fish in the streams and the difficulties in expense and trouble attending the efforts to restock are such that juvenile whims must be overridden and the laws enforced in all its provisions. Dr. Wales suggested the propriety of the society sharing its attention and solicitude with the food species of fish equally with the game species. The suggestion received the indorsement of various members who joined in the discussion and the point of comprising that idea in naming the society was informally adopted.

Dr. E. G. Shortlidge, John P. Doughten, Harry McConnell, Dr. J. P. Wales and D. W. Harlan were appointed a committee on constitution and by-laws. Action on permanent organization, enrollment of members and election of officers was postponed to next meeting, to which all persons interested in the important question of the propagation and preservation of fish of both the food and game species in the State and of the more vigorous prosecution of the game laws are invited.

Adjournment was made to meet Thursday evening, Nov. 15, at 8 o'clock, in the same place.

PIKE IN THE HUDSON.—During the past week several large pike (*Esox lucius*), locally called pickerel, have been taken in the upper Hudson. Henry Hawes, of Hudson, is reported to have taken one which weighed 34lbs.; while Mr. Linley, of Claverack, recently took one of 30lbs. It is doubtful if these fish are numerous enough to breed in the river, but they occasionally come down the Northern canal from Lake Champlain, and their appearance creates surprise. Some twenty-two years ago we took one below Albany while fishing for perch and black bass, which weighed 10½lbs., and have occasionally heard of larger ones being taken. From what we know of the river we do not think that an angler would meet with much success in fishing for them.

Fishculture.

THE U. S. STATION AT CLACKAMAS, OREGON.

Editor Forest and Stream:

Sometime last summer, the Oregon and Washington Fish Propapating Co. deeded to the United States the premises occupied by the Clackamas salmon hatchery, on the Clackamas River, Oregon. This is probably one of the best points in the United States for taking salmon eggs, and although the nets and seines and traps and other devices for capturing salmon, seem to reach in almost a continuous line from the mouth of the Columbia to the hatchery itself, the Clackamas station has, nevertheless, succeeded in securing nearly five million salmon eggs this season. This not only beats the record of this station, but is a larger number than could be taken, at present, at any other place in the United States, and indeed in the world, with the exception of the Canadian hatchery on the Fraser River in British Columbia.

The McCloud River salmon station in California, which has always held the world's record in taking salmon eggs, succeeded this year in taking only 1,500,000 eggs. But either the McCloud River station or the Clackamas station, both being wonderfully adapted by nature for taking salmon eggs, could easily secure 10,000,000 eggs a season, if the parent salmon had half a chance to get up the rivers.

As it is the salmon are so unmercifully netted and trapped on their way up to the stations, that it seems almost a miracle that any of them get there alive. It is, unhappily, very difficult on this coast to obtain any restrictions on the salmon fishing, but if the fishermen and others who reap a profit from the salmon fishing, would only exercise a reasonable amount of foresight and self restraint in providing an adequate close time every year, the salmon hatching stations on the Clackamas River and on the McClouds could soon fill the Columbia and Sacramento Rivers more full of salmon than was ever known in the best salmon days of these rivers, even before white men began their wholesale destruction of salmon with their traps and nets. X.

The Portland, Or., *News* gives the following items concerning the work at Clackamas: About fourteen miles from Portland, in a southeasterly direction, is the confluence of Clear Creek and the Clackamas River. Between the junction of these streams is the United States salmon hatchery. The spot, surrounded on either side by fir-covered hills, is a most picturesque one. Here has been set off for hatchery purposes, a piece of land triangular shaped, and covering an area of fifteen acres.

In the year 1877 the newly organized Oregon and Washington Fish Propagating Company engaged the services of Professor Livingstone Stone, Assistant United States Fish Commissioner, with a view of the establishment of a salmon hatchery at some point in the Columbia River basin. In his survey of the country, Professor Stone was attracted to the Clackamas. Coming to the above described spot he was struck with its advantages. Fearing lest there might be a better location above he secured the services of an Indian guide and proceeded up the stream a distance of twenty-five miles. Finding no better location, he returned to Clear Creek, at which point it was decided to begin operations. A survey of the place shows the wisdom of his choice. Besides its many natural advantages, the place is near Portland, from whence all supplies are obtained.

The building is 40x100 feet, with eight foot walls. Within are the hatching troughs which are about two feet wide and sixteen feet long. They are placed two together, four lengths of them reaching the length of the building. There are six rows of them, making a total of forty-eight. Each row will accommodate 1,000,000 of eggs, making a total of 6,000,000 in the room. It is the intention of Professor Stone to stretch a tent 60x30 feet, in which will be placed five rows of these troughs with an accommodation of 5,000,000 of eggs. In the house and tent there will be placed 11,000,000 eggs at the proper time.

One quarter of a mile above the hatchery the salmon meet with a barrier which is interposed by the hand of man to prevent them going beyond. This barrier is constructed of two-inch scantlings placed at an interval of about two inches apart and slanting with the stream at an angle of forty-five degrees.

Where it crosses the river there is a small island dividing the rack, as it is called, into two sections. Here at this rack is seen one of the most interesting sights that was ever the fortune of the writer to behold. Before arriving at the spot one can see the caudal fins of the salmon appearing above the surface, and in many places can be seen the backs of the largest ones projecting from the water. Boards have been laid along the rack, and, walking upon these, you look down and see nothing but a mass of fish. In some places they are piled up one above another to the depth of four or five feet. They are quite tame and remain almost in the same position while you view them. In their vain efforts to get further up the stream, they run against the rack with their noses, and nearly every one of them presents a bruised appearance. In many cases they force their noses between the scantlings of the rack, bruising their heads as far back as the eyes, which seem in some cases to be entirely out. The scene beggars description and must be seen to be appreciated. Professor Stone estimates that there are about $25,000 worth of salmon who are checked in their course. They will not return down stream, and thus they remain awaiting the time for spawning. Crossing the river and ascending to the summit of the bluff mentioned above, one looks down into the river below, and sees underneath him three large dark spots of salmon, one directly underneath another in the center of the stream, and the other close to the further shore. They are thickest at the upper end, and gradually taper down to one at the lower end. Their appearance may be compared to a flock of geese in reversed position. The whole scene may be likened to an army drawn up in battle array. You have the center and right and left wing. On asking Professor Stone how many fish there were there, he replied there were about 6,000 in view.

The length of time required for the eggs to hatch varies with the temperature. In a temperature of 50 degrees it requires about fifty days. A colder temperature requires more time, and a warmer one less.

It is expected to put in the river this fall 8,000,000 or 10,000,000 young salmon, provided no ill luck is had. It is understood that about four years are required for salmon to mature. In reply to the question, whether any benefit is derived from these hatcheries or not, it may be stated that in California it is shown that the number of canneries has more than trebled. Fish hatching for the purpose of supplying food has at length become popular. A visit to this hatchery is one of rare interest, and persons visiting will find Professor Stone to be a very courteous and pleasant gentleman, who takes pleasure in showing visitors around the premises, and explaining to them the different workings of the hatchery.

THE CINCINNATI EXPOSITION.—The exhibition at Cincinnati closed on the 8th inst., and the fisheries portion of it is being packed for return to Washington. Capt. J. W. Collins, in charge of the fisheries department, has made a very creditable display of material and apparatus. The young California salmon, to the number of ten thousand, which were hatched at the exposition, have been planted in Traverse Bay, Michigan.

NEW HAMPSHIRE.—The Penobscot salmon noted in your last, from which Commissioner Hodge secured the eggs, should, I think, read "Merrimac," as Mr. Hodge has no access to the Penobscot River, and the paragrapher evidently meant to imply *Salmo salar* only.—VON W.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 1 to 4.—Fourth Dog Show of the Meriden Poultry Association. Joshua Shute, Secretary, No. 430 Pratt street, Meriden, Conn.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

FIELD TRIALS.

Nov. 15.—Fifth Annual Field Trials of the Philadelphia Kennel Club, open to members only. Wm. H. Child, Secretary, Philadelphia, Pa.

Nov. 19.—Tenth Annual Field Trials of the Eastern Field Trials Club, at High Point, N. C. (Members' Stake, Nov. 15.) W. A. Coster, Secretary, Saratoga Springs, N. Y.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

CHESAPEAKE BAY DOGS.—Will George Baldwin, who wrote an article on Chesapeake dog, kindly favor "G. E. S.," Burlington, Vt., with his address. I should like to correspond with him.—E. B. S.

INDIANA KENNEL CLUB'S TRIALS.

[*From a Special Correspondent.*]

INDIANAPOLIS, Ind., Nov. 10.—*Editor Forest and Stream:* The second annual field trials of the Indiana Kennel Club opened Thursday, Nov. 1, with the Derby, at Bicknell, Ind. The day was bright and warm; notwithstanding this the work done was of a very superior character. There were plenty of birds, and the grounds look as if they were made to order. It was remarked by several that the grounds were very similar to those of High Point. Considering the season of the year, and that many of the puppies had been worked but a short time, I look upon this as the best Derby ever run in America. There are a few dogs that I desire to mention that did exceptionally fine work, viz., Florence Gladstone, Bertraldro, Rod's Gal, Tennie and Van Bang. Out of seventy nominations there were twenty-eight starters—sixteen setters and twelve pointers. The judges were Mr. D. C. Bergundthal, the veteran judge and president of the club; Col. A. G. Sloo, a genial, whole-souled gentleman of large experience in field work, and Mr. Ed. S. Shultz, first vice-president of the club and proprietor of the Devonshire Kennels, of Attica, Ind.

Eleven braces were disposed of the first day, and ample time was given in each heat to determine which was the best dog. The object of the club was carried out to the letter, namely, that every dog and handler should have a fair showing, and if possible place the best dog first. The decisions in every heat were indorsed by every one present, handlers included. It was estimated that over five hundred people attended the trials. I noted in attendance the following gentleman from abroad: Maj. J. M. Taylor, Syracuse, N. Y.; Mr. Smith, Dayton, O.; Will Stewart and E. Ramier, of Danville, Ill.; Dr. J. E. Link, Terre Haute; Dr. John R. Daniels, Cleveland, O.; Curtis Wright, Connersville, Ind.; Mr. Boli, Hamilton, O.; John Patterson, Noblesville; R. W. Wehrle, Blairsville, Pa; A. and W. G. Millier, Kansas City; G. F. Miller, G. W. Carlisle, W. I. Mitchell and J. C. Sherlock, Cincinnati; C. C. F. Bent, Supt. O. & M. R. R.; Joseph Becker, Thos. Howell, Royal Robinson, P. T. Madison, M. R. Williams, S. H. Socwell, H. A. Comstock, Indianapolis; Geo. Hunter, Washington, D. C.; J. B. Turner, Chicago. The owners and handlers present were: W. B. Stafford, W. W. Titus, Chas. Shaake, J. A. Hunter, J. L. Barker, C. W. Barker, Geo. De Walt, A. J. Gleason, Geo. McLin, John Bolus, Chas. Menker, J. B. Stoddard and J. B. Carnahan.

Florence Gladstone, the winner of the Derby, is a beautiful black, white and tan English setter of medium size, weighing about 35lbs. and looks every inch a winner. Being in the best possible condition she did her work like a veteran, covering her ground systematically and hunting with goood judgment; she fully demonstrated that she carried her nose with her. She is owned by Mr. J. I. Case, Jr., of Racine, Wis., and was trained and handled throughout the Derby by Mr. C. W. Barker She is a magnificent specimen of her breed and her owner should be very proud of her.

Bertraldro, the winner of second, is a beautiful specimen of the pointer family; he shows great range, speed and style, and is possessed of a great deal of bird sense. Tennie and Rod's Gal (pointers) are both good ones and will make it hot for the winners in other trials where they are entered.

The winner of the All-Aged Stake, Bohemian Girl, a blue belton English setter, is the best specimen of her breed I have ever seen. She will weigh about 50lbs., is very rapid, goes with a high head, and jumps into her points, is easily controlled and knows more about what is required of a first-class field dog than half of the people who shoot. If I were to go shooting over this dog I would allow her to lead me where she liked, and I am positive she would give me all the shooting I wanted. I look upon her as the best setter living. I warn the boys at High Point to keep an eye on her when she is put down in the Champion Stake, as I understand she will run there.

Polly II., the winner of second, is a handsome black and white bitch, about 35lbs., has plenty of bird sense, knows where to look for game, and points it staunchly when she gets there. She has speed, range and style, is easily controlled and would be a pleasant companion for any gentleman, and would give him all the sport he wanted in the field.

Effie Hill, one of the winners of third, is a medium-sized black, white and tan English setter of about forty-five pounds, has good speed, range and style, is a merry worker, points, backs and retrieves handsomely. She has every appearance of a winner, and is a dog any gentleman would be proud of.

King's Mark, the other third prize winner, is a black and white English setter with great speed, plenty of nerve and a dog that will undoubtedly stand a great deal of work. If he were a little more decisive in his points he would be a dangerous competitor in any trial.

In the Indiana or Members' Stake there were six nominations. Mr. P. T. Madison's Gordon setter Don's Boy being the only starter he was declared the winner without competition. Don being a nice retriever and a dog full of style, speed and range, and having been in Carnahan's hands six weeks, the boys seemed to be afraid to start their pets against him.

THE DERBY.

THURSDAY, NOV. 1.

ROD'S SON AND NELLIE DUANE.

Mr. W. B. Stafford's liver and white pointer dog Rod's Son (Rod—Belle), handled by his owner, and Mr. R. W. Wehrle's black and tan Gordon setter bitch Nellie Duane (Briar—Fannie) were cast off in a ragweed field on the Phillippi farm, half a mile south of town, at 8:10 A. M. Both dogs went to work in earnest and showed considerable speed. Rod's Son going down wind flushed a single outlying bird; in a moment the covey flushed and went to the woods. The birds were followed, Rod's Son pointed and moved on; then Nellie did the same; then Nellie pointed a single in good style, but was slightly unsteady to shot. Nellie pointed again and was steady to wing. Passed on to ragweed field. Rod's Son pointed and moved on. Passed on to another wood, then into another ragweed field. Spectators flushed a bevy. Birds were followed to the woods. Nellie pointed a single; Rod's son backed, both dogs steady to shot. Nellie pointed twice in succession beautifully and won. Ordered up at 9 A. M. In speed, style and range Nellie was the superior.

TENNIE AND PERRY T.

Mr. W. B. Stafford's liver and white pointer bitch Tennie (Rod—Nell) and Mr. P. T. Madison's black, white and tan setter dog Perry T. (Jack W.—Gladys), handled by Shaake, were put down in a ragweed field at 9:15. Perry pointed in edge of briers and birds flushed almost instantly. Birds were followed to the woods, where Tennie pointed. Stafford shot, both dogs were steady. Passing on, Tennie got two single points. Perry T. being very lame and in no condition to run, Mr. Madison, the owner of Perry T., requested the judges to take up the dogs and award the heat to Tennie, which was done. Taken up at 9:25.

SUE AND DASHING DIXIE.

Mr. W. B. Stafford's liver and white pointer bitch Sue (Rod—Nell) and Mr. W. G. Peter's blue belton setter bitch Dashing Dixie (Dashing Dale—Dashing Model), handled by Mr. A. J. Gleason, were put down in an open woods at 9:35. Passing into a stubble field Dixie pointed a covey handsomely, Sue backed. Gleason shot and both dogs were steady. Moving on Sue pointed; while waiting to bring Dixie up to

back the birds ran; then Dixie pointed and Sue backed, both dogs steady to wing. Followed birds to the woods, where Dixie pointed and Sue backed; both dogs dropped to shot. Ordered up at 10:02. Dashing Dixie won. The work done in this heat was very fine. In style they were equal, but Dashing Dixie had the advantage in speed and range.

GATH'S SPARK AND FLORA TEMPLE.

Mr. S. H. Socwell's orange and white setter bitch Gath's Spark (Gath's Hope—Lady M.), handled by Stoddard, and Mr. A. J. Gleason's black, white and tan bitch Flora Temple (Zippo—Ruby Buckellew) were cast off in an open woods pasture at 10:20. Flora pointed indifferently in a bunch of briers; then Spark pointed and Flora backed, both dogs steady to shot. Moved on and Flora pointed and Spark backed to order, both steady to wing. Ordered up at 10:38, Flora Temple won. Flora had the most style; they were equal in speed and range.

MINNIE AND LOTTA C.

Mr. Curtis Wright's black, white and tan setter bitch Minnie, handled by Stafford, and Mr. J. I. Case, Jr.'s liver and white bitch Lotta C., handled by C. W. Barker, were put down in open woods pasture at 10:50. Going down wind Lotta flushed a covey, birds were followed and Lotta pointed a single in fence corner. Minnie backed, both steady to wing. Passing on Minnie flushed a single; then Lotta pointed a single and was steady to shot. Minnie false pointed. Moved on and Minnie flushed a single. Then flushed another and dropped to wing. Then Lotta pointed and Minnie backed. Dogs ordered up at 11:20 and the heat awarded to Lotta C. Minnie was more stylish than Lotta, but Lotta had the advantage in range and speed. An adjournment was now taken for lunch.

DAISY HUNTER AND SYLPH.

Messrs. G. A. and J. A. Hunter's orange and white setter bitch Daisy Hunter (Gath's Hope—Daisy F.), handled by J. A. Hunter, and Mr. J. L. Barker's red Irish setter bitch Sylph (Glencho—Ashmont Nord) handled by C. W. Burker, were put down in a large ragweed field at 12:18. Daisy displayed a wonderful burst of speed, being by far the speediest dog yet shown. Daisy false pointed in a bunch of bushes, passed on and flushed a single, then pointed a covey, steady to wing, passed on and pointed another covey, was steady to shot and wing. A short distance further on Daisy pointed a single and was steady to wing. Ordered up at 12:37. Daisy Hunter won. Daisy had all of the speed, style and range shown in this heat.

CALIPH AND RESOLUTE.

Mr. C. G. Winchell's black and white setter dog Caliph (Kota—Topsy), handled by Chas. Shaake, and Mr. J. I. Case, Jr.'s blue belton setter dog Resolute (King Noble—Queen Vashti) handled by C. W. Barker, were cast off in open field at 12:53. Passing to a ragweed field Caliph flushed a single bird in edge of an old orchard. Resolute flushed a single in briers. Then Resolute pointed a single in fence corner. Ordered up at 1:48. Resolute won. Resolute had the call in range, speed and style.

PHIL SHERIDAN AND NELLIE REX.

Dr. J. E. Link's black pointer Phil Sheridan (Jo Pape—Nellie), handled by J. B. Stoddard, and Mr. Joseph Becker's black and tan setter Nellie Rex (Rex—Gip), handled by Geo. McLin, were put down in a ragweed field at 2. Nellie pointed covey, Phil refused to back, but walked in and flushed the birds; birds went on to another ragweed field, where Phil pointed and Nellie backed; both dogs steady to wing. Following the birds to the woods, Nellie pointed single in the briers and was steady to shot. Dogs taken up at 2:22 and the heat awarded to Nellie Rex; she was superior in range, speed and style.

NOBLE BANG AND LILLY P.

Mr. Chas. Wheelen's liver and white pointer dog Noble Bang (Bang Bang—Vanity), handled by Stafford, and W. P. Coleman's liver and white pointer bitch Lilly P. (Drake—Phœbe), handled by Gleason, were put down at 2:29, where the last heat was finished. Lilly P. pointed a single and was steady to wing. Passing on, both dogs pointed at the same time; both were steady to wing. Passing on, Lilly got two more points and won. Taken up at 3:14. In style, speed and range they were about equal.

FLORENCE GLADSTONE AND DUKE P.

Mr. J. I. Case, Jr.'s black, white and tan setter bitch Florence Gladstone (Gladstone—Flounce), handled by C. W. Barker, and Mr. W. P. Coleman's liver and white pointer dog Duke P. (Drake—Phœbe), handled by A. J. Gleason, were put down in open woods pasture at 3:20. Duke pointed a covey in grand style and was steady to wing. Passing on Florence pointed a single and Duke backed; both dogs steady to shot. Then Duke pointed a single and Florence backed. Gleason flushed and shot, both dogs dropped to shot. Passing on, Duke flushed a single and Florence further on pointed a single and was steady to wing. Ordered up at 4:32 and heat awarded to Florence Gladstone. Florence was superior in speed, style and range.

BERTRALDRO AND ROD'S GAL.

Mr. A. W. Whipple's liver and white pointer dog Bertraldro (Cornerstone—Bessie Beaufort), handled by A. J. Gleason, and Mr. W. B. Stafford's liver and white pointer bitch Rod's Gal (Rod—Juno) were cast off in a stubble field at 4:40. Gal pointed covey at the edge of the woods, Bert backed in style. Stafford shot, both dogs dropped. Moved on and Bert pointed single and was steady to wing. Moving on again Bert pointed where a bird had just been seen flush. Moving to other side of field Bert pointed a covey, Gal backed; both dogs dropped to shot. Moving on Bert pointed a single, jumping into his point in style; Gal backed, both dogs moved and bird flushed, both dropped to wing. Moving on Gal pointed covey and Bert backed, both dropped to shot. Moving on Gal pointed and when birds were flushed she dropped to order. The dogs were ordered on and both pointed at the same time; moved on and both pointed again; moved on again and Bert pointed near a patch of briers. Gal coming around briers flushed the bird; both dogs dropped to wing. Ordered up at 5:15 and the heat given to Bertraldro. Your reporter has never seen any better work than was done in this heat. In style, range and speed they were equal. This heat was a fitting close of the work of the first day.

FRIDAY.

The day opened cloudy and warm with every indication of rain, which came about ten o'clock and interfered greatly with the work of the trials.

FRANK R. AND FLOSSIE NOBLE.

Mr. D. L. Pickerel's black and white setter dog Frank R. (Deck Roy—Light's Girl), handled by J. S. McCartney, and J. H. Peebles's lemon belton setter bitch Flossie Noble (King Noble—Elsie Belton), handled by W. B. Stafford, were cast off in an open woods pasture close to the coal shaft at 7:33. Going into a brier thicket Flossie flushed a single and Frank pointed further on, was slightly unsteady when bird was flushed. The brewing storm made it very difficult to find any birds. The dogs kept at their work about two hours before they were successful in finding anything. Then Frank pointed a covey in heavy weeds close to a fence and Flossie came up and walked into the birds; the birds were followed into the woods and Frank secured a point on a single and won. They were taken up at 10:02. Frank had a slight advantage in style; they were about equal in speed and range.

Every person adjourned by mutual consent, and went with all his might to a neighboring barn to escape the approaching storm, but there were many who failed to get there in time to escape a sound drenching. Attendants of field trials are always a sorry-looking set, but when they get caught in a heavy rain, as they most always do, their appearance is indescribable. The storm apparently having passed, the judges decided to start the next brace, consequently they were called up.

HOOSIER HARRY AND JILL.

Mr. H. A. Comstock's liver and white pointer dog Hoosier Harry (Devonshire Sam—Dixey), handled by owner, and Mr. J. L. Barker's black and white setter bitch Jill (Count Rapier—Donna J.), handled by owner, were cast off in a stubble field at 10:29. Nothing being found they passed into the woods, where the judges flushed a covey. Following the birds both dogs scored a flush on singles, then Harry flushed again. Going into a cornfield Harry pointed a covey, Jill came up on the opposite side and flushed the birds. Following the birds in the woods Jill pointed a single. Harry pointed a covey, both dogs steady to shot. Ordered up at 11:10 and heat awarded to Hoosier Harry. In speed Jill had the advantage, in range and style they were equal. The rain coming on again the judges decided not to put down another brace until after lunch.

TRINKET S. AND VAN BANG.

Mr. Albert Smithnight's liver and white pointer bitch Trinket S. (Bodine—Meteor's Trinket), handled by J. L. Barker, and Chas. G. Stoddard's lemon and white pointer bitch Van Bang (Bang Bang—Variety), handled by W. W. Titus, were cast off in an open weed field at 1:20. No birds were found in this field. Moved on to a stubble field, where Van pointed a covey, moved up a few steps and birds flushed. The birds were followed to the woods, where Trinket pointed a single and Van backed, both dogs steady to shot. Passing on Van pointed. At this juncture a countryman's dog came running through the wood and flushed the birds. Van was steady to wing. Following the birds Van pointed again and won. Ordered up at 1:37. In style Van Bang had the advantage, but in speed and range they were equal.

Second Series.

NELLIE DUANE AND FANNIE.

At 1:22 Nellie Duane and Fannie were put down in an open woods pasture. Going down the wind at a rapid pace Nellie flushed a single bird; passing on she chased a rabbit until she was beyond the control of her handler; after being brought back and started on she pointed a single. Fannie refused to back, went in and flushed the bird. Nellie was unsteady to wing, but stopped to order. Dogs ordered up at 2:03 and heat awarded to Fannie. They were equal in speed, style and range, but Fannie was the most obedient. The rain began to fall again in torrents and the trials were ended for the day.

Saturday, Nov. 3, opened clear and bright.

LOTTA C. AND DASHING DIXIE

were put down in an open, ragweed field on the Phillippi farm at 7:15. Going across the field at a rapid pace, Dixie wheeled into a beautiful point. Lotta came up and backed. Gleason shot and both dogs dropped instantly. The birds were followed to the woods, where Dixie pointed a single, moved up and flushed the bird and dropped to wing. Lotta pointed, but finding her mistake moved on. Dixie pointed a covey and was slightly unsteady to wing, but dropped to command. The dogs were taken up at 7:52 and the heat awarded to Dixie. Dixie was superior in speed, style, range and obedience.

DAISY HUNTER AND FLORA TEMPLE

were put down in the open woods where the last heat was finished at 7:55. Going to a bunch of bushes Flora pointed, and Daisy refused to back and was dropped by her handler. Gleason failed to find a bird to the point. The dogs were sent on and Daisy flushed a single and Flora false-pointed again. Gleason claimed he saw a rabbit running out of the grass. Daisy again refused to back. Daisy further on pointed a rabbit and Flora backed. Moved on and Daisy pointed foot scent, and moved on and soon located the covey and pointed in grand style. Dogs ordered taken up at 9:10, and the heat awarded to Daisy Hunter, who had the advantage in speed, range and style.

RESOLUTE AND NELLIE REX

were cut loose in an open pasture field at 9:15. Resolute soon flushed a single and Nellie pointed. She was steady to wing. A little further on Nellie pointed another single. Resolute pointed the same bird but moved up and made a flush. The dogs were sent on and Resolute pointed and Nellie backed indifferently, both slightly unsteady to wing. Further on Nellie pointed a single and Resolute false-pointed. Then Nellie pointed a single nicely and was steady to wing. Taken up at 9:31 and heat awarded to Nellie Rex. Nellie was superior in speed, style and range.

LILLY P. AND FLORENCE GLADSTONE

were turned loose in an open field at 9:47. Lilly soon came to a point and Florence backed. No bird was found to the point. The dogs were ordered on and Lilly false-pointed again, and Florence backed. The dogs were sent into a cornfield, where Florence found and pointed a covey, but was slightly unsteady to wing. Following the birds, Lilly pointed a single and Florence backed; both steady to shot. Further on Florence pointed a single, but the bird flushed wild almost instantly. Going on Lilly pointed, which proved false. Then Florence pointed a covey in briers. Lilly came up behind and birds flushed, both steady to wing. The dogs were taken up at 10:32 and the heat awarded to Florence, who was superior in style, speed and range.

BERTRALDRO AND FRANK R.

were cast off in a ragweed field at 10:42. Frank soon flushed a single, then went on and flushed the covey. Following the birds Bertraldro pointed and Frank backed; both dogs were steady to wing. Further on Bertraldro pointed again and was steady to wing. The dogs were sent on and Bertraldro picked up another point and was backed by Frank; both were steady to shot. The dogs were taken up at 11:17 and the heat was given to Bertraldro, who was the most stylish, but Frank had the call in range and speed.

HOOSIER HARRY AND VAN BANG.

This brace of pointers were put down in a ragweed field where last heat was finished at 11:22. Van Bang, after crossing the field, pointed a covey and was steady to wing. Following the birds, Harry pointed, but did not hold his point satisfactory to the judges. The dogs were ordered to be taken up at 11:52 and the heat given to Van Bang. Harry was superior in speed, but Van Bang had more range and style and was under better control.

Third Series.

TENNIE AND DASHING DIXIE

were put down after lunch at 12:37 in an open stubble field, which was drawn blank. Passing into another field, Dixie pointed, but discovered her mistake and moved on. Tennie backed this temporary point. Going further on Dixie pointed a covey and Tennie backed; both dogs broke shot. Then Dixie flushed several outlying birds. Tennie soon found and pointed a covey and was steady to wing. Going on Dixie flushed two birds and Tennie pointed a single and was steady to shot. Ordered taken up at 1:19 and heat given to Tennie. Dixie was very rank in this heat and surprised all of her admirers; she was considered by many the coming winner.

DAISY HUNTER AND NELLIE REX.

This brace of setter bitches, both belonging to members of the club, were cut loose in the open woods at 1:23. Daisy soon flushed a single, then another. Nellie pointed but was unsteady to shot; she, however, stopped to command; being sent on Nellie flushed a single, then both flushed and gave chase; after being brought back and sent on, Daisy soon flushed a single; then, further on, pointed a rabbit; moved on to order and chased another rabbit about 50yds. The dogs were ordered up at 1:51 and the heat given to Nellie Rex. The work in this heat was of a very low order. Mr. Hunter could not control his bitch at all.

FLORENCE GLADSTONE AND BERTRALDRO.

This brace, setter against pointer, was put down in an open woods pasture at 2 o'clock. Florence soon pointed a single and Bertraldro pointed same bird at the same instant; both dogs were entitled to this point. Barker shot and both dogs dropped. Being sent on Bertraldro pointed, moved and birds flushed; Gleason shot and Bertraldro dropped to shot. Bertraldro further on pointed, moved and bird flushed, and he dropped to wing. Then Florence pointed and was steady to wing. Bertraldro then pointed and Florence backed. Gleason shot and killed, both dogs steady to shot. The dogs were ordered on, Florence pointed, moved on a few steps; Bertraldro came up and bird flushed; both dropped to wing. They were sent on and Bertraldro flushed a single and dropped to wing. Ordered on Bertraldro false-pointed and Florence did the same. Then Florence pointed a single in good shape and won. Ordered up at 2:49. In style, speed and range they were about equal and their work was of a high order.

Fourth Series.

TENNIE AND VAN BANG.

This brace of pointers were put down where the last heat was finished at 2:56. Van Bang soon began roading and Titus walked up the bird. Then Van Bang pointed a single in the bushes. Titus shot, Van Bang steady to shot. Then Tennie pointed and dropped to shot. The dogs were sent on and Tennie pointed and Van Bang backed indifferently. Both dogs dropped to shot. The dogs were then brought out of the bushes and sent down a fence, where the birds had been marked down. Van Bang pointed in fence corner and Tennie backed. Titus failed to find a bird to the point. Being sent on Van Bang did the same thing again. Ordered on, Tennie pointed single and dropped to wing. Dogs taken up at 3:48 and heat given to Tennie.

FLORENCE GLADSTONE AND NELLIE REX.

This brace of setter bitches were put down where last heat was finished at 3:50. Florence pointed in a bunch of bushes. Nellie came up on the other side and pointed same bird; both were steady to wing. Going into a stubble field, Nellie flushed a single outlying bird. Then the covey flushed wild and went into the woods. The birds were followed and Florence flushed a single. She then picked up three single points in one-two-three order, and won. The dogs were taken up at 4:20.

Fifth Series.

TENNIE AND FLORENCE GLADSTONE.

This brace, pointer against setter, were put down where the last heat was finished at 4:27, to compete for first money. The excitement now was at fever heat, as both dogs had their admirers. Florence soon pointed a single in a brier thicket. Baker shot and killed. Florence was steady to shot. She was ordered ahead. She soon made game and was about to locate the bird when it flushed. She dropped to wing. Being ordered on Florence pointed a single; moved on and pointed again and was steady to wing. Then Tennie pointed and was steady to wing. They were ordered on and Tennie pointed again, and Florence backed, both steady to wing. Then Florence flushed a single, moved on and pointed a single. Passing into a stubble field Florence pointed a covey, and birds flushed almost instantly. The dogs were taken up at 5:05, and the heat and first money awarded to Florence Gladstone.

MONDAY.

Sixth Series.

BERTRALDRO AND TENNIE.

The judges selected Bertraldro as the best dog beaten by Florence Gladstone to run against Tennie for second money. They were put down in the stubble on the Phillippi farm at 7:15. Tennie soon pointed a covey in good style and Bertraldro backed beautifully; both dogs were steady to shot. Being sent on after the scattered birds, Bertraldro pointed a single and dropped to shot. Then he pointed another at the side of a ditch, and was steady to wing. Crossing the ditch and going a short distance, Bertraldro pointed a covey. Tennie roaded into and flushed the birds. The dogs were taken up, and the heat and second money awarded to Bertraldro. They were down about 32m.

At the conclusion of this heat the judges announced that they had selected Tennie and Rod's Gal as the winners of equal third.

SUMMARY.

BICKNELL, Ind., Nov. 5, 1888.—Indiana Kennel Club's Derby. Open to all setters and pointers born on and after Jan. 1, 1887; $5 to enter and $10 to start. Sweepstakes purse, after deducting expenses, 50 per cent. to first, 25 per cent. to second, and two equal thirds to get 12½ per cent. each. Closed June 1 with 70 nominations:

First Series.

R. W. Wehrle's black and tan setter bitch Nellie Duane (Briar—Fannie Turner)

beat

W. B. Stafford's lemon and white pointer dog Rod's Son (Rod—Bille).

W. B. Stafford's lemon and white pointer bitch Tennie (Rod—Nell)

beat

P. T. Madison's black, white and tan setter dog Perry T. (Jack W.—Gladys).

W. G. Peters's blue belton setter bitch Dashing Dixie (Dashing Dale—Dashing Model)

beat

W. B. Stafford's lemon and white pointer bitch Sue (Rod—Nell).

A. J. Gleason's black, white and tan setter bitch Flora Temple (Zippo—Ruby Buckellew)

beat

S. H. Socwell's lemon and white setter bitch Gath's Spark (Gath's Hope—Lady M.).

J. I. Case, Jr.'s liver and white setter bitch Lotta C. (King Noble—Queen Vashti)

beat

W. B. Stafford's black, white and tan setter bitch Minnie (Royce—Jennie).

J. A. Hunter's orange and white setter bitch Daisy Hunter (Gath's Hope—Daisy F.)

beat

J. R. Culligan's red Irish setter bitch Sylph (Glencho—Ashmont Nora).

J. I. Case, Jr.'s blue belton setter dog Resolute (King Noble—Queen Vashti)

beat

C. G. Winchel's black and white setter dog Caliph (Kota—Topsy).

Joseph Becker's black and tan setter bitch Nellie Rex (Rex—Gip)

beat

Dr. J. E. Link's black pointer dog Phil Sheridan (Joe Pape—Nellie).

W. P. Coleman's liver and white pointer bitch Lilly P. (Drake—Phœbe)

beat

Chas. Whalen's liver and white pointer dog Noble Bang (Bang Bang—Vanity).

J. I. Case, Jr.'s black, white and tan setter bitch Florence Gladstone (Gladstone—Flounce)

beat

W. P. Coleman's liver and white pointer dog Duke P. (Drake—Phœbe).

A. W. Whipple's liver and white pointer dog Bertraldro (Cornerstone—Bessie Beaufort)

beat

W. B. Stafford's liver and white pointer bitch Rod's Gal (Rod—Juno).

D. L. Pickerel's black and white setter dog Frank R. (Deck Roy—Light's Girl)

beat

J. N. Peeble's lemon belton setter bitch Flossie Noble (King Noble—Elsie Belton).

H. A. Comstock's liver and white pointer dog Hoosier Harry (Devonshire Sam—Gypsey)

beat

J. L. Barker's black and white setter bitch Jill (Count Rapier—Donna J.).

Chas. G. Stoddard's lemon and white pointer bitch Van Bang (Bang Bang—Vanity)

beat

Albert Smithnight's liver and white pointer bitch Trinket S. (Bodine—Meteor's Trinket).

Second Series.

Tennie beat Nellie Duane.
Dashing Dixie beat Lotta C.
Daisy Hunter beat Flora Temple.
Nellie Rex beat Resolute.
Florence Gladstone beat Lilly P.
Bertraldro beat Frank R.
Van Bang beat Hoosier Harry.

Third Series.

Tennie beat Dashing Dixie.
Nellie Rex beat Daisy Hunter.
Florence Gladstone beat Bertraldro.
Van Bang a bye.

Fourth Series.

Tennie beat Van Bang.
Florence Gladstone beat Nellie Rex.

Fifth Series.

Florence Gladstone beat Tennie and won first.

Sixth Series.

Bertraldro beat Tennie and won second.

First, Florence Gladstone; second, Bertraldro; equal third, Tennie and Rod's Gal.

Previous Winnings.—Bicknell, Ind., 1887: Cherrystone (Trinket's Bang—Pearlstone), pointer, first; Zetta King Don (King Don—Queen Faust), pointer, second; Queen of Tennessee (Gath's Hope—Freda), setter, and Dash (Royal C.—Belle), setter, equal third.

ALL-AGED STAKES.

Col. Sloo and Mr. Shultz having been called home, Mr. Royal Robinson and Mr. P. I. Madison were selected to act as judges with Mr. Bergundthal in this stake. The drawing brought forth eighteen starters, fifteen pointers and three setters.

First Series.

JOE PAPE AND LORD GRAPHIC.

Dr. J. E. Link's black pointer dog Joe Pape (Sambo the Devil—Spot), handled by W. W. Titus, and Dr. John R. Daniel's liver and white pointer dog Lord Graphic, handled by C. Menke, were put down where the Derby finished at 7:45. Going into the woods Joe pointed a covey, Graphic backed a few moments, then he moved up and roaded past Joe, and kept on until he flushed the birds. Titus, however, shot and killed, and Joe retrieved nicely. Moving on Graphic pointed a single; Joe backed. Graphic moved up with his handler and flushed the bird. Going on Joe pointed a rabbit, and was steady to fur. Graphic pointed where a rabbit had run from and moved on; then Graphic false-pointed. Passing over to woods he p inted a covey in the bushes; Joe backed; both dogs steady to shot. Graphic then made a cast in the open field and pointed a single, and was steady to shot. Moving on Joe commenced roading along the fence; Graphic ran in ahead and flushed two birds; then Graphic pointed in fence corner and Joe backed. Graphic left his point, moving forward, and flushed the birds. Titus shot and killed. Graphic was sent to retrieve, but failed to find the bird. The dogs were sent on and Graphic flushed a single in the grass. Then Joe pointed a covey in the grass. Graphic coming up refused to back, but went in ahead and stole the point. They were taken up at 8:35 and the heat awarded to Joe Pape. Graphic had the most speed and style, but Joe was under much better control.

ROD-GEM AND ROWDY.

This brace was put down where the last heat was finished at 8:40. After giving them a spin in the open they were thrown into the woods, where Rod pointed in style. Titus shot and killed. Rod was sent to retrieve, but Rowdy broke away from McCartney, his handler, and retrieved the bird. Rowdy then pointed indifferently, moved up and began roading, and walked deliberately into a covey. Then the judges threw out a dead bird for Rod to retrieve, which he did nicely. They were ordered taken up at 9:05, and the heat given to Rod Gem. In style, range, speed and obedience Rod was the superior.

NELLIE DUANE AND RESOLUTE.

Nellie failed to appear, and the heat was given to Resolute.

BODKIN AND EFFIE HILL.

This brace was put down in a ragweed field at 9:25. Almost immediately Effie pointed a covey; Titus shot and missed. The birds were followed and Effie pointed, and J. L. Barker, the handler of Bodkin, brought Bodkin up to back, which he did nicely. The birds by this time had moved, the dogs began roading and Effie soon nailed them again; Titus shot and killed; Effie retrieved. Being sent on Bodkin pointed, and Effie backed, Barker shot and killed, both dogs dropped to shot; Bodkin retrieved nicely. Sent on, Effie pointed foot scent and moved on, but soon pointed; Bodkin backed; both steady to wing. The dogs were ordered on, and Bodkin pointed a moment then moved on. Effie going down wind, flushed a single and dropped to wing. Bodkin pointed a rabbit, then he pointed a single and Effie backed, both steady to wing. After crossing the fence Bodkin pointed staunchly and Effie backed, both steady to wing; Barker failed to find a bird to the point. Passing on Effie pointed where birds had been seen to flush from. Passing on to edge of cornfield Effie began roading, took the birds through the corn and into a stubble field, fully three hundred yards, nailed the covey and won. They were taken up at 10:00. This was a very brilliant heat. Effie had a slight advantage in style, range and speed.

KATIE NOBLE AND KING'S MARK.

Mr. L. A. Boli's black, white and tan bitch Katie Noble (Count Noble—Queen Meg), handled by Titus, and J. I. Case, Jr.'s, blue belton dog King's Mark (King Noble—Belle Belton), handled by C. W. Barker, were put down in a stubble field at 10:11. Katie soon pointed in the corner of the fence and Mark backed. Titus failed to find a bird. Passing on Mark pointed and Barker failed to flush. Going up the fence Katie pointed a covey and Mark dropped into a point on some birds almost instantly. Barker shot and both dogs dropped. The birds were followed to a thicket on the hillside and Katie pointed on upper side of thicket. Titus shot and missed; Katie was steady to shot. Mark by this time had secured a point in the thicket. Barker killed and Mark retrieved. Passing into the woods Mark pointed; Barker shot and missed; Mark was steady to shot. Katie flushed a single in the dry leaves. Mark pointed a little further on and Katie backed. Barker failed to flush a bird to the point. Passing through a cornfield, then through a stubble and into the woods Katie pointed a covey and won. They were taken up at 11:01. In style and range they were equal, but Mark showed the greater speed.

JESS AND BOHEMIAN GIRL.

Mr. E. E. Pray's liver and white setter bitch Jess (Dick—Spot Belton), handled by A. J. Gleason, and W. G. Miller's blue belton setter bitch Bohemian Girl (Count Noble—Mollie Belton), handled by Titus, were put down in an apple orchard at 11:18. This was drawn blank. At 11:30 they were taken up until after lunch. They were put down in a stubble on the Horn farm at 12:17. Bohemian Girl began roading a bird which flushed wild 30yds. ahead. Several fields were now drawn blank. Passing into a small weed field the Girl pointed in fence corner; Jess backed; the birds flushed wild and were followed up a ravine. Jess pointed and the bird flushed wild again. The Girl then pointed twice in succession, and the birds flushed wild to each point. Jess pointed and Gleason shot and missed. Jess was steady to shot. Going up the side of the hill Jess flushed a single and dropped to wing. Going into the woods the Girl pointed a covey in a patch of briers and was steady to wing. The dogs were taken up at 1:20 and the heat given to Bohemian Girl, who had a great advantage in style, range, speed and obedience.

POLLY II. AND FLORA TEMPLE.

Mr. J. B. Stoddard's black and white setter bitch Polly II. (Josh Whitcomb—Polly), handled by her owner, and Mr. A. J. Gleason's black, white and tan bitch Flora Temple (Zippo—Ruby Buckellew), handled by her owner, were put down in an open weed field at 1:21. Going east about 300yds., Polly struck foot scent, and roaded her bird 50yds. to a point. Stoddard shot and missed; Polly was steady to shot. Going across a ditch, Polly pointed a single and was slightly unsteady to wing. Flora flushed a single in the stubble. Passing on, Polly began roading and Flora ran in ahead and pointed a covey; both dogs steady to wing. The birds were followed, and Polly jumped into a nice point on a single and won. They were taken up at 2:15. Polly had the call in style, speed and range.

LOTTA C. AND PRAY'S GLADSTONE.

Mr. J. I. Case, Jr.'s, lemon and white setter bitch Lotta C. (King Noble—Vashti) and J. A. Bolen's black, white and tan setter dog Pray's Gladstone were put down in stubble field at 2:25. Gladstone soon pointed a rabbit; then moved on and flushed a single bird. Moving on again, he pointed a single and was steady to wing. Passing on, he pointed a single; Gleason shot and killed; Gladstone retrieved. Taken up at 2:52 and heat given to Pray's Gladstone. Lotta C. had the best style, range and speed. The work in this heat was not brilliant.

BEAUMONT AND DARBY.

Mr. W. R. Huntington's black, white and tan dog Beaumont (Prince Royal—Nettie), handled by J. L. Barker, and John Bolus's black and white dog Darby (Bridgeport—Bessie Belton), handled by owner, were put down in open woods where last heat was finished, at 2:55. Beaumont soon pointed and moved on, then Darby did the same. They then both flushed a single and dropped to wing. They were sent on and Beaumont pointed, but Barker could not find a bird. Darby came up after Beaumont had gone, pointed in same place and was steady to wing. Moving on both dogs pointed the same covey; Barker shot and killed, Beaumont retrieved. Following the birds Darby pointed, but Bolus failed to flush a bird to the point. Beaumont stopped, but Barker ordered him on and the bird flushed. Further on Darby pointed, and was steady to wing. Coming up to briers near a fence, both dogs pointed different coveys at same time. Barker shot and killed. Darby was slightly unsteady to wing and shot. Beaumont retrieved nicely. The scattered birds were followed and Beaumont pointed; Darby, coming up, walked into the birds. The dogs were taken up at 4:07 and the heat given to Beaumont. In speed, range and style they were about equal.

Second Series.

JOE PAPE AND RESOLUTE.

This brace was cast off in a stubble field at 4:17. Joe crossed the field to a bunch of briers and pointed. Titus failed to flush a bird to the point. Passing into the woods Joe pointed a covey. Titus shot and killed; Joe retrieved. They then went into a stubble field which was drawn blank, and the dogs were taken up at 5:05 to be put down in the morning. Tuesday rain fell in torrents, and nothing was done this day.

WEDNESDAY.

The brace was put down in the stubble at the Phillippi farm at 7:42. The spectators flushed a covey which was followed to the woods, where Resolute flushed a single bird, and then chased a rabbit, while Joe pointed a single and was steady to wing. The dogs were taken up at 8:16 and the heat given to Joe Pape, who had the advantage of range and speed, but Resolute had the best style.

ROD-GEM AND POLLY II.

The dogs were cut loose in the open woods at 8:20. Polly soon established a point in a fence corner, and Rod backed. Both dogs steady to wing. Polly went on, flushed a single and dropped to wing. She went on and pointed again, and Rod backed; then she picked up two more points on singles in the same locality. Moving on she began roading, and Stoddard flushed the bird. Then she pointed again and Stoddard shot and killed. Polly retrieved and won. They were taken up at 8:43. Polly was the best in style, speed and range.

KATIE NOBLE AND PRAY'S GLADSTONE.

This brace was put down where the last heat was finished at 8:46. Katie soon pointed a rabbit and Gladstone backed. Passing on Katie false-pointed. Then Gladstone pointed, and Katie backed. Gleason shot and killed. Gladstone retrieved very unsatisfactorily. Passing on down the fence Gladstone pointed and was steady to wing. Further on Katie pointed, Titus shot and killed, Katie retrieved nicely, Gladstone then pointed by a stump and won. Taken up at 9:15. Katie had the best style, but in range and speed they were about equal.

EFFIE HILL AND BOHEMIAN GIRL.

Both dogs were handled by Titus and were put down in the open woods pasture on the Horn farm at 9.15. Effie soon pointed in the briers, Bohemian Girl backing beautifully. Titus shot and missed, both dogs dropped to shot. They were sent on, and the Girl pointed. Titus thinking she was pointing a rabbit ordered her on, and a covey flushed ahead of her. Following the scattered birds the dogs became separated and both pointed at same time. Titus flushed the Girl's point first, she was steady to wing; he then brought her over to back Effie which she did nicely, Effie having remained rigid all this time; Titus flushed the bird and both dogs were steady to wing. Going on both pointed where a rabbit had been seen run from. Moving on, both dogs pointed. Titus shot and killed. The Girl retrieved. Further on the Girl pointed and Effie backed, both steady to shot. Going into a stubble field Bohemian Girl found a covey in the fence corner. When the judges got up they decided that both dogs were entitled to a point. The birds ran and were roaded by both dogs about 100yds., when they flushed wild and went to the woods where the Girl secured two points on singles and won. They were taken up at 10:04. Bohemian Girl had better range, speed and style than Effie and was under better control.

Third Series.

BEAUMONT AND JOE PAPE.

This brace was put down in the woods at 10:15; both dogs pointed several times where birds had evidently been and moved on. Beaumont crossed a branch and pointed, moved on fifty yards and located the birds. Barker shot and killed, Beaumont retrieving nicely. The dogs were taken up at 10:45 on account of rain and the trials postponed until to-morrow.

THURSDAY.

This brace was put down in a stubble field on the Phillippi farm at 7:37 to finish the postponed heat of yesterday. The weather was damp and cloudy, but the judges decided to finish the races to-day, rain or shine. The stubble field was drawn blank. Passing into the woods the spectators flushed a covey which scattered in every direction. Working back toward and into the stubble field, Beaumont flushed a single and was steady to wing. He then pointed a single nicely, Barker shot and killed, the dog dropped to shot. Beaumont retrieved the bird handsomely. Going to the Horn farm Joe flushed a single. No other birds being found and the water being all over the ground the dogs were taken up at 8:15 and taken to the Bunting farm and put down at 8:23. Beaumont soon pointed a single and won. They were taken up at 8:30. Beaumont had the call in range, speed and style. Joe was superior in obedience.

POLLY II. AND PRAY'S GLADSTONE.

This brace was put down where the last heat was finished at 8:35. They soon pointed and moved on. Polly pointed, Stoddard flushed a single and Polly dropped to wing. Following the birds Polly flushed a single, then she pointed and was steady to wing. Going on Gladstone pointed a rabbit. Gleason ordered him on and he pointed again, Polly backed. Gleason failed to find a bird to the point. They were sent into a weed field, where Polly pointed, moved on and began roading. She soon stopped on a point and a single flushed wild about ten feet ahead of her. Passing through the weed field to a brier thicket Polly pointed a single and was steady to wing. The dogs were taken up at 10:08 and the heat given to Polly, who had the advantage in style, range, speed and obedience.

Bohemian Girl a bye.

Fourth Series.

BOHEMIAN GIRL AND BEAUMONT.

This brace was put down in a ragweed field at 10:35. The dogs worked through the field to the fence, where the Girl pointed and moved on. Going into another ragweed field she pointed, and when the bird was flushed Beaumont chased about one hundred and fifty yards. Passing into a cornfield Beaumont pointed a single; then he secured another point in the weeds. Barker shot and wounded the bird, which fell in the wood a long distance away. The judges did not order a retrieve. Then the Girl pointed and was steady. They were taken up at 11:35 and the heat given to Bohemain Girl, who had the advantage in speed, style, range and obedience.

Fifth Series.

BOHEMIAN GIRL AND POLLY II.

This brace was put down in a ragweed field on the Wampler farm at 12 M. to compete for first honors. Polly soon pointed and the Girl backed. Stoddard failed to find a bird to the point. Passing into another weedfield the Girl pointed and Polly backed, both dogs steady to wing. (Mr. Wampler allowed no shooting on his farm, which is the reason "steady to wing" is used so often.) Bohemian Girl pointed again and Polly backed; both dogs dropped to wing. Then Polly false-pointed. They were taken up at 12:34 and the heat and first money awarded to Bohemian Girl. In style and obedience they were about equal, but the Girl was superior in range and speed.

Sixth Series.

POLLY II. AND EFFIE HILL.

The judges selelected Effiie Hill as the best dog beaten by the winner of first to run against Polly II. for second money. They were put down in the open stubble field at 1:02. Effie soon pointed and Polly backed. This was close to the fence. Titus failed to find the birds to the point. Effie crossed the fence, and while she was doing that Polly made a cast up the fence and pointed staunchly. Stoddard flushed and Polly dropped to wing. The birds settled along the fence. Effie coming up, pointed a single and was steady to wing. Then Polly secured another point on a single. She then false-pointed, and Effie nailed a single in the fence corner. Then Polly secured another point. These birds were very small, and the judges decided to leave them and move out in the field to hunt for better birds. Passing through the field to a thicket, Polly secured a point on a covey and Effie backed; the birds flushed just as the judges came up. They were followed into the woods, where Polly soon dropped to a point on another covey, and won. They were taken up at 1:57. In speed, range, style and obedience they were equal.

Seventh Series.

KING'S MARK AND BODKIN.

The judges selected King's Mark and Bodkin as the two best beaten dogs to run for one equal third. The dogs being back over a mile from where the last heat was finished, they were not put down until 2:32. Mark soon pointed, moved and the bird flushed. Then he jumped into a handsome point on a single, and dropped to shot. Barker killed and Mark retrieved nicely. Passing into a thicket, Mark false-pointed. Barker sent him on and he soon pointed a single nicely, and won. The dogs were taken up at 3:05, and the Indiana Kennel Club's second annual field trials were finished.

SUMMARY.

BICKNELL, Ind., Nov. 8, 1888.—Indiana Kennel Club's All Aged Stake. Open to all setters and pointers that have never won first prize in any All-Aged Stake in any recognized field trial in America; $5 to enter and $10 to start. Sweepstakes purse. After deducting expenses, 50 per cent. to first, 25 per cent. to second, and 12½ per cent. each to two equal thirds. Closed Oct. 1 with forty-one nominations.

First Series.

Dr. John E. Link's black pointer dog Joe Pape (Sambo the Devil—Spot)

beat

Dr. John R. Daniel's liver and white pointer dog Lord Graphic (Graphic—Daphne).

L. A. Boli's black, white and tan setter dog Rod Gem (Roderigo—Gem)

beat

R. F. Hoyt's liver and white pointer dog Rowdy.

J. I. Case, Jr.'s blue belton setter dog Resolute (King Noble—Vashti)

beat

R. W. Wehrle's black and tan setter bitch Nellie Duane (Briar—Fannie), withdrawn.

D. W. Barringer's black, white and tan setter bitch Effie Hill (Prince B.—Donna)

beat

J. I. Case, Jr.'s blue belton setter dog King's Mark (King Noble—Belle Belton).

W. G. Mellier's blue belton setter bitch Bohemian Girl (Count Noble—Mollie Belton)

beat

E. E. Pray's liver and white setter bitch Jess (Dick—Spot Belton).

J. B. Stoddard's black and white setter bitch Polly II. (John Whitcomb—Polly)

beat

A. J. Gleason's black, white and tan setter bitch Flora Temple (Zippo—Ruby Buckellew).

J. A. Bolen's black, white and tan setter dog Pray's Gladstone (Paul Gladstone—Bessie A.)

beat

J. I. Case, Jr.'s lemon and white setter bitch Lotta C. (King Noble—Vashti).

W. R. Huntington's black, white and tan setter dog Beaumont (Prince Royal—Nettie)

beat

John Bolus's black and white setter dog Darby (Bridgeport—Bessie Belton.)

Second Series.

Joe Pape beat Resolute.
Polly II. beat Rod-Gem.
Pray's Gladstone beat Katie Noble.
Bohemian Girl beat Effie Hill.
Beaumont, a bye.

Third Series.

Beaumont beat Joe Pape.
Polly II. beat Pray's Gladstone.
Bohemian Girl a bye.

Fourth Series.

Bohemian Girl beat Beaumont.
Polly II. a bye.

Fifth Series.

Bohemian Girl beat Polly II. and won first.

Sixth Series.

Polly II. beat Effie Hill and won second.

Seventh Series.

King's Mark beat Bodkin and won equal third.

First, Bohemian Girl; second, Polly II.; equal third, Effie Hill and King's Mark.

Previous Winners.—Bicknell, Ind., 1887: Lark P. (Glen—Topsy), setter, first. Change (Dan—Starlight), setter, and Jim Blaine (Don Nilson—Nellie B.), setter, divided second. Polly II. (Josh Whitcomb—Polly), setter, and Ben Lanier (Joe Bowers— ——), pointer, divided third. RICHMOND.

SOUTHERN FIELD TRIALS.

MARIETTA, Ga., Nov. 6.—*Editor Forest and Stream:* Inclosed you will find the list of the entries to the All-Aged Stakes of the Southern Field Trials Club. We have thirty setters and thirty-two pointers, a total of sixty-two. The entries to the Derby number fifty-six. The club should feel gratified at the number of entries. Everything points to a most successful meeting of the club. Letters from parties on the ground tell us that we will have all the birds we can possibly want, and that accommodations are both good and cheap. There are certainly no better grounds to be found.

ALL-AGED SETTER STAKE.

MAUD D. (Dr. K. D. Davis), black, white and tan bitch (Lightning—Dora Royal).

FASHION (J. E. Hart), black, white and tan bitch (Count Noble—Lit).

GLADSTONE GIRL (Pat Henry), lemon and white bitch (Gladstone—Sue).

BOB H. (A. J. Crovat), black and white dog (Count Noble—Belle Boyd).

DIMPLE (Fred F. Myles), black, white and tan bitch (Gordon—Blanch).

BOB (Fred F. Myles), black and white dog (Oberlum—Bess).

MAY QUEEN (Fred F. Myles), black and white bitch (Dan J.—Lady May).

DAVE R. (Dudley & Fisher), lemon and white dog (Gath's Mark—Daisy F.).

DASHING LADY (W. Henry Colquitt), black, white and tan bitch (Dashing Rover—Trinket).

LINDO (Mt. Washington Kennels), black, white and tan dog (Gladstone—Flounce).

KING'S MARK (J. I. Case), black and white dog (King Noble—Belle Belton).

RESOLUTE (J. I. Case), black and white dog (King Noble—Queen Vashti).

QUEEN NOBLE (J. I. Case), black and white bitch (King Noble—Belle Belton).

LITTLE GIFT (Bert Crane), black, white and tan bitch (Roderigo—Queen Bess).

MAUD (Bert Crane), black, white and tan bitch (Dog Whip—Harrison's Juno).

TOLEDO BLADE (J. E. Dager), black, white and tan dog (Roderigo—Lillian).

CINCINNATUS (J. E. Dager), black, white and tan dog (Count Noble—Dido II.).

BANG BRADLAUGH (Olive Branch Kennels), orange and white dog (Buckellew—Jolly's Daisy).

LASS O' BUCK (Olive Branch Kennels), black, white and tan bitch (Buckellew—Ida).

TIPTON (Tipton & Poindexter), black, white and tan dog (Gath's Mark—Vic).

DAN GLADSTONE (J. W. Renfroe), black, white and tan dog (Gladstone—Sue).

TUBE ROSE (W. E. Venable), black, white and tan bitch (Count Noble—Lit).

GOLDSTONE (Stone & Duncan), black, white and tan dog (Gladstone—Sue).

LILL W. (F. I. Stone), black, white and tan bitch (Baden Baden—Lessie).

BRANDON (J. O. H. Denny), lemon and white dog (Royal Rock—Lewis's Nellie).

PET GLADSTONE (West Tennessee Kennels), black, white and tan bitch (Gladstone—Sue)

RUBICON (West Tennessee Kennels), black, white and tan dog (Ben Hill—Zoe W. J. J.).

LOTTA C. (J. I. Case), orange and white bitch (King Noble—Queen Vashti).

BOHEMIAN GIRL (W. G. Melier), black and white bitch (Count Noble—Mollie Belton).

LADY C. (West Tennessee Kennels), black, white and tan bitch) Coleman's London—Belle of Hatchie).

MR. C. FRED CRAWFORD'S BLUE NELL.

ALL-AGED POINTER STAKE.

DEXTER (Bayard Thayer), liver and white dog (Nip—Tuck).

BEAU OF PORTLAND,—(H. F. Farnham), black and white dog (Graphic—Zitta).

LASS OF MAINE (H. F. Farnham), black and white bitch (Graphic—Zitta).

SACHEM (Chestnut Hill Kennels), liver and white dog (Beaufort—Zuba).

KING OF KENT (Field Trial Kennels), liver and white dog (Priam—Kent's Baby).

PONTIAC (Field Trial Kennels), liver and white dog (Milton Bang II.—Climax).

GO BANG (O. W. Donner), liver and white dog (Graphic—Bloomo).

JOYCE OF HALLS ISLAND (O. W. Donner), liver and white bitch (Graphic—Bloomo).

LEBANON (Lebanon Kennels), lemon and white dog (Fin—Peg).

GRAPHIC (Chas. Heath), liver and white dog (Bonus Sancho—Fursdon's Juno).

MEALLY (Chas. Heath), liver and white bitch (Pax—Climax).

BLOOMO (Chas. Heath), liver and white bitch (Bang II.—Whipple Belle).

FRIVOLITY (Chas. Heath), liver and white bitch (champion Donald—Revel III.).

LAUNCELOT (Chas. Heath), liver and white dog (Graphic—Meally).

LADY ZEAL (John E. Gill), liver and white bitch (Croxteth—Ammie).

FENWICK (N. B. Nesbit), liver and white dog (Trinket's Bang—Heyward's Lotta).

GRAPH (W. M. Towers), black and white dog (Brown Stout—Clytie).

CHAMPION BRACKET (Graphic Kennels), liver and white dog (Graphic—Bloomo).

BEPPO III. (Graphic Kennels), liver and white dog (Priam—Meally).

BLOOMO II. (Graphic Kennels), liver and white bitch (Lad of Bow—Bloomo).

RUMOR (Graphic Kennels), liver and white dog (champion Donald—Revel III.).

SLANDER (Graphic Kennels), liver and white dog (champion Donald—Revel III.).

DUKE OF HESSEN (F. R. Hitchcock), liver and white dog (Luck of Hessen—Blarney).

FLIRT (F. R. Hitchcock), liver and white bitch (champion Graphic—Ina).

LAD OF BOW (Westminster Kennel Club), liver and white dog (champion Graphic—Climax).

LASS OF BOW (Westminster Kennel Club), liver and white bitch (Graphic—Climax).

CONSOLATION (C. H. Odell), lemon and white dog (Bang Bang—Grace III.).

ROGER WILLIAMS (C. H. Odell) lemon and white dog (Bang Bang—Lalla Rookh).

OSSIAN (P. T. Madison), liver and white dog (Croxteth—Ammie).

SALLY BRASS II. (H. P. Dortch), liver and white bitch (Graphic—Meally).

BASS (Dr. Chas. Michel) black and white dog (Osborne Ale—Keswick II.).

KESWICK'S DAN (J. H. Dougherty) liver and white dog (Osborne Ale—Keswick II.).

LEILA.—Woodlawn, N. Y., Nov. 7.—*Editor Forest and Stream:* I have been informed by most trustworthy and reliable sources that at the last Richmond (Va.) dog show a rumor was most diligently spread, that my St. Bernard bitch champion Leila was "going to pieces" and "all broken up," and that this was the reason she was not shown at either Buffalo, Syracuse or Richmond. As the principal disseminators of this rumor Mr. Lacy and Mr. Hughes have been named me. Now, in order to prevent a further spread of this rumor, which has obviously been started to injure my property as well as myself, I desire to herewith publicly brand such rumor as an unwarranted and malicious lie, and I challenge either of the parties named to prove the contrary. Neither of them has been at my kennel since I became the happy possessor of the best living representative of the old smooth Swiss St. Bernard, nor have they seen her anywhere else since the Albany show, nor have I corresponded with them. Of Mr. Hughes this does not surprise me, but I am more than surprised that Mr. Lacy should so far lower himself as to allow himself to be made (unknowingly I trust) the tool for spite of some one else. I am happy to be able to say that champion Leila is in as fine health and condition as she has ever been, and as lively and playful as a pup. The only reasons why she was not shown at any of these shows are simply that I do not like to send her to shows except I accompany her myself, and being too busy at the time to leave the city, and not being in any way bound to attend any shows, except it suits and pleases me, since I keep my dogs for my own use and pleasure only and not for business, I kept her at home, enjoying her company. I love a good dog too much, and I value Leila's reputation too highly to allow her to "go to pieces," or to allow somebody's spite to destroy her reputation without branding it as what it actually is.—MRS. ALBERT REUTER.

BLUE NELL.

OUR illustration this week is a portrait by Tallman of Mr. C. Fred Crawford's English setter bitch Blue Nell. She is imported, being by Count Howard out of Sandal Queen, and her winnings are second Birmingham and first Carlisle, England, and first Boston, 1888. In our Boston show report Mr. Wm. Jarvis, the judge of this class, wrote, "The winner is new, I believe, to the American show bench, but will hold her own among the best." Blue Nell has been bred to Royal Albert.

JUDGING AT THE RICHMOND SHOW.

Editor Forest and Stream:

In a Chicago report of the Richmond dog show we are told that Mr. J. M. Tracy felt a "delicacy" about judging the W. K. C.'s pointers, and that on this account the classes were given to Mr. J. H. Winslow. Although it is several weeks since this statement was made I cannot find on record a single instance of anybody having congratulated Mr. Tracy for feeling a "delicacy" about judging his own dogs. Ever since dog shows were first held in this country the Westminster Kennel Club men have judged their own dogs, both at field trials and at dog shows; and it seems to me that the first among them that has discovered a "delicacy" about judging his own property is deserving of something more substantial than private indorsement and club room praise. Therefore, I move that the hearty congratulations and warm thanks of all true lovers of good dogs and fair play in these United States be most cordially tendered Mr. J. M. Tracy, of Greenwich, Conn., in appreciation of the recent discovery by him of a dormant "delicacy" that has been hidden for years, but unearthed at last.

As the A. K. C. is an interested party, the National Dog Club must handle the kennel man who has been judging (?) and writing up his employers' dogs in a Chicago weekly comic.

Mr. Tracy's discovery of a "delicacy" goes to show that the time is at hand when men, and creatures clothed in the garments of men, shall be permitted to judge neither their own dogs nor dogs owned by their employers. How deliciously pure and sweet will be the atmosphere when the honest exhibitor can show his dogs without feeling that the judge has a dog of his own in the class; and how gloriously bright the prospect when the independent dog owner shall realize that Jim Bagman's employers will not be permitted to exhibit their dogs when Jim Bagman is the judge.

Tom Coggins, Hartford's patent elector and counter-out of judges, recently assured all readers of a Chicago paper that have cataracts in their eyes, that anything that wears breeches is a gentleman. But give me the man that discovers (no matter how late in the day) within himself a "delicacy" about judging his own property. The purest gold may be hidden in a bed of rock for more than a half century, but its discovery proves that the rock was valuable, and that all that was needed was a little drilling and blasting to get at the refined article. CHARLES H. MASON.

CHICAGO BENCH SHOW.—Chicago, Ill., Nov. 8.—*Editor Forest and Stream:* It has come to the notice of the officers of the Mascoutah Kennel Club that doubt exists in the minds of some exhibitors and breeders as to whether the dates April 9 to 12, 1889, inclusive, for their bench show, will be adhered to or the show postponed in favor of some other shows claiming dates soon thereafter. Will you kindly state in your next issue that under no circumstances will there be any postponement, and that the bench show will take place as advertised. The building known as Battery D, with which many of the prominent breeders and exhibitors are familiar, has been leased for that week, and much preliminary work has been accomplished. Mr. James Mortimer has consented to judge non-sporting classes. All interested can rest assured that if time, labor and liberal outlay will make a good show, they shall have it.—JOHN L. LINCOLN, JR., Secretary.

SOUTHERN FIELD TRIALS.—Marietta, Ga., Nov. 5.—*Editor Forest and Stream:* Arrangements have been made by which parties who intend visiting the meeting of the Southern Field Trial Club at Amory, Miss., can procure reduced rates of fare. They will buy first-class tickets going to the nearest point at which they will strike the Kansas City, Fort Scott and Birmingham road, and procure from the agent a certificate showing that they paid full fare going, present the certificate to the secretary of the club for indorsement, and the railroad agent will sell return tickets to starting point at one cent per mile. The Kansas City, Fort Scott, Memphis and Birmingham road will sell round trip tickets at one fare. Three dogs will be carried free, when accompanied by the owner. For any other information address the secretary of the club. The entries to the All-Aged Stake are all that the club could ask.—T. M BRUMBY, Marietta, Ga.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6666.**

THOSE SPANIELS.

Editor Forest and Stream:

The returns at present seem to indicate that "Quester" and "Onlooker" have indeed "treed something" by a large majority. The scent was strong; in fact it had reached such a stage of malodorousness that it was positively offensive, hence the "barking up the same tree." The high perch had better be vacated soon, else axes will be applied (no axes to grind), the tree cut down and a general collapse result.

If the Hornellsville orator has been so successful on the bench, as he says, why is he continually groaning and growling about the shortcomings (which exist solely in his own brain) of the standards, the present type of dogs exhibited and the judges—the judges, mind you, from whom he received his prizes! Were I one of these gentlemen experts, truly would I strongly object to adjudicating upon any of this gentleman's dogs were they to come before me in the sawdust ring. Like unto the Sage of Netherwood, bombast, blow and windy utterances seem to characterize all his communications in regard to dog matters. At Buffalo he won this and that and the other thing, and "should have had first in the novice class." If "thirteen years' " experience as an exhibitor have been his, how is it that he does not know yet that "should have hads" do not count. As regards the Boston show, it is impossible for me to show there, as they contemplate going back "into the fold" of the A.K.C., and they will have none of my dogs in consequence. Enforced regisration has always been distasteful to me.

The report of the London show of course was written by our friend, the Doctor. He, poor man, thought he was doing a bright thing when he shelled the old chestnut—the cry against the present type, judges and standard, which originated in Hornellsville and not with himself—and fed it broadcast to an unsuspecting public through the medium of the press.

Mr. Fellows, come off your perch. AN ONLOOKER.

STAMFORD, Nov. 6.

[This was received too late for our issue of last week.]

Editor Forest and Stream:

Life is too short for me to waste any time in answering every boy or novice who thinks he knows just a little about spaniels. If there is an authority universally acknowledged on cockers, it is Dr. W. W. Boulton. He has honored me by publicly approving my views, so I am content, and will let the unknown quantities howl as they please. I was the first to advocate field trials for spaniels. I'll be on hand when they are ready.

Consistency, thou art a jewel,
Life is but a fleeting show,
But you will never make a workman
Of a spaniel, if he is very long and low.

J. OTIS FELLOWS.

HORNELLSVILLE, N. Y.

PRACTICAL JUDGING.

Editor Forest and Stream:

Mr. Wade's letters are like chapters in the Bible—you can write a sermon on almost any one of the sentences. There is something wrong, I think, in the heading "Practical Judging," at least it is a combination of words which does not convey to me the meaning of "judging by practical men." I have been too busy to pay any attention to the discussion between Messrs. Davey and Mason, and life is too short to "hark back," especially as it is no business or wish of mine to enter into any controversy respecting Mr. Davey's dogs.

It is an amiable failing of Mr. Wade's to rush headlong at the word "fancy," whereas Mr. Wade knows just as well as the rest of us that if it had not been for members of the fancy the dogs of to-day would be no better in symmetry than they were twenty years ago. In fact he acknowledges "fancy" by his acts just as our mutual friend "Uncle Dick" Fellows does, while all the time they raise ructions at such as make their deeds and their words conform. Mr. Wade, for instance, never tires of pitching into Crown Prince mastiffs, mainly because of their not being perfect on their legs, while at the same time he holds to Orlando because of his grand head properties. "Uncle Dick" rounded on all of us for giving prizes to "crocodile" spaniels, and when we heard of his being up for judge at Philadelphia we expected the "giraffes" would have their day. But no, the same old "crocodiles" were at the head. I don't judge either of them by what they say on these questions, but by their acts, and their acts have so far been sensible.

Mr. Wade makes a fair challenge to me as follows:

> At the risk of again stirring up my excellent friend "Porcupine," I must again call attention to the preposterous way in which "fancy" stuffs the mouths and eyes of its votaries, so that they do not know how they are eating their own words or see how they are traversing the instructions they are supposed to go by. "Authority" tells us that mastiffs must be square in muzzle, defining "square" in horn-book style as "forming right angle with upper line of nose," and that "hocks must be bent"; yet "fancy" puts the most frightfully undershot jaws and straightest of hocks as perfection if the muzzle is short enough, and in collies leads us to the remarkable decision that the puppy type is the correct one, not the fully matured one (I can never forgive "Porcupine" for the mischief he did by formulating this doctrine); and this, too, right in the face of a standard which says "skull of moderate width," or something to that effect.

Now "fancy" never put frightfully undershot jaws and straightest of hocks as perfection. A person officiating as judge might have given such a dog first prize, but that is only that judge's opinion. Besides which we are not told what was against such a dog. I suppose Mr. Wade has Ilford Caution in his mind's eye, and I have never had occasion to alter my original published opinion that his vocation is as a cross upon long-faced bitches and not on the show bench among first-class specimens. Mr. Mason and I do not agree upon this. Now, Mr. Mason is not "fancy." He is entitled to his own opinion and so is every one. Mr. Mason found fault with some of my judging at Buffalo, but that did not affect me at all. Under exactly similar circumstances I would render exactly the same decisions, irrespective of Mr. Mason's verdict, for I am not appointed to give expression of his views, but of my own.

Perhaps I might give a little bit of insight into what Mr. Wade would call practical judging if I touched up that Buffalo report. I have lost or mislaid my copy of FOREST AND STREAM containing Mr. Mason's report, but I recollect he found fault with me for my placing of the greyhound dogs. If I recollect right he said it was the worst work he had ever seen me do, and that the third dog should have been first. All I can say is that any one who would have so placed the dogs would have done so with an absolute want of knowledge of what is necessary to make a good running dog. In judging greyhounds my object is to get a dog built on the lines which, from practical experience, I know indicate the proper motion. Muscle is not all in a greyhound; conformation is the great thing, and unless the dog has sloping shoulders and plenty of length from hip to hock, he will not be flat to the ground and possess a long, sweeping stride. In the greyhound speed is everything, and I would sacrifice everything in the way of points to attain that object. Now, I know just as certainly as I do that one and one make two, how the third prize winner at Buffalo would "shape" in his stride, and with that knowledge I would not place him over those I put before him unless I had to peg them back on the score of condition. I noticed that the judge who at Syracuse reversed my decision of the greyhounds, said in his report that my first prize winner was out of condition, but even if right he was no match for the other one. All I can say is that I commenced my acquaintance with greyhounds and running dogs many years before the Syracuse judge started his experience by taking Friday Night to "walk."

In spaniels Mr. Mason objected to my judging in field spaniel bitches, saying Miss Newton Obo should have been second over Messrs. Oldham & Willey's other entry. In this case "fancy" comes in. I was not judging "spaniels over 28lbs.," but "field spaniels." Miss Newton Obo is not a field spaniel, but a short-backed, large-sized cocker, and was placed exactly where she ought to have been. Mr. Mason found fault with a good deal of the spaniel judging and perhaps failed to note one of my "practical" points. I found that quite a number of dogs had open coats, which I think is quite as objectionable as a single coat in a collie, and seeing that the breeders were overlooking such an important point, I laid stress on it in making my awards. There was one point made by Mr. Mason which I think he was wrong in doing in the way he did. It was the case of the spaniel Jersey. I forget where he said it ought to have been, but anyhow he would have been the last man in the world to have placed it as he said had he been in my place. The dog was dragged out of his box after forty-eight hours' confinement, and brought in front of me without having had a chance to be put in shape. On seeing his condition I simply put him on one side and looked elsewhere for the money dogs. Then Mr. Mason says for report on Jersey see his Boston show report. All very fine, but Jersey at Boston and Jersey at Buffalo were two very different dogs.

With regard to what I once said about collies Mr. Wade misquotes me entirely. What I said then and repeat now is that most collies are at their best at ten months old, after which the majority go thick in head and many go off in coat. Mr. Wade advanced the rejoinder that the way the majority went must be the proper way, and therefore thick heads were proper. Now it is just the very reverse, excellence is found in the few—excellence is the difficult to attain.

To come to Mr. Wade's fancy, mastiffs. The majority are big fawn-colored animals. Are big fawn-colored animals to go to the front simply because they are in the majority? Mr. Wade says "mastiffs are lacking a Moses to lead them out of the desert of fancy." No they don't. Mastiffs are "fancy" from one end to the other, and about the only dogs that I know of that are not, are business bull-terriers and greyhounds. I must stop with only one text handled this week. JAS. WATSON.

DOG TALK.

Lovers of setters will do well to consult the advertisement of Rosecroft Kennels, in another column, who offer some very fine stock for sale, their kennels being rather overstocked for the winter. Among the lot are Passion, Fanchette and Prince Foreman, well known on the bench, and a number of other grown dogs, besides some very promising puppies.

Our Indiana trials report tells us that everything passed off pleasantly and the meeting was voted a satisfactory one throughout. This is just what could not have happened had one of the originally appointed judges not been invited to step down and out.

Among our kennel notes is recorded the breeding of Kate II. to Mr. Wenzel's Chief. Mr. Hearst, the owner of Kate II., lives in San Francisco, and he shows commendable pluck in sending her so far. He must be a thorough dog man.

The Chesapeake Bay dog appears to be a growing favorite. We hope that those who are familiar with the breed and wish to see its merits better appreciated will favor us with some further discussion of the dog's usefulness as a retriever.

The New Bedford, Mass., show will be more attractive this year than before, by reason of a more liberal premium list, now in preparation and to be out shortly. We understand that Mr. C. H. Mason has been invited to judge.

Red Irish setter breeders will soon be scrutinizing the points of a new comer from the other side, concerning whose merits the purchaser has high anticipations.

C. L. wishes to learn the pedigrees of the Irish setters Glendale and Shipman's Purdy.

"DELEGATE" PESHALL.—Nothing could more thoroughly demonstrate the visionary way Mr. Peshall has of looking at and proposing things, and at the same time, his thorough conscientiousness and unselfishness, than his proposed resignation as delegate to the A. K. C. and his reasons therefor. True that many think the A. K. C. is a clique, but nobody ever suggested that Mr. Peshall was a consenting party to the clique, everybody knows he is an enemy of any such business, and how is the suspicion to be dispelled by withdrawing from the directory a known enemy of rings? I am no lover of the A. K. C., never was from its inception, always said it must drift into a clique, but at the same time I know it is for the good of doggy affairs in general that some decent and independent fellows should be connected with its management. What makes its drift to cliqueism so easy is very largely the very thing that Mr. Peshall objects to, *i. e.*, too much "new blood." Suppose that Messrs. Peshall, Winslow, Child, Drake, Donner, Kelly, etc., (I know that all of them are not delegates) should withdraw their patronage from the A. K. C., how long would it stand? Does not Mr. Peshall know that the great political strength the South used to have in Congress came from their retaining the same member year after year who had shown his efficiency? I know many of the N. J. K. C. who would worthily fill Mr. Peshall's shoes, but is that any reason for starting resignations?—W. WADE (Hulton, Pa.).

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ Notes must be sent on the Prepared Blanks.

Sheiah, Snowdown, Cremona and Berwick. By Tower Grove Collie Kennels, St. Louis, Mo., for two black and tan and two sable collie bitches, whelped Aug. 11, 1888, by Ben Lomond (champion Ben Nevis—Beauty IV.) out of Lady Woodford (champion Nullamore—Dot).

Rebel Rose and Dorothy. By F. G. Taylor and G. G. Davis, Philadelphia, Pa., for white and orange flecked and orange and white bitches, whelped July 2, 1888, by Buckellew out of Rodreka (Roderigo—Gem).

Mac S. By Chas. F. Loudon, Cincinnati, O., for white, black and tan English setter bitch, age not given, by Roderigo out of Pet Gladstone (Gladstone—Sue).

Bif. By Warner & Hamilton, Canaan Four Corners, N. Y., for black, white and tan collie dog, whelped July 13, 1888, by champion Clipper (A.K.R. 2529) out of Nellie McGregor (champion Rex, A.K.R. 149—Juno).

Beulah N. By G. H. Nixon, Leesburg, Va., for lemon and white pointer bitch, whelped Aug. 24, 1888, by Bob White (Joker, Jr.—Fussie) out of Lady of Naso (champion Nick of Naso—Devonshire Queen).

Whiff. By G. H. Nixon, Leesburg, Va., for lemon and white pointer bitch, whelped May 6, 1888, by Baffler (Joker, Jr.—Lady Mac) out of Fussie (champion Beaufort—Maggie).

Governor Hill. By A. W. Smith, Buffalo, N. Y., for black and tan terrier dog, whelped April 24, 1888, by King (A.K.R. 6365) out of Gipsey Queen (A.K.R. 5028).

Max, Jr. By C. S. Hickborn, Augusta, Me., for fawn mastiff dog, whelped April 26, 1888, by Max (A.K.R. 4258) out of Alpha (A. K.R. 3921).

DEATHS.

Hector. Mastiff dog (A.K.R. 6378), owned by F. R. Rohrman & Co., on Nov. 3, of inflammation of the bowels.

Kirmess (A.K.R. 6056), Duke of St. Paul (A.K.R. 6636), Marquis of St. Paul (A.K.R. 6639). St. Bernards owned by D. Bergman (St. Paul, Minn.) the first week in November.

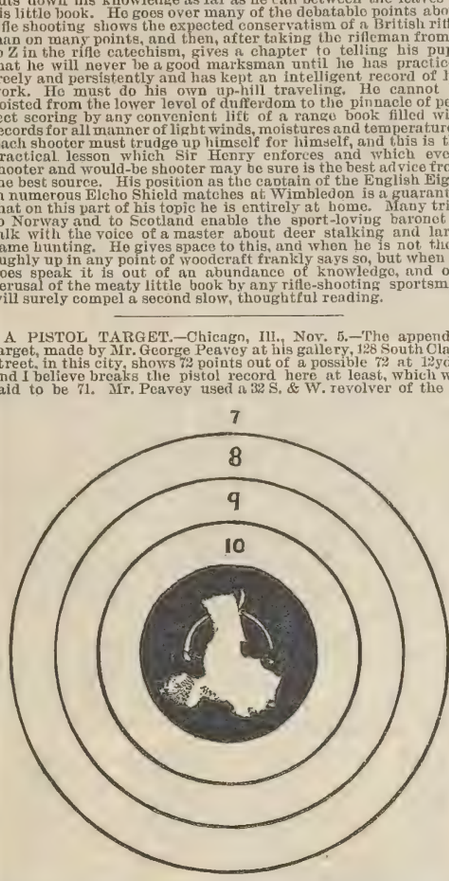
Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

Point out to us a boy of original or what would generally be called eccentric habits, fond of rambling about, a haunter of the woodside and river bank, prone to collect what he can search out, and then on his return to shut himself up in his room and make experiments upon his gatherings, to inquire into the natural history of each according to its kind—point such a one out to us, and we should have no difficulty in pronouncing him, without the aid of physiognomy, to be of far better augury than his fellow who does nothing but pore over his books, never dreaming that there is any knowledge beyond them.—*New York Ledger.*

Rifle and Trap Shooting.

RANGE AND GALLERY.

HALFORD'S RIFLE SHOOTING.



THE ART OF SHOOTING WITH THE RIFLE. By Sir Henry Halford, Bart. Republished from *Land and Water.* Price, 30 cents.

Sir Henry Halford in this book has gathered into convenient shape several chapters on the art and science of rifle shooting, which he had beforetime contributed to *Land and Water.* These may have been revised; if so, it was for typographical errors. For it would be absurd to think of the expert of experts on the subject revising anything he had written, or rather, that anything he would write should need revision.

Of course every rifleman who wishes to know all he may on his favorite subject will read this book. It will not take long to read it. For it is not long, but it will take a long time to thoroughly digest all the ideas in it, to master all the points and to be able to carry out all the hints. He insists that there is a why and wherefore for every phenomenon connected with rifle shooting. He sets out to find them out, and then proceeds to tell the rifleman just what to do, and not in mere didactic fashion, but with an explanation why he does it.

Not a few riflemen take as much as they may on trust. They see a Vernier gauge, learn how to use it, and go ahead. Not so Sir Henry. He wants to know as much of that Vernier gauge as the man who put it there, and in matter of fact does know as much of the science of rifle construction as any rifle maker, and puts down his knowledge as far as he can between the leaves of his little book. He goes over many of the debatable points about rifle shooting shows the expected conservatism of a British rifleman on many points, and then, after taking the rifleman from A to Z in the rifle catechism, gives a chapter to telling his pupil that he will never be a good marksman until he has practiced freely and persistently and has kept an intelligent record of his work. He must do his own up-hill traveling. He cannot be hoisted from the lower level of dufferdom to the pinnacle of perfect scoring by any convenient lift of a range book filled with records for all manner of light winds, moistures and temperatures. Each shooter must trudge up himself for himself, and this is the practical lesson which Sir Henry enforces and which every shooter and would-be shooter may be sure is the best advice from the best source. His position as the captain of the English Eight in numerous Elcho Shield matches at Wimbledon is a guarantee that on this part of his topic he is entirely at home. Many trips to Norway and to Scotland enable the sport-loving baronet to talk with the voice of a master about deer stalking and large game hunting. He gives space to this, and when he is not thoroughly up in any point of woodcraft frankly says so, but when he does speak it is out of an abundance of knowledge, and one perusal of the meaty little book by any rifle-shooting sportsman will surely compel a second slow, thoughtful reading.

A PISTOL TARGET.—Chicago, Ill., Nov. 5.—The appended target, made by Mr. George Peavey at his gallery, 128 South Clark street, in this city, shows 72 points out of a possible 72 at 12yds., and I believe breaks the pistol record here at least, which was said to be 71. Mr. Peavey used a 32 S. & W. revolver of the .44

model. His shooting was witnessed by Messrs. Charles Porter and H. E. Bush. On the same evening Mr. Peavey emptied the 26-shot magazine of a .22 Winchester rifle in 11 seconds, breaking 5 balls on swinging targets in the score.—E. H.

WILMINGTON, Del., Nov. 6.—This was in every way a great day for the rifle shooting fraternity and their friends at Healdmore rifle range, Wilmington, Del. The weather was delightful, the turning out large and the scores unusually good. During the afternoon there was a large number of visitors at the range to witness the sport. The monthly badge of the Wilmington Rifle Club was won by J. Scott on a fine score. Three scores of 80 and upward were made at 200yds. S. J. Newman and H. B. Seeds raising their former highest records. The beginners's monthly badge was won by J. S. Jefferis for the third consecutive time, which debars him from future beginners' matches. The badge now becomes his property. S. P. Marshall was the winner of the leather medal. The scores made were as follows, at 200yds., off-hand, standard American target:

Wilmington Rifle Club's Badge Match.

J Scott	8	9	6	8	7	8	6	9	6	5—72

TOPEKA, Kan., Nov. 4.—*Editor Forest and Stream:* The inclosed scores were made by members of the Topeka Rifle Club and two visitors, Messrs. R. S. Dinsmore, of Troy, Kan., and W. T. Whiteford, of Banard, Mo., on Nov. 2 and 3. The latter day was nearly all taken up in shooting, as several went to the range in the morning with their dinner baskets, with their minds firmly made up to give the bullseye particular fits. As will be seen by the scores, Mr. J. L. Paine made a full score and a run of 16 bulls, and 42 bulls out of a possible 50. The shooting was all done at 200yds. off-hand, field target.

Nov. 2.

Mr. J. L. Paine thus expresses himself: "I don't doubt that Dr. Minkler has injured our rifle club a great deal by reports about our scores. The fact is our system of scoring is as perfect as we know how to make it, and subject only to the inevitable corrections which a marker makes on any range. We boys here began to think it was rather a misfortune than otherwise to be good rifle shots, since other clubs hinted that our scores might not be absolutely correct, and we only wish doubters to come down and score for us if they doubt our ability to shoot and score, too."

BOSTON, Nov. 10.—Several riflemen put in an appearance at the range to-day but as the bad weather conditions continued no high scores were made, except Messrs. Bennett's pistol scores. Following are to-day's scores:

Rest Match.

J Francis	9	9	11	12	11	12	11	12	12	12	10—169

100 Consecutive Shots, 50yds., with .22-100 Pistol.

ST. LOUIS, Mo., Nov. 9.—*Editor Forest and Stream:* The St. Louis Pistol Club, despite the intense election interest that attracted the attention of every one here, turned out in very good attendance at its last shoot. Some good scores were made by the members who took part, and altogether the general average was very good. The high score for the evening was made by Mr. Bauer, who will in consequence hold the medal until next week. All the shooting is done at a standard American 20yds. target. The score:

W Bauer	7	8	10	8	9	10	9	10	8	5—84
W T Larned	10	6	7	10	6	10	6	9	10	6—80
O Neuhaus	8	8	7	5	9	8	8	10	10	7—80

UNSER FRITZ.

NIAGARA FALLS, Ont., Nov. 9.—A very interesting rifle match took place here to-day between the Lincoln Rifle Association team of St. Catherines and the 44th Battalion and the Niagara Falls (Ontario) Rifle Association team of this town, on the range of the latter. The teams consisted of 7 men each, and the match resulted in favor of the home team. The weather was anything but favorable for the sport, there being a drizzling rain falling the entire afternoon, with shifting winds, making it very difficult to make good scores. The following is the score of the teams, 5 shots at each range:

St. Catherines.	200yds.	400yds.	T'l.	44th Batt. and N. F. A.	200yds.	400yds.	T'l.
J S McClelland	19	15	34	W M Parker	21	14	35
J Carlson	19	13	32	Colin Pratt	15	16	31
A Carlson	15	21	36	J J Bampfield	19	14	33
W S Crane	19	4	23	G E Bukley	21	18	39
S Harper	12	2	14	G Margetts	19	19	38
T Plovard	17	12	29	F C Devoe	22	10	32
J Longley	13	20	33	R P Skinner	16	18	34
	201						242

The return match will be shot at St. Catherines in the near future.

CONNECTICUT MARKSMEN.—According to the laws of the State of Connecticut, the militia companies are required to make a return of qualifications during the year. There are four classes —"sharp shooters," "first," "second" and "third." In order to qualify as a sharp-shooter, it is necessary to make at least 43 out of 50 at 500, 600 and 800yds. respectively; as 1st class, 40 out of 50 at 200 and 500yds. respectively; as 2d class, 20 out of 25 at 200yds; and 3d class, 17 out of 25 at 200yds.

NEWARK, N. J.—The Newark *Sunday Call*, always accurate and full in its reports of shooting matters, says at the close of the season's work: "The season for out-of-door rifle shooting is practically closed so far as this part of the country is concerned, and it has been the liveliest since 1878. Almost every club, large or small, in New York and New Jersey, has held one or more prize shoots, and nearly all of them have drawn well. The grand event of the year and one which stirred up a rifle shooting interest in every State in the Union, was the mammoth six days' festival held in the Shooting Park in July. This affair, which was conceived and pushed to a finish by Mr. William Hayes, of this city, will go upon record as the most gigantic shooting festival ever held in America. By some of Newark's citizens the affair, as a whole, was looked upon as a failure because there was a deficiency of $3,586 to be made up after the festival closed, but this loss was entirely in the Volksfest portion of the affair, the bad weather cutting the attendance, outside of the shooting house, down to a mere nothing, compared with what it would have been had the festival been held in the first week of the month. The festival as a Schuetzenfest was a grand success financially and otherwise, all the losses occurring outside of the shooting house. The festival swelled the membership of the Newark Shooting Society, one of the oldest organizations of the kind in this part of the country, to about 157, about two-thirds of the new members being active riflemen. This society will soon stop practicing for the season, but bright and early in the spring the shooting-house will be unlocked and the targets stretched, after which some lively work is contemplated. Some of the most earnest of the old members and a large percentage of the new ones will endeavor during the off season to have some plan of record-shooting worked up by which it is hoped that all members of the society will be tempted to take up active practice. For a few years back all the practice has been on the go-as-you-please plan, no records being kept by the society of any scores made except at the annual king shoot. Records will be kept not only of scores made by the hair-trigger shooters, but those made with the 3lb. pulls as well, and it is safe to say that before the season of 1889 closes one-third at least of those members who have become accustomed to the cumbersome Schuetzen rifles in days gone by will discard them for the lighter and handsomer hard-pull rifles. It is not known as yet in whose hands the Shooting Park will be when another season opens, as Mr. Geiger, who has managed for the past two years, will leave on December 1, but this cannot affect the matter of the Newark Shooting Society using the range, as it has a perpetual lease thereon."

NEWARK, N. J., Nov. 6.—About thirty marksmen, one-half being members of the Newark Shooting Society and the rest visitors from New York, were in the Shooting Park to-day pegging away at the German ring targets from morning until dark. It was expected that Point targets would be used, but instead the shooters contented themselves by contesting in three-shot pools. The proposed revolver practice was cut down to one man's work, the rest of the revolver shooters failing to put in an appearance. Theo. E. Beck, using a .44-caliber Smith and Wesson Russian model at 30yds. did some fine shooting on a Standard American target, making several clean scores of six shots each. The 50-shot match which was arranged for the afternoon was not started until late, and in consequence had to be cut down to 35 shots, and even then was finished almost in darkness. It had 13 entries, the entry fee being $3, half the contestants being winners and half losers. The result, according to the official scores was as follows: G. Plaisted, Zettler Rifle Club, 742; J. Williams, Newark S. S., 741; Barney Walther, Z.R.C., 741; M. Dorrler, Z.R.C., 740; H. Holges, Z.R.C., 727; A. Begerow, N.S.S., 723; F. Watts, N.S.S., 722; J. Coppersmith, N.S.S., 714; G. Zimmerman, Bullshead R. C., 712; C. G. Zettler, Z.R.C., 708; J. T. B. Collins, N.S.S. (three pound pull), 687; T. E. Beck, N.S.S., 676; L. Vogel, Z.R.C., 652.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

ELECTION DAY SCORES.

THE Suburban Grounds were open on Election Day, and a small number of shooters gathered to keep their guns from rusting and to get beyond the reach of heated political argument. The weather was not conducive to a large attendance in the morning, but toward noon the sun appeared to cheer the spirits of Republicans and Democrats alike. The shooting was from five traps, screened, known angles, regular rules, and the targets used were bluerocks. Some improvements have been made on the grounds since the opening tournament, and more will be made before the next shoot, which is dated for Nov. 29, Thanksgiving. Below are scores made.

Sweep No. 1 at 15 single rises, $1 entrance, three moneys:

Sweep No. 5 at 10 single rises, $1 entrance; three moneys:

Brientnall	1111011111— 9	J F Richards	1101111111—9
Bristol	1001111011— 7	Hendry	0111111100—7
Gould	0111110010— 7	Hunt	0111111111—9
Albee	1010001111— 6	Jones	1110011101—7
Miller	1100011111— 7	Hubbell	1101011010—6
J P Smith	1111111111—10	Quimby	1110110011—7

J. P. Smith won first, $6; ties on 9 divide $3.60; ties on 7 shot off and $2.40 divided by Miller and Quimby.

Sweep No. 6 at 10 single rises, $1 entrance; four moneys:

Quimby	1001111101—7	Tell	1001010011—5
Brientnall	1111111101—9	J P Smith	1101111111—9
Miller	1111111101—9	J F Richards	0001101111—6
Bristol	1101000100—4	Hendry	0011000111—5
Gould	1000111011—6	Dr Gill	1000010011—4
Albee	0110111111—8	C Richards	1001110010—6
Jones	1111000111—7	Hubbell	1110110000—5
Hunt	1111101111—9		

Ties on 9 divide $6; Albee wins second, $4.50; ties on 7 divide $3; ties on 6 shot off and fourth money, $1.50, won by Gould.

Sweep No. 7 at 5 pairs double rises, $1 entrance; three moneys:

Brientnall	10 10 10 11 11—7	J F Richards	00 10 10 00 00—2
Miller	11 11 10 11 10—8	Jones	01 11 10 00 11—6
Albee	10 11 10 11 10—7	Quimby	10 11 10 10 10—6
C Richards	00 11 11 00 10—6	W A Hendry	11 10 10 00 10—5
Bristol	00 11 11 11 10—7		

Miller wins first, $5; ties on seven divide $3; ties on 6 divide $2.

Sweep No. 8 at 10 single rises, $1 entrance; three moneys:

Miller	1111111001— 9	Hunt	1111101101—8
Brientnall	1111111011—10	Bristol	0001111001—5
J P Smith	1110011111— 9	J F Richards	0110111001—6
Gould	1111111111—10	Quimby	1101000101—5
Albee	1011110111— 8	Cramer	1111011111—9

Ties on 10 divide $5; ties on 9 divide $3; ties on 8 divide $2.

Sweep No. 9 at 10 single rises, $1 entrance; three moneys:

Miller	1101110101— 7	Jones	1101110111—8
Apgar	1101101111— 8	Handry	0110101001—5
Brientnall	1111111111—10	J F Richards	1001011001—4
Hunt	1111111111—10	C Richards	1111100101—7

Ties divide moneys $4, $2.40 and $1.60.

Sweep No. 10 at 10 single rises, $1 entrance; three moneys:

Brientnall	1111101111— 9	Miller	0111111111—9
Hunt	1010111111— 8	Tell	0010010109—3
Apgar	1111111111—10	J F Richards	1010101100—5
Jones	1010010000— 3	C Richards	1001010111—6

Apgar won first, $4; second divide $2.40; Hunt won third, $1.60.

Sweep No. 11 at 10 single rises, $1 entrance; three moneys:

Hunt	0111101111—8	Miller	1111111110—9
Brientnall	1101111101—8	J F Richards	1111111101—9
Apgar	1111111101—9	C Richards	0111111001—7
Jones	1100011101—5	Tell	1100110000—5

Ties on 9 shot off and the $4 won by Apgar; second divide $2.40; C. Richards won third, $1.60.

THANKSGIVING DAY SHOOT.

THE New York Suburban Shooting Grounds Association present an attractive and varied programme for their Thanksgiving Day Tournament, which will no doubt draw a goodly number of shooters, particularly as mine host Bowers of the restaurant promises an excellent spread with all the usual accompaniments of a Thanksgiving dinner. The grounds are at Claremont, N. J., second station from New York on the Central R. R. of N. J. Time from New York, 18 minutes; round trip fare 14 cents.

Event No. 1, 10 single bluerocks, open to all, entry $1.

Event No. 2, 10 singles and 5 pairs bluerocks, open to all, entry $1.

Event No. 3, match between chosen sides, at 10 singles and 5 pairs bluerocks, no entry fee, but the losing side to pay for all the dinners, not to exceed 75 cents each, each contestant paying for the birds he uses. Open to all.

Event No. 4, 9 single bluerocks, open to all, use of both barrels, 12-gauge guns at 17yds., 10-gauge guns at 16yds., traps to be screened, 3 traps and at different angles unknown to the shooter. The shooter to turn the indicator and shoot at three targets before leaving the score, entry $1.

Event No. 5, 50 cents entry, miss and out match, to be shot same as Event No. 4; open to all.

Event No. 6, Walking Match Sweepstakes, 50 cents entry, open to all, at 6 birds. Each shooter will march alone from end to end and back, along the line of six traps, turning and firing at the targets as they may be sprung from any trap as he passes along. The gun must be carried upon the shoulder, the muzzle well elevated. The referee shall call pull, when one of the three traps nearest the shooter shall be immediately sprung. The use of both barrels will be allowed.

The Western set of traps will be used exclusively for open-to-all shooting. The Eastern set of traps will be devoted entirely to the use of amateurs, for such shooting as the may see fit to indulge in, either for practice or sweepstake shooting, they having the privilege of barring any one they choose by a majority vote of those concerned.

All impromptu sweepstakes not regular programme events, must pay 50 per cent. of entries in each sweep to the club. This applies to all impromptu sweeps where money is up. Every one interested in shooting is earnestly invited to attend and bring a friend and gun along.

ALBANY, N. Y., Oct. 31.—Elm Grove Park was the scene of a capital trap shoot to-day. Three traps were bolted to the platform in front of the trapper's pit in charge of Jack Whitney, and 60yds. to the left a bluerock trap was secured to a weighted box. The familiar Albany faces were all present, Rockworth, Gardner, Paddock, Barron, Gove, Olcott, Reese, James and Thomes, prominent ones in the sport. Troy had a goodly representation in the inevitable Goggin, the fun-loving Curley, the excitable Buesser, the quiet Betts, the earnest Dunn and the youthful crack shot Lord. Patten generally comes along from Lansingburgh, Paul from Cohoes, and Domer from Green Island. Wheeler, of Brunswick, and Hurd, of Schuylerville, are strangers, and so are the modest Cunningham and the polished Livingston, of Saratoga. The Ransom brothers, of Londonville; Selkirk, of Selkirk; Becker, of North Scotland; Osterhout, of Amsterdam, are regular habitues of Elm Grove, and Partiss, a good shot from Johnstown, is well known. The first event that excited the interest and drew the attention of everybody on the ground was the "composite match." This consisted of 5 singles and 3 pair of kingbirds being allotted to each contestant, the totals made in the singles and doubles to count in the score.

S Goggin	11111	11 11 10—11	H Livingston	00110	01 11 11—8
F W Partiss	11111	00 11 11—10	A Paul	01011	00 10 10—6
W T Lord	11101	11 10 11—10	C L Gove	10000	11 11 10—6
H Gardner	11110	10 11 11—10	P G Williams	00100	10 00 00—3
C Rockworth	11011	11 10 10—8	Gus Buesser	10010	11 00 00—5

Ties on 10, 3 singles, 1 pair: Gardner 5, Partiss 4, Lord withdrew.

After the composite match was concluded, the eagerly looked for live bird event was called.

S Goggin	1111111—7	J Selkirk	1110110—5
W G Paddock	1111111—7	J H Patten	1111010—5
W Domer	1111111—7	J T Betts	1111010—5
C E Rockworth	1111101—6	C L Gove	1101101—5
F W Partiss	1111011—6	G H Thomas	1111010—5
W G Parr	1011111—6	A Dunn	1010011—4
B J Hurd	1111011—6	G A Wheeler	0011100—3
W T Lord	1111110—6	G Buesser	0100100—2
J Becker	1111101—6	A Paul	0010001—2
H Gardner	0101111—5	H M Livingston	1110100

o Denotes dead out of bounds.

Goggins, Paddock and Domer divide first money with straight scores of 7 dead birds. There were six men in the second class tie with scores of 6 each, and they shot out the tie with the following result: Parr 2, Partiss 2, Lord 1, Becker 1, Rockworth and Hurd withdrew. W. G. Parr, of Albany, and F. W. Partiss, of Johnstown, divided second money. The ties in the third class, with scores of 5 each, divided third money. There was but one man in the fourth class with a score of 4, and he got fourth money, which paid him a dollar and a half over and above his entrance fee. As Toney was handed the money, Tom Curley exclaimed, "well Dunn!"

BROOKLYN, Nov. 1.—The members of the Glenmore Rod and Gun Club did not turn out very strong in numbers to-day at their regular monthly shoot at Dexter's Park, Jamaica Plank Road, Long Island. Thirteen went to the traps to compete for the handsome diamond badge presented to the club by Mr. Bernard Midas and a handsome silver pitcher presented by Supervisor George U. Forbell as the members' prize. James Bennett repeated his fine performance of last month, killing his 7 birds straight from the 20yds. mark, winning the badge and the Forbell pitcher. W. Selover also did some splendid shooting, killing 17 out of 18 shot at. M. J. Bourke, the president of the club, has improved in his shooting very much during the past season and killed 6 out of 7. T. T. Edgerton, Jr. killed 20 out of 23. Supervisor G. U. Forbell also shot well, although he was in the parade of the previous evening. After the regular shoot sweepstakes were shot off, W. Selover and T. T. Edgerton taking the lion's share and dividing in each sweep. Host Si Nager proved to be the best man of the Glenmores and their guests, and saw that every one present did not hunger or thirst as long as the good things provided held out.

The full score of the shoot and sweepstakes is as follows:

J Bennett (29)	1111111—7	C Magee (25)	1010100—3
E Helgans (27)	1001111—5	W Selover (29)	1110111—6
W Levens (25)	1111011—6	W Quinington (26)	0100111—4
J Ochs (26)	0101000—2	W J Bennett (23)	0111111—6
P von Dreele (26)	1110110—5	G U Forbell (29)	0111011—5
M J Bourke (26)	1011111—6	T T Edgerton, Jr (29)	0111101—5
J D Bennett (26)	1110110—5		

First sweepstake at 25yds.: J. Bennett 2, W. R. Selover 4, G. U. Forbell 3, T. T. Edgerton, Jr., 4, E. Helgans 3, P. H. von Dreele 2, W. Levens 2, O. Mills 2, E. Scheillein 2. Second sweepstakes: G. U. Forbell 2, W. Selover 4, T. T. Edgerton 4, E. Helgans 1, W. Levens 3, P. H. von Dreele 1. Third sweepstakes: G. U. Forbell 1, T. T. Edgerton 6, W. Selover 3. Referee, Mr. C. A. Dellar; scorer, Mr. W. Bennett.

SHAMOKIN DAM, Pa., Nov. 8.—Sweepstake match at 10 live birds, 25yds., 40yds. boundary, use of one barrel: Levi Hill, Muncy, 9; T. Kessler, Shamokin Dam, 9; Ben Mackamer, Trevorton, 6; L. Ditsman, Shamokin, 8; W. Burrows, Shamokin, 10; G. Goodman, Shamokin, 8; G. W. Stahl, Lewisburg, 7; Finn Cooper, Shamokin, 9; A. J. Bickel, Selins Grove, 7; Tom Larkins, Shamokin, 8; G. Hudson, 8; G. S. Burk, Shamokin, 8. Same place and day a match between L. Hill and T. Kepler, 15 live birds, for $100, 25yds. rise, 40yds. boundary, use of one barrel, won by Mr. L. Hill with 14 to Kepler's 12.—J. B. D.

LUCKNOW, Ont., Nov. 6.—A pigeon shooting match here to-day between Dr. McCrimmon, of Kincardine, Dr. Garnier of Lucknow, John Hewitt and Jas. McKenny, of Rervie, and T. J. Stewart and Sam Holmes, of Black Horse, was a most enjoyable affair. It was Dr. Garnier's match and he entertained the outsiders in his most royal style. The match was 15 birds each, and the following is the result: Dr. Garnier 14, John Hewitt 13, T. J. Stewart 8, Sam Holmes 5, Dr. McCrimmon 4, Jas, McKenny 6.

MONTREAL, Nov. 3.—Some time ago Messrs. Greener, the well-known gun makers, presented the Montreal Gun Club with two handsomely finished and valuable guns, one for club and the other for open competition. The first club match took place to-day on the M. G. C. grounds at Cote St. Antoine. If the devil had the choice of days and wanted to hear shooters say cuss words he could not have arranged the matter any more to his satisfaction. Misty, bleak and damp, with a wind that would lull for a minute and blow great guns the moment a man said "pull." Birds would sail along nicely for half a second, then they would be lifted up to the tree tops or dashed to the ground. The wind seemed to be blowing from six different directions, the cardinal points did not give it scope enough; sometimes it seemed to blow down in a straight line from the sky, and again it would appear as if there was a vent in the earth; at least the wind seemed to come from that direction. At all events good shooting was an impossibility. Some of the crack shots were there and most of them wished they were somewhere else, seeing that their prayerful maledictions did not send old Boreas where he belonged. How bad the shooting was may be imagined from the fact that out of 20 birds the men who broke 9 were tied for first place, and when the ties were shot off Mr. W. McCaw had won the first competition for the Greener gun. A gentleman who won the gold medal, emblematic of the championship of Canada, some few days ago, only grassed 6 out of his 20. Shooting, however, will take unto itself a little bit of a boom round about Thanksgiving Day, when the Montreal Gun Club will hold their annual shoot and the Dominion Club will have their first match for the gun presented by Mr. Horseley. In fact Thanksgiving Day may be put down as the real opening of the clay-bird season here. The score to-day stood:

First handicap competition for Greener gun, at 20 Peoria blackbirds, 18yds. rise, from 5 traps, Lewis J. Trotter referee:

R James	1110110100110100000001	—10	+2—12
W L Lumsden	0000000100010010011111	— 6	— 6
W McCaw	1101101100011000000001	— 9	+4—13
A Alexander	0010000000001010010000	— 4	+3— 7
E C Alberts	0101010010101001011	— 9	+4—13
H Judge	0000110100010000011001	— 5	+4— 9
B Jim	1010003900010010110	— 7	+4—11
Fred Orr	0000010001000111001	— 7	+3—10
W A Vensteson	0000000000000000000	— 0	+3— 3
Luke Sharp	1111010101000101000	— 9	+4—13

In the shoot off at 5 birds for first place the score was: W. McCaw 4, E. C. Alberts 3, L. Sharp 1.

The following sweeps were then shot at 10 birds:

Alexander	1100011100—5	E A Cowley	0110001010—4
L Sharp	1110010000—4	B Jim	0101101000—4
D Robertson	0100010111—5	Taylor	0100001000—2
W Lumsden	0000101001—4	H Judge	0010101010—4
F Orr	0011000001—3	Thackwell	0110001000—3
R James	1110011111—8	R Bogardis	0000010011—3

Alexander first on shoot off, Cowley second.

Second sweep at 5 birds:

A Alexander	00111—3	W Lumsden	01101—3
L Sharp	00101—2	E A Cowley	01101—3
L Robertson	11111—5	O F Botsford	01011—3
R James	10110—3		

Cowley second on shoot off.

WELLINGTON, Mass., Nov. 8.—The Wellington Gun Club held an all-day tournament to-day, and, in addition to the several sweeps, the challenge amateur individual and team badges of the Massachusetts S. S. Association were contested for the first time. In the individual badge match, at 7 bluerocks and 8 clay-pigeons, the following scores were made:

Nichols	0111110111101101—11	Sanborn	1001010001111111—10
Melcher	0111101011111001—10	Atwell	0011010101100—7
Swift	0110101110000011— 8	Schaefer	1111111110000—11
Perry	1101111000101101—10	Moore	0111110001101110— 9
Pete	0111111111111100—12	Snow	1110110011110111—11
Chase	1101010101111010—10	Field	0111101111101111—12
Charles	1110011110111111—12	Choate	1011101111111101—12
Lang	1011110111101111—12	Budd	1110010000000100— 6
Payson	1110001000000101— 6	Wild	1110111001111111—12
Conant	1101110101011111—12	McCoy	0011011110100001— 8

In the shoot-off in the above match Conant won, breaking five straight. Schaefer won the keg of powder. For the team badge match there were no competitors outside the club, although it was expected that teams from Walnut Hill, Worcester and Springfield would be present. Three teams from the club contested for it, and it was won by Wild, Gore, Moore, Pete and McCoy, with a total of 36 out of 50 birds. The other teams tied with 35 each.

Following are the winners in the sweepstake matches: Six bluerocks, Chase; six clay-pigeons, Bond; six bluerocks, Bowker; six clay-pigeons, Schaefer; three pairs clay-pigeons, Bond; six bluerocks, Swift and Snow; six clay-pigeons, Schaefer and Swift; three pairs clay-pigeons, Pete; six bluerocks, Charles, Schaefer and Field; six clay-pigeons, Wild; three pairs clay-pigeons, Schaefer and Charles; six bluerocks, Chase; three pairs clay-pigeons, Bond; six clay-pigeons, Choate; six bluerocks, Nichols and Snow; six bluerocks, Choate, Wild and Bowker; six clay-pigeons, Wild and Chase; seven bluerocks, Wild and Sanborn; eight clay-pigeons, Schaefer; three pairs clay-pigeons, Choate and Moore; six bluerocks, Sanborn; five clay-pigeons, Gore, Schaefer and Choate; five bluerocks, Field; six bluerocks, Wild; six clay-pigeons, Melcher; six bluerocks, Choate.

DAYTON, O.—The Heikes-Bandle 100 live bird match for a purse of $500, which is to be shot here on the 29th inst. is the most important event now on the shooting stage—will, in fact, be the largest stake race that has been shot in the State for over fifteen years. A correspondent of the Cincinnati *Enquirer*, speaking of the two men says: "I know both men. Both personally are great fellows—big-hearted men, generous to a fault. But when it comes to shooting the similarity ceases, their method, manner and character being different. Heikes walks up to the trap seemingly confident, usually without a tremor; calls 'pull' in an ordinary tone of voice, and shoots at his first bird as though he were contesting for a dinner, in place of perhaps a half year's salary. Here the Dayton man, Heikes, shoots a winning race—in the beginning. He is, I believe, not quite so confident near the latter end of the match, seems over-anxious, and, I think, is not quite so strong as at the start. He should overcome this, and he will be one of the greatest all-around trap shots in the country. However, he displayed no weakness in this respect in his great shoot with Hart, of Huron, O., for the L. C. Smith State championship cup two months ago at Dayton, in which he tied his competitor twice, shooting at 150 birds apiece, both scoring 145 out of 150. Al Bandle is, I must say so, a peculiar fellow. I have often thought that in a contest his thoughts are too thoroughly centered in the money his friends have upon him. He seems over-anxious as he steps before his first side-quartering or trailing bird. This displays itself in the serious look in his dark eyes, his set teeth and the rigid contraction of his muscular arms. There is where Bandle could be careful. I will venture to predict that if he loses in his coming match it will be on the first fifteen birds. I base that opinion on his over-anxiety—his surety. It is a splendid sight though for a lover of shooting to witness Bandle shoot an up-hill race. When his chances seem almost hopeless he does his neatest work, birds right and left, slow and fast flyers being cut down like grain before a mower. His birds are out of the trap and riddled before you scarcely see a spread of wing. I tell you, my friend, if Bandle will only watch himself in the beginning of a match he can win every time. The action of a Dayton paper criticising the statement made in Cincinnati papers that Bandle made concessions to Heikes in going to Dayton to shoot the coming match is unreasonable. Bandle, as he always does, gave up his interests upon every question in favor of his opponent, leaving to him the race, the time, the grounds and birds. Besides this agreed to go among his opponent's friends on comparative unfamiliar grounds to shoot his match. The question brought up as to the fairness exhibited by Mr. Heikes was altogether uncalled for, as all these persons are known as gentlemen who have never, nor ever would, stoop to take any advantage of a person who came among them as a guest or friend. Still I insist Mr. Bandle's friends who have money (and they are many) on the match are right in disapproving his course in the event. Every one must acknowledge one's dunghill is an advantage—is pleasanter than going to the hill on which some other cock has trod."

GUELPH, Ont., Nov. 3.—Five members of the Guelph Gun Club went to Brampton to-day and had a friendly pigeon shoot with an equal number of the members of the club there. It was expected that representatives from Toronto would put in an appearance, but they failed to do so:

Guelph.		Brampton.	
Geo Sleeman	00110110—4	D Allison	11110100—5
W D Shattuck	11111111—8	M Deady	01010110—4
J Wayper	11111111—8	W Lee	10000111—4
James Johnson	11010111—6	R J Williamson	01110111—6
F Quarrie	11010111—6—32	James Packham	10111101—6—25

Shattuck and Wayper won the sweepstakes, killing 8 birds each, his dividing the honor.

WALLINGFORD, Pa., Nov. 6.—The election day shoot of the Wallingford Gun Club took place at the country seat of R. W. Downing, at Wallingford, Delaware county. Fifty well-known gentlemen were present and half of them participated in the shoot. The prize was a cup made of gold, silver, iron, brass, copper, nickel, zinc and tin. It is known as the Protection or Free Trade Handicap Cup, and is inscribed with the names of the Republican and Democratic candidates for President. The Republicans were greatly in majority and one of their number won the cup. The terms of the match were: Each man to shoot at 25 bluerocks thrown from a trap 18yds. distant, 40yds. boundary. D. S. B. Chew, of the Riverton Gun Club, and C. G. Downing tied for first place, each hitting 20. In the shoot-off Mr. Chew won. He hit 4 out of 5 bluerocks, while Mr. Downing hit 3. The total scores were as follows:

D S B Chew	24	B Bernheim	15
C G Downing	23	C M Moody	15
T S Dando	19	C H Ranney	15
W C Downing	19	T K Ober	15
F T Downing	19	J D Garber	15
E S Handy	17	W Murphy	15
John Sanderson	17	E S Hart	14
Dr W S Woolford	17	E W Wilkins	14
J D'Invilliers	17	L A Flanagan	13
R W Downing, Jr	16	C A Ray	13
Percy Hill	16	J W Mercur	13
T H Farquhar	15	J C Roop	12
Isaac Kemble	15		

SPRING HILL GUN CLUB, Blauvelt ville, N. Y.—The regular holiday shoot of this club was held on election day, Nov. 6. The attendance for various reasons was very small. The scores were as follows, 5 traps, 5 bluerocks, sweepstake, 18yds., Hathaway 20yds.:

J Bogert	11020—2	C C Allen	00300—0
A D Kittle	00010—1	C M Hathaway	01000—1
C J Bogert	11000—2		

Second match, 3 pair doubles, 16yds., Hathaway 18yds.:

J Bogert	11 11 10—5	C C Allen	11 11 11—6
A D Kittle	10 11 10—4	C M Hathaway	01 01 01—3
C J Bogert	00 01 00—1		

Third match, for club medals, 10 bluerocks, straightaway, 18yds.; C. A. Kittle 20yds., Hathaway 22yds.:

J Bogert	0101001111—6	C C Allen	1110111111—9
A D Kittle	1011111111—9	C A Kittle	0111011011—7
C J Bogert	1100010001—4	C M Hathaway	0001111101—6

Ties—A. D. Kittle 2, C. C. Allen 3. Dr. Allen, gold medal; C. A. Kittle, silver medal.

Fourth match, 7 glass balls, sweep:

A D Kittle	0110111—5	Allen	1011010—4
Hathaway	1001101—4		

Fifth match, 3 pair bluerocks, sweep:

A D Kittle	01 01 11—4	Allen	10 10 11—4
Hathaway	00 11 11—4		

Ties, miss and out, A. D. Kittle 1, Hathaway 2, Allen 1.

Sixth match, 5 bluerocks, 5 traps:

A D Kittle	10110—3	Allen	11010—3
Hathaway	10100—2		

Ties—Kittle killed 2, Allen 2.

Seventh match, same as No. 6:

A D Kittle	01111—4	Allen	01111—4
Hathaway	00110—2		

Ties—Kittle 3, Allen 1.

Eighth match, same as No. 6:

A D Kittle	11111—5	Hathaway	11110—4
Allen	11010—3		

C. A. KITTLE, Sec'y.

BANDANA GUN CLUB.—At the fall meeting of the Bandana Gun Club, held near New Foundland, N. J., on Nov. 6, the scores were as follows at 10 live birds, 26yds. rise:

Murray	6	Howe	7
Bonner	7	Street	8
Cambell	6	Sheriff	8
Morosini	6		

The shoot-off for first money was won by Sheriff, Street taking second and Howe third.

WELLINGTON, Mass., Nov. 10.—The rainstorm this afternoon did not prevent a fair attendance at the grounds of the Wellington Club, there being 15 present to contest in the merchandise and badge matches. In the merchandise match the following scores were made at 10 clay-pigeons and 10 bluerocks: Melcher 16, Bradstreet 13, Choate 14, Lee 13, Swift 15, Snow 16, Nichols 18, Duff 17, Conant 17, Perry 18, Scott 17, Shumway 17, Bond 17, Sandborn 16, Moore 14. For the individual badge Melcher got 14, Choate 17, Lee 14, Swift 15, Snow 18, Nichols 17, Duff 16, Conant 15, Perry 15, Scott 15, Shumway 17, Bond 16, Sandborn 17. The winners in the sweepstake matches were: Six clay-pigeons—Snow. Six bluerocks—Scott and Snow. Six clay-pigeons—Duff and Scott. Six bluerocks—Duff and Snow. Six clay-pigeons—Snow. Six clay-pigeons—Scott, Duff and Shumway. Six bluerocks—Duff and Bond. Ten clay-pigeons—Perry. Ten bluerocks—Bond. Ten clay-pigeon—Conant and Choate. Ten bluerocks—Snow. Three pairs bluerocks—Melcher. Three pairs clay-pigeons—Perry and Nichols.

ANNIE OAKLEY (Little Sure Shot) and Philip Daly, Jr., are billed to shoot a match at Elkwood Park, Long Branch, N. J., tomorrow, Nov. 16, the Little Sure Shot to shoot at 50 birds and Daly at 55, Monaco boundary, W. Fred Quimby and W. D. Campbell judges.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. B. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Boustield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. GIBSON, } Albany, N. Y
Secretary-Treasurer: F. L. MIX. }
Vice-Com. *Rear-Com.* *Purser.*
Central Div..W. R. Huntington..E. W. Masten.....T. H. Stryker, Rome, N. Y.
Atlantic Div. W. P. Stephens.....L. B. Palmer.....F. L. Dunnell, 186 Jerolemon st., Brooklyn.
Eastern Div..H. E. Rice, M. D....Maxton Holmes.....H. D. Marsh, Springfield, Mass.
N'thern Div..Robert Tyson.....S. S. Robinson.....Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

THE WHITE SQUALL.

THE canoe in New Brunswick has not reached any great distance beyond the point of hard pan utility. It still continues to be almost the sole wealth of the Indian, and is used by the white man as a hunting boat and to navigate waters not suited to other craft. The forms in use are the birch and primitive log pirogue, with a few lapstreaks of uncertain shape and unknown weight, and for the most part built "by guess and by greenness." Its use as a pleasure craft is confined to a few towns and villages on the rivers, where it is quite the thing for young men to own birches, of apparently good carrying powers, but positively dangerous for more than two; in the management of which many of them have acquired a good deal of skill. The sailing canoe is as yet almost an unknown quantity. Professor Roberts, and others, have written for these columns accounts of canoe cruises in New Brunswick waters, under pole and paddle, in a style that must have pleased their readers, and that I can only vainly wish I had the ability to approach. There is usually more or less sentiment clinging around the memory of one's first canoe. As the first one owned by me is the only sailing canoe in southern New Brunswick, and so far as I know in the whole Province, I propose, if the editor wills, to make it the subject of a sketch.

In 1873 I lived in a small village near Long Island on the river St. John, formerly a famous resort for wildfowl. My hunting paraphernalia constituted my entire personal property, and I prided myself on its completeness. But here was duck hunting, of which a good canoe is a necessity, and I had none. So the man with whom I boarded and myself sent a joint order to a boat builder of St. John for the best canoe he could turn out. We did not know what we wanted, neither did he; but in the course of time he sent up a lapstreak double-ender of rather graceful lines, about 17ft. over all and 30in. beam. The planking was of clear Aroostook pine, and the work was done very neatly. She would carry three easily, and four on a pinch, and was propelled by the ordinary single paddle.

That she was ever furnished with any other motive power was owing to a feature in my character which so far as I know is peculiar to myself. I can labor patiently all day at the most back-breaking work with oar or paddle against a half gale of wind and a gulf-stream current; but when it comes to rowing or paddling with a fair wind, I am not there; I hate it and consider it just as much a waste of force as pouring water in a sieve or lifting on one's bootstraps. My partner readily fell in with my proposal to fit her with a sail. In vain did the knowing ones predict the direst results should we carry out our insane scheme. They assured us that it was difficult to keep a canoe on its bottom at any time, and even hinted darkly that soon after our first essay, there would be strangers in that part of the spirit-world where winter cometh not. We used a narrow-headed spritsail set on the principle of a spinaker. The clew was fastened to a long pole, which was pushed out from midships till the sail set flat and was generally managed by the "forward hands." The sheet was also fastened to the clew, taken through a ring in the stern and belayed close to the steersman. When a squall which in the opinion of the captain was too much for her, chanced to strike, the order, "pull in your jill-poke," (not found in "Canoe Handling") was obeyed, and the sail allowed to bag around the mast. Here was an automatic instantaneous reefing gear. We found it something of a luxury after a hard tramp around the islands, in the spring, to tumble into our canoe and be bowled swiftly home by a piping northwester, the prevailing spring wind.

Our vessel soon grew so in our confidence that either of us would sail her alone. One evening when my partner was within a half-mile of home on his return from the head of Long Island he was struck by a white squall, which no one thought he could weather. The eyes of the village wiseacres were on him and their tongues busy discussing the probable fulfilment of some of their evil prophecies, their regret for the danger of their fellow citizen, half swallowed up in secret joy at the anticipated shower of "I told you so's," that they would pour upon the surviving owner, in case of disaster; but much to the relief of the latter unfortunate the canoe came through safely. Ever after this incident she was known as the White Squall.

After two years, the other owner moved away and I bought out his interest in the canoe. Her great length made her hard to paddle against the wind, and it was impossible to turn her quickly so in '78, when she began to leak, we slung her to the rafters of the barn and invested in a small cedar lapstreak.

In '83 I lived on the banks of the Kennebeccasis. Here I made the acquaintance of Horace W., a young carpenter about nineteen years of age. Reared within reach of one of the best schools in the Province, he had made good use of his opportunities; and now he determined to abandon his trade and pursue his studies, with the object of first entering the teaching profession and ultimately studying medicine. In my intercourse with him I discovered that he had a mind of more than ordinary capacity; and a year later, when a teacher was needed in the district where my father lived, I mentioned the name of my friend and he was duly engaged. I was working five miles away, which distance I rode or drove every morning and evening, and Horace domiciled himself with us on the home farm. Toward spring he began to inquire about the prospects for sailing. Upon being told that there were no good boats nearer than the Narrows, three miles away, he said that with such a sheet of water right at our doors, he considered it a slight on the goodness of Providence. In the conversation some one incidentally mentioned the Squall, and his interest was at once aroused. He and my younger brother, Fred, climbed to her resting place, looked her over, and came to me with the proposition that they would put in a new bottom, with a centerboard trunk, deck her over, and fit her for sailing, if I would furnish the cash to buy material; so I told them to go ahead.

My time outside of working hours was so fully occupied by care of horse, harness, saddle and wagon, that I paid little attention to what they were doing for the next few weeks; but I got a good many reminders in the way of sundry bills for deck stuff, paint, canvas, cordage, blacksmith work, etc., till, had I not been certain of their honesty, I would almost have thought that those boys were liquidating their entire liabilities on the strength of that job.

However, when it came to the question of rigging, I was called in to decide what it should be. The "Mohican settee," which had been illustrated in the FOREST AND STREAM the previous autumn, very favorably impressed Horace, but Fred thought it too complicated. It was fun to hear them talk. Horace would say, "Now, this Hoolican settee, or whatever you call it, gives us a good high peak and a big sail close to the water; a higher, narrower sail would act as a longer lever to roll a boat over." And the other would reply, "Your Hoolican settee is sheeted home aft, and the wind is pressing on the whole area; it thus acts as a number of short levers, and you don't gain all the advantage that you imagine by your large area near the water." When they would appeal to me, I would protest against being drawn into any of their discussions; but the truth is I had not at that time read "Canoe and Boat Building" (a work that every one who is interested in small boats, and don't know it all, should read), and my own ideas about center of effect, etc., were very hazy. But I thought I saw some force to Horace's argument, and the Mohican carried the day. This came of the labor of a party of novices sending out a rig that they did not understand.

The sail plan of the Snake had been illustrated the previous autumn, and H. said, "Our boat could stand as much sail as any Snake," so we decided on the same area, 75sq. ft. Then the Snake became our unit of comparison. As the lines of the Squall were finer at the bow and stern, we set the mainsail further aft and the mizen a little further forward. Then we scaled out the drawing to get the proper area. We found the drawing of the mast not exactly true to scale, and cut our first one too short. When we cut the mainsail we set our brad awls in the floor to designate throat, peak, tack and clew, and around these tightly stretched a chalk line. We then laid on our breadths of sail stuff, making due allowance for seams, and cut out the sail. The putting on of the bolt ropes was our next trial; we would seem to get too much sail fastened to a given length of rope in spite of all our precautions, but by calling a council of older heads, and following their directions, we at last did a very satisfactory job.

Over the mizen the boys had another argument. H. and I had agreed to cut it 5ft. on the foot and 6ft. perpendicular from foot to peak, in order to get the required 15ft. area. Fred thought this closely resembled guess work, and H. undertook to explain. Then Fred got the impression that our rule only worked on an equilateral triangle, and in the midst of an animated discussion, in which his opponent persisted in misunderstanding him, H. picked up his lamp and went to his room. Did you ever know a man whose vocabulary was so barren that he had not one little expletive? Our friend H. had one, and only one little safety valve, the syllable "dan." On the etymology thereof I can throw very little light. It may have been the harmless "dang" used by the Fitzgeralds, "wantin' a bowsprit," or the equally innocuous "darn" so common among descendants of the Pilgrim Fathers, bereft of its midship section; but it was always pronounced in a slow, hesitating way, as if after all he was not certain that the occasion warranted the use of so weighty a word. And my room being next to his, the last thing I heard on the evening in question was the soliloquy: "I don't care what is the shape of the triangle, the base by half the altitude has got to give the area, d-a-a-n me if it hasn't."

We made the cockpit 7ft. long and about 20in. wide, with a 2in. coaming. We fitted her to steer by a "thwartship tiller" exactly like the one illustrated in the FOREST AND STREAM among 1887 canoe fittings. Horace laughed long and loudly for him when he looked at it, and said it was another example of great minds following the same groove. It was about the first of June when we launched our vessel for the trial trip. We were so impatient that we could not wait till she was rigged, but it took a large part of the next forenoon to adjust the reef tackle. We were very much pleased with the way she worked in the light wind in which we first tried her, and the next day, when we found that the reef gear worked like grease and the reefed sail sat well, we felt perhaps a pardonable inclination to praise ourselves, seeing that there was no one else around to do it for us.

When we were well along with the rigging a nautical man, one of those walking encyclopedias of sea lore which it has been nearly every one's fortune to meet, had looked the canoe over and given out as his opinion "that if we put all that sail on her and keep on her bottom she would go like blazes." We did put all that sail on her, and the public saw that we kept her on her bottom, so by a process of reasoning as nearly syllogistic as possible, "she went like blazes." The fame of our vessel went abroad in the land, and very soon we began to feel a desire to pit our boat against some other, or was it to "clean out" or beat somebody? Be it as it may, we displayed a caution that would have done credit to the conservators of the America's cup. We thought if we could catch any of them out in a good stiff southerly, a very steady wind here, we would not be afraid of their making any great exhibition of us, and like other people when they have the whole business in their own hands, we waited for what we wanted before making our debut at the Narrows. At length our wind came, and about 5 o'clock one June afternoon we set out in company with a shadboat, from which we sailed away as if she had been a buoy. Horace having promised to assist the shadder in setting out nets, we pulled up an eighth of a mile to windward of the fishing grounds, dropped mainsail, trimmed the driver flat, and waited for our consort, which took H. off, went on to the grounds, and had the nets out by the time I had drifted down to them.

When we hove in sight of Narrows our eyes were gladdened by the sight of a half dozen sails disporting themselves in the broad basin below, but while we were waiting, less than a quarter of a mile away, they squared away before the wind and went on up the lake so far that we could not afford to follow, although we did go a short distance above the Narrows. We were disappointed. We had expected a go-as-you-please scramble of boats in their haste to see which should do us first. We had never counted on being the "brusher," such a position was not to our liking, from the boasting we had heard concerning the sailing of their boats we thought we would simply have to assume the more passive position of "brushee."

During the remaining two months that H. was with us it seemed impossible to get near the other boats, they were always at the place where we were not, and as Pat said, "When we went there they were somewhere else." We could be patronized, I think, for our suspicion, that they knew they had little to gain in prestige by beating us, and a good deal to lose if so small a boat beat them, and consequently they kept aloof, but I don't say we were right. There is a provero which says: "Fools rush in where angels fear to tread." Having neither an extensive nor very intimate acquaintance among the classes it names, I have very little practical proof of its truth, but I do know that young inexperienced people will often precipitate themselves into positions that older heads would carefully avoid, coming out right side up astonishingly often, and in any event adding materially to their stock of experience.

One day myself, my brother Fred and our little nephew had beaten the canoe a couple of miles down river, when we spied one of the Narrows cracks nearly opposite our place, laboring heavily down against a squally N.W. wind. We afterward learned that the son of its owner and two friends had stolen off to brush us down "to a fine fraction." I cannot better describe what followed than by quoting the following extract from a letter I wrote Horace: "We changed our course so as to cross that of the boat, and when we were about 40yds. to windward she payed off quickly and started up the lake ahead of us. We saw she meant race, and we also had the satisfaction of passing her and in the next fourth of a mile putting her 60yds. in our wake. By this time she had had enough of us, and resumed her old port tack. And here comes in a lesson on minding your own business. Had we been content with that, we would have established the touch-me-if-you-dare reputation [you see I was not pleased to find out the truth when its knowledge involved a beating], but we luffed and went on the same tack with a promptness that must have surprised them. In the first two stretches across the lake we gained back our 60yds., in the next two we barely held our own—then in a falling wind they beat us ignominiously, notwithstanding the fact that we dropped overboard all the ballast. Whether their steady gain after the first two tacks was due to the falling wind, too little centerboard and too much weight, as Fred claims, or to the fact that we taught them a lesson in pointing, I can't say, but I incline to the latter opinion. Fred says he will splice the centerboard and take his revenge yet." He did splice the board, but on the picnic day he expected to get his revenge he was sick, and that ended his chances, for the boat was soon after sold.

It was about this time that "Deja" raised such a breeze among canoeists by publishing the lines of a boat which he claimed would outsail a canoe. While I regarded his statement that a "canoe required the assistance of a paddle in staying" as a libel on the character of a decent craft, I find scribbled in an old notebook the following indorsement: "Resolved, that in my opinion Deja is right. A boat constructed on the principle he advocates would knock the last vestige of light out of the best sailing canoe in a half an hour in anything like a heavy sea." The Squall remained in commission that season till Nov. 1, and was in use nearly every Sunday, something that drew down upon me not a little censure from the quiet country folk, and perhaps they were right. In my opinion something depends on the spirit in which the thing is done. Racing on the Sabbath seems to me out of place, and I confess it is a thing into which a person is liable to be drawn. My understanding on some points is perhaps obtuse, but I am not certain that the man who attends church three times on Sunday is invariably benefited either spiritually or physically by what I consider an overdose; neither is it quite clear that the canoeist who spends a part of the Sabbath afloat, in direct contact with nature, and in the enjoyment of the fresh air and sunshine, of which, perhaps, he sees little during the rest of the week, is necessarily so very far from the great Creator, who "holdeth the waters in the hollow of his hand." L. I. FLOWER.

BROOKLYN C. C.—The Brooklyn C. C. finished its season with two races on Election Day, a paddling race in the morning, won by Mr. Cammeyer from a fleet of five; and a sailing race for the B. C. C. cup in the afternoon, won by Mr. Ward in the Vagabond. Two junior prizes were also given in the sailing race, the first won by Mr. Geo. Snyder, the second by Mr. Davis.

AMERICAN CANOE ASSOCIATION.—The annual meeting of the Executive Committee of the A. C. A. will be held on Nov. 17, at the house of the Toronto C. C., Toronto, Can., beginning at 3 P. M. The chief work of the committee will be the selection of a site for the next meet.

Yachting.

Address all communications to the Forest and Stream Pub. Co.

NEW YACHTS.

BEYOND a vague rumor of a 90ft. schooner for the Sachem-Grayling class, and the probability of a new steel seagoing schooner of large size for Mr. Lloyd Phœnix, there is no talk as yet of anything large in the way of sailing yachts.

It is reported that Gitana, Mohican and Alert are all for sale, and if sold they would probably be followed by new boats, as the owners of all three are young and enthusiastic yachtsmen. Mr. Burgess has lately placed with the Atlantic Works, at East Boston, an order for a steel yacht 126ft. over all, 110ft. l.w.l., 19ft. beam and 8ft. draft, designed for speed. She will have triple expansion engines and a locomotive boiler by F. O. Welling & Co., of Weymouth, Mass.

Dr. W. Seward Webb, of Shelbourne, Vt., has contracted with the Harian & Hollingsworth Co. to build a steel steam yacht 112f. long, 18ft. beam and 12ft. 6in. depth, for use on canals and other inland waters. She will have triple expansion engines. The bow and stern will be fitted so as to be readily removed in going through canal locks. She will be schooner rigged and will be very elaborately fitted below.

At Lawley's yard the new Richardson sloop, for New Orleans, is in frame, and a similar yacht will soon be started for Mr. Chas. E. Ellis, of Philadelphia. Both yachts are 45 l.w.l. and have centerboards. Mr. Ellis's yacht will be 58ft. over all, and 6ft. 6in. draft. Lawleys have in hand a steam launch for Dr. Rollins, designed by the owner. She is 35ft. long, with very little freeboard. Lawley will build two new 40-footers this fall, for Rear Com. Morgan and Mr. August Belmont, Jr., both from Mr. Burgess's designs. The latter will be the narrowest and deepest of the class. The other Burgess 40-footer, for Mr. N. D. Lawton, will be built by John Mumm at Bay Ridge. She will be similar to Baboon. Mr. Mumm has nearly finished a compromise of his own design, 35ft. l.w.l., for sale.

Wallin & Gorman, at Bay Ridge, have just completed the 28ft. 6in. in shoal sloop, described elsewhere, and are at work on a centerboard catboat for Islip, Long Island. She will be 26ft. on deck, 21ft. l.w.l., 8ft. beam, 2ft. 6in. draft, and will have 2,300lbs. of lead on keel and the same amount inside.

At Ayer's yard, Bay Ridge, is a new launch with a naphtha-burning engine, by Mr. Ofeldt, the inventor of the naphtha launch. Several new 40 and 30-footers are in contemplation about New York, and others in Boston; and building promises to be very brisk this winter in the smaller classes.

DUCK SHOOTING UNDER DIFFICULTIES.

THE writer, in company with Walter, having concluded to go on a duck shooting trip to the far famed black duck grounds of Neguac, Northumberland County, N. B., on Monday, Sept. 27, the following is an account of our experiences:

I arrived at Newcastle in good time on Monday, finding our yacht all ready, provisions and water aboard, sails and anchor ready for hoisting, our factotum, Tom, cagerly waiting for the word "go," but our friend Walter was nowhere to be found. On further inquiry we found that he had so far forgotten where some ladies were concerned as to go on an expedition down river, promising to follow us down to whichever part of the lower Miramichi we might designate. A friend of his wishing to see him on business volunteering to go down with us till we should pick him up, we accepted his offer, knowing that we were short-handed.

Our yacht, the Kittock, is 27ft. on deck, 22ft. 6in. waterline, 6ft. 8in. beam, ballast 2,000 lead, 2,000 iron inside, 4,000 lead outside; cutter rig, bowsprit 13ft. outboard, boom 22½ft., gaff 14ft., hoist 15ft. 6in., topmast housing, 16ft. heel to truck. She has a small cockpit that may accommodate six, her interior being laid out somewhat similar to the Windward, to accommodate four persons for sleeping, *i. e.*, two on transoms and two in hammocks, one each side of the mast.

We started from Newcastle about 4 P. M., wind light from west, dying away as we neared Chatham, five miles from N. Here we sighted the steamer upon which W. was supposed to be, and ran for her, at least as fast as the wind would allow us, it now having almost calmed off. Making signs to her we got her to alter her course to meet us. W. was profuse in his apologies for not being on hand, but said he would join us at midnight at Black Brook, about six miles below Chatham, where we told him we proposed anchoring for the night. G. said he would stay with us and bring back W.'s horse from Black Brook. As soon as the steamer left us we headed down river again, but the tide being strong up forced us to anchor opposite Chatham at 6 P. M., leaving all sails set, no wind.

After supper, the warm part supplied by our coal oil stove, the crew and George indulged in a game of cards. Still no wind, but about 8 P. M. on going on deck I imagined I could feel a light breath of air from up river, and we also imagined the tide was about full; so we ordered all hands to up anchor, determining to keep our part of the bargain and try and reach Black Brook. It turned out to be a long, tiresome sail, or rather drift, for the tide could not have commenced to run out for an hour after starting, and the wind was just strong enough to stem it. We arrived off our anchorage about midnight, 3½ hours for about 7 miles. We had to use oars to get near enough shore to anchor. Turned in about 1 P. M.

Tuesday, Sept. 25.—Shortly after turning out at 6 A. M. Walter came along in his carriage, saying he had put in the night from 1 P. M. on a couch in the office of a livery stable at Chatham, not wanting to go to a hotel for fear he might not get out early enough in the morning, and knowing how calm it had been, was afraid we might be at anchor somewhere between there and Chatham, where he would miss us in the dark, having forgotten that our signal for him would be a lantern at the masthead. After breakfast, 7:30 A. M., we set sail and weighed anchor for down river, Neguac being about twenty-two miles below Black Brook. The wind was light S.W. and the weather foggy, in fact we had to steer part of the time by compass below Sheldrake Island. Three miles below Black Brook we ran up our No. 2 topsail and spinaker, which helped us along a good deal faster. We skirted the north shore of the bay Miramichi, which, at Oak Point, about 9 miles below Black Brook, opens up to about 7 to 10 miles broad, keeping out from shore about a mile. The trip was delightful so far, warm for the time of year, but the wind was very light, especially off Burnt Church, about 8 miles below Oak Point. Here the sails merely kept full, but as we neared Hay Island, about 4 miles below Burnt Church, it freshened up considerably. After passing the island, having to change our course for Adams Neguac, it necessitated taking down our spinaker for the run in over Neguac Bay, about 2 miles, arriving at the wharf at 1:30 P. M.

Our purpose in calling here was to get a guide for the Black Lands, where we proposed going for ducks, but our man disappointed us, having left for the grounds, expecting to meet us there. This was quite a disappointment, for after getting down to our anchorage there was a great possibility of us missing him; however, we got under way again, having about three miles more of a sail this time down Neguac Bay, three or four miles broad just here, and not more than 10 or 11ft. deep. As we approached the lower end it shallowed very gradually, till we were brought up all standing in about 4½ft. of water. The bay is formed by a sandy beach or island and the mainland. Outside of the former, which is only 80 to 100yds. wide, is the Lower Miramichi Bay, or more properly speaking, the Atlantic Ocean.

Although aground, we were still about three-quarters of a mile from the mainland, the same from the beach, and ahead of us it was about one mile to the lower end of the bay, which is here narrowed down by the mainland and beach coming together; the mainland being the "Black Lands" before spoken of, leaving a narrow, shallow channel about 3ft. at high water, leading into Tabusintac Bay, the noted brant and goose shooting resort of this part of the country. This place is shoaler than Neguac Bay and more inclosed, there being only this narrow entrance and another narrow outlet called the Gully, having about 6ft. of water on the bar at low water, the beach and mainland joining at the lower end of the bay.

After running aground we were so far from shore that we thought we should be able to find better water, having been here two years before. It seemed to us we had been closer, but on getting out our smallboat and trying the water, the hope for one was find was 6in. more, so we towed the yacht into it and anchored for the night; not fearing, for the bottom was composed of long grass and about 2ft. of soft mud, a very exposed place in a S.W. wind, but we thought that between shallowness and eel grass there would not be much danger of a sea, and from an east wind we were apparently well sheltered by the beach. Being all pretty tired after the long night before and sail down the bay in the fine fresh air, we turned in early, having seen nothing of our friend the guide.

Wednesday, Sept. 24.—We were all up in good time this morning, having passed a quiet night, there being no wind. Things looked blue for shooting, though, for our man had not yet turned up at 8 A. M.; but just as we were about giving up hopes four came were seen walking Neguac-way along the shore. Walter suggests going after them, and if our man is not one of them to hire one; for on these plains there is such a sameness and small, narrow paths, many grown over, that a stranger would go astray very quickly and lose himself. W. came back soon, having a man with him, and on his arrival we found that on coming up with the men and asking them if they knew where Charley Mol. was, they said, "Yes, this is he," pointing to him. He had, in company with the others, passed the night near one of the ponds with the expectation of getting a shot at some geese; but they were returning empty-handed, having been out for two days and bringing back but one duck, which did not augur well for our trip. He excused himself to us for not hailing the boat by saying he supposed we had engaged another man at Neguac on finding he was not on hand.

On getting ready for our walk inland Charley asked us if we intended to stay on the plains for the moonlight shooting; as it would be necessary to take a lantern and a little more grub, in case we decided to stay. We provided ourselves accordingly and started for the shore, four of us in our little boat about 12ft. long. I would not, I thought at the time, like the trip if there was any sea on.

The first part of the walk was not too bad, the road leading through a point of woods, but once through this we came out on the plains, as they are called, having to walk single file along a very narrow, deep path; sometimes up to the ankles in soft mud and water, making the walking extremely difficult. The plain or barren is covered with blueberry bushes and short scrubby bush and on going out of the road a person sinks knee deep, and some places the ground on walking on it springs up and down as if afloat, leading a person to think that if he stood long enough he would disappear entirely. Scattered upon these plains are numerous ponds, varying in size from 50 to 150ft. long, these are the resort of black ducks and geese.

After an hour's hard tramp we came to the first ponds. W. was stationed at one (nearly every one has a small blind for shooting from), Tom at another, myself and Charley going further on to two others; agreeing to meet for our dinner at our pond, and if nothing came to us in the way of birds we were to take up our march further into the plains. I had a dreary watch for an hour or two, nothing coming near me. There were a great many geese flying; but oh, so high; a flock coming over me but so far up I knew it was useless; however, I fired. Charley said I struck one, that he could hear the shot; I must be hard of hearing for I heard nothing; having been told the same thing before and not hearing I put little faith being able to hear shot strike a bird at 70 or 80yds.

At noon the party came together for dinner, all with the same story "no birds." After our lunch it was decided that the ponds about one and a half mile further on were the ponds; these that we were at were more frequented by geese, but not at this season. After a smoke we took up our dreary march again, reaching our goal at last pretty tired, the ground getting more soft than ever, my 210lbs. miring every step. I noticed that off the branches where I sat in the blind the water appeared in each footprint.

We were doomed to disappointment here also; not a bird came round or near us; as is always the case, the weather was said to be too fine and the wind not in the right quarter. The only shot I got was at a diver that appeared to me in the middle of the pond I was stationed at. How he got there I could not tell, although they are hard to shoot I managed to kill him.

At 4 P. M. we had to make a start for the first lakes spoken of, as it was time we were to stop for the night. As the moon did not rise till 11 o'clock and the wind did not come round we decided, in case the sky became so cloudy that we could not be able to find our boat if we stopped, to go straight for the shore and go aboard as soon as possible; which turned out to be a wise conclusion, as the sequel will show. Arrived at the first ponds we were all thoroughly tired out with our tramp, but after a short rest we pushed on and got out to shore about 5:30 P. M. There was a little wash on from the east wind, and I proposed that the others should go out and Charley come back for me, but they persuaded me to get aboard, and it turned out not so bad as I thought, but got just rough enough as we neared the yacht, which was ½ or ¾ mile from shore, the wind having risen a little.

Having the appearance of a rough night we set to work while supper was preparing to make the yacht more shipshape, housing the topmast, veering out more anchor chain to both anchors, lashing down the boom to prevent swaying off its support in case we had some rolling to do. I also reefed the foresail. I forgot to state in my description of the yacht that her sails, except the mainsail, all stow away in bags in a sail locker under the cockpit, entered from under one of steps going down companion way; the water tank, holding 15 gallons, being under that again.

Had I done what Mr. Kunhardt did on his cruise in the Coot, when I anchored in an exposed place—reefed everything down close, I would perhaps have had a better chance to have worked out of the scrape we got into later on. I have done so before, but it never struck me as being necessary this time, supposing our best shelter was from an east wind, and thinking that the shoal water and eel grass would prevent any sea from getting up.

After supper it was blowing quite lively, so much so that it would then have been impossible to have got out more than two at a time in the yawl. About dark it began to look bad, especially when the shores began to disappear in the darkness. W. and Tom wanted me to turn in, so long as everything was all right, and try and get some rest, in case we had to turn out during the latter part of the night. I said I would if everything was all right at 9 o'clock. C. and Tom got out the hammocks and turned in, Charley and self smoking and waiting events. I had put the leadline over the side and anxiously waited to see if the slack line would be taken up to show if she was dragging any. The wind seemed to have reached its height at 9 o'clock and everything was holding all right, so I thought I would lie down, everything on, ready for work, spreading a blanket over me, leaving word for Charles to call me if anything went wrong, and to do so any way at 12 o'clock, and I would take a watch, cautioning him try the lead often to note if she dragged any, also the depth of water. The latter bothered me a good deal, as I knew there was only about six inches to spare if the tide fell much.

At the time I laid down, and all the evening, in fact, I could see no great difference; it always kept at about 7ft. I felt that if the tide fell any in the sea, which had now grown considerable, the yacht would pound very hard, but had hopes the strong easterly wind would keep the tide up, which it generally does in the river. I gave Charley my watch and told him to keep a sharp lookout, and laid down, but could not close my eyes, as the wind, which for a while had kept about the same, commenced to blow harder, accompanied by squalls of rain. In one of these, about 10:30 P. M., Charley came down for shelter, and I came up to join him in a smoke and have a talk over the situation, for by this time she was pitching up and down at the most lively rate I ever saw her, and the wind had increased to a regular gale; one that did a great deal of damage all along the cost from Maine north.

As we sat chatting and smoking we experienced a different sensation quite suddenly, that was a roll along with the pitching. Charley shouts "She's broken her hold." I thought at first the wind had hauled suddenly to south'ard. We both rushed up to find that the lead line was taut, she was going astern and her head had also paid off, making it lively work scrambling about her in the dark, for it was as dark as Egypt, raining, and how it did howl.

I got the lads out of their hammocks pretty quickly, and we all groped our way forward and commenced to get the anchors in and cleared and out again. They were hardly to be seen for grass and mud. It was no small job when we were all on her bow; sometimes she went bowsprit under, and spray and water broke quite over us. She held pretty well for a time, but I think the trouble was that being so little water to spare every time she took a plunge her heel went down in the mud, so that when she yawed a little the stern did not give way, bringing her broadside to the wind and making it very hard for the anchors to hold.

By keeping a man with the lead line over the side we were advised of how she was holding. For perhaps half an hour the word was favorable, "she's holding all right," then "she's gone astern about a foot," increasing every time from three to four feet, till at last we hauled up one again that seemed to have the least hold. About this time I began to think it was time we were making up our minds what was the best thing to do under the circumstances. She was plunging bow under, and the stern would go down about even with the water. Our position was about thus, having two alternatives; first to try and get sail enough on her to weather a point lined with boulders and run across Neguac Bay, and try and come to anchor above Neguac Wharf, risking the chance of being driven on to the point, crossing the rough bay if successful, and ending up with the doubt of whether the anchors would hold any better after we got there. We had two lights which we could steer by when they were not obscured by the driving rain, but I was afraid that they would not serve much purpose in clearing the point, as while drifting and clearing the anchors we had driven a good deal shoreward, and not having any landmark behind or N. E. of us being obscured in darkness, I was afraid I was not able to judge of the position of Hay Island light near enough to clear the point.

The second alternative was to get sail enough on to head her for the shore, at a place Charles assured me was soft bottom and free from boulders. After a hurried consultation my mind was made up to avoid the risk of anything happening in trying to locate the point, the run across the bay, and the chance of anchors breaking, and to up anchors, put the foresail on her and head her for the shore. The anchors came up hard, and when her head fell off the sea broached clean over us. Getting the foresail on was no small undertaking with a reef in it. I supposed for the distance we had to run it could be held without the aid of the sheet by W. and Tom. It turned out they had their hands full, but they managed to hold on.

The reader can imagine the writer's sensation when he was steering for the shore, expecting to hear and feel the final thump. It came at last, but not only one. I think it was a good idea putting on the sail, for it carried her into shoal water much quicker and out of the larger breakers than would have been the case otherwise. As soon as she seemed to stop moving forward the depth of water was tried and 4ft. found, and as well as we could see we were about 80yds. from the shore. Before she got much list we went to work and got up the spinaker boom as a shore to try and keep her on as even keel as possible. By lashing blocks and tackle to head of boom, other end fast to the mast, hauling taut, we got her up quite a bit, and then we lashed the boom itself to the mast, which, along with the tackle, did a good deal of good. We did this also with our topsail yards, and having done everything we could think of, we retired below about 5:30 A. M., having commenced to drag anchor about 11:30 P. M.

She still kept lifting and pounding hard enough, in fact, too much so to be safe or comfortable, but she made no water. Having drawn the hatch and companion door no spray came down, and so, as long as she kept tight we were not too badly off. The wind, fortunately, seemed by this time to have blown itself out, and, wet as we were, it was not long before we had dropped off to sleep. I know it was broad daylight, about 7 A. M., before I woke.

[TO BE CONCLUDED].

MORE LONG STERNS.—At Bay Ridge Mr. Mumm has been busy lately with the work of lengthening the sterns of several yachts. The sloop Ilderan has had her counter spun out, and as the boat is as wide and flat as a pancake the effect is very curious. Originally a very shoal South Bay boat she has been altered several times in the effort to make a yacht of her, being built up some 5in. amidships and 8 at the ends two years since. Athlon is on the ways for a new and longer counter, and Mr. Mumm has put in some very good work, the lines being carried out fairly, while the construction is strong and light. Lagonda, steam yacht, is also on the ways, her stern being rebuilt and improved, while her bulwarks, stanchions and rail will be renewed.

THE NEW 53ft. YAWL.—The contract for the new yawl designed by Mr. A. Cary Smith has been awarded to Mr. Piepgrass, who will begin work at once at City Island. The yacht will be of steel.

THE 40FT. CLASS.

THE indications thus far are that the chief feature of the racing next year will be 40ft. and 30ft. classes. The former class especially has been greatly in favor this year, both about New York and Boston, and it is certain now that half a dozen new yachts will be added before the season of 1889 begins, thus making the largest racing class ever seen in America. The Weld challenge cup, offered this year by Com. Weld, of the Eastern Y. C., is apt to provide plenty of sport in Eastern waters, and in New York one club at least will give special attention to the smaller classes, from 40ft. downward. The Corinthian Y.C., of New York, has wisely decided to throw all its efforts toward encouraging racing into the 40ft. and 30ft. classes, in which some good may be done. There is every prospect for good sport in these boats, and if three or four good matches can be arranged during the season the result is likely to be far more satisfactory to the club than if it tried to compete with the other clubs in a general spring regatta. By being first in the field, the Corinthian may capture the cream of the year's racing, as it seems impossible to get sufficient entries to make sport in the larger classes. In the spring regatta there was no competition in either the 90ft. or 70ft. singlestick class, while the fall regatta of the New York Y. C. was confessedly a failure. The conditions of the Weld cup are as follows, the cup itself, designed by the donor and made by the Whiting Manufacturing Co. of New York, being a silver tankard or rather a loving cup, having three handles and standing 8in. high, measuring 10in. in diameter, including handles. Two of the spaces between the handles are engraved, one having inscribed on it, "1888, Eastern Yacht Club challenge cup for 40-footers." On the other is a representation of two sailors pulling a rope. The third space is left vacant for the names of the winners of the cup. The cup has already been won once by Chiquita.

"This cup is offered by Mr. William F. Weld, for competition by sloops and cutters 35ft. and not over 40ft. in waterline length. Five races in all are to be sailed, the yacht winning the greatest number to own the cup. The first has been won by Chiquita, A. Hemenway owner. The other four will be sailed during the summer of 1889, in connection with the regattas of the Corinthian Yacht Club. All the races are to be sailed off Marblehead, and they will be managed by the regatta committee of the Corinthian Yacht Club, in whose charge the cup will be placed. Yachts less than 35ft. in length may be admitted at the discretion of the regatta committee, and at a rating to be determined by the committee.

"The courses will be alternately dead to windward or leeward and return, and triangular. The first race having been dead to windward and return, the second will be triangular, and so on. In the courses dead to windward or leeward and return, the start and finish will be made off Marblehead Rock, unless in the opinion of the judges it be necessary to finish at Halfway Rock in order to obtain the proper course. The length of the windward and leeward courses will be eight miles and return.

"The triangular courses will be as follows: Triangular course No. 1, from starting line, between Marblehead Rock and the judges' boat, leaving Tom Moore's Rock, Pinker's Island and can buoy on the outer breaker off Pig Rock's on the starboard, to and around Egg Rock, leaving it on the port, to and around a mark anchored 7½ miles southeast by east ½ east of Egg Rock, and bearing south by east ¾ east from Marblehead Rock 7½ miles, leaving mark on the port, to finish line, passing between the judges' boat and Marblehead Rock. Distance, 20 miles.

"Triangular course No. 2. The reverse of triangular course No. 1, all marks being left on the opposite hand.

"Necessary instructions will be issued by the judges to contestants, and all points not covered by these instruction will be decided by the regatta committee of the Corinthian Yacht Club in accordance with the sailing regulations of the Eastern Yacht Club."

Beside the 40-footers there is already quite a fleet of 30-footers, Saracen, Mignon, Marguerite and Rosalind in Boston, the new Tomboy, and several will be built in New York. These two classes seem to be very well adapted to present needs, and we regret to see that already the effort is being made to bring the 40ft. class into favor. The Boston *Herald* of Nov. 11 says under the heading "The 45ft. Class:"

"Said Gen. Paine a few days ago: 'The 45ft. boat ought to be a very popular yacht. She is just about the right size, and one can have better accommodations than in a 40.'

"This opinion seems to be gaining ground among our prominent yachtsmen, and the small difference in expense is amply made up in size and accommodation. In a 45-footer a good-sized ladies' stateroom can be built aft, also a fair-sized saloon, with many other conveniences which cannot be put into a 40-footer. The extra expense would be one man, so that practically the expense of the two classes would be the same. Thus far this season two 45-footers are to be built from designs of Mr. Burgess, both being centerboards. They are being built to be sailed in other waters, so that little of them will be seen here. The 45ft. class has some excellent yachts now in it, including the sloops Vixen, Fanita, Scotch cutter Bayadere, and the new production, the keel sloop Alga, the first sloop production of Mr. Burgess in this class.

"General Paine's opinion carries great weight, and it would not be surprising if the 45-footer, by spring, was the popular boat. The expense of building would not be much greater, and, all things considered, both for cruising and racing, she is the better yacht."

The *Herald* forgets that the present class is 46, and not 45ft. and while Gen. Paine is correct that the boats have better accommodations than the 40ft., it is not proved above that the accommodations are increased in proportion to the cost. A well laid out 40-footer can and should have a good ladies' cabin, a main cabin of ample size, and a forecastle and pantries. As far as this argument goes it is used continuously from the smallest sizes up; thus a man will argue that a 35ft. yacht will cost little more than a 30ft. and that with a Corinthian owner the larger can be run with one man, while the smaller cannot be run with less than a man. So with the next size, a 40-footer is larger than a 35-footer, gives more room, and only needs two men in place of one, and so on through each class. The main point is to confine the building and racing to as few good classes as possible, and if the 35 and 40ft. classes were now as firmly established as the 30 and 40ft. it would be in order to consider which sizes are best worthy of encouragement. As the 40ft. class is however by far the largest and most promising, and as the 30ft. is as popular as the 35 and will go better with the 40; it will be far better to encourage the racing in these two classes, and not to force it in the others. The following, from the *Field* of Nov. 3, puts very plainly the great trouble that besets regatta committees here:

"In America the interminable classification has had a most disastrous effect on the sport, not only because clubs cannot find the money to give proper prizes for so many classes, but also because the number of yachtsmen who are keen about yacht racing are not sufficiently numerous to fill so many classes. This condition of affairs is much the same as our own, although it is more pronounced in America. The New York Club alone, although its smallest class is 46ft. on the waterline and under, has as many as eleven distinct classes; and while some of these classes have not filled at all, or have been ornamented by one solitary entry, others have had two entries, four entries, etc., much the same as the entries have been in this country.

"There thus has been a dreadful lack of concentrated energy in deploying yachts into so many classes; and we think the Americans would do well to reduce the number of their classes by at least half."

The *Field* does not recognize the additional fact that the classifications differ even yet in the various clubs, and have differed still more. The number of classes seems to be a necessary evil, as it would not be practicable to blot out entirely a class like the old 45ft., which numbered several fast boats. The classes must be retained and some prizes given for owners who desire to race in them; but at the same time it is perfectly fair for the clubs to determine which classes are most desirable, and to offer special encouragement to them, so that in a few years they will be built up into a strong and healthy series, while the intermediate classes will disappear from the racing. A good series of classes, taking the limits as they exist in the Eastern, Seawanhaka and New York clubs, would be 30ft., 40ft., 53ft., 70ft. and over. There is no special virtue in these sizes perhaps over the alternate classes, 35, 46, 61 and 80, but the former classes are already established and well filled compared with the latter. This being the case, it is to the interest of yacht racing that the prizes as far as possible should be devoted to the enlarging of the former classes rather than to attempt the impossibility of building up a fleet of racers in each of the many classes. From this point of view we should be sorry to see the 46ft. class encouraged unless it is clearly proved that there is a real demand for it, and that it can be permanently maintained. Of the new boats thus far under way for the 40ft. class, all three are from Mr. Burgess's designs, being for Messrs. Morgan, Lawton and Belmont. The latter we understand is to be narrower and deeper than any of the others, another string to the bow in case the Fife cutter Minerva should prove as good as she looks. The owner of Ulidia is also willing to go down into the 40ft. class, his yacht being about 42ft. l.w.l.

UNQUOWA, Mr. Jenning's new steam yacht, will make a trial trip this week.

SEAWANHAKA CORINTHIAN Y. C.

THE last meeting of the Seawanhaka Corinthian Y. C. for the present year was held at the club house with Com. Canfield in the chair. The board of trustees reported the election of the following gentlemen: Messrs. Henry A. Bishop, Edwin H. Baker, John J. Pierpont, Henry Cutting, I. N. Phelps Stokes, Clarence A. Postley, J. N. McDonough, R. H. Warren, John L. Riker, Lieut. Wainwright Kellogg and Surgeon M. L. Ruth, United States Navy, and Dr. E. F. Tucker. They also reported that the sloop Venture, presented to the club by Mr. Chas. Leland, had been sold and that the proceeds would be used in the purchase of a cup to be known as the Leland cup, to be offered as a challenge cup under such conditions as would insure permanent competition for it. The race committee made no report, but the prizes won in the June regatta were on exhibition, a very handsome collection. The following amendments to the constitution were adopted:

Article XXVII., Sec. 5. "Broad Pennants." "Fleet Captain—The Fleet Captain's pennant shall be swallow-tailed in shape, the hoist to be two-thirds of the length; the device, a fouled anchor in white on a blue field."

The secretary then proposed the following amendments to the racing rules:

Rule II., Sec. 1. Class VIII. of sloops, cutters and yawls to read: "All over 30ft. and not over 35ft. load waterline length," and the addition of another class:

"Class IX. All of 30ft. load waterline length and under."

Amend Rule XXXVIII. by inserting after the words "June 1" the following: "By a vote of two-thirds of the members present."

Both amendments were adopted.

The secretary then read the following memorial and resolutions:

The members of the Seawanhaka Corinthian Yacht Club desire to give expression to a sense of the loss, common to all American yachtsmen, in the death of two former members, distinguished alike by the respect and affection of their fellows, as well as by the length and eminence of the services rendered by them; and to commemorate their relations to this club, and to the sport they both loved so well.

Of these two, the senior member, Cornelius Smith Lee, joined the Seawanhaka Yacht Club on Jan. 2, 1873, little more than a year after the foundation of the club. An enthusiast in the sport of yachting, he showed at that early date the combination of the qualities of success—courage, judgment, endurance, coolness in emergency, close observation and vigilance, and the resulting ready and quick decisiveness; these joined to the greater knowledge and skill and the wider experience later years were destined to bring, placed him in the foremost rank and made him one of the most brilliant and successful Corinthian sailors in the annals of American yachting. To this the records of yacht racing bear ample testimony. Each of the boats which he successively owned, became, in his skillful hands, famous among the racing craft of the day, and each bore witness not only to those qualities already mentioned, but to his possession, in a marvelous degree, of that intuitive perception and sympathy with his vessel, qualities so rare in amateur as compared with professional handling. The perfection of Corinthian training, the courageous perseverance and the confidence in a then novel type of yacht, which surmounted difficulties, seemingly insuperable, and changed apparent failure to brilliant success, have made the record of his latest vessel the story of his own achievements.

A firm believer in and a zealous supporter of the principles of Corinthian yachting, Cornelius Lee identified himself from the first with the advancement and growth of the Seawanhaka Yacht Club. The minutes show him to have been a most regular attendant at all the meetings, and on many special committees in the service of the club, his character found scope to clearly indicate its best and most decisive lines, and he was always ready to cheerfully give the benefit of his wise and clear-sighted counsel. In 1880 he was elected vice-commodore, serving the club for two years in that capacity, and in 1882 was elected commodore, filling the position during that year with credit to himself and with honor to the club. In 1881 it was Cornelius Lee, then serving as chairman of a special committee appointed to consider a new rule of measurement for racing yachts, who first urged the adoption of a rule with sail area and length as factors. To the formulation of such a rule he and his committee devoted much labor and earnest thought, and it was adopted by the club in 1882. Time has justified the wisdom of his counsel, for the factors of measurement proposed by him at that early day have been generally adopted throughout the yachting world.

William A. W. Stewart became a member of the Seawanhaka Corinthian Y. C. on May 31, 1877, at which time the club had already transferred its station from Oyster Bay to New York. With the energy of his enthusiastic and earnest nature he entered the field of Corinthian racing, in which his intelligent management secured an enviable success. Toward the club and its members were extended those feelings of kindly sympathy and courteous fellowship which were the outward expression of his generous nature. Amid the absorbing cares of busy life he found the time and made the opportunities to think and labor for the advancement and profit of the Seawanhaka Club, and the encouragement and propagation of the principles upon which it is founded. In 1890 he accepted at the hands of the club the honors and duties of the highest office in its gift, and after serving two successive years as commodore, accepted in 1885 the office of vice-commodore. Perhaps in no other position than as the head of a club like our own could the rare qualities of his nature have been so clearly brought to light; keen and clear in his insight, fertile and ingenious in expedients, his mind dwelt constantly upon the advancement of the club and the good of its members. A rare and delicate tact marked all his dealings with man; where he governed he seemed only to lead; when he decided he seemed only to suggest; while in him lay the power, so often withheld, to give life and expression in words to the kindly feelings of his heart. With such qualities for the presiding position in our club, he was, with an affectionate desire to serve it, in the highest sense the chief servant of all. To place his own at the disposal of others was to him so evident a pleasure that, to the many fellow members who experienced his kindness the spirit of the deed doubled the value of the service done—for his generosity was such as feared only the expression of obligation or gratitude and sought only to depreciate its own acts or to disguise their source. To many among us will these words suggest what can now be only a memory. The delicate perception and the kindly sympathy which found ever so free and graceful expression in his intercourse with his fellow members, were the secrets of that personality which was so quickly felt by all—the power of strength expressed through the gentleness which it wore; and beneath all lay the hidden springs of those outward developments of his character, known only to those who enjoyed the boon of his intimate friendship, and evidenced to the world by their deep and affectionate devotion to him.

Of these two, the thread of whose lives has been so closely woven with our own in the fabric of the past, only these memories remain. As Corinthian sailors were they with us and as Corinthian sailors have they sailed away out of our lives.

On Saturday, March 10, 1888, the yawl Cythera, with William Stewart, Cornelius Lee and a crew of twelve officers and men, cleared from the port of New York, bound to Bermuda and the West Indies. On Sunday the 11th, she was reported off Barnegat and was again seen on Monday the 12th, in the height of the fearful storm then raging on our coast.

History closes here. Mortal hands will never lift the veil and mortal tongues can never tell the closing words.

The gallant ship and her brave crew have gone to that resting place where so many good ships and brave men have found their end, and we can but write beneath the names of our brother yachtsmen those sad and terrible words—Lost at Sea. A tragedy unparalleled in the history of yachting has brought to a close the careers full of promise of William Stewart and Cornelius Lee.

With a deep feeling of sorrow at the loss of our brother yachtsmen, we desire to express to those who most deeply mourn them, our heartfelt sympathy in their grief. The Seawanhaka Corinthian Y.C., recognizing their many qualities, gratefully acknowledge their services, and their many friends among its members will ever hold their memories in tender and reverent esteem.

Resolved, That the foregoing memorial be spread in full upon the minutes of the club, and that copies of the memorial, together with these resolutions, duly signed by the commodore and attested by the secretary, be forwarded to the families of the deceased and to the Corinthian Y. C. of New York.

Resolved, That as a tribute of respect to the memories of Cornelius Smith Lee and William A.W. Stewart, the burgee of the Seawanhaka Corinthian Y. C. be displayed at half mast from the club house for the period of three days, beginning Thursday, Nov. 15, at 8 o'clock A. M.

Resolved, That as a further mark of respect this meeting do now adjourn *sine die*.

Mr. A. B. Simonds, one of the Oriva's crew, seconded the resolutions, speaking with great feeling of the personal qualities of the lost yachtsmen, and Fleet Chaplain Vandewater also spoke in favor of the resolutions, after which they were unanimously carried by a rising vote, and the meeting adjourned.

BISCAYNE BAY, FLA., AND ITS YACHT CLUB.

Editor Forest and Stream:

On election day three yachts belonging to the Biscayne Bay Yacht Club started from Great Kills, Staten Island, for their winter cruising ground at the southern extremity of Florida. Two of them were the schooner Presto, Commodore Ralph Munroe, who is accompanied by Mr. Frederick Mollister, Mr. Richard Carney and a man forward, and the schooner Nethla, just built at Brown's Tottenville yard for Captain Thos. A. Hiue. With Captain Hine sail his brother, Vice-Commodore Edward Hine of the Mischief, Mr. John Washburn, Mr. Lloyd, and a crew of ten men. In company with these boats Mr. T. B. Asten, New York and Biscayne Bay clubs, sends down his 36ft. sloop Awixa, which he intends to join soon after January 1.

At Wallin & Gorman's yard, in Brooklyn, a 33ft. sloop is building for Mr. Thos. F. Falls, of New York, a member of the Biscyane Bay Club. She is to be a light draft boat, especially fitted for king fishing, for which the waters of that part of Florida are famous, and will be shipped South as soon as finished. She will be 33ft. 2in. over all, 28ft. 6in. l.w.l.; 12ft. 8in. beam and 19in. draft, with 2,500lbs. of lead inside. She has a very good cabin, with a berth on each side, formed by the locker drawing out. The cabin windows are of a peculiar make, designed by the owner, and are fitted with wire gauze frames as well as glass. The galley has a Rippingill oil stove, imported from England. The oil is carried in a large tank aft, with a pipe and faucet leading to the galley. The boat is fitted up with closets, shelves and lockers, which utilize every inch of space. She is finished in mahogany, and Messrs. Wallin & Gorman have put in very good work.

At Brown's yard, Tottenville, two more boats for this club are receiving their finishing touches. One is the handsome 35ft. clipper-stem, yawl-rigged Allapatta (seminole for Alligator) belonging to Commodore Kirk Munroe, of the New York Canoe Club, who is also secretary of the Biscayne Bay Y. C., and the other is the 33ft. sharpie Necotah, ordered by Treasurer Jean de Hedouville, B. B. Y. C. These two boats will go South in December.

This most southerly yacht club of the United States, although but two years old, is attracting much attention from Northern yachtsmen, and has been notified that it must expect to receive a number of visitors from among them this winter. The location of the club is at the extreme southeastern point of Florida, and only 45 miles across from the Bahamas. The main channel into Biscayne Bay washes the southern extremity of Cape Florida, and at this point the beach shelves so rapidly that a yacht's bow may rest on the sand, while her stern overhangs 20ft. of water. At the same time this place is so completely sheltered as to offer a safe harbor in a blow from any direction. In order to control this anchorage and to offer courtesies to the passing yachts that may run into this harbor, the Biscayne Bay Y. C. has leased from the Government the old Cape Florida lighthouse with its surrounding grounds. Here they propose to keep a man during their yachting season, from Dec. 1 to June 1, who will furnish visitors with information as to channels, cruising and fishing grounds, etc.

On the mainland, across the bay, and eight miles due west from this lighthouse, is Cocoanut Grove, the headquarters and hailing port of the Biscayne Bay Y. C. Here is the pretty cottage that forms the winter house of its secretary, and near by, directly on the beach, the commodore is erecting a handsome club house, which is to be completed next month.

The United States Fish Commission is contemplating the establishment of a station on Biscayne Bay for the cultivation of sponge and the hatching of green turtle eggs, for both of which purposes it is eminently well fitted. The U. S. Coast Survey is also beginning to take a decided interest in this remote corner of the country, and has just built, through Brown, of Tottenville, two large sharpies, one 53ft. and the other 60ft., to do inside work from Biscayne Bay along the Florida Reef to Key West, a region that has never yet been charted.

As this region is 300 miles from the fever-infected portion of Florida, and very sparsely settled, its dwellers have no fear of the disease, and pursue the even tenor of their way as quietly as though it did not exist.

If those yachtsmen or canoemen who would enjoy one of the finest winter cruising grounds in the world, as well as kingfish, tarpon and red snapper fishing that cannot be excelled, will visit Biscayne Bay they will be disappointed. At any rate, I was; but it was such an agreeable disappointment that I have not yet recovered from it, nor have I any desire to. Thus I still remain, yours from Biscayne Bay,

O. K. CHOBEE.

TORONTO.—The scheme proposed last spring for an amalgamation of the Royal Canadian and Toronto clubs is now under discussion again, and a meeting will be held on Nov. 24 to consider the reports of committees. The movement if carried out would make the new club the second or third largest in America.

TRITON.—At Poillon's yard the schooner Triton has been hauled out and her old centerboard trunk replaced by a new one. The construction of the old one was very peculiar, two cast iron girders being used to form the keel and bed pieces, the plank and frames being bolted to them.

WENDUR, yawl, has been sold to Mr. T. B. C. West, former owner of Queen Mab, who will take her to the Mediterranean this winter and race her there.

DORCHESTER Y. C.—The new winter quarters of the Dorchester Y. C. at 99 Boylston street, Boston, have lately been opened for the season.

THE AMERICA'S CUP.

THE limit of ten months, within which a challenge must be sent will very soon expire, and as yet there is no intimation of a *bona fide* challenge. Mr. Walter Reeks sailed for England last week, announcing before he left that he intended to challenge for 1890, but the chances are very small that the New York Y. C. will be called upon for many years to seriously consider a challenge from such a distance. The Phelps postal card challenge has not resulted in anything, and nothing definite is known about the alterations in Thistle, what is being done or who really owns her. The latest information comes through the New York *World* as follows:

"LONDON, Nov. 10.—The *Sunday Times* will print to-morrow the following despatch from Queenstown: Irish yachtsmen have been quietly building a steel sloop of tolerably large dimensions from Richardson's designs, with which they propose to challenge for the America Cup. Her name is to be Shamrock and she will be owned by the Jamiesons, of Irish whisky fame, who are the present owners of the famous cutter Irex, which was also designed by Richardson.

The Royal Irish Y. C. would in this case be the probable challenger, for Mr. Jamieson is one of its members."

There is very little probability of any truth in the above rumor, as if all accounts be true, Mr. John Jamieson has not the slightest intention of challenging for the Cup.

Answers to Correspondents.

Address all communications to the Forest and Stream Pub. Co.

☞No Notice Taken of Anonymous Correspondents.

F. S., Brooklyn, will oblige by sending his name to us.

W. H. P.—See notice in an early issue in our gun columns.

G. A. S., In Camp.—Cut of hatchet will be printed next week.

D. B., St. Paul, Minn.—The A.K.R. number of the St. Bernard Martigny is 4275.

AMATEUR.—Spaniels do not set nor point, but flush the birds. We have no book on spaniel training.

L. H. B., Philadelphia.—For quail shooting locality try Fayetteville, N. C., noticed in our shot columns.

RABBIT, St. Louis.—The best rabbit and squirrel shooting within fifty miles of St. Louis, Mo., is to be had in the vicinity of Hillsboro, in Jefferson county.

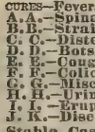
UPLAND, Lynn, Mass.—You will find much information in "Shore Birds," the pamphlet published by the Forest and Stream Publishing Company; price 15 cents.

H. C. W., Philadelphia, Pa.—Write to J. S. Kittle, Durham's Creek, Beaufort county, N. C. The dog Beaumont is owned by W. R. Huntington. See our report of Indiana trials.

G. D., Woodstock, Ont.—1. Pointers are the favorites with many grouse shooters. 2. The Canada or spruce partridge (*Dendragapus canadensis*) and the ruffed grouse (*Bonasa umbellus*) are different birds; but you have the ruffed grouse in your country.

A. P. G.—We cannot give you information respecting the precise locality, but all the waters of this country afford duck shooting. Pamlico River is a famous ducking resort, of which you may obtain particulars by addressing J. S. Kittle, Durham's Creek, N. C.

GORDON, Holyoke.—What is the result of inbreeding dogs? I am told it does no harm, but should think it would. Should you advise me to use a dog with a bitch whose sire was of same litter as dog's mother? Ans. The subject of inbreeding is one which cannot be treated in a paragraph; it is enough to say, however, that it is often beneficial, and in any individual case it must depend upon the health and constitution of the animals and their adaptability. If dog and bitch are strong and healthy and suited to produce progeny of character, their relationship need not be regarded as any bar.



A. N. C., Philadelphia.—Will you please inform me whether the liberation of barking squirrels in a public square where there are fox squirrels, would, as in the case of red squirrels, threaten injury to the fox squirrels. The fox squirrels which I placed in Washington Square last spring have done splendidly, and the keeper thinks there are now three times as many as were placed there. They attract the attention of passers-by, and amuse the children who play in the square. The reason of my question is, some one desires to place some barking squirrels in the same square. Ans. We cannot advise positively, but our opinion is that it would be wise to keep the grays out.

V. B. M., North Carolina.—A bitch is afraid of fire-crackers, and I took her out in the field with me twice in the last week. Fired several times. She does not attempt to run away; that may be on account of her age, being only four months, or a little over; or it may be caused by her fondness for me. When I fire, or rather when she sees the old dog standing, she begins to cower, as she has found out that the "war" will soon commence. About ten minutes after I fire she will come to me, but as soon as I fire she will stop where she was at time of report, or run off about twenty steps further, and no persuading can induce her to come to me I thought I would try her and work on her for about two months longer, when she will be nearly seven months old, and at the end of that time it strikes me she ought to get better or worse. The point I look it is, that it is enough trouble to break a dog for field work without having the trouble to overcome a serious fault such as gun-shyness. I think without that fault she would make a fair hunter. Ans. The treatment recommended in "Hammond's "Training vs. Breaking" will doubtless prove successful. It will be given in our kennel columns next week.

Dead Finish Waterproof Braided Silk Fly Lines.

For Salmon, Trout and Black Bass.

These lines, which have given such general satisfaction, have been subjected to the most severe tests during the past two seasons, and are now made better than ever. They do not crack, chip or become tender, but remain soft and pliable; they are waterproofed through and through not merely on the surface, and are decidedly the best lines for fly-fishing ever offered to anglers.

Send 10 cents to cover postage, and we will mail you our 140 double page illustrated catalogue.

A CIVIL BULWARK.

THERE is in this city of New York the regiment which of all others in the country may most properly lay claim to being the crack organization of citizen soldiery. It is the Seventh Regiment, N. G. S. N. Y., and it has its full quota of men and officers; every place in the ranks is filled, and a long list is in the recruit squads waiting for a vacancy in the regular ranks. It has social standing, while military men who have given their lives to the study and practice of arms give it unstinted praise.

But we did not mention the Seventh to speak of it as a kid-gloved, prettily uniformed body. It is all that and a great deal more. It has 1,000 men in its ranks, and it has 921 marksmen in that number. What does that mean? A great deal indeed to those who have studied the uprising of modern rifle practice in this country. Since the FOREST AND STREAM was started all this modern use of the soldier's arm has come into being. There are men now in the regiment who have been on its muster roll for twenty-five years. They will tell how for the first ten years of their military experience such a feat as shooting off the rifle they so daintily carried and so carefully polished was never expected of them. They got 100 per cent. in military duty, and were not able to fire off their arms, much less use them intelligently. Then came the agitation in favor of rifle practice. Wingate led it, and it won favor wonderfully, and now the figures 921 out of 1,000 as marksmen tell of the present status of the movement in its best development.

What is a marksman? By the regulations it is one who, using the State arms—and this is the .50cal. "gas pipe" Remington—has been able to make 25 in a possible 50 at 200 and 500yds. Reducing these figures to a more intelligible form, it means to a New Yorker, who will hold his hat up at any point on the avenue, that a Seventh Regiment marksmen will stand three blocks away and put a bullet through that hat crown, at least in each alternate shot. He may do better, but his work must be of this standard if he is to win the marksman's badge of 200yds. off-hand work. At 500yds., or say about seven blocks off, the marksman will stretch himself prone upon the ground and hit a barrel head at each alternate shot, or do work the equivalent of this in an aiming way.

It is no small enterprise for this number of young men to get away from business enough to acquire this skill. It is a positive proof of the excellence of the arms they have and the ammunition they use; and it is a complete and overwhelming proof that the work of the FOREST AND STREAM and other journals which have urged and pointed the way to this reform in military standard of excellence has been well carried out.

Another view of this accomplishment in shooting is that it properly completes the guard as a bulwark of civil liberty. The militia has a double object in being. It is first of all and all the time ready to be called upon to quell a riot, which passes beyond the control of the civic constables. Then it is, in this republic at least, an organization which on the occurrence of a war may be swelled into an army at the shortest notice. Imagine a mob facing a set of men in uniform, and knowing, too, that those men had guns which they were incapable of handling. Imagine again that same mob facing such a guard as that illustrated in the Seventh, where over 90 per cent. of the men are marksmen, and let that mob know what a marksman is and what he can do.

We hope the day may never come when the Seventh or its fellows in the militia may be called upon to quell a riot by the use of ball cartridges; the very fact that there are so many marksmen will tend to put off that day; but should it ever come, one volley will do the work which it would have required a week's fighting under the old regime, when the only difference between a guardsman and a mobsman was that one had a uniform and the other had not. To-day the difference is that one can and will shoot and the other is sure to be shot.

THE ETHICS OF HUNTING.

BY THE above heading must be understood the vindication of hunting on the plea that its pursuit is necessary, or at least conducive to human welfare, and before we have gone well below the surface it will be seen that there will be no difficulty in presenting a strong case. When man first came on the stage, and in every country in which he made his appearance, the balance of life between herbivorous and predatory animals was already established, and the human race had to enter on a struggle for existence with predatory beasts that sought to make a meal of them, and to a less extent with frugivorous and omnivorous animals that contended with them for fruits and roots. For this struggle man had only his intelligence and dexterity to pit against the superior physical endowments of almost all his rivals, and in the production of means to enable him to secure advantages over them all his dormant intellectual and many moral faculties were called into activity; even his latent sense of art was stimulated into exercise by the accidental results produced in his first rude efforts to fashion the primitive club and spear. Driven by necessity to defend himself and his children against beasts of prey, he gradually acquired a measure of reliance upon himself and his weapon, and what is of perhaps still more importance, he learned the advantages of co-operation both for attack and defence and for securing his prey, and thus laid the foundation of social life and his recognition of those mutual rights and obligations which are the basis of moral law.

The primitive hunting stage was the school in which man acquired supremacy over the beasts of the field, and had his faculties gradually cultivated for that interminable struggle for supremacy between the several sections of the race, which has subsisted for ages, and which must for ages continue to subsist.

Man's increase is limited by his food supply, precisely as with other creatures, and as long as he depended on the free gifts of nature and the spoils of the chase his increase over the habitable globe was limited to approximately ten millions. This limit may possibly have been reached by the offspring of a single pair of parents in a thousand years, in which period man's education was not yet so far advanced that he could provide for his own further increase by cultivating the earth, and his choice lay between the two alternatives of consuming all available food and dying wholesale of starvation, or of resorting to tribal wars to keep his numbers down.

Civilization has materially widened the horizon. The earth has now a population of seventeen hundred millions, and is perhaps capable of supporting four times that number, but the Germanic nations alone, at present rate of increase, would multiply so much in five hundred years that after trampling out all other races their progeny would not have a square yard of earth per man for standing and working room.

There can then be no relaxation of the severity of the struggle. Sclav and Tartar and Latin races are not going to bow themselves politely out of the earth to make room for us, and even if they were kicked out, it would scarcely afford a breathing space before the several sections of the Germanic races would be engaged in a death struggle with each other, the tendency of the struggle being inevitably to secure the survival of the fittest intellectually and morally. Frequent unnecessary wars, provoked by the fighting instinct in man, or by jealousies, or whatever cause, impose such checks upon increase of population that ages may elapse before the two Americas shall be filled up with such a dense population as would necessitate an universal struggle for existence. For these inevitable wars the hunting field is the best training field. It improves a man's physique, gives him readiness of hand and eye, familiarity with weapons of war, inures him to hardship, and gives him that self-reliance born of assured skill in the handling of his weapon which is so much conducive to victory.

We think a woman is never more lovable and womanly than when she shows tender pity for the beast or bird deprived of its innocent life in the hunting field, but realizing that war may come upon us at any moment, that war with foreign powers, sectional wars or class wars at home are all possible, and that war in some shape is necessary to the working out of human destiny, we can only regard as a very hopeful national characteristic the prevalence of those warlike instincts which find healthy and innocent vent in the hunting field. We say innocent advisedly, for the predatory animals being destroyed, man must usurp their duties, keeping the herbivorous animals within due bounds, if only for their own well-being. The non-predatory game, both beast and bird, should be preserved jealously. The uncertainty of life detracts nothing from their enjoyment of it and their pursuit is as already said a valuable discipline and preparation for the sterner struggle by means of which the human race will be elevated by the survival of the fittest.

Hunting must then, we contend, be admitted to have an ethical basis, and it is not without a certain amount of self-complacency that we see the people of this country as a whole so enthusiastic for field sports as they unquestionably are. The United States at any rate is not likely to drop out of the struggle for existence so long as the love of hunting continues a leading characteristic, and its people display sufficient foresight and self-control to provide for the maintenance of their game by prudent legislation.

PUBLIC TROUT IN PRIVATE STREAMS.

IN our fishcultural column will be found a reference to a question which has been privately discussed several times, but on which little has been publicly said. We refer to the stocking of private streams with trout at the expense of the State. As will be seen by the article referred to, some of the anglers of Connecticut have proposed to make a test case of their alleged rights to fish in waters which are stocked at the expense of the people at large. This is an interesting point, and one which we would be glad to see brought before the courts for decision. We do not know that there is any law on the subject, but there is a feeling among some of our anglers that whenever trout are planted by the State the public should have the right of free fishing. This is a question which the Fish Commissioners of New York should consider, and about which they ought to give definite orders to their superintendents. The earlier Commissioners, Messrs. Seymour and Roosevelt, considered that the stocking of private waters added to the food products of the State, but were cautious about doing it extensively, thereby showing their doubt about the correctness, or the legality of placing the fish where they would only benefit certain individuals. From time to time complaints have been made against this form of stocking waters, but no action has been taken to test the right of owners or lessees of streams to close their waters to the public, after stocking them at the public expense. It would seem that the Connecticut club was not sure that the law would uphold their action, or they would have accepted the offer to test the question before the Supreme Court.

BY an inadvertence last week, the late J. P. W. Riley was named as L. A. Riley.

The Sportsman Tourist.

NOTES ON WESTERN FLORIDA.

III.—CRUISING DOWN THE COAST.

ONE spring Rusticus and I chartered the little 40ft. schooner Geline Coleman and cruised down the Gulf coast of Florida eastward from Apalachicola; we had ample time and no object in view save sport; so we sailed when the wind blew, and anchored when it did not, and lazily idled along, stopping at any point that caught our fancy and remaining in a place only so long as the interest or novelty lasted. This is the true secret of pleasant sailing, you must have plenty of time, no object save sport, and no point to reach within any given time. Outline for yourself no special course or trip, for once you confine yourself to any regular plan, or have a certain date in which to reach some point, then you destroy the charm of perfect yachting. You are worried if the wind is unfavorable, you swear at calms that delay progress, and in fact fret and fume and generally end by condemning sailing as a most tedious and monotonous pastime, dependent upon the variable moods of sea and air, and not to be relied upon at all as a means of locomotion.

Start out, however, as I have recommended, willing to be the sport of the elements so long as they share their sport with you; if the wind don't go your way, then you go the wind's way (a case of Mahomet and the mountain), and if that most common occurrence, a calm, strike you, take it easily and sleep or read it off as you would a headache—do all this and go under these circumstances and you will enjoy sailing. Let stocks and bonds go for the present, wish for no quotations, care not whether France and Germany, England and Russia act like Kilkenny cats, and devote yourself to no higher science than the putting of bait on a fish hook in the most approved manner, or the calculating of a distance for a rifle shot—in other words, be utterly lazy.

Rusticus and I both fulfilled these conditions, and we enjoyed ourselves accordingly.

The roll of the officers of the Geline began and ended with Captain Joe, an American sailor of some ten years' experience, while the crew was represented in the person of Santo, an Italian who spoke very little English, and when he did struggle with our piratical tongue, his mistakes and accent were very amusing, a mixture known as pigeon-English being the result.

We started on our expedition well prepared with the good things of this life: the cabin was literally filled with boxes of canned goods of all descriptions. Several dozen bottles of ale, a most grateful luxury at sea, and a liberal supply of loaf bread and crackers to last as long as possible and save us the eating of bread of our own make. I believe in being as comfortable as I can upon a shooting or fishing trip. The man who starts out with the idea that in order to be a successful woodsman he must eat nothing but bacon and cornbread and make himself generally uncomfortable, has a most mistaken idea, and does not enjoy himself in his self-imposed penance. Hardships will come in ample numbers of their own accord and without forcing them.

We hoisted all sail one morning about 10 o'clock, and catching the full force of a strong breeze on our quarter, bowled merrily out of the river. The channel is extremely shallow and tortuous, and it requires great care to avoid grounding on the sandbars that everywhere rear their heads to within a foot or so of the surface. These flats, however, are generally well marked by the immense numbers of dead trees, which have stranded on them from the mouth of the river, and whose naked branches reaching upward form guide marks to the navigator. Once outside this network of bars, we entered the open waters of the Gulf and fairly bounded along, the Geline proving herself all that her lines had promised for speed and seaworthiness.

Seven miles off the mouth of the river lies a long, narrow sand bar, St. George Island. It stretches some thirty miles down the coast and protects the mainland from the force of the gales of the Gulf, forming a sound in which very rough weather is impossible. Toward this island our prow was headed. The day was simply perfect, sky and sea being in that sympathetic accord where one reflects the beauty and serenity of the other, while the wind was just strong enough to raise the waves to the height that is the joy of sailors and terror of landsmen. Now, Rusticus is not a sailor, and I had noticed him growing paler and paler as the swell increased in ratio to our distance from land, and soon my comrade was in the agonies of sea sickness. Of course he got no sympathy from either the sailors or myself. People who are kind-hearted enough in everything else are absolutely brutal in their mocking of this, indeed, terrible malady—provided, always, that they are themselves free from its effects. There is an indescribable feeling of superiority as you watch your dearest friend writhing before you, and a sort of I've-been-there-myself look, as you heartlessly suggest such remedies as the piece of salt pork and an attached string. Poor Rusticus suffered awfully; but we told him that sea sickness never proved fatal, and then left him to his fate; probably he felt as Mark Twain describes his own sensation: one minute afraid that he was going to die, the next that he was not.

We spent three days along the coast of St. George Island, hunting over and exploring that desolate waste pretty thoroughly. It is, indeed, a wild spot, a sand waste covered with a thick growth of pines and palmettos and with swamps and thickets almost impenetrable. It seems strange that a barren sandbar, evidently formed by the sea, should produce the luxuriant vegetation that here exists; the soil is nothing but loose, shifting sand, across which, from evidence that I saw of drift, the sea in exceptionally high storms must sweep. The widest part of the island is not over two miles, while in places sea and sound approach to within a few hundred yards of each other. In the interior are many lakes and lagoons, each surrounded by a swamp.

We had very good sport, tramping over this desolate island in the pursuit of game. Snipe and plover were very abundant, I never have seen anything like the numbers that we stirred up on every beach. Rusticus and I averaged some fifty birds apiece per drive, and mercy alone, not lack of birds, kept us from tripling that score. Cranes and herons were very numerous and afforded good sport, but they are very wary and difficult of approach, and one has to be "up" in the business to successfully stalk a crane perched on the topmost branch of some dead pine, for if they are all neck and legs so also are they all caution and watchfulness; the still-hunting of a deer is mere child's play compared to the labor and caution necessary to circumvent one of these waders. One afternoon after a long hot tramp, and several unsuccessful attempts to bring one of these birds to bag, I spied a magnificent specimen of the great blue heron perched high upon a tree some 300yds. away. I stepped behind the nearest bush and began to use all of the wood lore that I possessed in the silent advance upon that guileless bird. When I was about 150yds. away from him, out went the long neck and my prospective quarry began to search the brush under him in the very direction where I was crouched. I saw he would be off in an instant, so leveling my rifle in despair, I fired. Down he came with a hoarse *quonk*, like a streak of blue flame, while I hurried forward to take as trophies the much prized plumes. But not so fast. My bullet had shattered one of his wings, leaving him otherwise uninjured, and he stood facing me as I came up, with fierce eyes and ready poised chisel-like beak, in an attitude of defiance that did not extend a very cordial invitation for a nearer acquaintance. Not one step did he retreat—not he! disdaining to use those long legs of his for so ignoble a purpose—a gallant bird, indeed. Well, I put an end to him, and took my plumes; beauties they were too, but just a little ragged, for it was rather late in the season for the gathering of perfect feathers.

Wild creatures are generally brave. When we contrast the size of a bluejay or a mockingbird with that of a man, and see how fiercely they defend nest and young against the approaching human, a feeling of admiration for a bravery so great must possess us. I remember, one afternoon, on this island, as I was returning about sunset to the little bay that sheltered the Geline, a magnificent bald eagle flew over me, and by a lucky shot I dropped him down from his lofty flight. Tumbling, like Phæton, to the world below, he was wounded unto death, but his fierce, defiant eyes showed no fear, but boldly met mine, and he gazed at the red sinking sun as, it is said, only kings and eagles can. I felt sorry that I had killed, by the advantage of my rifle, so noble a bird, and cut short that bold free life, spent high in the heavens over the expanse of sea, a life perhaps nobler than that of man. But we all of us have that blood-lust that hates to see any other animal in the full possession of life and liberty, and we slay and slay, by means devised by our superior intellect, many animals that we would not dare to face upon an equal footing. The honest lion is, after all, much braver than man, seeking prey or enemy with no other than his own sturdy powers, and not, in perfect safety to himself, cruelly killing countless harmless creatures for mere sport. However, I moralize, and bore you. People nowadays don't like to think. Perhaps it is too humiliating.

Though deer tracks were very abundant, having no dogs, we did not attempt to hunt the deer in the almost impenetrable thickets of the interior.

We shot several alligators in the ponds, but soon tired of slaughtering the great lazy beasts that scarcely would crawl out of our way, but lay inert and motionless with stony stare and open mouth, while the message of death was sent crashing through their stupid brains. I do not know what the opinion of naturalists is on the subject, but I think that the organs of sight of the alligator must be very imperfectly developed. I have walked deliberately to within 20yds. of one of these saurians that seemed not to see me, though his eyes were fixed in a dull stare in my direction.

The days passed very pleasantly. We tramped and hunted all day and would return to the Geline by dark, thoroughly tired out. One must know what it is to be exhausted in order to appreciate the joys of rest and a supper of snipe, canned goods and bacon. And what yarns were told and songs sung as we lounged about the deck in the refreshing breeze, with naught overhead but the eternal heavens, the little vessel rising and falling to the gentle swell and sobbing and sighing with the winds or laughing with the rippling waves that played against her sides.

One night Santo, in answer to a call for a song, started off—not with some rollicking sea ditty such as "Shiver my Timbers," "Douse my Toplights," or Italian words of like effect, but with the Miserêrê from "Trovatore." To hear such a song, sung in a really good tenor voice from the lips of a common sailor was somewhat startling, but he had not forgotten his early life in Italy, that land of music, where highest and lowliest alike share the taste for opera and have opportunities for the gratification of that taste. "Hernani," "Traviata" and others followed as the musician became warmed with his theme, and all were rendered in so excellent a style, that we could almost imagine ourselves in some grand opera house listening to a painted tenor singing under painted trees.

The sea, highly phosphorescent, presented at night a truly grand spectacle; we seemed floating on a mass of molten metal, that seethed and boiled as far as eye could see in one blazing surface of weird, ghostly fire, flaming yet giving no light. Occasionally flying fish would leap out of the water and meteor-like leave for an instant a trail of fire in their wake.

Never shall I forget the experience of our first night. The vessel was anchored about a quarter of a mile from shore, Captain Joe supposing that at that distance we should be safe from the attack of mosquitoes. As a good breeze was blowing, all went well during the early hours, but about 11 o'clock the wind died down, and all hands were awakened by the attacks of myriads of these "avengers of the Gulf." The air was literally one heaving mass of humming, buzzing, biting mosquitoes, not the ordinary seaside variety that a net will stop, but great mailed monsters that would pierce a bar as a bullet would a pie. Our cheese-cloth nets were of no avail, and we spent the remainder of the night in one steady struggle, slapping our faces into veritable jellies in vicious hits at the tormentors. A steady murmur arose from that deck like miasma from a swamp, not the murmur of prayer, somehow no one seemed to think of praying, and at last Santo said something that sounded amazingly like *caramba*, and I did think that I heard Rusticus mention the name of some lady, "Helen Blazes." Captain Joe simply swore, being quite expert at that useful art, and I, knowing that I could not do the subject justice, hired him to aid me in expressing my sentiments. [*Mem. He did.*] Ever after we anchored at least a mile from shore and were troubled no more in our repose.

The early morning was generally very still, the breeze seldom springing up until about 10 o'clock. A calm at sea in hot weather is the deadest picture of life and nature that it is possible to imagine. No breath of wind stirs the oily water into the slightest ripple; no flying bird nor leaping fish disturbs the absolute quiet that broods over all. The sunlight, flashing in the stagnant waters, reflects two-fold its own light and heat, and your little vessel lies lifelessly upon the dead flood, her white sails hanging limply like the drapery of a marble Venus. A wonderful peace and quiet rests over all, broken only by the creaking of the spars that feel the almost imperceptible motion of the swell, or the gentle rippling of the miniature surf as it falls upon the beach. The lines, "A painted ship upon a painted ocean," though long hackneyed, yet express with singular exactness a calm at sea, and we may search the range of literature and find no better simile.

One very hot morning I rashly plunged overboard to enjoy a swim. Scarcely had I struck the water, however, when the fin of a shark appeared some hundred yards away. My time back to the boat would certainly have exceeded in point of speed any professional record in the swimming line, and I clambered back on deck, resolved in future to confine my ablutions to a bucket. These sea wolves are very numerous all along this coast, making bathing very dangerous save in shallow water.

During the morning of our third day in the vicinity of the island clouds began to gather and a strong wind sprang up that rapidly freshened into a gale. We had decided to run for Carabelle, a little settlement on the mainland some fifteen miles away; and not liking to have our plans broken into, we closely reefed fore and mainsail, hoisted the flying jib, and started out before the wind. Once out of the shelter of the protecting island the full force of the open sea was felt, which lashed by the southwest gale was very rough, and our situation was a little squally. The Geline, however, behaved splendidly, stoutly opposing her strong sides to the great rollers and plowing through the curling seas, dashed the white foam right and left; exulting as a thing of life in this war of wind and sea.

There is no grander sight than a storm on the ocean nor one that offers so great a contrast to the laughing blue waters in their gentler moods. The sea that but yesterday toyed and splashed its harmless waves in play against the vessel's side, to-day, dull and sombre, heaves with fury its seething masses in awful power. Gleaming white crests, like the red caps of anarchy, excite the rebellious subjects of Old Ocean to fury, and they rush about, dull, gray and forbidding, terrible in their resistless might, reflecting in the great troughs and swelling heights the rage of the contending skies above. It is an exhilarating sensation to stand on the bow of a bounding vessel, as it rises to surmount some great billow or dashes in a mass of foam through the heart of an opposing sea. The pulse *will* quicken, the breast *will* heave, and high thoughts and noble impulses be born in the presence of the greatest of the manifestations of Almighty powers. It seems to me that when one's time comes to die, a death in the midst of dashing waters and shrieking winds, a death in the very presence of Nature's God, would be a grand end, a death worthy of a man.

We had a pretty hard time getting into Carabelle, but by exceedingly careful handling managed to run up the somewhat intricate channel at the mouth of Crooked River and tied at the apology for a wharf that receives the shipping of the town. It is a place of only two or three stores, but has some importance on account of the large sawmills that are here situated, the shipping facilities are much better than at Apalachicola, the deep water approaching closer into land and doing away with so much lighterage. Crooked River, at the mouth of which the village lies, is a narrow, winding estuary of the Gulf that divides St. James Island from the true mainland and connects the waters of St. George's Sound with those of Ockolockone Bay. Some two miles above Carabelle, New River empties into the Crooked. It is upon the territory watered by these streams that the sawmills principally depend for their supply of logs. A tram-railway of two or three miles penetrates St. James Island and gives an outlet for the magnificent timber everywhere to be found. We spent several days exploring New River; it is a very narrow, winding stream of great depth, the banks often falling sheer down into fifteen feet. Toiling up the current was laborious work, as the wind, shifting around through the forest aisles, was very variable, and the twisting, serpentine course of the river made many long reaches in which we had to battle with wind as well as tide. In such places, poling being impossible on account of the deep water, all hands would go ashore and haul the schooner up stream by means of a rope fastened to the bow—pretty tough work I can assure you, with the thermometer in the nineties. The country is one vast wilderness of pine forest, with only occasional swamps, and is about as promising a portion of western Florida as I ever saw. It has a great reputation as being a fine game preserve.

We kept a sharp lookout for bears but saw none; in fact, save alligators and a few herons and cranes, there was an absolute dearth of animal life. The water of these Florida streams is of the deepest black, stained with the decay of the luxuriant vegetation.

On the morning of the third day the river became so narrow that we were obliged to give up the notion of further progress, so we "bouted ship" and started back. The wind being for the most part favorable, and aided by the strong current, the Geline fairly flew back to Carabelle, making the trip in about five hours over a distance that had required two days of severe labor to accomplish against the stream. I made a rather odd use of my rifle during the run. At one place, where we had to tack, one of the ropes of our topmast became entangled in the branches of a pine tree, stopping us at a very critical moment and threatening to tear our rigging all to pieces in an instant; there was no time to climb up and loosen the ropes, so I snatched up my Winchester, took a hasty aim at the waving branch and fired, luckily cutting the cause of our trouble in two, and freeing the Geline from a rather awkward position. I think that this is the first instance on record of a rifle having been used in navigation.

ALEX. M. REYNOLDS.

BUFFALO PHOTOGRAPHS.—Chicago, Ill.—I got a stand on a herd of buffalo a few days ago in the Flat Head country, Montana, and took about twenty shots at them with my detective camera. I brought away fifteen very fair negatives, of which the inclosed prints are a sample. —G. O. SHIELDS.

Natural History.

JUMPING MICE AND THE PORCUPINES;

AND THE SUBORDER DUPLICIDENTATA.

BY R. W. SHUFELDT, M.D., C.M.Z.S., ETC.

ZAPUS HUDSONIUS, the jumping mouse, is the sole species of the only genus of the family *Zapodidæ*, the first family we have to deal with in this contribution, and in it I will close with the North American Rodentia. This interesting little animal measures from tip to tip, when adult, between seven and eight inches, the tail being considerably longer than the body. It is white on its lower parts, while on the back and superior aspects it is of a reddish brown. Ranging over North America generally, although nowhere abundant, it is known in some localities as the *Canada jerboa*, it having much the appearance of one of those animals, with its long hind and short forelegs, and its power of taking long leaps. Mr. C. C. Abbott, in comparing the habits of hibernation in the common white-footed mouse (*H. leucopus*) and *Zapus*, says: "These two mice, popularly so called, hibernate with regularity in one sense, but differ *inter se* in another. The former (*Zapus*) once torpid, remains so until spring, a few warm days in winter failing to rouse them; but the white-footed mouse seems simply to sleep soundly rather than grow torpid, and responds with considerable promptness to any disturbance. The jumping mouse builds a nest of leaves and grass at a considerable depth from the surface of the ground (not a 'ball of mud,' as stated in the 'Enclyclopedia Britanica,' art. 'Jerboa'),

CANADA PORCUPINE (*E. d. dorsatus*).
Drawn by the author. Reduced.

and, once fairly settled therein, is beyond the various sudden changes of our winters; the white-footed mouse, on the contrary, utilizes an old bird's nest, or has a nesting place beneath a log or in a half-decayed stump. In such positions, of course, the occupant is more likely to be disturbed, and is also directly exposed to the varying temperature. Is it to meet the requirements of his condition that this mouse lays up a goodly stock of food during the autumn? Something the jerboa, or jumping mouse, does not do. However this may be, the fact remains, that both these rodents are quite sensitive to cold, and hibernate as soon as the winter sets in; yet how differently is this faculty exercised!"—(*Science*, May 2, 1884.)

Zapus may have several litters during a summer, and the female bring forth from three to four each time. Sometimes the mother may be seen dragging her semi-hairless progeny along, bumping them over the ground as they hang on like grim death to her teats.

This animal in leaping takes a course in zigzags, clearing two or three yards at a time, springing with its hind-feet, but landing on its forefeet at each bound. Audubon says that it is certainly the most agile of animals in the entire world's fauna. Farmers sometimes plow it up in their wheat fields, when it makes off in magnificent leaps. It feeds on grain and various kinds of seeds, but rarely does much damage. Strictly nocturnal in its habits, it may be found haunting either the woods or the open cultivated fields. Smaller by all odds than many of its kin in foreign lands, it is when captured found to be a gentle and timid little creature, that, with pains and care, is soon broken to domestication, and makes an interesting little pet.

Next in order in our "List" we find the Family *Octodontidæ*, but as it contains only West Indian forms we will have little or nothing to say about it here. It contains two genera, *Capromys*, with three species in Cuba and one in Jamaica; they are an interesting type of rodents, and Dr. G. E. Dobson, F.R.S., has given us an admirable review of their anatomy. The other genus, *Plagiodontia*, has but one species, the *P. ædium* of Hayti and Jamaica, and is quite nearly related to *Capromys*. Space will not permit of my touching upon its habits here.

Following these Antillian forms of rodents, we come next to the Family *Hystricidæ*. Created to contain the porcupines, of which animals we have two species in our United States fauna, the Canada porcupine (*E. d. dorsatus*) and the Western porcupine (*E. d. epixanthus*), while *Synetheres mexicanus* is found only in Costa Rica and Mexico.

In the Northwestern districts of our country I have seen fine specimens of our Western porcupine, and a number of years ago sent a complete skeleton of one to the Army Medical Museum in Washington. A good idea of the form of the Canada porcupine may be gained from

THE JUMPING MOUSE (*Zapus hudsonius*).—ADULT MALE. DRAWN BY THE AUTHOR.

the figure of the one I present at the head of this article. It's a clumsy brute, not unlike a beaver in its general outlines, but somewhat smaller than that animal. They vary much in color, from a blackish brown to lighter shades of an ochrish brown, with dingy white shadings on the sides. The quills in this porcupine rarely exceed 4in. in length; they may be erected by the animal at pleasure; are covered from sight by the hair of the coat, and are very easily detached. I will never forget the boquet of these bristles that adorned the nose of a setter dog, which had run his muzzle into the fur of one of these animals to try and find out what kind of a brute his master had just slain. Thes quills spring from the superior aspects of the animal and are longest on the back; shortest on the head and sides; they are nearly straight, being pointed at their insertional tips, but sharp as needles at their apices. In form they are cylindrical, and many of our northern Indian tribes split them, dye them and use them to ornament their robes and for other similar purposes. I have seen Sioux buffalo robes magnificently worked in with these spines of the porcupine, and stained various colors. When we come to examine a quill carefully, it is found to be reversely barbed along its distal extremity, so that they are really dangerous affairs to get into the flesh, owing to the tendency for it to work in deeper and deeper. Wolves and dogs not infrequently come to a painful death from this cause. For this reason our Northwestern Indians detest the animal, as they often have some of their favorite canine pets destroyed by it. It is said that both cougars and lynxes have been found dead in the forests with their mouths filled with these quills, and all the evidences of the presence of destructive inflammation therefrom. This species has five toes on its hinder pair of feet, all armed with long curved claws, while the anterior pair, similarly provided, possesses in each foot but four toes; its ears are small and quite concealed in the surrounding fur; further, its tail is short, and its eyes by no means of great size, while the feet are plantigrade, and the pectoral teats four in number. Late in the spring the female gives birth to her two young, and they breed, as a rule, but once during the year; a hollow tree is commonly selected by her for her nest, though other situations are occasionally chosen.

I hardly knew what to make of the first one I saw as he moved sluggishly along a nearly horizontal limb of a great cottonwood tree; but it is on the ground that their behavior in the face of the enemy is most remarkable, and a writer at hand says that they "often will not take the trouble to run away from dog or man, being in this respect very much like the skunk. As the latter relies on his liquid shaft, addressed to the nose, the former seems to put his trust in his thousand barbed arrows, which threaten the flesh. Of the two, the porcupine has the advantage, for when attacked by a dog, wolf, cougar or other ferocious beast, it presses its nose downward, erects its quills, and brandishing its tail, stands ready for the onslaught. If the assailant is inexperienced, and unwarily seizes the hostile party with its mouth, he instantly retreats with a howl of pain and dismay, for his nose, lips, jaws and tongue are stuck full of the barbs of the porcupine. Unless some one extracts them, they work deeper and deeper, and often result in the death of the sufferer."

Richardson asserts that they are hardly fit for food, and as in all vegetable feeders among wild game, are not infrequently found infested with intestinal worms. Much of their time during the day is spent in sleep, but when abroad they feed upon the bark of a number of varieties of trees, often denuding, in the case of a single animal, as many as a hundred trees during a season. In this way it is very destructive, and when once it attacks a tree, it usually never leaves it, except to repair at night to its nest, until every vestige of bark has been eaten off. Porcupines in most Eastern districts are now becoming quite rare, and while they are fully capable of becoming completely domesticated, they are not, upon the whole, very engaging pets. Although I have never personally heard it, it is said that the animal during the night often gives vent to a low and peculiar cry, which once recognized is not likely to be forgotten again; its well-known growl when teased by its captor is quite characteristic. These animals when feeding will often sit up on their hams like a "prairie dog," and use their forepaws to hold their food while they gnaw it off; it is stated that they are very fond of green corn, and such fruit as apples, as well as the entire list almost of the garden vegetables.

Many of the habits of the Canada porcupine are but still imperfectly known to us and demand careful study; while its structure, and the structure of its young at various stages, would by no means be labor thrown away at the hands of the comparative morphologist.

The Suborder *Simplicidentata* of the Rodentia, which we have heretofore been considering, closes with the family *Caviidæ*, the cavies, but as all of the species, which I have already enumerated in a previous article, are either West Indian, Mexican or South American, we will here pass them by; the well-known guinea-pigs, the agontis, as well as the paca, are examples of this highly interesting group of rodents.

[TO BE CONCLUDED.]

NOTES FROM MISSOURI.

THE summer with us here in northern Missouri was very cool and rainy, but the autumn has been dry and pleasant. We have most all kinds of migratory birds. A few Southern mockingbirds reach this latitude, appearing in May and going South during the latter part of July.

Regardless of the unfavorable season, the game fowls and animals are plentiful. Grouse are an average and began to fly about Oct. 10. Quail are numerous, likewise rabbits and squirrels. Mallard and other species of ducks annually rear their broods here among the ponds of the Mississippi River lowlands. Great flocks of mallards began coming from their summer retreats north of us about Oct. 15. To-day, Oct. 31, a large flock of wild geese passed southward, the first I have observed this autumn.

Immense numbers of brant and loons have been flying by for two weeks. The migratory birds have practically disappeared. A few mud hens, some chewinks, and solitary representatives of the robin and the bluebird families yet remain, as stragglers of the migratory army. Meadow larks and wrens took their return flight in the early days of October. The forests are silent, so far as concerns the sweet songs of the many species of birds. During the whole year I have seen but few passenger pigeons. They were in former years very numerous here, and could be seen in flocks composed of millions of birds every spring and autumn. But strangely they have virtually disappeared from this region. I read not long since of two very large roosts of passenger pigeons, one roost situated in Texas and the other one in some Pacific State. What accounts for this principle of forsaking a certain locality? Food is abundant here for the pigeons, as this region is nearly one-half forest. May it not be due to the workings of civilization, such as the awe inspiring presence of man, the noisy cities, and the alarming steamers and railway trains? And while we are talking on this subject, what has become of the swan? This noble fowl was tolerably plentiful here in former times, and even hatched its brood along the densely covered shores of our lowland lakes. But they have given us good-bye and have sought climes more congenial, and their musical voice is no more heard in our land.

ALEXANDRIA, Mo. J. B.

NEW YORK, May 17, 1888.—*U. S. Cartridge Co., Lowell, Mass.:* Gentlemen—It affords us much pleasure to report upon your latest Climax shells with strong primers received this morning. We have tested them with Schultze powder, and find them simply excellent in every particular and practically equal to the best adapted English primer. Two and a half drams to 3¼drs. of Schultze powder in 12-bores and 3¼ to 4drs. in 10-gauge worked to perfection in your shells, loaded simply like black powder and without ramming. Very truly yours (Signed), VON LENGERKE & DETMOLD.—*Adv.*

Game Bag and Gun.

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 12.—The late severe storms have at length started the tardy wildfowl south, and they have gone down with a vengeance. Instead of stopping at their accustomed feeding grounds, the great bulk of the flight seems billed straight through to the Gulf of Mexico. They only stop when their wings get a hot box. Abe Kleinman, one of the oldest and most successful market hunters of this place, says that the shooting has not amounted to anything this fall at any place near Chicago, although there have been a few good days at some of the reliable localities. Mr. Kleinman is in receipt of letters from different parts of the South which tell the same story. Even in southern Missouri the ducks are passing on down without stopping much—a thing almost unheard of. He thinks this situation is due to the fact that the heavy storms came too late in the fall, so that when the ducks did get down into this middle country, they found the feed scanty and poor, and so did not tarry with us. The water has been generally low also this fall.

Still, it should not be supposed that no ducks at all have been in this country. To the contrary, there has been a very heavy flight for the last four or five days. Indeed, the lake front, right within the city limits, has at times been fairly black with ducks, and the novel sound of the shotgun in the city has been almost continuous. Some shooters have had fair sport along the lake. The twelve-year-old son of a prominent north side citizen was nearly drowned a day or so ago while out hunting, just off shore. His cranky boat upset when he reached for his gun in order to salute a passing flock of ducks, and the youth sank in about 800ft. of water. He clung pluckily to the bottom of the boat when he rose to the surface, and was seen by the fireman of a passing railroad train, who jumped from his cab, pushed off in a rickety skiff, and rescued the boy from a cold close call. The whole affair was rather singular.

A week ago there were thousands of geese on the Kankakee, near Roselawn, Ind., but they went on South after a short rest.

Dakota has afforded good shooting this fall. Messrs. W. W. McFarland and C. D. Gammon, who have lately returned from a little shoot at Lake Preston, report that they bagged 132 on their first day's shoot, and 57 on the day following.

Lieut. Phil. Reed, inspector of rifle practice, U. S. A., stationed here, has just got in from a short trip to Fox Lake, the Chicago general sporting resort. He bagged 22 ducks on his first day and 17 on the second. He reports that there were plenty of ducks, but that the numbers of shooters kept them off the water after the morning shoot; by waiting over another day he could have added somewhat to his bag, for the ducks were unquestionably there.

Mr. Ward returned from the marshes of the Kankakee Land and Cattle Co. last Saturday with 23 good mallards. Nobody was shooting, and the ducks were not well stirred up.

Mr. J. Palmer O'Neill reports that two friends of his killed 78 ducks at Fox Lake last Saturday. Numerous bags of a dozen to two dozen per gun are reported at the different gun stores.

Mr. John Gillespie, just in from English Lake, Indiana, says that ducks were not seen in any great abundance. He bagged only fourteen mallards, and had a rather slow time, although the weather was disagreeable enough for good shooting.

I said something about Mr. Abe Kleinman. Everybody in Chicago knows him as one of "the Kleinmans." He is one of seven brothers, all noted for their shooting ability and experience and all of trap or market shooting fame. The names of the Kleinman brothers, in the order of their ages are John, Abe, Henry, George and William. They challenge any five brothers on the face of the earth to shoot them a match at trap or in the field. Henry Kleinman rejoices in the euphonious and apt name of "Swamp Angel." John Kleinman is a member of the Audubon Trap Club. George, Abe and William all belong to the Chicago Club. George won the diamond badge last year, making two years out of three he has carried it. Abe claims that he is the poorest shot of the family now, as he has not fired a gun this fall.

Harry Loveday, a duck shooter of experience and success, got in to-day from the Cumberland Club's grounds on the Kankakee, reporting only fair sport. The shooting is spasmodic. Now you see it and now you don't.

Nov. 13.—Mr. A. C. Black, of Armour's, is lately back from the Kankakee with fair luck. The Kankakee country is a favorite locality. The members of the Tolleston Club, who own the big marsh just over the Indiana line, have, however, had about the best shooting done by Chicago club men this fall, although even there it has been spasmodic.

FOX LAKE, Ill., Nov. 15.—Last night we heard the "mewing" of redheads out in the lake, and judged there must have been quite a body in. From the balcony of the Howard House this morning we can see that the conclusion was warranted. There are probably 2,000 redheads and bluebills in the big bank of ducks visible on the middle of the lake, about two miles out. The weather is very open and warm. The boom of the guns began with the rise of the sun, and the main body of the ducks is already showing restlessness. The poor creatures have small chance for rest, for they are harried even from the middle of the lake by inconsiderate shooters who do not know that it is the surest way to spoil the shooting for themselves and everybody else.

There is plenty of wild rice and celery yet to be found here, and the deep-water ducks, redheads, bluebills, ringbills and some canvasbacks, still hang to the lake. The mallards and teal have all left for the South or elsewhere. It is the unanimous verdict of the residents and visiting shooters here that this is a poor season. No very good bags have been made, although last week a number of scores of one or two dozen ducks were made. I can learn of only one bag of over thirty, and a dozen ducks to a boat has been something in the nature of a surprise. Walter Clark and George Beckwith got twenty-nine last Saturday, including several mallards, shooting in the bay at the head of the river.

Chet Howard brought in eight bluebills and ringbills and one canvasback to-day from the "Hogback" pass on the lower lake. Ed. Howard bagged nine last Tuesday. John Gillespie got one canvasback among the dozen he killed a week ago. The Howard boys killed thirty-five teal one day earlier in the season. The Stanley and Dunnell boys, persistent coasters and pot-shooters, can claim no large records for this fall. Everybody looks gloomy, and the resort keepers begin to talk of closing down their houses.

Nov. 16.—Yesterday I went with George Beckwith, one of the two very best pushers on the lake, and a man of twenty years' experience on these lakes. We had a good fleet of decoys, and we put out our blind on the best points on the lake, and also visited Grass Lake and the Long Channel, hunting hard and patiently all day. Counting out the mudhens, we bagged two ducks, one of them a sawbill (merganser) and the other a ruddy duck. The latter was killed clear out of range, and it is safe to say that we did not have a shot all day long. The weather was clear and bright, and the ducks all went over to Pistaqua Lake.

The body of Mr. Hendershot, who was drowned in Pistaqua Lake eight days ago, was recovered last Tuesday. The unfortunate gentleman attempted to cross from one point to another in a boat which is said to have been leaky, and there being some sea on, he and his companion were in some way thrown out. Mr. Hendershot swam half way ashore, then turned and swam back to the boat, where he finally lost his hold and was drowned. He was a strong and confident swimmer. When found, it was seen that he had managed to get rid of one of his hip boots; the exertion of trying to get them off is probably what exhausted him.

Nov. 17.—Yesterday there was a sudden and severe change of weather. A half inch of snow fell night before last, and yesterday morning dawned very cold and windy. George Beckwith and I went around to Pistaqua Lake and put up our blind in a bay out of which we drove a couple of dozen redheads. We sat in our blind patiently all day, the coldest day, I think, I ever passed in a blind. What few ducks came into our bay decoyed nicely. We had only about eight shots, and missed two of them vilely, owing probably to the wind, which was blowing a gale, and which drifted shot worse than any wind I ever shot in. We lost three of our ducks, two of which were picked up to windward of us by a piratical "coaster" who was prowling along the shore. There were plenty of ducks on Pistaqua Lake, quite a flight coming in from Fox Lake from 9 o'clock till noon. We were out of the line of this flight, and although they would probably not have decoyed out in the open water, we could probably have had fair shooting on the fly-way had we thought the flight would last as long as it did. The ducks banked up out in the open water, and sat all day in a swell where our boat would hardly ride. At dark, when we pulled up our blind and decoys, the big bank was still out in the deep water, and showed no disposition to move. Their wisdom is shown this morning, when all the bays are seen to be frozen up.

Chet Howard brought in sixteen ducks last night, all shot out of a sudden flurry that came in after 3 o'clock. He was at the upper end of Fox Lake.

The best shooting here is had from the newly-invented canvas blinds, of which, as well, indeed, as a great many other things about this noted locality, I shall speak as soon as I find time.

CHICAGO, Ill., Nov. 18.—Mr. Chas. E. Willard, of the Blatchford Cartridge Co. and vice-president of the English Lake Duck Club, was down at the club grounds last week and got some mallards, but reports the shooting slow.

The members of the Tolleston Club have had about the best shooting of anybody this fall. They have fed their ducks nicely on wheat screenings and the refuse of a glucose factory. The ducks have appreciated this, and in return have "staid by" the Tolleston marsh.

Messrs. Chas. Mears, R. W. Cox and Jesse Cummings got back to-day from Swan Lake, on the Illinois River. They say the shooting was without form and void.

E. HOUGH.

WEST VIRGINIA.

Editor Forest and Stream:

On account of the weather being unfavorable for some weeks past, quail shooting has been almost a complete failure here, there being but few birds killed; but should the rain and wind cease some good bags will likely be made during the remainder of November. The birds that have been bagged are well-grown and in good condition.

No pheasants (grouse) nor wild turkeys have been bagged worth noting. The former are plentiful and the latter scarce.

Our marshes are seldom visited by woodcock, and consequently none are harmed.

Generally by Oct. 1 wild ducks are plentiful on our water courses, but up to this time this season I have not heard of one being seen on our ponds or streams.

Squirrels have been quite numerous since spring, and a great many are being bagged.

Rabbits are also quite plentiful this season. Heretofore "Mollie Cottontail" was seldom seen by the sportsmen.

As yet no deer have been killed. They are reported as being very scarce. It seems as though some parties have no regard for the game laws of West Virginia. Whose fault it is I don't know, but it looks as if the officers could catch up with some of the chaps who chase deer with dogs before the time expires set by the West Virginia Legislature, if they wanted to do so. All kinds of game are killed here out of season, and I for one would be in favor of seeing the game laws enforced against any one who does not respect them enough to abide by them. The matter is this, that our officers don't seem to take any interest in game and don't care whether it is killed in or out of season. Last year one of our prominent lawyers chased deer with dogs, and surely he knew it was unlawful. When this is the case what can we expect of the mountaineers, who do not know there is a law? Let the law be enforced and game will be plentiful. P. C. O.

LEWISBURG, West Virginia, Nov. 15.

THE NEW JERSEY COAST.—Perth Amboy, N. J., Nov. 17.—Why is it that the New Jersey coast is so seldom heard from in the Game Bag and Gun department? Is no information to be had concerning wildfowl in Barnegat and Egg Harbor bays, or are they among the things that were? Let us hear from Chadwicks, Cedar Creek, Harvey Cedars, Tuckerton and Atlantic City now and then.—J. L. K.

MICHIGAN'S UPPER PENINSULA.

LAKE LINDEN, Mich., Nov. 5.—*Editor Forest and Stream:* The fall shooting in these parts has been very good, although the past two weeks of continuous rain and snow have made it somewhat disagreeable.

Partridges have been plentiful, though extremely wild. Still a bag of from sixteen to twenty in a day's tramp is not a bad showing and has been repeatedly made by sportsmen here.

A few bear have been killed on Keweenaw Point during the summer past. The last one on record, a full grown one, was brought to town by a fellow who did the cooking at one of the lumber camps. He received a good price for bruin, together with many complimentary comments on his success, and was in the height of his glory, when there appeared upon the scene several boys from the woods, overflowing with wrath and fury, and the would-be sportsman hid himself out of sight.

It appears the boys had been feeding that bear on salt pork, etc., all summer, and were only waiting for the time for bruin to be in his best possible condition, when they would dispatch him and receive the reward for their patience. During their absence from camp, however, the cook stole a march on them.

Deer are not so plentiful on the Upper Peninsula of Michigan as they have been in years past, a fact which is attributed to the unusually large number of wolves which abound in the forests, and if the multiplication of the latter keeps on at the present rate, deer hunting will soon be a thing of the past with us. Unless the bounty on wolves is increased, this will surely be the result. In the lower part of the Peninsula, however, and in Wisconsin, sportsmen are reporting better success, and venison sells for 6 cents per pound there. In Marquette county, the other day, a party of hunters went out on a deer-hunting expedition, making their journey over the railroad by means of a hand-car. It happened that a certain hunter, already on the grounds, knew of their coming, and having shot a large deer the day previous, but not securing him until the following day, when he was found stiff in death, he concocted a scheme to have a laugh on the boys. He stood the deer up against a tree at a convenient distance where it could be seen from the railroad track, and hid himself on the opposite side to witness the fun. It soon commenced; the foremost on the car, spying the deer blazed away, and failing to bring him down, was followed by the entire company, but without any better success. The firing continued, until the owner, to save his venison, interfered.—Curtain.

Last week a half-breed, while out hunting partridges in Baraga county, came upon two fine looking otters and secured them. Otters are seldom met with here nowadays.

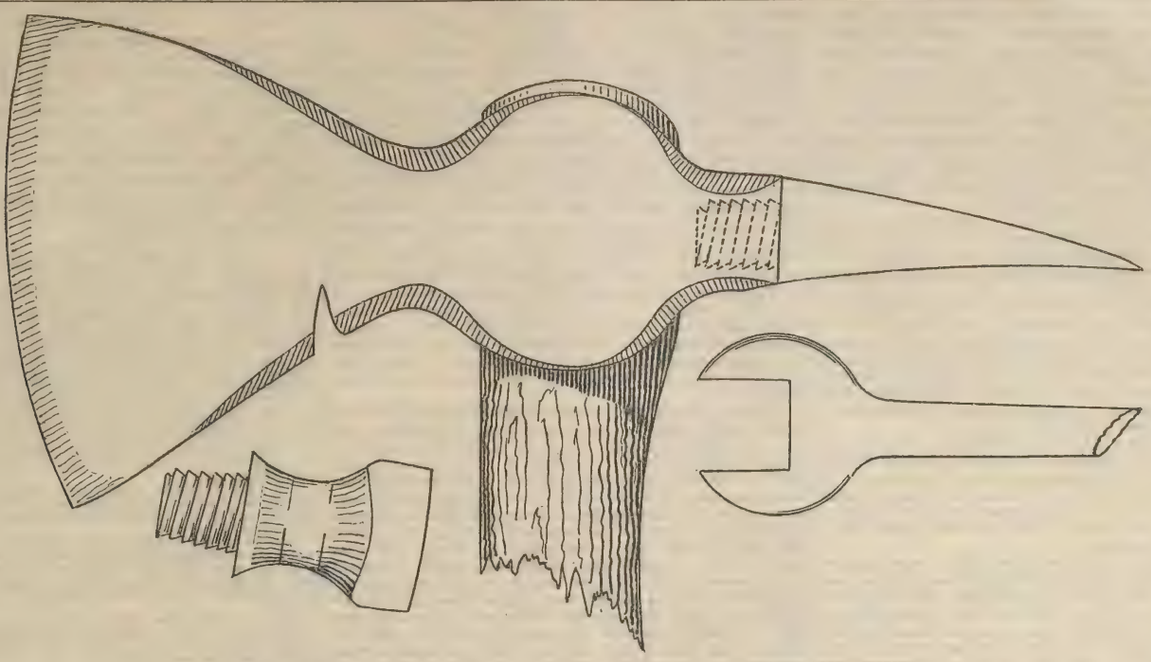
LANK.

RESORTS IN THE NORTHWEST.

GRAND HAVEN, Mich., Nov. 10.—*Editor Forest and Stream:* In looking over an old number of FOREST AND STREAM to-day I noticed an inquiry by "Princeton Students" as to the hunting and fishing possibilities of the Northwest, with Duluth as a starting point. Now, while too late for this season, my communication may help some one to a pleasant trip next year, and I herewith send you my views of the matter.

Once in Duluth, nothing is easier than to get good trout fishing, every stream on both the Minnesota and Wisconsin shores swarms with the speckled beauties. It is simply shut your eyes and throw your fly, you are sure of a strike. My way would be to charter a small steam tug, or if you prefer it, a sailboat, and go down the south or Wisconsin side; there are dozens of streams and all well stocked. But don't stay too long. I want you to go for larger game.

Three years ago I availed myself of the privilege Uncle Sam extends to all his sons, and homesteaded 160 acres in northern Minnesota. I got my supplies at Tower and traveled to my claim by canoe. For six months I don't think I slept a dozen nights under a roof and I enjoyed every minute. We portaged, and ran rapids, and poled up them again, hunted and fished, enjoying the best of health, till it is a wonder we ever forsook the wild free life.



From Duluth go to Tower about Sept. 1. It is only half a day's run over the Duluth & Iron Range R.R. You can get a good guide for from $1.50 to $2.00 per day, your birch canoe will cost from $5 to $10. You will do well to be prepared for both large and small game, for you must know you are going to the home of the moose and caribou. Go twenty-five miles or one day's paddle through Vermillion Lake to Wa-ke-mow-up's portage. The trail leads you to the "Little Fork" of the Rainy River. If you are there anywhere near Sept. 1, I will guarantee that you can't paddle down the stream one day without seeing a moose standing in the edge of the water. You may see a deer, a bear or a caribou, but a moose you are almost sure of. At least such was my experience and I ought to know. On the portage and in fact everywhere along the river you can get good shooting. There are any quantity of ruffed grouse, spruce partridges, rabbits and pinnated grouse. The country is timbered with silver birch, poplar, spruce and balsam, and is full of openings, making it good ground for working dogs. If you don't know how, your guide will show you how to make a balsam bed that you will want to take back to civilization.

Here it is in a nutshell. Within a day's canoe travel of the railroad you get into the best moose country in the world. The water is full of pickerel and pike and the woods swarm with small game. Any novice who tries may shoot a moose there.

R. G. M.

WORCESTER, Mass., Nov. 17, 1888.—At a meeting last evening of members of the Worcester Sportsmen's Club it was voted to omit the annual hunt this year. It was also voted to have the annual game supper on Monday evening, Nov. 26, and that A. B. F. Kinney, E. S. Knowles, Major S. G. White, Gilbert J. Rugy and E. F. Snow be the committee of arrangements. Messrs. Chas. Crompton, Dr. W. P. Bowen, G. N. Wheeler, Eben Jewett, A. G. Larkin, A. E. Davis, J. Kennedy and C. R. Holman were admitted as members.

DAKOTA GEESE.—Eureka, Dak., Nov. 9.—On Nov. 4 J. E. Regan, Geo. C. Knickerbocker and myself took a morning with the geese. We left Eureka at 8:30 A. M. and drove five miles, returning at 4 P. M. with thirty-five geese and brant, among which were one snow goose and nine Canadas.—W. BACH.

HUNTING HATCHET WITH INTERCHANGEABLE HEAD AND PIKE.

HUNTING HATCHET.

BEAVER, Pa., Oct. 29.—*Editor Forest and Stream:* Early in the summer I wrote you asking for design of hatchet. You kindly sent me the address of the maker of the double blade or Nessmuk hatchet. Thinking the matter over, I wrote you in reply (and you kindly (?) published it) that "I did not like the hatchet, as there was nothing to drive nails with, or to dig with for that matter," and that I would get up one of my own and send you outline sketch of it as soon as completed. Please find it inclosed. The pike is square, hole the same, just back of the head, so as to fit the wrench. The head may be used in and around camp putting up bunks, etc. And when you go on a hunt, by the proper application of the wrench, you can in a very short time have a hatchet that will be of great use, should you wish to climb a tree, dig a hole, go prospecting or administer the *coup de grâce* to a badly wounded buck or bear. The hatchet is not patented, and should any brother hunter fancy my idea I will take pleasure in having one made for him. Mine is made of finest steel, and in such a way that the head will not jam or stick. I hope "Nassmuk" will pardon the criticism. G. A. SCROGGS, M.D.

THE WOODCOCK SUPPLY.

Editor Forest and Stream:

As I have shot woodcock here for the last fifteen seasons and have been a close observer of the movements of the birds, I will give Mr. Lathrop the benefit of my observations about here. I do not find as many woodcock as I used to ten or fifteen years ago, but I have seen very little change in numbers in the past five or six years. The year 1885 was a good season, 1886 not as good, 1887 better than any season of late, and 1888 fully up to the average for the past six years. I consider the best shooting here the last week in September and the first week in October, but in some seasons birds are quite plenty all through October. The birds began to move southward very early this season on account of the cold weather and cold storms, and I am inclined to think that the best flight passed Springfield, Mass., before they were expected. The birds were most numerous here the past season from Sept. 22 to Oct. 5, and my largest bag was twelve woodcock on Sept. 29.

My observations go to show that woodcock begin to move southward in cold, wet seasons like the one just past, early, and are gone before they are expected in many localities. I have shot about twice a week the past season and have killed seventy woodcock alone, not including grouse and birds killed by companion.

N. A. PLUMMER.

BRATTLEBORO, Vermont, Nov. 16.

Editor Forest and Stream:

I see a good number of the correspondents of the FOREST AND STREAM are wondering where the woodcock have gone this year. Some say the blizzard killed them, while others think that too much shooting is the trouble; and, as is the case in a controversy like this, sportsmen don't agree. So I have still another theory, perhaps I might call it a theorem, for certainly it is to be proven, whether correct or not.

Going back to the early shooting this season, I am very confident that there were more woodcock on my preserve, which is entirely a woodcock cover, than there have been for two previous seasons. I have also made extensive investigations in western Connecticut and find this: that for the past six or eight years there have been no woodcock raised in this locality to speak of, and that all the woodcock sportsmen could get here were flight birds; but this year seems to have been an exception—the covers were well stocked with woodcock; and trout fishers and others, who had occasion to go through them, found them in unusual numbers in the summer time, and up almost to Oct. 1. In fact, a Mr. Kinney, on Schtacoke Mountain in the southwestern part of Litchfield county, investigated the matter in September and reported to my friend Northrup that he could easily move 30 to 50 woodcock in a day—an almost unheard of thing for that locality. I found the same state of things all over the county, but on Oct. 1, when we tried for them, they had gone, and instead of the 30 or 50 native woodcock promised by Mr. Kinney, we actually moved 7 very wild flight birds. I found the birds in my Massachusetts cover very wild, and moving as early as the middle of September, or immediately after the second heavy frost; and the freeze of the morning of Sept. 29 set them all humming for warmer climes, and, aside from a few flights of birds which were old-fashioned indeed in numbers, there have been but few seen except stragglers.

About the middle of October (the 16th I believe) Mr. Bevan, of Winsted, found a very large flight and moved, as reported, 25 or 30 birds in one small piece. On Oct. 30 he encountered another large flight, killing 21 birds. I believe a few scattering birds could be had for the hunting any day up to the present time, but not in such numbers as are usually met with, with the exception of the two notable flights above referred to.

Now this is my theory about the matter, that for some unknown reason the woodcock did not go as far north this season as usual, stopping in Connecticut to breed inetead of going further north. Again, the heavy frosts of September, which were very severe, started the birds earlier than usual, therefore the larger part of the birds were gone before sportsmen knew that they were moving or even had a chance to shoot at all in Connecticut. Lastly, if these sorrow-stricken ones will wait patiently till our long-billed friends return, I think they will find them as plenty as usual, and by using discretion and only killing a few each year, they will be made to last a great deal longer than we do. NOTLIKS.

COLEBROOK, Conn., November.

Editor Forest and Stream:

I have noticed one or two articles in the FOREST AND STREAM regarding the failure of the flight of woodcock, and they have been of a very discouraging nature. Possibly a note or two from my book of remembrances on hunting will be of a more cheerful nature. I have hunted woodcock for a longer or shorter, "usually longer," period each season for the past eight years. This season I enjoyed the sport but two days, Oct. 22 and 23. Mr. T. H. B. was my companion. The result of our trip was twenty-three woodcock, two quail and one gray squirrel. Our hunting ground was in Dingletown, Mass. Now, my dear brother sportsman, don't look on your map for the town of Dingletown, as this is only a local name. My past record shows no two consecutive days with a "diminution" total equal to the two days of the present season. I am inclined to think the great amount of rain this fall has saved many a woodcock's life; what has been good fall ground in past seasons has this year in many places been from one to four inches under water, and the birds seeking other cover have safely run the gauntlet.

A. B. C.

BOSTON, Mass.

Editor Forest and Stream:

I am perfectly satisfied that the failure of the woodcock crop results from the deadly telegraph wires. Who has not found dead and crippled birds under the wires, where they are destroyed while making their flight in the night? I know of a great many birds that have been found by other parties than myself. I found the first one twenty years ago, and have found several since. It is useless to try to estimate how many of these beautiful game birds are destroyed that are never found. As long as the wires keep up their silent, deadly work, we will not have any woodcock, unless we can get the woodcock to migrate by daylight or have the wires placed underground.

The English snipe shooting this fall has been a failure here, but that is easily accounted for. It has rained about every day, and the upland has been so wet the birds could not feed without resorting to the lowland. I flushed them on the stubbles, where I never saw them before.

ALFRED A. FRASER.

THE CEDARS, Oakdale, Long Island.

FOLLOW UP A MAY-BE-HIT BIRD.—Gorham, N. H., Nov. 17.—*Editor Forest and Stream:* In last week's issue Sus Q. Hannah makes mention of a number of ruffed grouse getting away with the loss of a bunch of feathers. I have once this fall and two or three times last fall had fair shots at birds without in the least, seemingly, to touch a feather, but upon following up the direction in which they flew the dog has found them dead and brought them to me. I think it is a good rule to always follow up a bird at which you have had a good shot without stopping it.—H. F. M.

MISSOURI GAME INTERESTS.

ST. LOUIS, Mo., Nov. 17.—The duck shooters were finally rewarded by a fair flight of ducks the fore part of the present week. The Manitoba wave, which the signal service predicted, came, and with it came the web-feet. While they were here good sport was had on them, and a few good bags were reported. They did not remain very long because the weather became warm, and the ducks departed with the same suddenness that they came.

Heretofore they have been in the habit of remaining among us for quite a little while in the fall of the year when they did make their appearance, as usually the food in the lakes hereabouts is most plentiful. But now they don't seem to have any use for this locality whatever. They come, but they don't stay. They evidently have no great love for this part of the country, and give it the grand go-by.

A party of gentlemen went up to the Grand Pass game preserve, which is located about eighty-three miles above here on the Illinois River, the latter part of last week, and had fair sport. They returned a few days ago with quite a good bag of ducks.

Another party took in the Ellsberry grounds, which are located sixty-two miles above here in this State, with fair success. When they landed at the Union Depot they could produce but thirty-two ducks and a few snipe. Considering that they were gone but one day, this was doing quite well.

Reelfoot Lake reports poor shooting so far this season. There is a party of nimrods from this city down there and they are having very little shooting at ducks. In a letter from one of the gentlemen to a friend here he states that they have had no shooting to speak of yet. They have now been down there about ten days and expect to remain that length of time or longer.

Quail are plentiful in the vicinity, and as there are no ducks the party writes that they are putting in most of their time on them with good results.

Fishing is also fair, and the gentlemen are whiling away part of their idle time angling.

A snow is anxiously awaited by the field sportsmen in this city to break down the prolific growth of weeds that at present very much interferes with the successful pursuit of the quail. There are quite a good many in this locality, but it is very unsatisfactory to hunt them while the weeds remain in their present thick state.

A gentleman who was out on a hunt for them during the week, says it is very tiresome to try to make one's way through the weeds. Why, he said, I walked through a field while I was out, which was not more than a quarter mile across, and when I reached the opposite side I was as completely worn out as though I had been knee deep in mud all day. He said that his dog found a few coveys of birds, but could do nothing with them to speak of on account of the weeds. It is not only hard work for a person to make his way through the weeds, but is also very hard on a dog. A dog can run through them, but has to leap up continually and make his way along in that way. Now, of course, as any one can imagine, this is too much to expect of a dog, and a sportsman who thinks anything of his dog at all will not give him much of such work. A little of it goes a long way.

He also reports having seen many half-grown birds, which he allowed to fly away without shooting at them. This fact is remarkable, and why it is so cannot be explained in any other way than that the wet weather in this section of the country last spring retarded their breeding.

Among a shipment of birds from Kansas, which was received by a firm of game dealers on Third street a few days ago, there were many small birds. This firm received on last Monday and Tuesday over 300 dozen alone from the above State. There was a heavy fall of snow out there, and it is quite evident from the number shipped here that the market shooters had a great bonanza slaughtering them.

Just so long as the East puts the premium on game that it does, just so long can there be found parties out there who will get game, no matter how they get it, to supply the markets of the East. It is quite certain that of all the quail shipped from Kansas last season, which probably would exceed a thousand dozen, not one-third of them were shot, but driven into a net, and then caught and killed, to be sent to the Eastern market, where they sell for $3 a dozen.

While visiting one of the large gun stores in this city a day or two ago, your correspondent overheard a conversation between a gentleman and one of the clerks in the place that fairly made his blood boil with rage. The gentleman was a wholesale business man in the city, and one of his customers had written to his house to get quotations on quail nets. The clerk politely informed him that they did not keep them, and therefore could not give him prices on them. That is the way the quail are secured to supply the rich people of the East who never give the subject of game protection a thought, neither do they care how soon it is exterminated.

The protection of game here in the West is becoming quite a serious subject, and the sooner the sportsmen take it up the better. If they don't make some effort to have them better protected than they are now it won't be long before it will be necessary to offer a reward to obtain a quail out in this part of the country. What is wanted is a staff of game wardens, the same as are to be found in some of the Eastern States. They should be paid by the State and have nothing to look after but the protection of game and fish. They should be metropolitan officers with authority to make arrests in any part of the State, and they should be severely charged to keep a vigilant lookout for all infractions of the game laws.

The Missouri Game and Fish Protective Association is going to introduce a bill for the establisment of such a constabularly during this coming session this winter. A delegation of prominent field sportsmen are going up to Jefferson City when the Legislature meets for the purpose of placing the much-needed measure before that body in a proper manner.

From information obtained from the largest game dealers in this State, men who are supplying the markets in the East, and from the officers of the various sportsmen's associations in many counties, it is asserted that Missouri has a greater supply of game and fish than any State in the Mississippi Valley. That a reasonable protection will greatly increase the resources of free food for our people there is no denying.

The bill in question is drafted after a similar one adopted by the State of New York and provides for the appointment by the Governor of a Commissioner whose duties shall be the enforcement of the fish and game laws. He is to have as assistants two game wardens in each county, who are to report to him all violations of the laws against fish and game.

The Legislature is requested to appropriate $10,000 to defray the expenses of the Commissioner and necessary wardens.

If this bill be passed it will be one of the best measures yet adopted in this State for the protection of our fish and game. With the present means of taking care of fish and game nothing can ever be accomplished, because there is no one who will interest himself in it enough to give any time to it.

Legislatures can go on passing laws for the protection of game until doomsday, and no good will ever result from them if there are no officers to see that they are properly enforced. What is wanted in this State is game wardens, and all sportsmen should interest themselves in the bill to be presented to the Legislature this coming session, and make every effort to have it passed and become a law. Capt. H. C. West, who is one of the committee which drafted the bill, is working hard to bring it to the notice of the people of this State, and should it be fortunate enough to pass, much credit will be due him for his untiring efforts in behalf of it. UNSER FRITZ.

WESTERN MASSACHUSETTS FOX CLUB.

AND this is Chester, well known politically, where district conventions are held and politicians of both parties set up or knocked down, as results may prove, and famous for its emery mines, granite paving blocks, white quartz rock from (the ground product of) which sandpaper is made. And still Chester is not happy. Her ambition craves further renown—and gets it. How? you ask. By the pluck and enterprise of a few men who met and organized the Western Massachusetts Fox Club, appointed Nov. 15 for their inaugural (annual) meet, sent out invitations to their friends liberally, and prepared themselves to receive, provide for and entertain all who might come. Quite an undertaking, one would say, knowing size of the village; but with two good hotels, and citizens generally putting their "spare" rooms at disposal of the club, all had excellent sleeping accommodations and plenty to eat.

Chester lies like a lump of sugar in a coffee-cup—surrounded on all sides by high hills, across which it seems as though Brooklyn Bridge would almost span, leaving the little hamlet 500 or 600ft. below it. Stepping from the train to the platform of the station on the evening of the 13th (Tuesday) my attention was at once attracted to what seemed a bank of clouds very black about 20 degrees above the horizon and reaching entirely around. A strange effect it gave with the bright moon and starry sky above; but I was quickly set right. "Them's hills, not clouds."

A delegate from the reception committee met and conducted us at once to the rink, a spacious old wooden building, like many others of its kind all over the country, standing monuments of the roller skating fever of a few years ago—a capital place for the purpose, and here the club made headquarters. We were received cordially by the officers and members and at once assigned sleeping and eating quarters. Everything seemed to be done in a systematic manner, no friction, all working harmoniously. "Any dogs come on your train?" "Yes, four." "Good, that makes sixteen here and more coming." It had been decided to divide the party into squads, each squad to go to a different locality under command of some one familiar with the sport and country, Mr. Perkins of Springfield taking our party to his old and favorite grounds toward Becket, Mr. Otis another to a large hill called "Old Gobble," and so on.

Mr. Dwight Smith, a conductor on the B. & A. R. R., born and raised here, knowing the ground well, an enthusiastic and successful follower of reynard, and under whom your correspondent enlisted, chose for his ground Mount Abby, only a step from the hotel, beginning its ascent at the platform of railroad depot. Pointing his finger at a point on the hill he says: "There's a burrow right there that five foxes were raised in and they are all around there yet."

Good-nights had been pretty generally spoken, but not feeling quite ready for bed I joined the members of the committee, who were to meet the midnight train and receive any late ones who might come. Standing on the platform at the station I heard a hound's voice on the hillside only a short distance away. Soon a gun was heard and some of our party directly put in an appearance with a plump coon. The train comes booming in and four men with two dogs are added to the quota and quickly disposed of, and all seek their beds, to be awakened at 5 o'clock in the morning by the hunter's horn ringing out its mellow music on the stillness. The sky is clear, air cold and crisp, heavy white frost covering everything; the weather clerk up to this time has been kind to the boys, and a perfect day for the sport is assured. Breakfast is soon eaten, lunches stowed away in pockets, all is ready and away we go. One party only by team, as they wish to go four or five miles before putting the dogs out. The other squads shouldered guns and followed their leader each to his chosen locality. For our own party, within twenty minutes after leaving the hotel we had a fox running and could hear the hounds of the party on "Gobble," just across the river from us, driving furiously.

Who can tell the rest of this story? Who would if they could? not I, your humble correspondent. Should we tell how one killed his fox, we ought to tell how his next neighbor missed one; how perhaps a novice, seeing reynard for the first time, felt his breath getting shorter, and heart thumping louder as he watched him coming on, growing in size at every jump until he looked as large as a yearling calf, and a halo around him big as a circus ring, and a good deal more going on inside, and how finally with muzzle of gun describing a circle, he shut both eyes and pulled trigger; and how another when the fox came suddenly on him in the brush shot both barrels into the air, and then saw the old fellow within easy gun shot; or the other fellow who stepped out from his ambush just in time to turn the fox, or left his stand to visit or borrow a chew of to acco from a neighbor, while reynard took this time to cross his stand. Then there is the veteran, the old stager, who has hunted and killed too many of them to lose his head, and can look over his gun at a fox as calmly as he could sight at a knot in a pine board. When these old fellows "set the iron on," and pull trigger their hand goes instinctively down into their breeches pocket for the jack-knife before smoke has cleared away, and then start to take the pelt off.

It is enough to know that there were seven foxes honestly killed this day and seven handsome pelts to show for it, among them (and the first fox killed) was a beautiful gray, I think the largest and handsomest skin I ever saw taken about here. Two of the red ones killed I called good-sized, but this one was very much larger at all points, fur coarser than the rest, color a solid gray with tinge of red on the brush, no mark of the cross fox whatever. He was killed ahead of President Roraback's young hound—and a promising one he is (only fourteen months old).

I said I wouldn't tell who killed a fox, but excuse me if I reconsider in this instance. Uncle Sam Otis, a veteran of seventy-six years (and I would pick him out as one of the "old stagers" previously mentioned), was the happy one to get first blood, and that the beautiful gray one. And very happy it made the old man, too. Addressing him familiarly as I had heard others do—"Well, Uncle Sam, you killed the gray one." "Yes, sir, I did, and I feel ten years younger than I did this morning. This morning I was all bent over, look at me now." And straightening himself up, with shoulders thrown back, and calling my attention to a button-hole bouquet put on by the ladies, he told me just how he did it. "First time he came around, gun missed fire, caps wa'nt well on; but the fox heard the gun snap, so thought I would change my place, as he wouldn't probably run there again; so moved further down into the swamp, and next time he came around I gave it to him." It would do you good to have seen the old man's eyes shine as he told his story, and if the club had accomplished nothing more, they have made him very happy; if his life is not prolonged from this day's sport, he has certainly had a cup of joy poured into it that will not cease to bubble while life lasts.

At 6:30 P. M. all started for the rink, where a bountiful supper was spread. About 150 members and guests sat down; all were hungry; the supper was good; plenty of it, followed by cigars, speech making, music, whist, etc.

Thursday the weather clerk gave us tears instead of smiles. The morning opened drizzly and nasty, and soon settled into a drenching rain, though a few ventured out and one fox was killed. All soon got under cover and kept the house for the rest of the day. So closed the inaugural meet of the W. M. F. C., said to be the largest of the kind in the United States. The club has a right to congratulate itself. The meet has proved in every sense a success, and we hope and believe the club has come to stay. It was voted to make it a permanent organization and the following officers were elected:

Geo. W. Roraback, President; F. S. Gross, Vice-President; Dr. O. J. Shepardson, Secretary; C. D. Smith, Treasurer. Executive Committee—S. C. Burten of Pittsfield, F. N. Pease of Lee, E. T. Slocum of Pittsfield, F. S. Hazar of Westfield, R. B. Crane of Westfield, J. H. Casey of Lee, R. M. Fairfield of Holyoke, E. A. Perkins, Wm. M. Williams and Gurdon Bill of Springfield.

The following were registered on the club's books: Springfield—Gurdon Bill, Charles Bill, Nathan D. Bill, D. J. Marsh, H. L. Niles, E. A. Perkins, J. Dwight Smith, Henry S. Dickinson, Charles L. Chapin, W. P. Leshure, F. H. Williams, Wm. W. Williams, E. H. Williams, Geo. B. Clark, W. H. Clark, E. C. Thomas, A. H. Hardy, Howard P. Merrill. Westfield—B. R. Holcomb, C. O. Kinsley, M. Quance, Chauncey Allen, B. N. Crane, R. D. Gillett, F. S. Hagar, Frank Pomeroy, Frank Taylor. Lee—A. C. Brace, Fred Birnie, J. H. Casey, John Daly, Theman Foote, H. N. Horton, Chas. H. Morgan, Thos. Norton, F. N. Pease, J. B. Shultis, John Stallman, J. A. Tamer. Pittsfield—C. E. Hibbard, John H. Manning, Henry Manning, Dr. S. C. Burton. Great Barrington—J. E. Benton. Hinsdale—F. W. Strong. Housatonic—Charles Pease. West Stockbridge—A. E. Harris. Blandford—A. F. Knox, Fred Willis. Williamsburg—John Kelso. Chesterfield—James Kelso. Leeds—Albert L. Church. Middlefield—John Tracy. Dalton—J. H. Adams. Suffield, Waldo S. Knox, Wallace Knox. Worcester—Charles L. Allen. New York city—Chauncey Bowen St. Paul, Minn.—F. P. Wright. W. M. W.

SPRINGFIELD, Mass., Nov. 19.

GUNNING AT COHASSET.—Cohasset, Mass., Nov. 17.—The cooting season this year has been a decided failure. The best record made has been of a trifle over 200 birds, while men who ordinarily kill from 200 to 300 birds have only got from 50 to 100. A couple of red-throated loons have been killed, which are quite rare here, and two brant have been shot, both being single ones. The prevailing idea seems to be that the cold spring prevented the eggs from hatching, as there have been no young birds. The best record for one day is 28, on a rough easterly. Old squaws are quite plenty and there is a small flight almost every day, though most gunners have left in disgust.—E. C. H.

TO CONNECTICUT SPORTSMEN.

HARTFORD, Conn., Nov. 16, 1888.—The object of this letter is to call your earnest and careful attention to our association. This association, as its name implies, was formed to protect game and fish from illegal capture, sale or shipment and for no other purpose. The Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish was organized for the strict and equitable enforcement of our game and fish laws—not for any learned monographs on our game and fishes, the nomenclature of which is left to those versed in our fauna.

Every one who goes afield for legitimate recreation with rod and gun should act spiritedly and promptly with us. We want a large membership of farmers, shooters and anglers—our interests are mutual. It certainly behooves all who wish to have our game and fish laws enforced to join our association at once. Sympathy is a good thing (at times), but it does not enforce the law—neither does breezy talk.

We want financial support, and very much depends on your hearty co-operation. The game laws will not enforce themselves and every one who wishes to protect our game and fish ought to act promptly with us.

It costs money to hire skilled detectives—sympathy does not work to any advantage here—it's dollars that keeps the ball rolling. We want enthusiastic workers, will you become one? We want the name and address of every sportsman in the State—send us the names of your friends that may be interested in game protection.

The Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish should be welcomed by every farmer, shooter and angler in the State. A spirited campaign must be inaugurated against the violators of our game and fish laws. We desire help, can we have it?

The expenses are mainly for employing detectives "who get there," the officers and directors of the association work gratuitously.

The Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish means to stop all illegal capture of game and fish in Connecticut—a large undertaking, but we must and can do it. If every farmer, shooter and angler will put his shoulders to the wheel we can do the work.

The game and fish laws are practically of no earthly use unless the law-abiding citizens combine and enforce them. The benefits of our association are tenfold over what individuals can attain. The membership fee is $1 (farmers are admitted free). There is work for all who love legitimate sport with rod and gun, will you help us?

Trusting for your prompt and hearty approval and early remittance to Mr. Allen Willey, secretary (editor of the *Globe*), Hartford, Conn., or to any officer or director, which will be promptly acknowledged, we are respectfully yours,

Connecticut Association of Farmers and Sportsmen for the Protection of Game and Fish, by A. C. COLLINS, Pres.

The officers are: Abbott C. Collins, President, Hartford, Conn.; Charles J. Parker, Vice-President, New Britain, Conn.; Allen Willey, Secretary, Hartford, Conn.; Dr. N. W. Holcombe, Treasurer, Simsbury, Conn. Directors: Hon. Geo. P. McLean, Hartford, Conn.; Hon. Joseph W. Alsop, Middletown, Conn.; Hon. J. C. Chamberlin, Bridgeport, Conn.; Hon. H. O. Dimock, Rockville, Conn.; Mr. Geo. A. Reed, Chaplin, Conn.; Mr. Horace O. Stanard, Norfolk, Conn.; Mr. Z. R. Robbins, Norwich, Conn.; Mr. F. W. Whitlock, Waterbury, Conn.

Sea and River Fishing.

HIS HIGHNESS SALVELINUS NAMAYCUSH.

(*Concluded from Page 327.*)

ONE writer says of fishing: "The quality of sport is in the ratio of the delicacy of the tackle to the strength and play of the fish." My first fishing for lake trout was done with a hook made by a blacksmith from a rat-tail file, as mentioned by Brown, and the "rural cod line and heavy sinker," as mentioned by other writers. A block of wood was anchored in the deeper part of a lake by a rope, or more generally the bark of a tree cut in strips and tied together to mark the place of your future fishing. This was the buoy, and for several days the "buoy" was baited by throwing into the water about it bits of perch, sunfish and rock bass the size of an English walnut. The baiting was omitted for one day, and the next the place was ripe to fish. The blacksmith-forged hook, baited with a piece of fish, was let down to the bottom, a hundred or more feet, and kept in motion by a movement of the hand until a bite was felt, when a yank was given and, if hooked, the fish was drawn in, in the manner that the Irishman played the violin, by main strength. I use the past tense in writing of this style of fishing, though it is still in vogue in some parts of some waters. There was great fun in it for me at the time, and I presume I dignified it by the name of sport; but as I think of it now, and compare it to the mode of fishing for lake trout adopted in late years, I have my doubts about its having been scientific angling, and it is not to be wondered at perhaps if the writers of that period damned it with faint praise or damned it out and out. It was, however, a style of fishing upon which the fish kettle could rely for returns throughout the season with considerable certainty, the tackle was not expensive and the labor was slight; consequently it was resorted to by those people who lived near the trout lakes, and visitors from a distance depended upon the baited buoys of a resident for lake trout or satisfied themselves with other kinds of fish. It will be noticed that while the "buoys" were baited with fish, that must of necessity have rested without motion upon the bottom, to insure success in catching trout the baited hook had to be kept in constant motion. Few if any species of game fish will take a stationary dead bait, and I wondered at this apparent contradiction at the time and since; but when afterward, while watching fish in an aquarium, I saw them blow dead food from the bottom and seize it while in motion, I considered the problem solved.

The lake trout inhabit the deepest parts of the lesser lakes, and in all waters are a deep-water fish, and, like others of the salmon family native to the Atlantic slope, they spawn in the fall, beginning in the month of October. The spawning beds are made on shoals in midlake, if such exist, rather than on the shores of the mainland. The lake trout are the first of all the salmon family to be affected by a high temperature, and they come up out of the cool depths of the lake into the warmer surface water only in the fall and in the spring as soon as the ice disappears. This is the rule; the exception is when driven by a scarcity of food in deep water they come on to the shal

lows in search of it. The favorite food of the lake trout is the whitefish, but in the absence of the whitefish, perch, sunfish and rock bass come not amiss to satisfy their hunger.

In the latter part of April or first of May, before the ice has entirely disappeared, there are sometimes open places near the shores, in the channels or between islands, and in them the lake trout may be seen rolling at the surface, entirely out of reach of the angler. When the lake is cleared of ice is the time for the lake trout fisher's harvest, for then the fish may be all over the surface of the lake, but generally at the surface over deep water. They may remain "up" a month or six weeks, and by up I do not mean directly at the surface of the water, but somewhere between the bottom and the surface. Ten days or two weeks is, I think, the limit of time when they are actually at the surface to see and take a bait trolled without a sinker.

What brings the lake trout to the top of the water in the spring? I think it is chiefly because their favorite food is there at that time, and in addition to that perhaps they like a holiday to roll in the sunshine after their long imprisonment by Jack Frost, fill their maws with flies that they do not get at the bottom, and celebrate generally but circumspectly. The matter-of-fact scientist will, of course, say that the lake trout is not given to painting the surface red even in a mild or hydropathic manner, so we must fall back upon the food question. When the trout are up the whitefish are also up, and very interesting the trout makes it for the whitefish. If the lake is smooth, schools of whitefish may be seen disturbing the surface in every direction, and occasionally a mighty swirl in one of the schools indicates that Duke *Namaycush* hath dined. The whitefish are from two inches to fifteen inches in length, and sometimes a dozen of the larger ones may be seen in the air at once, and they may continue jumping for the space of ten to twenty yards, which is an indication that *Namaycush* is hungry. The smaller whitefish from one to two inches do not jump from the water when pursued by the trout, and it would almost seem as if they followed the example of "Brer Tarrepin" who "sot and tuk it," for when a trout is knocked on the head he may throw out a dozen of these little fish. The members of a school of whitefish appear all of the same size. If one is eight inches all are eight inches; if one is fifteen inches all are fifteen inches. I have never seen whitefish larger than what I called fifteen inches (of course these are all eye measurements) jump. Whitefish are much the best trout bait an angler can use, but they are only to be obtained from the belly of a trout that has just swallowed them, or picked up dead or injured on the surface. I will modify that. This year a man went out trolling, taking his gun to kill a gull for mounting; he caught no trout and finally blazed away at a gull and brought it down. The gull threw up two comparatively fresh whitefish, and with one of them this man hooked two trout of about twelve pounds each.

At times there appears on the water and in the air in May a small black fly, and they come in swarms. I was fishing one day when these flies covered everything; the water, the boat, the oarsman, myself and everything in the boat, and besides the air was filled. I caught several trout, and in each case in removing the hook I noticed that the mouths of the fish were fairly black with these small flies. The lake was perfectly smooth, and as usual I was watching in all directions for a trout to roll, thus breaking the surface. I had not and did not see a trout break the surface that afternoon and concluded as they were feeding on the flies that they must swim just beneath the surface and suck the flies into their mouths without disturbing the water in a manner to be observed by the eye of the watching angler.

The brown trout of Europe (*S. fario*) and our own *fontinalis* have been credited on occasions with doing this silent work on floating insects, but as every trout fisherman knows it is not their usual way of taking a fly, real or counterfeit. As to the modern tackle for lake trout trolling I can do no better perhaps than to relate the particulars of my last fishing in May of this year. The best obtainable bait for lake trout is the gold shiner or bream (*Notemigonus chrysoleucus*—a name about seven times as long as the fish), and by obtainable I do not mean that they are as plentiful as blackberries. Each year it requires a deal of hustling to get bait, but this year a friend told me he had a thousand good shiners and they were at my disposal. The ice went out of Lake George, N. Y., this year April 29, but the following days were so cold, stormy and windy that it would have been unpleasant fishing, provided the trout were in the mood to do their part. It was not until May 11 that I drove out to get the bait preparatory to going to Lake George the next day. I found the bait all dead because of a storm two days before, which washed out a little dam on this brook and left the bait box high and dry. It rained while I was coming home and, altogether the immediate future was not promising for trout.

That evening Judge Ranger, his son Mr. William F. Ranger, and the writer held a meeting that was in harmony with nature, as it was stormy, and decided to order the horses for the next day at noon, and "if the breechin' held" we would sleep the next night on Ranger Island, bait or no bait. The Judge was in poor health, and to some men in his condition a drive of twenty miles in a carriage, followed by a row of three in a boat, would appear formidable, but what he lacked in health he more than made up in courage of the "pure grit" order. Before we reached Bolton, where we took the boat, we encountered a rainstorm, but during the row to the island the lake was smooth, the rain had ceased, and whitefish were seen breaking in every direction, with an occasional "boil" made by a rolling trout. The outlook for good fishing would have been fair had we been provided with bait. Not a boatman in Bolton had bait, but one had gone that day for shiners and we left word for him to bring us some if he proved successful. The next day was Sunday, and rainy, and while putting rods together on the ample piazza of the cottage I heard the noise of oars, and looking in the direction of Bolton saw a man in oilskin hat and coat rowing toward the island. I said to Billy Ranger, "That is 'Wint' Finkle's stroke, but I don't recognize the oilskins."

It was "Wint" Finkle, and he had thirty gold shiners for us, and our agony was over. I told "Wint" that he looked more like a Gloucester than a Lake George fisherman, and he admitted that it was a fairly good guess, as the oilskins had just been sent to him from New Bedford by Mr. Julian, for whom Lake George trout hath a charm. It rained most of the day, Sunday; the clouds light gray and somewhat broken in the morning, seemed to betoken a change of some sort, and the change came with a vengeance at noon, when the wind came cold out of the north, in fitful puffs, piling the clouds up in somber masses and causing the waves to break on the shore in a manner to send a shiver to one's marrow. With one accord we sought the cottage stove. Two hours before sunset we noticed an opening of deep blue in the dark clouds above the hills in the west; from above downward in this space radiated fan-like sprays of soft gray mist, and we waited and watched for the sun to descend into the space that we knew was prepared for its presence. At last it appeared full of fire and glorious, and when it had slowly disappeared behind the hills there came the afterglow. Shining purple, gold-edged, umbrella-shaped clouds, singly and in masses, took the place of the orb of day; the deep blue of the heavens turned to pink and gleamed with promise for the morrow, while the dark clouds north and south dissolved into innumerable puffballs. In the twinkling of an eye fantastic cloud figures and shapes in lavender and pink and gold and royal purple, peopled and filled the space from hills to zenith, and we watched, lost in silent admiration, until the crescent moon of silver floated from behind the mountains, and we knew that the jig was up; the sunset was over.

Monday opened auspiciously, the sun was bright and warm, the sky cloudless and the water smooth. I was up early and made a breakfast of coffee and eggs, and when Fred Dagles, my boatman, appeared I was ready. Fred is the son of Anthony, and Anthony is the good-natured giant who was introduced to the pages of FOREST AND STREAM not long ago in a sketch entitled, "A Pond That Nobody Knows." My fishing outfit consisted of two rods, reels, lines and a double gaff hook. One rod was a split-bamboo 10ft. long and 10oz. in weight, the other was a foot longer and an ounce heavier. The reels were both multipliers and the lines were, one E, the other F. Each line was furnished with a leader of single gut 9ft. long, and between the line and leader were several swivels. To one leader was fastened a metal spinner and to the other a minnow gang on flight of hooks. The gang is composed of three treble hooks and a lip hook, generally tied on single gut. The gaff hooks, one large and one small, are fastened back to back on the same staff. The shiner is fastened to the hooks of the gang so it will whirl in the water, and it is sewed on with linen thread so it will not be lost when a trout strikes it. The reason for the last named precaution is that I have known gold shiners to cost fifty cents each. The rods project from each side of the boat and at right angles until a fish strikes, when the engaged rod is taken in hand.

Monday morning Fred thought we would get about five trout; when we came in to lunch at 1 o'clock I had not had a strike, nor had the Judge, who, with his son Billy, started out to fish two hours after I did. While we were at lunch it began to rain, and after waiting a reasonable time for it to cease, I put on rubber clothing and went on the water. There was an hour's lull in the storm, at which time I had a strike. As I have quoted from Mr. Milner, the strike of the lake trout is a tug at the line, but it is a vigorous, determined tug, and requires close attention on the part of the angler with light tackle in order to save the fish. The trout that struck me proved to weigh 8¾lbs., and I hooked it on a 10oz. rod, and for half an hour I had as much to contend with as if it had been a black bass of the same size, except that the trout swims down and the bass jumps from the water. The most interesting time in catching a lake trout of fair size is when it is brought near the boat; then it is a give-and-take battle; long runs and short ones, until the fish is gaffed or it escapes. Scarcely was the trout in the boat when it again began to rain and continued until daylight the next morning. Two hours of cold rain without a strike and I went to the cottage. Tuesday was clear, but cold, and the water rough. In the morning I caught a trout of 7¼lbs., and in the afternoon one of 4lbs. In the evening I went out on the piazza to see what was promised for the next day; the glow-worms were having a picnic in the grass, Jupiter rose serenely above the mountains at the south, there was not a cloud to be seen, and everything was seemingly lovely.

Wednesday morning the wind was howling, the thermometer discouraged, the Judge sick and there was no pitch hot. Anthony came to row me in place of his son, but not a boat left the island for fishing that day. At 4 o'clock in the afternoon the wind went down, and if the Judge had not been so miserable I would have gone out, and had I done so I would have hit it, for as we learned later the trout were biting all over the lake from 4 o'clock till dark. Two 15lb. trout were taken that afternoon, and that is a big trout for Lake George. It was decided to return home Thursday; the Judge stormed, said he was well, that we need not worry on his account, that he wanted trout more than he wanted a doctor, but there were two against him and he came, but he did not yield.

The number of trout taken last May to my own rods is not a fair test of the capabilities of Lake George in the way of trout fishing. Fishing parts of six days I have caught thirty-two trout from 12lbs. down to 2lbs. each, and as many as eleven in one day. One year Billy Ranger caught four weighing 35lbs. in one afternoon. Last year the Judge caught two within an hour weighing 13½ and 10½lbs. each. On another occasion I caught three in succession, weighing as follows, and in this order, 12, 11 and 10½lbs. each. I think these specimen catches indicate fairly good fishing for a lake that does not grow large fish, 16lbs. being about the maximum weight of individual trout.

There is not such a vast difference between the play on the hook of the lake trout and the speckled trout. The latter at the time of taking a fly will jump above the surface of the water, which the former will not do in taking a bait or subsequently, and the speckled trout swims near the surface when hooked, while the lake trout bores downward, but there is not sufficient difference in their tactics when hooked to cause the *fontinalis* to stand with the elect and the *namaycush* to herd with the goats. In this latitude the lake trout fishing opens several weeks in advance of brook trout fishing, and the impatient angler is not slow to avail himself of the difference in time. Legally the season for the two species of trout opens on the same day, but while the trout of the lake are active and vigorous at that time, the trout of the snow water brooks have not overcome the lethargy of winter, and there is little more sport in catching them than there is in snaring suckers.

One thing about trout catching I have omitted, and that is the *coup de grace*, gaffing and thumping the fish on the head. The fish should be killed while on the gaff hook by a blow on the head with a short club. I have mentioned that my gaff hook was double, a large hook and a small one, for small trout must be gaffed if a gang is used, because the ten hooks of a gang in a landing net, agitated by a struggling fish, plays the dickens with the net. Unless I have great confidence in my boatman I gaff my own trout, for they are often but lightly hooked, and I put the gaff under the fish and draw upward and boatward. This is easier to do for a man who has but one hand disengaged than it is to strike downward in the water, because in the first named method the gaff handle extends under the forearm and exerts a great leverage in lifting. Another reason is that a trout at the sight of the gaff is apt to settle down in the water and if the gaff is under him he cannot avoid it, whereas if the gaff is over him he settles away from it. In my humble estimation, possibly from an untutored palate, the lake trout is much superior to the brook trout, cooked and on the table. I care not whether the brook trout are 6in. long or 3lbs. in weight, if both species are fresh from the water and in the best condition the lake trout is my meat. Let no one judge the edible qualities of the lake trout from the specimens found in the market stalls that have been out of the water from one week to three months, such an one is but a sorry caricature upon the freshly-caught, well-conditioned fish.

Occasionally there is caught in Lake George a trout shorter and deeper than his fellows of equal weight, with real salmon-colored flesh and with creamy curds between the flesh flakes. Such a fish has devoted his whole mind to his diet, and good living has changed his appearance; simply this and nothing more.

One year I cut my fishing short to return home to an entertainment under the old roof tree. I had scarcely got my traps into the house when my grandmother told me that she must have a salmon for the lunch the next day. I showed that it was impossible to telegraph to New York and get a salmon at the hour is was required, and disappointment reigned. Among the fish that I had brought home was one of these specially fed trout of 10½lbs. I asked for the list of the expected guests, and when I had read it I announced that I had a salmon that I had until that moment overlooked, and I advised that it be boiled and served cold, covered with mayonnaise and garnished with parsley, and placed before me to serve. Considering the occasion, I was only shaky about one of the men, for I knew he had eaten salmon from the Columbian River to New Brunswick, and he might be critical even in a friend's house. The only one who ever spoke of that fish to me was that very man, and it was when we were at table together and actually eating salmon, and he compared the real with the bogus, and the bogus won by a throat-latch. A. N. CHENEY.

GLENS FALLS, N. Y.

THE BIGGEST BASS IN LAKE GILES.

THIS beautiful sheet of water is situated in the heart of Pike county and is known as being the haunt of very large black bass. The fish, however, are very hard to catch, no bait having been found that will tempt them to any great extent. They have been tried with dobsons, helgramites, frogs, crickets, etc., with but moderate success, and though once in a while a big one is hooked, the average catch will run from ¾ to 3lbs. That the large bass are there is an undeniable fact, for fish weighing 5lbs. and over have been repeatedly seen swimming around the dock, but they seem totally oblivious to all lures.

On the particular morning in question my companion, S., and myself were lying stretched out in the boat, lazily enjoying our pipes and still-fishing. We had had but ordinary luck, our catch consisting of a half-dozen bass weighing a pound apiece, but as we had energetically waded a trout stream the previous day, we felt perfectly contented to lie and watch our rods and the surrounding scenery. Our reverie was suddenly broken by S. springing to his feet and grasping his rod, which threatened to disappear in the lake. As he was fishing with an eight-ounce Chubb rod he gave the fish plenty of time before striking. Upon his striking, the rod bent double, and I laughed at him, telling him he had caught bottom. "Have I," shouted he, as his rod began to perform all sorts of curves, "I've got the biggest bass in Lake Giles." For my part, I really thought he had a large fish, as the line began to run off with great rapidity, but what surprised me was that the fish did not break water; still, as it was heading for the deeper water, I came to the conclusion that he had a big one and no mistake.

At the end of about fifteen minutes' fighting, S. began to recover line, and after several tremendous struggles, during which I thought the tackle must give way, he shouted: "I see him; he's almost four feet long. I said: "Nonsense, you never saw a bass four feet long." But S. was right, the fish was four feet, but ye shades of Izaak Walton! what a fish! After S. got him within a few feet of the boat, he yelled, "It's an eel!" And a madder, more disgusted man could not be found in the entire county. An eel it was, sure enough, about four feet and a half long, as thick as one's forearm and weighing three and a half pounds. I laughed at S. till I almost fell overboard, and by the time S. got the eel in the boat—and the eel, rod, line, landing net and S. were mixed into a regular Chinese puzzle—I could laugh no more. The fun that S. had with that eel, or rather the fun that that eel had with S., was worth a small fortune to witness; it seemed as if he never could kill it, and when after about ten minutes S. held up the defunct eel in triumph, he was a sight to behold. His beautiful white flannel shirt was dotted with slime and blood, his line was in an inextricable snarl, and his spirit was far from saintly, and in fact the air had rather a sulphurous hue. S. vows to this day that I thought it was a bass and that he knew it was an eel all the time, and he only did what he did to fool me. I keep my own counsel, however, and think there was too much stern reality connected with the killing of that eel ever to make me imagine S. was fooling. Whenever the boys begin telling bass stories and S. chimes in I always beg the boys to have him tell them how he caught the biggest bass in Lake Giles, and forthwith S. looks at me in such an imploring way that I have never had the heart to relate his experience till the present day. JACK.

NEW YORK.

SILKWORM GUT AND LEADERS.

Editor Forest and Stream:

We shall be much obliged if you will give us space in your valuable columns to reply to Mr. Cheney's letter in your issue of Oct. 25, which reached us to-day. The subject of Mr. Cheney's letter is "Gut Leaders and Silkworm Gut," and as we have more of these articles passing through our hands than any other house in the world, and have obtained the highest award for silkworm gut at the exhibition of Murcia, Spain, we think we can speak with authority on this subject.

Mr. Cheney's letter seems to us very unfair to the fishing tackle dealers in the States. We do not wish to imply that Mr. Cheney is intentionally unfair, but he is certainly misinformed. We do not wish to dispute his assertion "that if the London dealers have the first whack at the gut crop, they are intelligent enough to take the cream of it." The London dealers do not, however, "have the first whack at the gut crop," and Mr. Cheney is mistaken in asserting that London is the chief market to which most if not all the dealers in fishing tackle are obliged to go for their silkworm gut.

We supply most of the best wholesale firms in the States, we deliver silkworm gut direct from our gut manufactory in Spain, and if any firm will pay the same price that we can get in London or elsewhere for our best grades they can be sure of being as well served as the London houses are.

There is no more difficulty in being supplied with good gut leaders than there is in being supplied with good gut, and many of the best firms are trying to induce their customers to adopt higher class grades than those usually in demand. The following letter which we have lately received from Messrs. Reuben Wood's Sons, to whom we had sent some strong salmon leaders, known as 115 D.M. quality, will suffice to illustrate the efforts that are being made on the part of the dealers and to show that, if they do not always stock the higher grades, the fault is more with their customers than with them.

SYRACUSE, N. Y., Oct. 20, 1888.—*Messrs. S. Allcock & Co., Redditch, Eng.*—Gentlemen: The No. 115 D.M. gut leaders were received and in good shape, which we have tested particularly together ourselves and a few fishermen in this section whom we shared them with, and we think there will be created quite a demand for them next season. Yours very truly, (signed) REUBEN WOOD'S SONS.

In conclusion we beg to say that if Mr. Cheney or any of your readers will order from any respectable tackle dealer in the State exactly the quality of gut or gut leaders which they require, the dealer will have no more difficulty in procuring it for them than the best London house would have. S. ALLCOCK & CO.

STANDARD WORKS, Redditch, Nov. 8.

BOIS D'ARC RODS.

ROCHESTER, N. Y., Nov. 6.—*Dr. M. G. Ellzey:* DEAR SIR—In looking over the back numbers of my FOREST AND STREAM I came upon an article of yours of July 8, 1886, in which you speak very highly of osage orange or bois d'arc for making fish rods. Being an amateur rod maker myself, I became much interested in this wood, and take the liberty of writing you concerning it. I should be very much obliged if you would give me information as to where to obtain it, also its cost and whether it is best to make a rod wholly of it or with a split-bamboo tip. Yours truly, H. S. W.

Editor Forest and Stream:

I receive constantly from all parts of the country letters similar to the one inclosed, asking information about the wood of the bois d'arc or osage orange for making fly-rods. I have replied to them privately hitherto, but as it seems so many are unfamiliar with this wood and its use, I beg space to reply to my present correspondent and others interested. I have a rod which I have used in all sorts of fishing for five seasons, which I made myself from this wood, and it has never been broken, nor has it to-day a particle of warp or set. It casts two bass flies 75ft. without difficulty, and I have killed great numbers of large bass and trout on it. I have used rods of all sorts, kinds and descriptions, and I have no doubt of the superiority of this wood over all other materials used in rod making. It is a marvel to me that professional rod makers ignore it. It seems to be thought it is a mere hedge plant, and so it is in the North; but in the Southwestern States it is a timber tree of great value. It is extensively used as posts for wire-fencing and in ordinary house carpentering, and especially for wagon building in that section; wagons made of it are worth thirty or forty dollars more than others. There can be no difficulty in getting ample supplies of it, say in northwestern Texas. It is utterly worthless for hedges, but planted for timber, is of most rapid growth, and not even locust is so durable. Why it is not better known I cannot conceive.

M. G. ELLZEY, M.D.

SPAWNING HABITS OF BLACK BASS.

Editor Forest and Stream:

I consider it my duty to inform you and my fellow fishermen of a fact which came to my knowledge recently in regard to the gamy small-mouth bass. Sept. 23 last, I caught in the Oneida River, below Brewerton, some fine bass, one weighing over 4½lbs. When I dressed these fish five were females, and all of them were in a breeding condition; that is to say, the spawn sacks or bags were formed, and in those taken from the larger ones the eggs were plainly visible, the sacks varying in size from ¼in. in diameter by 2in. long, up to ½in. by 4in., which last came from the largest bass. Now, the curious thing about this is this. Bass do not spawn, according to the best authorities, until in May. These bass were caught in this condition about seven months before their spawning time. Query—How long are bass in this condition before spawning? Is the period with them the same as that of a human being? This find was a new thing to me, but it may not be to you, and it has caused many queries to arise in my mind. At any rate I should like to know whether or not it is a settled fact that bass are in this condition always in the month of September. If I had only caught one such female I should not have thought much about it. I and other fishermen here wish information and consider your paper the best source of supply. I GO A-FISHING.

SYRACUSE, N. Y., Nov. 17.

[The eggs of the bass, as in most other fishes, begin to develop for the next season's spawning shortly after the breeding season is over, and as it takes a whole year to mature a crop of eggs, it is not strange to find the ovaries of a black bass partly developed in autumn nor those of the trout in the same condition in June. The eggs develop slowly during the first eight or nine months, and increase more rapidly afterward. The black bass in western New York and northward undergo a partial hibernation, and do not take much, if any, food during the winter. In the spring they begin to feed, and then as the water gets warmer the eggs develop more rapidly until they spawn in May or June.]

CHICAGO AND THE WEST.

CHICAGO, Ill., Nov. 13.—I was in Jenney & Graham's gun store the other day and saw a fish hanging on the wall big enough for the original whale. It was a muscallonge, very nicely mounted, weight 43lbs., length 52½in. It was taken by Mr. Chas. E. Scott, of Freeport, Ill., at Big Twin Lake, Wisconsin, on an 8oz. split-bamboo rod, after a fight which lasted three hours and a half. The fish was finally shot before he could be landed. As mounted it is certainly a beautiful trophy.

Mr. J. M. Clark, a clear, dyed-in-the-wool enthusiast in bait-casting with the short lancewood rod, lets go of the fishing season mighty reluctantly. He swears off, but every bright, warm day makes him break his swear and go up to Silver Lake again, just for the last of it, you know. The last last time he was up he hooked a big pickerel, which he thought would have weighed between 15 and 20lbs., but lost him, since the big fellow, doubtless pricked many a time before, made haste to spit out the bait as soon as he found what it really was. This leaves Mr. Clark with a bad taste in his mouth, too.

Captain Ramage, one of Mr. Clark's converts to the art of bait-casting, is another fisherman who thinks spring a long way off. He will try Silver Lake again this week, the weather having now cleared up. I left these two gentlemen engaged in a red hot discussion over the relative merits of the Kentucky and Abbey & Imbrie reels. I don't know whether they intend to fish through the ice this winter or not.

NOV. 14.—A party just back from a duck shooting trip on the Illinois below Peoria, report that they varied the monotony by trying for the fish in the Illinois, and took over 100 bass and pickerel, including a number of 4-pound bass. The fishing was better than shooting. Fish bit in the lower Wisconsin lakes on the bright days of this week. E. HOUGH.

AN ARTIFICIAL SQUID.—The commercial fishermen of Gloucester, Mass., have discovered that codfish will take an imitation of the squid, made of rubber, and are more or less jubilant over the fact in the belief that it will settle the vexed question of bait, which is the great difficulty with them, and which has assumed the importance of an international question. These fishermen go out on the Grand Banks with herring packed in ice for bait, and unless they are successful in getting a fare, or cargo of fish, before the bait spoils, they are obliged to return at great expense of time for more, because the Canadian law does not permit them to put in to the nearest port and buy a fresh supply. A recent test was made of the rubber squid which promises to solve the bait problem. The day selected for the test was rough, and, in a locality where cod are very scarce, only two squid were used. Six large-sized cod and two small ones were taken, which proves conclusively that cod, like other fish, will bite at artificial bait. These cod were taken in the afternoon, when the boat fishermen find it very hard to make fish bite. The artificial bait consists of a rubber squid, the counterpart of the natural squid, the favorite bait of the cod. On this occasion the squid was coated with a preparation of anise-seed oil. It is proposed to so manufacture these squid that the hook will be concealed. Rubber imitations of frogs and insects are to be found in all the fishing tackle shops but are only used by anglers when the natural bait cannot be readily obtained, therefore there is nothing new in this idea but the application of it. Perhaps there are other things which our commercial fishermen might learn from a study of the methods of anglers, a class who have expended much ingenuity in devising means to attract and capture their game. By the way, we do not hear of the extensive use of the Norwegian gill-nets in the cod-fisheries, which were introduced by Prof. Baird and Capt. Collins, and which were expected to solve the bait question.

THE DELAWARE ROD AND REEL ASSOCIATION.—In our last issue, under the heading of "Fish Protection in Delaware," we gave an account of the proposed formation of a society for the protection of fish and game and of a meeting for this purpose which adjourned to November 15. The second meeting was held on the date named at the rooms of the Board of Education, in Wilmington, at 8 P. M., and an organization was effected under the title of the Delaware Rod and Reel Association. Mr Ellwood Garrett was chosen as temporary chairman and Mr. J. Travers Jones acted as secretary. The constitution and by-laws as reported by the committee were read and adopted. A permanent organization was formed by the election of Dr. E. G. Shortlidge as President, and of Messrs. Ellwood Garrett, Dr. J. P. Wales and John P. Doughten as Vice-Presidents. It was voted to elect six vice-presidents, three from Kent and three from Sussex, making nine in all. Mr. John P. Allmond was elected to be the Treasurer and Mr. J. Travers Jones, the Secretary, all the officers to hold office for one year, dating from the first Thursday in December. In addition to the annual meeting in December it was ordered that a semi-annual meeting be held on the first Thursday in June of each year. The annual dues will be $2, and about fifty persons have already signified their intention to join. The association has a good start, and as there is a good field for it to work in it will prove to be useful. In the selection of Dr. Shortlidge as President the association has an active worker and one who has been especially active in stocking the waters which it is now proposed to protect.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.

Fishculture.

THE CONNECTICUT COMMISSION.

WE have the twenty-third report of the Fish Commission of Connecticut to the Governor, January, 1887. The statutes of the State require the Commission to make an annual report of the season's work and provide that it shall be "made, returned and printed" on or before the first day of November in each year. In States where the fiscal year begins in October this is a most excellent provision as it places the report before the members of the Legislature in due time and the matter is all fresh and the hatching season of the succeeding year has not begun, and consequently does not in any way overlap the one recorded. The report under consideration is a supplement to the last one, which has not yet been transmitted to the General Assembly. By the terms of the appropriation for the use of the Commission, the money can only be devoted to two purposes, viz: The artificial propagation of shad and the purchase and distribution of young trout for stocking the streams of the State.

There is no State hatchery in Connecticut, and no nominal superintendent, the work being done and paid for as needed. The hatching of shad was continued by Mr. Henry J. Fenton, at Birmingham, on the Housatonic River below the dam. The laws in regard to shad fishing in that part of the river were observed, and as a consequence the spawning fish were plentiful. The hatching is all done in the McDonald jars and from 11,615,000 eggs there was planted 10,167,000 fry. Of these, 5,600,000 were placed in the Connecticut River and its tributaries, 500,000 in the Quinnipiac River, and the remainder, 4,067,000 in the Housatonic River.

Again the Commissioners are compelled to report any decrease of the number of shad taken in the Connecticut River, and by the pounds near its mouth. Mr. Robert B. Chalker, who has collected the statistics of the catch for several years, reports the catch for 1888 at 68,450, which is 11,900 less than the number reported for the previous year. The returns for the last four years show that the catch in 1885 was 190,300; in 1886, 117,950; in 1887, 80,350; and in 1888, 68,450. The details of the catches by different methods are given, showing that the largest number are taken in the pound nets; the gill-nets come next, and lastly the hauling seines. As was the case in 1887, the catch of shad in the Potomac and Hudson rivers seems to have been very large, while the Delaware and Connecticut rivers have shown a decrease. As to the causes of the gradual disappearance of this most valuable fish from the waters of Connecticut the Commissioners have nothing to add to the theories mentioned in their last report.

Of brook trout there were 336,000 fry bought of Henry J. Fenton, and 3,000 were allotted to each of the 112 applicants who wrote for them previous to March 1. Every year there are persons who wait until after that time and then are disappointed because they cannot be supplied. The fry are delivered free at the hatching house at Poquonock, but any person who prefers to have them delivered can do so by paying the expenses of a messenger and $3 per day for his time.

The question alluded to in a former report, whether brooks stocked by the State with trout could be closed to the public and leased to private individuals, has taken a practical form during the past year. Certain gentlemen of Middletown have for several years applied to the Commissioners for trout and have placed them in the Hammonassett Brook, with the consent and approval of the owners. The trout have increased and the stream has been much improved for fishing purposes. Under these circumstances a New Haven club of well-known citizens has taken a lease from the owners of several miles of the stream and closed it to all except its own members. The Middletown gentlemen claim that this cannot be legally done, and offered the New Haven club to make up a test case for the Supreme Court of the State to decide. As this overture was declined, some of the most prominent of the Middletown gentlemen gave notice that they should go on a certain day and fish in the stream with the expectation of being arrested. It is understood that this was done, but thus far no arrest has been made.

A salmon of 22lbs., and one of 17lbs., were taken in the Housatonic in May and June. Mr. T. L. Cornell writes from Birmingham about these fish, and says that in 1887 there were three caught weighing 11¼lbs., 10¼lbs. and 2lbs. respectively. The State has not made any plantings of salmon for several years, and the fish mentioned are the remnants of former plantings. About twenty salmon were taken in the Connecticut in 1887. A letter from Mr. Fred Mather, General Assistant to the U. S. Fish Commission, is printed, in which he informs the State Commissioners that in May, 1887, by order of the late Prof. Baird, he planted 50,000 salmon fry in the Housatonic, placing 10,000 at New Milford, 10,000 at Kent, and 30,000 at Falls Village.

SALMON HATCHING ON THE CLACKAMAS RIVER, OREGON.—*Editor Forest and Stream:* I beg to correct a statement which appeared in the papers a short time ago, and for which I am myself responsible. The statement was to the effect that the Canadian salmon breeding station, on the Frazer River, turned out more young salmon last season than the U. S. station on the Clackamas River. This statement is to some extent misleading, for although the Frazer River establishment took more eggs and did turn out more fish than the Clackamas station, nevertheless most of the salmon from the Canadian station were bluebacks ("saw quai," "sock eye," *Oncorhyncus nerka*), an inferior kind of salmon, while there were only a million Chinook salmon (*Oncorhyncus chouica*) hatched at that station. At the U. S. station on the Clackamas all the young fish that were hatched were Chinook salmon (*Oncorhyncus chouica*) and of these there were about four million. Consequently the United States station hatched out about four times as many as the Canadian station, and the fish, most of which are now in the hatching house, are in magnificent condition—nothing could be finer. They are a splendid sight.—LIVINGSTON STONE.

A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all-rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N.R. R., P. St. Paul, Minn.—*Adv.*

THE following letter received by the United States Cartridge Co., Lowell, Mass., from Mr. F. S. Lindsley, Supt. American Wood Powder Co., West Hoboken, N. J., speaks for itself: "I am perfectly willing that you should use my name to indorse your shells, and especially your new primer for American wood powder, and I heartily recommend your shells to wood powder shooters. As a matter of fact I have recommended your paper shells for the last eighteen months, and have in that time shot thousands of them, and given away thousands of them loaded with wood powder.—*Adv.*

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 1 to 4.—Fourth Dog Show of the Meriden Poultry Association. Joshua Shute, Secretary, No. 430 Pratt street, Meriden, Conn.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

FIELD TRIALS.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6776**.

THE EASTERN FIELD TRIALS.

[*By a Special Reporter.*]

THE tenth annual field trials of the Eastern Field Trials Club began at High Point, N. C., Nov. 15, with the Members' Stake. There were fourteen starters, and the quality of the work was of a very superior order. The handling was skillful and would compare quite favorably with the best. The perfect knowledge of the requirements of field work and the principles of a competition were often displayed in the running under all the varying complications.

The time given at the beginning and end of heats is the official time of the judges. The time limit had its first trial in the Members' Stake. It is yet premature to attempt to describe its merits or demerits; but the weight of opinion appears to be against any time limit after the first forty-five minutes have expired. The ruling required the judges to run full half-hours if the first forty-five minutes were exceeded. At a meeting of the Board of Governors, held on the night of the 14th inst., the secretary was instructed to submit the time limit to a vote of the owners and handlers of starters in the Derby with a view to apply it to that stake. At the same meeting, J. Henry Purdy and Thomas Hitchcock, Jr., both of New York, were proposed for membership. E. R. Wharton, of New York, was elected to membership. Col. A. Merriman was invited to judge the Pointer Stake with Messrs. Henricks and Bergundthal. The latter wired that he would be unable to attend.

Major J. M. Taylor and Mr. F. R. Hitchcock judged the Members' Stake.

Dashing Noble was awarded third without further running. According to the work done no dog was entitled to a division, and the judges very properly broke away from a misleading precedent. The judging was commendably accurate, and the decisions were well received as a whole.

The weather Thursday was cloudy and the ground muddy, heavy rains having fallen the previous day and night. Friday was clear and pleasant. Following is the order of running:

MEMBERS' STAKE.

GO BANG (O. W. Donner, Beaufort, S. C.), liver and white pointer dog, 2½yrs. (Graphic—Leach's Bloomo),

against

NOBLE COUNT (Herbert Merriam, Weston, Mass.), black and white English setter dog, 1½yrs. (Count Noble—Royal Myrtle).

PRINCESS HELEN (J. Otto Donner, New York) orange and white English setter bitch, 6½yrs. (Thunder—Bessie),

against

BUCKELLEW (W. A. Coster, Saratoga Springs), orange and white English setter dog, 9yrs. (Druid—Ruby).

GLOSTER (J. L. Breese, Tuxedo, N. Y.), black, white and tan English setter dog, 4½yrs. (Dashing Rover—Trinket),

against

MALITE (H. B. Duryea, Red Bank, N. J.), liver and white pointer bitch, 5½yrs. (Meteor—Dell).

ROY MONARCH (C. C. Gray, Providence, R. I.), black, white and tan English setter dog, 5yrs. (Dashing Monarch—List),

against

DAN NOBLE (J. R. Henricks, Pittsburgh, Pa.) lemon belton English setter dog, 5yrs. (Royal Rock—Lewis's Nellie).

BRANDON (J. O'H. Denny, Pittsburgh, Pa.), lemon belton English setter dog, 5yrs. (Royal Rock—Lewis's Nellie),

against

COUNT BELTON (I. Norris Cochran. Philadelphia, Pa.), black, white and tan English setter dog, 3½yrs. (Yale Belton—Polly Blue).

RUBY BUCKELLEW (J. L. Breese, Tuxedo, N. Y.), orange and white English setter bitch, 4yrs. (Buckellew—Brimstone),

against

NAT GOODWIN (I. N. Cochran, Philadelphia, Pa.), black, white and tan English setter dog, 3½yrs. (Roderigo—Bo Peep).

BANG GRACE (J. L. Breese, Tuxedo, N. Y.), lemon and white pointer dog, 3½yrs. (Bang Bang—Grace),

against

DARLING NOBLE (J. R. Henricks, Pittsburgh, Pa.), black and white English setter dog, 4½yrs. (Count Noble—Dashing Novice).

First Series.

GO BANG AND NOBLE COUNT.

This brace was cast off at the school house, near the outskirts of the town, at 9:25, in an open field. Go Bang showed decided superiority in range and judgment in working his ground. He kept the outside fling throughout the heat. Noble Count improved in his range as the heat progressed, but, owing to failure to find in the first hour, both dogs thereafter appeared to lose interest and contracted their range somewhat. Excepting a point by Go Bang on some tame chickens, and the flushing of three or four woodcock in the woods, the first hour and a half of diligent work through open fields and cover was without any find. A bevy was marked down by some spectators. The dogs were taken to a position to get the advantage of the wind, but unfortunately the course was to one side of the birds. They flushed wild and were marked down again in the open sedge. Noble Count was the first to secure a point which he did handsomely. Go Bang at the same time was roading carefully only a few yards from Count Noble; the latter sprang in and flushed his bird; and Go Bang pressed too closely on his bird and flushed. The scenting conditions appeared to be unfavorable, as neither dog performed skillfully on the remaining scattered birds. Several of them flushed wild or were flushed by the handlers; the dogs roading and half pointing several times. Bang nicely secured a point on a single bird in the sedge. Noble Count ran close by him and refused to back. Both were steady to shot. While searching for the scattered birds one was flushed on bare ground in the open. Mr. Donner shot at it, and it left a large part of its feathers floating in the air. Noble Count again refused to back a point of Go Bang on a single, and showed an inclination to be unsteady to shot. At 11:40 Go Bang was awarded the heat. He carried his head higher, and worked his birds with better judgment than Noble Count, and outclassed his competitor in every quality. Although the heat was quite long, there was but little work done in it, owing to the failure to find birds.

PRINCESS HELEN AND BUCKELLEW.

At 11:45 they were cast off in an open sedge field. After working diligently in cover and open, Princess Helen stood handsomely in some thick brush in a fence corner; Buckellew backed. Mr. Donner failed to find anything to the point. When ordered on, both dogs began roading in the open field along the fence; the bevy flushed some distance away and went to the woods a short distance ahead. Helen made a very good point on one of the single birds, doing it quickly and accurately on bare ground in the edge of the woods. Buck was hunting 30 or 40yds. further in the woods and several birds flushed wild near him. Helen next began roading a running bird and pointed. Buck backed handsomely for a few moments, but he broke his back and resumed it when cautioned. Helen moved on, and both then began roading the running bird. Buck located accurately and pointed. Coster killed neatly and Buck retrieved. While Buck was locating this bird, Helen had secured a point on a single some yards away further in the woods; the bird flushed wild. Soon Buck pointed, but moved on either to order or from losing the scent. Mr. Coster flushed a single bird near where he had been pointing. Next Helen flushed a single. Shortly afterward she began roading Buck pointed; Helen took a cast back and drew to a point apparently on a rabbit, as one jumped away a few yards ahead of her point. She probably had a true point, as a bird was flushed a few yards ahead after the dogs had been ordered on. It was killed and fell a few feet in front of Helen. It was so close that she could not resist the temptation to retrieve it independently of orders. While it might have scored as being unsteady to shot, it was excusable. Soon after moving on Helen made a skillfull draw and point where there was no cover other than dry leaves; Buck honored the point. Helen shortly afterward drew to a point, but discovered that it was erroneous and moved on; Buck backed. At 1 o'clock they were ordered up and the party went to lunch at the Model Farm. Princess had the better style in motion and on point. Buck had a decided advantage in range, taking wide casts in likely ground and conducting his search with excellent judgment. His years rest lightly upon him, and he carries himself with as much spirit as if he were a youngster. While Helen outworked him on the scattered birds, his superior range and uniform pace made the heat a close one.

GLOSTER AND MALITE.

At 1:45 they were cast off in an open field. Gloster went merrily away in the lead, taking wide casts. Malite was going well, but the contrast was unfavorable. She made a false point near the edge of some sedge. On a side hill, shortly afterward, Gloster pointed a bevy; Malite, a few yards to one side, was either pointing or backing, it was difficult to determine which. Mr. Breese killed nicely and Gloster scored a good retrieve. Both dogs behaved well to wing and gun. Some of the birds went to thick grass, having briers and brush. Gloster made a half a point and Malite backed. No birds. In the thick cover Gloster pointed accurately, a very commendable piece of work under difficult circumstances. When sent on he roaded and pointed alternately some yards, but no bird was found. A few birds were marked down by a fence further along and were followed. Gloster soon pointed by the edge of a strip of corn in some thick grass; Malite made a very stylish back. Mr. Breese did not search sufficiently for the bird. The point had so much the appearance of being genuine that, after the handlers had moved on, one of the judges rode over the place where the bird was likely to be and flushed it. In nearly every heat points were lost by not using sufficient effort to flush the bird. Malite pointed false and Gloster backed, and the error was repeated shortly afterward. At 2:30 Gloster won. He had a decided superiority in range and uniformity of speed. Malite, when she extended herself, was fast, but was not regular in her range or speed. Both had good style, Gloster having the better when in motion.

ROY MONARCH AND DAN NOBLE.

The heat began at 2:45. Both frittered away a few minutes on larks. Roy opened the work by pointing a large bevy, but impaired its value by springing in and flushing. The birds scattered right and left, and went to the woods close by. After the flush Roy stopped to order. While the handlers were going to the right after some of the birds which had been marked down, Roy took a cast into the pines to the left and pointed two or three birds steadily. Dan honored the point handsomely. Both were steady to wing. The footscent engaged Roy's attention for a moment after being ordered on. A single bird had taken a flight of ten or twelve yards and settled in a little hollow. Roy came down wind on it, and, in taking a short turn close to it, he caught the scent, and made a rigid point; Roy, at the flush, showed an intention to be unsteady. Soon after moving on, Dan pointed a single very nicely; Roy backed well. Roy was steady to the gun when cautioned; Dan refused to retrieve. A bird flushed wild to Roy's next point; Dan, about the same time, secured a staunch point on a single; Mr. Henricks made a difficult shot very nicely. Dan again refused to retrieve. Dan next roaded to a flush; then pointed a bird which flushed wild. A bird was thrown out and a gun fired; Roy was required to retrieve the bird. He showed slight unsteadiness to the gun, and, although he retrieved the bird, he pinched it badly. He won. Time 3:30. Roy had the better range, but no advantage in speed. Both had good style in point; in motion Dan had a more spirited style of going.

BRANDON AND COUNT BELTON.

The heat began at 3:50. The handlers became widely separated. By an old fallen tree Count pointed a small bevy and held his point staunchly while the judges, who were forced to make a detour by boggy ground, rode to him. Brandon backed well. Both were steady to shot. Count, while retrieving, hesitated near the tree-top and showed a strong inclination to point, but his handler required him to finish his retrieve, which he did. Both dogs then pointed and drew through the fallen tree-top. Brandon pointed the bird, which had been worked a few yards from the tree-top, and was a trifle unsteady to shot. He retrieved the bird well. Shortly afterward Brandon was unfortunate in having some birds flush wild as he was roading them; part of the bevy remained, which he pointed accurately and stanchly, and was steady to wing and shot. Count, off to the left, was pointing three or four staunchly at the same time, but he moved when Mr. Denny shot and the birds flushed. In a few moments Count pointed on the footscent; Brandon backed well. Count did not hunt the scattered birds with sufficient assurance, displaying over-caution at times. He again pointed and was again backed, but there was no bird. Brandon dropped to a point in the open, Count backed several yards away. Brandon started to break shot, but stopped to order. On a side hill Count pointed for several moments, but discovered his error and moved on. His over-cautiousness was more apparent toward the last of the heat. The heat ended at 3:35 in favor of Brandon. His style and speed were better. Notwithstanding Count's cautiousness he undoubtedly is a very killing dog.

NAT GOODWIN AND RUBY BUCKELLEW.

They were cast off at 4:40. Both went off at a lively pace. Nat the merrier worker and the superior in style. Nat crossed a small creek and pointed a bevy in thick cover. He held his point while the judges went around to cross on the bridge, which required several minutes. Mr. Cochran did not beat out the cover far enough ahead of him. The bevy was flushed a few moments afterward by the dogs or handlers, it was impossible to determine which. The birds were marked down in open sedge. Ruby roaded to a flush; next Nat pointed, but his handler failed to flush; Nat immediately coming back down wind flushed two where he had pointed. Both dogs made two or three excusable flushes each; Ruby making one as she crossed the creek close by. After crossing the creek, Nat pointed a single bird, and retrieved it when it was killed. In the meantime, Ruby false-pointed about 50yds. away. By the bank of the creek, Ruby pointed and a bird flushed wild about 20ft. down wind. When Ruby was ordered on, Mr. Breese flushed a bird ahead of where she had pointed; probably it was the bird she pointed. She was steady to shot. They then crossed over to some woods about 300 or 400yds. away; Nat pointed by the edge of the woods and was well backed; both were steady to shot and wing. They were then ordered into the woods and the best work of the day was done. Points were made in rapid succession, and nearly all the work was accurate. But few errors were made although the dead leaves were all the cover the birds had. Each began to draw about after running birds. Both secured a point on the same birds and were steady Nat, while roading a bird, failed to score by the bird flushing wild. Ruby pointed a single nicely. Each secured two more points in masterly style, and the day ended with most satisfactory work. Nat won at 5:25. He appeared to be disobedient at times. On point there was no special superiority in style.

DASHING NOBLE AND BANG GRACE.

They were cast off Friday morning at 8:20 near the Glass house. Each made a point and back, but nothing was found to either point. Dash was lost for a few minutes. When found he was pointing a bevy staunchly in the thicket. Bang backed handsomely; both were steady to shot. Bang made a good point on a single bird in short weeds; soon afterward he pointed another, and was steady to shot. In thicket each made a point, but no birds were found. On top of a hill in some oaks, Bang pointed a bevy and held his point several minutes while the judges rode up; he showed some unsteadiness to wing. The scattered birds were followed and both dogs made game and each secured a good point. Next Bang pointed a bird which Dash had presumably pointed a moment before, as it was close to the place where he pointed, but which Mr. Henricks had failed to flush. In some dead oak limbs Bang did a neat piece of work in pointing a single bird. At the end of the time limit the judges consulted, and then ordered the dogs on. Near a fence Bang pointed, drew on a few yards, located and pointed; he was slightly unsteady to shot. Dash secured a point on one of the scattered birds and was nicely backed. Soon afterward both dogs pressed too close and flushed. Dash made one more neat point; Bang drew too close to a bird and flushed. At 9:35 Dashing Noble won. Dash had better speed, range and style in motion. Each ranged well and did some good work.

Second Series.

GO BANG AND PRINCESS HELEN.

They began the first heat of the second series at 9:45. Helen made game several moments, then pointed, Bang, coming from opposite direction, backed but broke it, and resumed hunting. No birds to the point. In the open, in weeds, Helen pointed soon afterward, and Go Bang refused to back. No birds were found to the point, but a spectator said that a bevy had flushed from the place a few minutes before. Go Bang refused to back. While going through a thicket one of the handlers flushed a bevy, which flew into the open field close by. Near the edge of some pines Go Bang pointed, then carefully drew on to locate, then pointed staunchly and was well backed. The bird flew toward a wagon and prevented Mr. Donner from shooting. Go Bang, in a few moments, again pointed a single by an old ditch and was steady to wing. The ground was then beaten to and fro in search of the scattered birds, and Go Bang flushed an outlying bird on the side hill in sedge. Helen pointed the bevy, Mr. Donner killed and Helen failed to retrieve the bird. Some birds flushed while Helen was retrieving and Mr. O. W. Donner killed one which was retrieved by Go Bang. He rolled it in his mouth, and it appeared as if he pinched it, but an examination of the bird showed that it was not crushed in the least. The retrieve, however, was done indifferently well. The dogs were ordered on at the expiration of the time limit. Go Bang opened the work by pointing a bevy in some weeds and retrieved the dead bird much better than the previous one. At 11:00 Go Bang won. His work outclassed that of Helen, but he was not running up to the form of the previous day, showing some signs of staleness. Helen was just coming in season and did not work up to her best form.

GLOSTER AND ROY MONARCH.

At 11:15 they were cast off in the weeds, and began a race which was not conclusively settled last year to the satisfaction of all. Gloster took a cast to the further corner of a weed field on a side hill and pointed; Roy, at the lower end of the weed field, some distance from Gloster, was making game; his handler whistled to him to bring him up to back. He flushed a bevy before obeying. Gloster moved on and pointed again; Roy backed. Gloster then began to road carefully down wind on part of the bevy which had run, doing the work with rare judgment, stopping to a point on

the birds with accuracy, and was steady to wing. Returning, he pointed near the place where he pointed first. Mr. Breese failed to flush. Gloster then made a cast to the bottom of the field, taking advantage of the wind with admirable judgment. He returned to the place where he made his last point and pointed again; Mr. Breese flushed a bird to the point. The scattered birds were followed. Gloster showed a higher grade of work throughout in every detail. He pegged point after point in the woods, was quick and accurate in locating and backed promptly and well. Roy pointed several times, but his work was inferior in quantity and quality. Gloster had the advantage in pace, range and style. At 12:00 they were ordered up and Gloster won.

BRANDON AND NAT GOODWIN.

They were cast off at 12. Brandon showed decided superiority in his work on birds, although Nat had the better range and style. Nat was not under control properly. At 12:45 Brandon won, and the running was suspended for lunch. Dashing Noble had a bye in this series.

Third Series.

GO BANG AND DASHING NOBLE.

At 1:30 the heat, the first of the third series, began. After a half hour's run Dash pointed some tame chickens; Go Bang backed. Next Go Bang, while carefully roading a bevy diagonally down wind, flushed it excusably. Dash pointed one of the single birds and Go Bang backed; the latter jumped forward at the report of Mr. Henricks's gun, but dropped to order. While hunting for the dead bird Dash pointed, and both dogs were steady to shot. The point did not count in the competition, as Go Bang was dropped for his opponent to retrieve. Dash retrieved tenderly, but was not sufficiently prompt. Each scored a flush. Mr. Donner shot one of the flushed birds. Go Bang, while hunting for it, pointed; Mr. Donner ordered him on and he flushed, which did not count, as he was being tried as to his retrieving at that time. At this time Dash was dropped on a point in a small washout; Mr. Henricks flushed a bird to his point. Go Bang retrieved his bird alive. Dashing Noble won at 2:45. He showed a superiority in maintaining a more uniform range and pace, and had better style.

GLOSTER AND BRANDON.

At 2:45 a good working heat was begun. But a small area of ground was worked over, and there were a sufficient number of birds to give both dogs a thorough test. Gloster showed greater execution and accuracy and made fewer errors. His pace, range and style were better. Brandon did some excellent work, picking up single birds admirably, but was not able to cope with Gloster. Each one ended with a similar piece of work. Brandon dropped to a flush and remained staunchly pointing; Mr. Denny flushed a bird to the point. Shortly afterward Gloster dropped to a flush and remained dropped to a point, to which Mr. Breese flushed a bird. The heat ended at 3:30 and Gloster won.

Tie for First Place.

GLOSTER AND DASHING NOBLE.

At 3:50 the final heat for first began, Gloster having a rest of twenty minutes. Soon after the dogs were cast off Gloster was lost. Following down a wide valley, he was found on a point in short weeds. Mr. Breese flushed a bevy to the point and Gloster remained steady to shot and wing. While working for scattered birds Gloster made a point in sedge; no birds found to it; Dashing Noble pointed and no birds found. Gloster made an accurate point on a single in open sedge grass and retrieved it neatly when Mr. Breese killed. The dogs were then worked in pines, the judges following afoot. Gloster pointed and the birds flushed wild. While Gloster was drawing to a point near the edge of the pines, several birds flushed wild ahead of him. A few yards out in the open Gloster pointed a bird in sedge grass. Dash roaded out and pointed near where this bird flushed. After working about in the open a few moments Mr. Henricks announced to the judges that he was willing to submit the heat to the decision of the judges on the work done. At 5:21 the dogs were ordered up and Gloster won the heat and first prize. He had the advantage in range, style and work on birds.

Tie for Second Place.

BRANDON AND DASHING NOBLE.

This heat determined second place, and was the last one of the stake. It was begun at 9 Saturday morning. The day was clear and bright. A moderately cool breeze blew from the northwest. The dogs were started near the schoolhouse. Dash pointed soon after starting in open sedge; as his handler came up he moved on and resumed hunting. In the meantime Brandon had taken a cast ahead out of sight in the hollow in sedge and weeds, where he was found dropped on a point. Dashing Noble, while being brought up to back, came on him suddenly out of the woods, caught scent and pointed, standing five or six feet behind Brandon. When the bevy was flushed both dogs were steady to wing. Mr. Denny had no shells in his gun, therefore could not shoot. The birds were marked down on a side hill in sedge in a thin, scattered growth of sassafras bushes. A circuit was taken to give the dogs the benefit of the wind. Brandon was first to point; he drew carefully on to locate. Dashing Noble backed, but as Brandon drew on he took a short circuit, came in ahead of Brandon and pointed the bird. Brandon next scored a good point on a single and Dashing Noble backed nicely. Brandon next flushed a bird while going up wind; shortly afterward he pointed a single bird very nicely. In the meantime the dogs and handlers had become separated. Dashing Noble, about one hundred yards further up the hill, pointed, then drew on and pointed staunchly. No birds were found. The dogs were then cast off to hunt for another bevy. About one hundred and fifty yards from where he made his last point he pointed a bevy, and probably had made his previous point on the footscent of it; he was steady to shot. The birds were marked down in the same place where the first bevy lighted. Mr. Henricks killed a single to a good point of Dashing Noble, and the latter retrieved. The judges had flushed the remainder, some of which were marked down near by. Dashing Noble located and pointed one prettily on a side hill in sedge, Brandon honoring the point handsomely. Both were steady to shot. A short piece further on in a thicket Brandon pointed a bird which flushed and treed a few yards away. A few moments afterward Brandon pointed a sparrow in open sedge. The forty-five minutes were up. The judges consulted a few moments and the dogs were ordered on, the heat being decidedly close. Soon after starting Dash false-pointed. Brandon pointed in the open near some small trees, but not having the scent just right, being too much up wind, drew on to locate, got too far up wind and lost the scent. Dashing Noble coming up wind on the bevy pointed it, and Brandon backed. Brandon pointed one of the scattered birds at the edge of a thicket. Mr. Henricks, a few yards away, claimed a point for Dashing Noble at the same time; the bird flushed wild and was seen in its flight, but the cover was so dense it prevented the judges from seeing the point. Each pointed in the open, and no bird was found to either point. Some heavy weeds were then worked for scattered birds. At 10:15 the heat ended and Brandon won it and second prize. Undivided third was awarded to Dashing Noble without further running. The heat was a good working one throughout. Brandon had a slight advantage in style and range, and worked his birds with excellent judgment. He showed an inclination to be unsteady at times. This closed a very successful stake. The quality of the work, taken as a whole, was of a high order, and the best dogs came to the front in the running. Subjoined is the

SUMMARY.

First Series.

Go Bang beat Noble Count.
Princess Helen beat Buckellew.
Gloster beat Malite.
Roy Monarch beat Dan Noble.
Brandon beat Count Belton
Nat Goodwin beat Ruby Buckellew.
Dashing Noble beat Bang Grace.

Second Series.

Go Bang beat Princess Helen.
Gloster beat Roy Monarch.
Brandon beat Nat Goodwin.
Dashing Noble a bye.

Third Series.

Dashing Noble beat Go Bang.
Gloster beat Brandon.

Tie for First Place.

Gloster beat Dashing Noble and won first prize.

Tie for Second Place.

Brandon beat Dashing Noble and won second prize.
Dashing Noble third.

THE DERBY.

HIGH POINT, Nov. 19.—The starters in the Eastern Field Trials Club's Derby were drawn to run in the subjoined order, subject to change where two were owned by the same owner, or in case of withdrawal:

SATANELLA (Highland Kennels, Red Bank, N. J.), liver and white pointer bitch, June 28 (Robert le Diable—Tuck),

against

GLAMORGAN (L. A. Beddle, Philadelphia, Pa.), liver and white pointer dog, June 28 (Robert le Diable—Tuck).

ROI D'OR (Memphis and Avent Kennels, Memphis, Tenn.), black, white and tan setter dog, June (Roderigo—Bo Peep),

against

OLIVER TWIST (B. F. Wilson, Pittsburgh, Pa.), black and white setter dog, Jan. 5 (Count Noble—Fannie W.).

GUY (S. B. Duryea, Brooklyn, N. Y.), black and white setter dog, Jan. 2 (Ned—Leindor),

against

LADY PIEDMONT (Geo. T. Hodgson, Athens, Ga.), black, white and tan setter bitch, March 19 (Dashing Rover—Ranee).

LINDO (Mt. Washington Kennels, Pittsburgh, Pa.), black, white and tan English setter dog, Jan. 2 (Gladstone—Florence),

against

PETRARCH (Highland Kennels, Red Bank, N. J.), liver and white pointer dog, June 24 (Robert le Diable—Malite).

HOPE'S LASS (J. O'H. Denny, Ligonier, Pa.), black, white and tan setter bitch, July 1 (Gath's Hope—Lady May),

against

ORLANDO (Memphis and Avent Kennels, Memphis, Tenn.), black, white and tan setter dog, June (Roderigo—Bo Peep).

FRED (Bayard Thayer, Boston, Mass.), liver and white pointer dog, June 28 (Robert le Diable—Tuck),

against

CECIL (Memphis and Avent Kennels, Memphis, Tenn.), black, white and tan setter dog, June (Roderigo—Bo Peep).

GLAUCUS (Thos. Hitchcock, Jr., New York), liver and white pointer dog, July 3 (Naso of Kippen—Glauca),

against

MAUDE FOREMAN (E. F. Thomas, Denver, Col.), black, white and tan setter bitch, July 7 (Foreman—Miss Elsie).

JOYCE OF HALL'S ISLAND (O. W. Donner, Coosaw, S. C.), liver and white pointer bitch, March 24 (Lad of Bow—Bloomo),

against

VIC (T. H. Gibbs, Columbia, S. C.), liver and white pointer bitch, April 25 (Meteor—Mamie).

COUNT FAUSTER (Dr. J. G. F. Holston, Zanesville, O.), liver, white and tan pointer dog, March 4 (Mainspring—Dolly Fauster),

against

MILDRED (Edward Dexter, Boston, Mass.), lemon and white setter bitch, Feb. 25 (Dashing Rover—Muriel.

VIC G. (T. Hodgson, Athens, Ga.), Irish setter bitch, March 23 (Dan—Nora),

against

MISS MONARCH (C. C. Gray, Providence, R. I.), blue belton setter bitch, June 19 (Roy Monarch—Flossie).

COUNT PIEDMONT (Edward Dexter, Boston, Mass.), black, white and tan setter dog, Aug. 9 (Count Noble—Belle of Piedmont),

against

FELIX M. (Dr. Geo. Knapp, New York) lemon and white setter dog, April 9 (Gath's Hope—Daisy F.).

STELLA (F. R. Hitchcock, New York), liver and white pointer bitch, Jan. 22 (Naso of Kippen—Boski), a bye.

The application of the time limit to the Derby was submitted to the owners and handlers of the starters, but there being some who objected to it it was not adopted. The judges are Messrs. J. Otto Donner, J. R. Henricks and Maj. J. M. Taylor. It began raining Sunday and has continued with little intermission since.

HIGH POINT, Nov. 19.—A drizzling rain fell Monday forenoon. The afternoon was cloudy and damp. Considering the work as a whole, the quality of it was very inferior, due in a measure to the unfavorable weather and the changed habits of the birds in consequence. They ran from points, flushed unexpectedly at times and were difficult to work. But five heats were finished. The running was as follows:

Satanella beat Glamorgan.
Oliver Twist beat Roi D'Or.
Lady Piedmont beat Guy.
Lindo beat Petrarch.
Orlando beat Hope's Lass.
Fred and Cecil unfinished.

[*Special to Forest and Stream.*]

HIGH POINT, Nov. 20.—The quality of the work to-day has been decidedly superior to that of yesterday. The weather is cooler and birds are found in greater numbers. The running was as follows.

Cecil beat Fred.
Maud Foreman beat Glaucus.
Joyce beat Vic.
Count Fauster beat Vic G.
Miss Monarch beat Mildred.
Count Piedmont beat Felix.

Second Series.

Satanella beat Stella.
Oliver Twist beat Lady Piedmont.
Orlando beat Lindo.
Cecil beat Maud Foreman.

PHILADELPHIA CLUB TRIALS.

THE fifth annual field trials of the Philadelphia Kennel Club, which were commenced on the 15th inst., were decided Saturday evening, the 18th, after three days' work.

The usual rain storm which attends these trials was on hand a little earlier this year than usual, and owing to its severity a delay of some five hours was occasioned in starting; but as after clouds came the sunshine, and pleasant weather continued during the week, no particular fault could be found with the clerk of the weather. However, the threatening appearance no doubt deterred many from attending. The absence of Hon. Chas. T. Thompson and Mr. James H. Winslow was greatly regretted; they were both on hand at the departure of the train to see their brother members and the dogs started for the field of battle. When Mr. Thompson's smiling countenance lighted the depot to meet his dogs on their return, the smiles were allowable, as his imported Desmond II. had been the victor, which news had been wired to Sir Charles; and as Desmond II. is an Irish setter, and as he had beaten Llewellins and pointers, Mr. Thompson had occasion to be proud. Last year the dog made his appearance at these trials in the Derby stakes, and showed then much merit. Owing to the scarcity of birds but little work was done, so we can only give credit where credit is due. There were sufficient, however, to show he had a good nose, and will undoubtedly do the good work his happy trainer, Theo. Predmore, tells about. In range, pace and style of same Desmond II. is away up. His blood should be sought after by those desiring to improve the field form of the Irish.

There being no opportunity for brilliant work there was none done. Owing to this fact, and as it is only tiresome to our readers to describe such heats, let it suffice to say the dogs acquitted themselves creditably in most cases. Some rattling good young dogs were run, but their poor condition was too much of a handicap, especially where it was hard work to find game. Mr. E. Comfort's English setter Perseverance is worthy of particular mention, she doing the best work done on game, while her pace, speed and quartering is excellent; but owing to having too many acquaintances and being too willing to obey any and every whistle or call, she will have to wait another year for higher honors, which with work and care she will probably get.

Mr. J. A. Stovell's Irish bitch Victoria always comes in for some of the money, and as she is a dog that runs day in and out without making any mistakes, she is likely to continue to get somewhere near first for a year or two yet.

Mr Mitchell Harrison's pointer Sachem evidently got disgusted with the idea of trying to decide a field trial where birds were so scarce; in fact, it made him sick, and as he also injured his eye, Mr. Tallman, his handler, withdrew him. Mr. Winslow's pointers Victor of Blue Stocking and Golden Rod are both beautiful appearing dogs in the open fields. They both seem to lack experience. Their ranging and speed is very good. This was shown to better advantage on our return, when these dogs were allowed to run. The country here being very flat and open these dogs ranged the fields with great speed, at times a quarter of a mile to one side of the stage or the other. We think Mr. Winslow has his eye on the "Victor's Cup" and will be in for it next season with his dogs, which are to have a collegiate education this winter in Virginia.

Mr. Walter Smith's Ben Hur Franklin is a good, promising puppy for a gentleman's shooting dog; but like Mr. F. S. Brown's dog Horace, which is an extraordinarily strong young dog, he lacks the style required on his points, etc.

Cassino G. was not up to her usual form this year.

Cornelia G. has the dash and getaway of the Gladstones; in fact, she gets away a little too much at present. But Mr. Shuster's persuasive ways (without the whip) will soon overcome this difficulty. If this is the only trouble nothing will prevent her being well up with the other promising young dogs for next year. Among these are also Mr. B. Ridgway's Foreman's Pride, Dart and Clipper. Gath's Mark was represented by Glen Onoke, whose appearance indicates that he has had a hard time of it, but as looks don't count in a field trial he won't be last if he has proper care.

The following summary tells the story:

THE MEMBERS' STAKE.

CORNELIA G. (L. Shuster), black and white English setter bitch (Gladstone—Cornelia).

VICTORIA (J. W. Stovell) red and white Irish setter bitch (Berkley—Noreen).

HORACE (F. S. Brown), orange and white native setter dog.

DART (B. Ridgway), black, white and tan English setter bitch (Sweringer Dan—Countess Pansy).

BEN HUR FRANKLIN (W. Brown), orange and white setter dog (Ike—Leda).

GOLDEN ROD (J. H. Winslow) lemon and white pointer bitch (Beaufort—Zuba).

CASSINO G. (E. Comfort) black and white English setter bitch (Gladstone— ——).

First Series.

Cornelia G. beat Horace (absent).
Victoria beat Dart.
Ben Hur Franklin beat Golden Rod (withdrawn).
Cassino G. a bye.

Second Series.

Cassino G. beat Cornelia G.
Victoria beat Ben Hur Franklin.

Third Series.

Victoria beat Cassino G. and won first.
Ben Hur Franklin and Cassino G. divided second and third.

In these stakes, owing to time being short, Mr. W. Tallman, of New York, assisted in the judging, Mr. Percy C. Ohl officiating in the other events.

THE DERBY STAKES.

DART (B. Ridgway), black, white and tan setter bitch (Sweringer's Dan—Countess Pansy).

GLEN ONOKE (E. Comfort), black, white and tan setter dog (Gath's Mark—Katie Winterbred).

CLIPPER (B. Ridgway), black, white and tan dog (Sweringer's Dan—Countess Pansy).

BEN HUR FRANKLIN (Walter Smith), orange and white setter dog (Ike—Leda).

DON JUAN (Walter Smith), setter dog (Ike—Leda).

First Series.

Dart beat Glen Onoke.
Clipper beat Ben Hur Franklin.

Don Juan being withdrawn, it was agreed to have the judge place the dogs without further running, which was as follows: Clipper first, Ben Hur Franklin second, Dart third.

ALL-AGED STAKE.

PREMIER (E. W. Clark), black white and tan English setter dog (Dashing Monarch— ——).

FOREMAN'S PRIDE (B. Ridgway), black, white and tan English setter dog (Foreman—Countess B).

HORACE (F. S. Brown), orange and white native setter dog.

SACHEM (Chestnut Hill Kennels), liver and white pointer dog (Beaufort—Zuba).

RAP (E. W. Clarke), liver and white pointer dog (Croxteth—Lass).

VICTOR OF BLUE STOCKING (Bryn Mawr Kennels), liver and white pointer dog (Beaufort—Zuba).

PERSEVERANCE (E. Comfort), blue belton setter bitch (Chalkley D.—Cassino W.).

DESMOND II. (C. T. Thompson), Irish setter dog (Frisco—Grouse).

WINNIE II. (C. T. Thompson), Irish setter bitch (Frisco—Grouse).

BEN HUR FRANKLIN (Walter Smith), orange and white English setter dog (Ike—Leda).

VICTORIA (J. A. Stovell), Irish setter bitch (Berkley—Noreen).

VICTORIA II. (Stovell & Thompson), Irish setter bitch (Blarney—Victoria).

GOLDEN ROD (Bryn Mawr Kennels), lemon and white pointer bitch (Beaufort—Zuba).

First Series.

Foreman's Pride beat Premier (absent).
Horace beat Golden Rod.
Sachem beat Rap (absent).
Perseverance beat Victor of Blue Stocking.
Desmond II. beat Ben Hur Franklin.
Winnie II. beat Victoria II.
Victoria a bye.

Second Series.

Victoria beat Foreman's Pride.
Horace beat Sachem.
Desmond II. beat Perseverance.
Winnie a bye.

Third Series.

Victor beat Winnie.
Desmond II. beat Horace.

Fourth Series.

Desmond beat Victoria and wins first.

Perseverance being the next best dog beaten by the winner, and not having time to run Victoria and Perseverance together, they divided second and third.

The Philadelphia Kennel Club have determined upon having plenty of birds to decide these trials on next year, and will in all probability go further south. The selection will likely be made during the coming winter. Leaving Frederica and the Delaware House the club will find it difficult to get as comfortable quarters, and the kind attention to both themselves and their dogs as that given by both Mr. Call and his good wife will be sadly missed. Their attention to the dogs deserves particular mention.

WATCHDOGS.

Editor Forest and Stream:

I have just read two articles on the above subject, by Dr. J. Sidney Turner and Miss Marie J. Gale, that are deserving of notice. Both are considerably out of the way of ordinary discussion on doggy matters, in that they dispute positions, and do not attack the holder of them. This is an example that it would be well for all writers to follow, and it is most shockingly neglected, as witness the discussion on "pure" Gordons, etc. Dr. Turner has made a singular omission for so old a hand at mastiffs, when he speaks of the boarhound using its "punishing jaw," and does not mention that peculiarity of the mastiff that is the glory of the breed as watchdogs, *i. e.*, the universal disinclination they have for biting except as a last resort after all other measures have failed. They will bristle up, growl, push between an intruder and his object, spring on a trespasser and knock him down, or catch hold without biting before they will actually bite. I suppose I have had two dozen full-grown mastiffs in my care, and I never had one who bit as a first measure, and but one who would use her teeth except as a *dernier resort*. That this is a fixed characteristic of the breed, is shown by Bingley's mentioning it as early as 1809, and Pierce Egan copies Bingley *verbatim*. Bingley was apparently a naturalist, while Egan was thoroughly versed in everything pertaining to English country life and English sports, and it is certain that with his knowledge of English country gentry, their homes, mode of life, associations, etc., he would not have copied Bingley had he not known that Bingley's statements were accurate.

The lady's article is peculiarly interesting in the exactness of statements it makes, and I think that her position is correct in that there is a breed with which what we call boarhounds, Great Danes, Ulmer, Siberians, etc., is confused, that is of good temper. I strongly suspect that the mastiff we find mentioned in various parts of the continent by Marryat (in various novels) and other writers is this breed the lady alludes to. But this is not the light in which the matter must be looked on when considering the value of the breed for watchdogs. We must consider what kind of a dog will be taken as say Great Dane, and ninety-nine out of one hundred will take it to be the dog appearing like a cross twixt mastiff and greyhound, that Germans keep, that German butchers, tanners and beer hall owners have around their premises, and that students bring home from German universities. I have known or known of dozens of these dogs, from the days of poor Butler's "American" dog Prince down, and I cannot remember of one that was thoroughly trustworthy and brave. I remember that John L. Cassiday (Larkin) told me that Butler was not in the habit of being afraid of anything that wore hair, but was very circumspect when he went around Prince.

I think the lady is also mistaken in writing of a "Siberian" cross in boarhounds. I cannot recall any mention of a large breed of dogs coming from either Russia or Siberia. Mr. Wynn mentions a "Russian" mastiff he once owned, who was a devil in temper, very stupid, but of excellent type of head; but he does not give any evidence that the dog came from Russia, and I suspect it was something like that "Russian" collie that Mayor Grace showed at New York a few years since. The old dog show habitués remember when there was a class for "Siberian bloodhounds" or "Siberians" at our shows, and will remember that the class was filled with a lot of long-legged, crop-eared beasts that the keepers were very shy of. I remember how poor Charley Lincoln told me how Dr. Gordon Stables was all upset in his judgings at New York by seeing a lady poking an umbrella at a "Siberian" in a stall near by (you will remember the judging was done on a stage then), and he was so disturbed with apprehensions of the lady's safety that he had to stop the judging until he could get Charley to move the lady away from her dangerous position.

This term "Siberian" however, was a complete fabrication, and was originally got up by Butler to "pass" a litter of vast mongrels he had. What the breed of their progenitors was, nobody knew, not excepting Butler, but they astonished even that old hand by their vast size. Butler and a lot of his cronies were around the stove of one of the resorts out Bloomingdale road, discussing jorums of "hot," when somebody suggested "Siberian bloodhounds" as a name, giving as a deciding merit that nobody ever came from Siberia, so there was no chance of the "purity" of the breed being disputed (a fine sample of what "pure" breeds generally are). This was after Butler had taken that "American" humbug, Prince, to England and disposed of him there. I would be very much pleased to find a copy of Waterton's writings of natural history; I have often seen scattered articles of his, but no regular natural history: Waterton was the beau ideal of a practical naturalist, and as he owned and bred mastiffs, he would be very apt to say something of value as to their disposition and usefulness. Does anybody know of such a work?

W. WADE.

HULTON, Pa., Nov. 10.

PRACTICAL JUDGING.

Editor Forest and Stream:

Mr. Watson, in speaking of his award of third prize to my Highland Chief at the Buffalo show, claims that the dog is lacking in proper conformation to enable him to gallop. He has judged the dog yet did not nor can he find his defect. I imported him for a specific purpose and "he fills the bill," as Mr. Watson will find out later on.

Highland Chief ran in a Sapling Stakes in England, and after winning them was sold on the field for £125.

In Mr. Watson's report of the San Francisco show he says, "Jennie June won well in bitches and got the special for best greyhound," Mischief winning second prize. When these two dogs ran in the same stakes Jennie June was knocked out in the first course, her opponent "not letting Jennie in," while Mischief (second to Jennie in the show, and properly so according to Mr. Watson) won the stakes in grand style. These facts prove that Mr. Watson's opinion of the true conformation of a greyhound and how he "will shape in his stride" are not substantiated by practical tests of speed and endurance.

These are not by any means Mr. Watson's first and only mistakes in greyhound judging. When I recall the fact that there was some years ago a dog show held in New Haven where he judged this breed of dogs, I have to smile while regretting that he has not advanced much in his ideas, and which, if they are carried out, will not tend to improve that dog in which "speed is everything, and I would sacrifice everything in way of points to attain that object."

H. W. HUNTINGTON.

BENCH VS. FIELD.

LONDON, Ont., Nov. 16.—*Editor Forest and Stream:* Having just returned from a short shooting excursion of three days in the field, I send you a brief report of our doings, and to show what can be done over second and third rate dogs in the Province of Ontario. Our dogs comprised Knight of Snowden, Locksley, Jester, a second-prize winner at the late London dog show, and Betty, a young Irish bitch owned by Mr. Davidson, who accompanied me on the trip.

We arrived at our destination in good season for a day's sport, and taking Knight, Jester, and the Irish bitch, went out for a short trip, intending to return to take a hand in a pigeon match which was to take place in the afternoon. On our return shortly after noon, although sultry and extremely dry, we laid out a bag of 17½ brace of quail and ruffed grouse, which we thought excellent. Mr. Davidson's bitch was not up to the high standard he had formed of her, but then it was her first day out for the season, and all her previous work had been south last winter.

On the following day, being exceedingly anxious to see Locksley hunted by his former owner, I insisted upon Mr. Davidson taking him in charge, as on the only trial I had given him he displayed a tendency to wildness; I took the puppy Jester.

On entering the first field I was treated to an agreeable surprise in the perfect understanding that existed between the dog and his former owner. On being cast off he cut out the field like a quarter horse, wheeled to the whistle, and, casting his head into the wind, went boldly up and nailed his first covey in a manner that made "light eyes, long loin, cow hocks and badly carried tail" all disappear on the instant. On the birds being flushed his behavior was perfect, and the manner in which he retrieved his first bird under his old master delighted me, although when purchased he was not warranted to retrieve game, having been broken by the force system during the past winter and had not been tried on birds. His actions on this occasion caused me to raise his price above the $200, the price stated in your columns, for which he could have been bought.

Our luck in finding game continued through the day, and in the evening we turned out a beautiful lot of game. Aside from the pleasure we take in occasionally showing dogs on the bench we take great pleasure with them in the field, and a bench show dog without field qualities is of no use to me: that being the case, I am content with such dogs as Knight, Liddesdale and Locksley, particularly the former two, over which I have spent so many enjoyable days, and which as field dogs I have never seen excelled, although by some they may be classed only as second or third raters.

Our bag for three days consisted of 93½ brace of quail and partridge, which is not bad for Ontario. T. G. DAVEY.

ST. BERNARD CLUB OF AMERICA.

A MEETING of the Board of Governors was held Monday, Nov. 12, at the Hoffman House, New York city. The following gentlemen were present: E. H. Moore, Geo. M. Elwood, W. H. Joeckel, Lorenzo Daniels, with K. E. Hopf in the chair. Mr. Moore had come all the way from Boston, and Mr. Elwood all the way from Rochester to attend the meeting. Messrs. E. B. Sears, of Melrose, Mass., John Keevan, of New York city, and T. H. Hastings, of Fond du Lac, were received into membership.

After a long and thorough deliberation, it was decided to offer a series of specials to be competed for at the most prominent shows in 1889. According to the constitution, the competition is open to members of the club only.

These specials are to be solid silver cups varying in value from $15 to $25, and are to be known as the St. Bernard Club cups. They will be distributed as follows:

Westminster K. C. Show.—Two cups, value $25 each; one for the best smooth-coat, the other for the best rough-coat (dog or bitch); four cups, value $15 each, for the best American-bred smooth-coated dog and bitch, and for the best American-bred rough-coated dog and bitch; two cups, value $15 each, for the best smooth stud dog with two of his get, and for the best rough stud dog with two of his get. Total value, $140.

New England Club (Boston) Show.—Two cups, value $25 each, for the best smooth-coat and for the best rough-coat (dog or bitch); four cups, value $15 each, for the best American-bred smooth-coated dog and bitch, and for the best American-bred rough-coated dog and bitch; two cups, value $15 each, for the best smooth-coated brood bitch with two of her get, and for the best rough-coated brood bitch with two of her get. Total value, $140.

Chicago Show.—Four cups of $25 each, for the best smooth-coat (dog or bitch), for the best rough-coat (dog or bitch), for the best American-bred smooth-coat and for the best American-bred rough-coat. Total value, $100.

N. J. K. C. Show.—Four cups of $15 each for the best American-bred smooth-coated dog and bitch, and ditto rough-coated dog and bitch. Total value, $60.

Philadelphia Show.—Two cups of $25 each, for the best smooth-coat (dog or bitch), and for the best rough-coat (dog or bitch. Total value, $50; grand total, $490.

In order to prevent these cups from being awarded to dogs unworthy of the honor, the stipulation was made that a dog or bitch, in order to be eligible to compete for them, must have won a prize in its respective class at the show where the competition is to take place. To make it very plain: If the best dog or bitch, owned by a member of the St. Bernard Club, is awarded a v.h.c. only in open or puppy classes, the club cup cannot be awarded to the said dog or bitch and reverts to the St. Bernard Club.

You will notice that the club means, by its very liberal offers, to encourage its members to come to the front with their home-bred dogs. There are many owners of good dogs that are still giving the club a wide berth and do not care to support it. When the time comes the club, in its turn, will not support them. The initiation fee is $10, annual dues $5. A word to the wise is sufficient. A number of judges were selected who will be recommended to the bench show committees as being approved by the club.

The offer made by Mr. Thos. B. Lee, of Toledo, to donate the stud services of his champion Victor Joseph as a special, to be competed for at a show to be designated by him, was accepted with thanks. It was decided to hold puppy and produce stakes, which will be announced later.

The annual meeting of the club is to be held on the first day of the Westminster Show, Feb. 19, 1889. K. E. H.

THE COURSING MEETS.

THE following are some expressions of opinion as given by those interested in the sport of coursing:

M. E. Allison, Hutchinson, Kan.—"I don't think FOREST AND STREAM ought to be too rough on me about the wolf hunt we had out on the coursing grounds. Out West we don't have much style about us in our sport, and think it's all right to kill a wolf any way you can, whether he's in a pen or not. Besides, you have to work schemes to get your gate money. If you didn't have any gate money where would be the fun?"

Dr. G. Irwin Royce, Topeka, Kan.—"I want it understood that I volunteered to chase the wolf along the fence in the Hutchinson inclosed wolf hunt, simply as a matter of accommodation to Mr. Allison, and to advance what I thought to be the interests of the sport of coursing; but I told Mr. Allison the right idea would have been to run the wolf around the yard once or twice, and then take him up. I didn't like to see him killed in a corner. I want it understood, too, that I didn't own Ruby in the delayed courses at the American Club meet, and that I 'rode furiously two or three miles' only to accommodate Mr. Allen, who couldn't take care of Ruby himself."

H. C. Lowe, Topeka, Kan.—"Do you know, while I shouldn't for a moment wish to boast of my own property, to be sure, I mean to say that White Lips is the greatest greyhound bitch under the bloomin' canopy, excepting Patira, and Patira is the greatest except White Lips. I feel positively melancholy when I think what a spactacle they will make of all the other entries at the coursing meets next spring and fall. And, don't you know, my imported Lord Neversettle is going to show a rare good one. He is, without doubt, of the highest grade."

Dr. Van Hummell, Omaha, Neb.—"Did you see Master Rich jump the fence? Did you see him kill his jack every time? Did you see him bring back the rabbit's tail in his mouth, that time he ran in the slips with Rowdy? Great dog, Master Rich! Do 'em all up next year! Do 'em all up!"

D. C. Luse, Great Bend, Kan.—"Did you ever notice that a jack rabbit's eyes are set in his head so that he sees square behind him when he runs? You watch one, and you'll see him swerve to one side just the instant a greyhound is about to pick him up. Of course, a jack can't run with his head over his shoulder. He always looks straight ahead; but he always knows what's going on behind him, you can bet your life. He's built that way."

Chan. Smith, Des Moines, Ia.—"Sam Hinkston, of Weldon, Decatur county, Iowa, is an old Englishman, and owns a pack of foxhounds, which he delights to run. He also owns a mare, that does something that I never before heard of any horse doing. She jumps a wire fence, slick and clean. I know it, because I've seen fellows who saw her do it. She's a daisy."

F. H. Perry, Des Moines, Ia.—"My red Irish Nino is the handsomest bitch in Iowa. Just look at her, isn't that quality for you? She's a whole house and lot in the field, and just as good as she looks."

Col. R. S. MacDonald, St. Louis, Mo.—"It is true, Gyp didn't win the cup in the grandparent stakes at Great Bend; but just keep quiet till next fall. I'm going to get a dog over from England that will win something or die. I have a friend over there now, and he has instructions to pick out as good a young dog as he can find on the island. I'm going to come to Great Bend better fixed next year, and you'll find my dog right down close at the end. Bear that in mind."

R. D. Williams, Lexington, Ky.—"I wish to whisper in the ear of FOREST AND STREAM, not necessarily for publication, that I shall bring down a greyhound to Great Bend next year that will simply make an Uncle Tom's Cabin dog out of anything that meets him in the slips. Don't mention this."

C. P. Page, Minden, Neb.—"If my luck will only turn so that I don't get all my dogs killed before they run, next year I shall make a mournful procession out of the rest of the greyhounds at the meet. Just keep it quiet. I don't want it generally understood." E. HOUGH.

A DAY WITH THE BLUE RIDGE BEAGLES.

Editor Forest and Stream:

As most of your readers know, the beagle is specially adapted to the pursuit of rabbits, and a day in the field with a pack of good beagles is hard to beat in the way of sport. I always enjoy a description of dogs engaged in a hunt, and thinking others will do so, I will give you a description of some of the ones used on this occasion. Thone (Rip—Blossom, A.K.R. 5711) was bred by Prof. W. W. Legare, Selma, Ala., and is a beautiful white, black and tan, and has a beautiful tongue—long, clear and flute-like. Dan, same color, was bred by Robert Cromwell, Jr., Baltimore, Md., and is by his Jack out of Music. Nell, Dinah, Sue and Jolley's Tom were all sired by Thone.

Having decided to accept the oft-repeated invitations of Dr. J. G. D. to hunt with him, the morning of the 14th October found the writer and two boys, accompanied by W. J. H., on their way to the Doctor's.

On arriving at our destination we found the Doctor had been unexpectedly called away, but he had kindly arranged with his brother-in-law (an old schoolmate of the writer) for our reception.

The first honors of the day in starting a rabbit from its form lay with Sue, the smallest one of the pack, weighing only about 12lbs., while Dinah was the first one to taste blood, she catching the rabbit after it was slightly wounded by H. Some excellent running was done by the dogs, and some fine shots were made by some of the party.

After tramping around through briers, bushes and swamps for a while we returned to the hospitable home of friend S., where we were cordially received and enjoyed the bountiful dinner set before us by Mrs. S. as only those whose appetites are sharpened by outdoor exercise know how to appreciate.

In the evening, after having been in the field about five hours, our score of results was as follows: Twenty-one rabbits were started and seventeen were either caught by the dogs or killed by some of the hunting party. Three of those started were not run by the dogs, being started by some of the party while the dogs were after others. This really makes the score seventeen out of eighteen, which I call tolerable good work for dogs that are mostly young ones.

The Blue Ridge Beagle Kennels generally run from three to seven brace of beagles, but on this occasion only had three brace. The beagle is just being introduced in this part of the country, and they are very popular with sportsmen who have tried them. They will, in all probability, supercede the larger or foxhound, as foxes are extremely scarce and the beagle suits better for rabbit hunting than the larger hound, and two or three of the little fellows can be kept on the food required for one large hound.

BLUE RIDGE.

DENVER, S. C.

SCENT AND OTHER FACULTIES.

Editor Forest and Stream:

In answer to "Clumber's" letter in your issue of Oct. 25, I would say that it was the scent of the horses that his spaniel Johnny followed, and will give my reasons for thinking so. I have a black spaniel bitch eight years old. She is very much attached to a half-bred gray mare I own. This bitch Lucy, when the mare is in, is generally to be found in the mare's stall under the manger. Although when going out after woodcock, snipe or partridge (ruffed grouse), I always take this bitch with me. I tie her up when going to shoot golden plover; these plover being such extremely shy birds, the less one has with him to attract their notice the better. The shooting ground for the plover is five miles from Cookstown, and on my going out after them on several occasions on my return to where I had left my horse and buggy, I have found the bitch lying under the buggy quite contented, having evidently followed the scent of the mare, with no wish to find her master, if so she could easily have scented me across half a dozen fields, a mile or so through cleared fields. The bitch on these occasions that she followed the mare, was let loose by my boy about one hour after I had left home. I never knew Lucy to scent either of my other horses. If I drive or am driven out from home with a strange horse she never follows. I think that the above is pretty conclusive evidence that the bitch followed the scent of the mare.

There is one point that "Clumber" does not mention, and that is whether he always drove the same horses or not, when Johnny escaped and followed. Some years ago I owned a black and tan spaniel that followed me wherever I went, on foot or on wheels, and there was no driving him back, except when I went to church on Sunday, and at that time he never offered to follow at all; he would come to the gate, put his head through the bars, and watch me as far as he could see me. It has always puzzled me how he knew where I was going, for at that time we had no bell on our church, so that it could not have been that he heard the bell. The only clew he would have was the prayer book in my hand. How he knew Sunday and where I was going has always been a mystery to me.

Dogs that are in the habit of being fed or let out for a run at a certain hour in the day, can tell that hour to the minute. I have a brace of cockers that accompany me to the postoffice at half-past ten o'clock every day when I am in; at this hour they are to be found to the minute at the front door, and if I do not make my appearance close on time they yelp and bark until I do. H. B. N.

COOKSTOWN, Ontario.

Editor Forest and Stream:

In your last issue, "J. E. Van E." cites an interesting case of a hound's finding his master, and he seems to think that champion Johnny followed my scent, although I was driving. I would be inclined to agree with him in this, were it not that each time I saw the dog tracking me his nose was held close to the ground as he ran, not breast high as in hunting a wind scent. Then again he ran along the middle of the road without deviation, as he would not be apt to do were the scent on the air. I own I can't understand it at all.

Another instance of "the sense of smell in dogs" worthy of remark is the following exhibited by my Clumber bitch Nell III. Three years ago I was starting on a shooting trip down the Ottawa River, and as Nell was due to whelp in a couple of weeks I intended to leave her behind. But she knew what was up, and on my locking her in a kennel, ate her way out, and when I shut her up again repeated the performance. As I was just getting into the vehicle, which was waiting to take me to the steamer, I coupled her up to the other dogs and took her with me.

As we had three other Clumbers with us we did not need Nell; so when we left camp in the morning would chain her up. She used to kick up such a shindy that after two or three hours of it the man's patience would wear out and he would unchain her. At once she would start after us, and no matter where we were would find us out, though the islands are densely wooded, and in many places there were ponds and marshes to be waded through. One morning in particular we were shooting from a canoe on the "battures," which were hidden from the camp by an island. My companion ferried me across the deep channel, which Nell had to swim, and took the canoe up to the "battures," where I waded along the shore and joined him at the head of the island. We then paddled about half a mile from the beach and began shooting. After a time I saw something white trailing along the shore where I had been, take to the "battures," and wading and swimming come to us. I don't think she came because she heard the shooting, as it was a place much frequented by sportsmen, and as a rule there was "banging" from daylight to dark. This to my thinking was another remarkable performance. CLUMBER.

GUN SHYNESS.

WHILE our pup is yet young he should be taught to love the sound of the gun. This can be easily accomplished if the proper course is pursued. In the first place we take a couple of old tin pans, and while his attention is attracted by something that interests him we strike them together, lightly at first; and if he appears to be afraid we are very careful not to add to his fright by a repetition of the noise anywhere near him, but take the pans to quite a distance from his pen and leave them, and wait awhile before trying again. When it is time to feed him we go to the pans, and while sounding our whistle, as before described, to let him know that we are coming, we give a stroke just loud enough for him to hear plainly, and at once proceed to his pen and give him his feed. By pursuing this course for a few days, and gradually going a little closer every time, he will become accustomed to the sound, and learning that the noise is connected with our coming, and also his dinner, he soon gets used to it, and in a short time will stand the racket without flinching. When he has become so accustomed to the noise that he shows no signs of fear at quite a loud crash it is time to try him with the gun. In order to do this understandingly you will require an assistant. Let him take the gun loaded with a light charge of powder and at some little distance—say forty or fifty yards away—and be ready at your signal to fire. You will now enter his pen, and after he gets a little quiet call him to you and put a piece of meat before him and bid him *Toho*, at the same time raising your hand as a signal for the gun. Carefully watch him, and should he display any sign of fear the experiment must be repeated as with the pans. There is no need of your presence only to notice how he behaves, and you can dispense with your assistant, unless, as will probably be the case, he does not mind the report, when the gun can be brought nearer, and you can make another trial. Great care must be taken not to frighten him with too loud a discharge, nor should it be too close to him, until he gets used to it. By paying close attention to him when under fire, you can readily tell how far it will do to go, and by properly conducting your experiment you can soon teach him to love the sound of the gun, even when fired over his head; indeed we have cured in this way some of the worst cases of gun-shyness that we ever saw. Comparatively few dogs are gun-shy, and it is with these only that those precautions are necessary. After your pup has been carefully accustomed to the noise do not lay the gun aside as soon as you have accomplished your object, but let him hear the sound occasionally until his education is complete, taking good care that the discharge of the gun is at once followed by something pleasing to him—his dinner, for instance—or let it be a prelude to giving him his liberty, thus giving him to understand that the noise means something, and soon the noise, or even the sight of the gun, will cause him pleasurable emotions that he will never forget.—*Hammond's "Training vs. Breaking."*

SPANIELS FOR BENCH AND FIELD.

HORNELLSVILLE, N. Y., Nov. 18.—*Editor Forest and Stream:* I suppose "Quester" would have us believe that he was the first to advocate spaniel field trials, but if he will look over your files of 1878-9 he will see that he is wrong.

I admit it was a "set back," and "I was mad" to be beaten by the field spaniel Brahmin. Did I not have reason to be mad? I raised him from a puppy, but I never exhibited him because I could never get him under 28lbs. I will not starve my dogs to weight; the dog was not good at the stud nor in the field, so I sold him cheap; could have had him back for $25, but would not take him as a gift.

Any one who has cash enough can buy good stock; but Messrs. Rendle, Nelles, West and Oldham have yet to make a name as breeders. Mr. Willey's and my stock is just alike, only I breed to the standard, he to the long and low, but not satisfied with what he had, he must needs cross his old bitches with the longest and lowest field spaniel ever imported. I am a bit slow myself, but I never did and never will own but one slow pottering dog, and that champion Benedict. "An Onlooker" thinks he and "Quester" have "treed something." Well, I am not dead yet. I knew he would "cry peccavi" on the Boston show challenge. Now then, young fellow, don't tell the boys I bluffed you. I don't believe you belong to the N. D. Club, because you have "no sand," so I will hang up your scalp with the rest.

My "perch" is too high for Messrs. "Onlooker" and "Quester" to shin up; they can never grind an axe sharp enough to cut the tree, nor can they raise enough wind to blow it down, so I will give them and the rest of the clique an easy job. Just let them explain how the present style of long and low cockers are "eminently well built, graceful and active dogs," and do they "show strength without heaviness or clumsiness?"

When the winds of winter blow,
His little short legs cannot go,
And April showers tax all his powers,
To crawl through the mud, don't you know?

To Mr. Watson I would say that I never wanted a "giraffe" spaniel, and I remember that at Philadelphia when I was deliberating about sending the long-legged Johnny out of the ring for having too long legs, a gentleman handed me a note which read, "Don't fool around with a dog if he is able to walk." I was not judging spaniels as I want them, but as they were entered, when they had a chance to compete the workmen got the blue ribbon, but when the class was of "crocodiles" and "weeds" then I had to put the long and low ahead.

I did not suspect that Mr. Mason was bitten so badly by the "fancy flea," and it was at Mr. Wade's suggestion that he was given the mastiffs at Buffalo. J. OTIS FELLOWS.

Editor Forest an Stream;

Now that Mr. Fellows has gone to earth and our little side show controversy is over, we can get down to the main point at issue—spaniel field trials. Are they to be or not to be? The Spaniel Club as a club seems moribund; but surely the individual spaniel men are alive to the interests of the breed! Messrs. Wilmerding, Hemingway, West, Willey, Nelles, Mercer, Oldham, Laidlaw, Kirke, Niven *et al.*, do let us hear from you on this vitally important subject. QUESTER.

MORE COON.

WHILE coon hunting in Connecticut during September I discovered that woodchucks could climb trees and that they ran nights. Twice I saw my dogs take a track, once they "barked up," and we found a woodchuck up a white birch about 10ft. from the ground. The other time, upon going where they were barking, found they had a woodchuck in a swamp under some roots. These were different nights; one a moonlight one, the other very dark and cloudy. My dogs have, with my help, killed thirty-four coons so far this season, five of them they caught on the ground. The last one weighed 25lbs.; by far the heaviest of the lot. J. G. L.

CAMBRIDGE, Mass.

I have read with some amusement and some impatience the statements of your various correspondents concerning the whicker of the coon. One is reminded of the ancient feud over the shield of a certain statue. One knight saw it from the east and swore it was of gold; the other took a hasty glance from the west and was prepared to stake his life on its being silver. As they belabored each other a third party of less haste and more judgment interfered and stopped the fight by showing the true state of affairs. Now to apply—I have often heard the whicker of the coon and the cry of the long-eared owl, and have found it difficult at times to distinguish them. The note of the coon is perhaps deeper and more squalling, especially if it be a fully adult animal. The mottled owl also is said to utter this prolonged quavering cry, but I am not familiar with this species.

ERNEST E. THOMPSON.

NEW YORK.

A SHORT ESSAY ON PUPPYISM.

THERE are puppies who have no canine appetites, who drink more than they eat, and sleep more than they live. There are puppies from the ducal coronet down to the shoeblack; puppies of every complexion, size, stature and denomination. There are puppies in crape as well as in ermine; tie-wigs as well as crops. Puppies are cherished by the ladies, who consider them as innocent animals, and treat them as lapdogs; they are admitted to female toilets, and are looked upon as so insignificant that they are not noticed. A hairdresser is an animal of superior merit, a dentist is a king and a dancing master an emperor, compared to a dangling puppy.

In the Senate a puppy may be distinguished by the choice of hard words without any meaning; constantly speaking to every question without understanding it; addressing the chair without any address; joining the treasury bench, and dividing with the majority, right or wrong.

In the pulpit, the stroking a white hand and admiring it with a ring in the middle of a sermon, a simpering ogle, and affected lisp, and a circling gaze for admiration, particularly from the ladies, all denote the clerical puppy.

At the Bar, an affected pronunciation, and lugging in my "lud and autority," without any sort of authority, brow-beating witnesses, whose ignorance and embarrassment prevent them from acquitting themselves with propriety, asking questions and straining the meaning of answers all argue the puppy.

In medicine, a glaring chariot, a large wig, a pedantic selection of technical phrases, a dogmatic decision, an evasive replication, determine the faculty puppy.

From these specimens the reader will be enabled to form some idea of puppyism in most situations; he will easily trace the puppy fop, the puppy sportsman, the puppy critic, the puppy connoisseur, the puppy poet, and even the puppy writer.

That I may not be classed under the last, I shall here terminate this essay by declaring myself a sworn foe to puppyism in every class and station of life.—*Sporting Magazine, 1797.*

AMERICAN KENNEL REGISTER.

FOLLOWING are the numbers of the dogs entered in the November number of the *American Kennel Register:*

BASSET HOUNDS.

6667. Jocrisse, Cornelius Stevenson.

BEAGLES.

6668. Bugle II., E. W. Whitcomb. 6670. Josette, Wm. West.
6669. Cappie, E. W. Whitcomb.

BULLDOGS.

6671. Uncle, G. B. Benners.

CHESAPEAKE BAY DOGS.

6672. Chesapeake, E. A. Palmer.

COLLIES.

6673. Bobbie of A., W. Werntz. 6679. Janie II., Sol. W. Blue.
6674. Bawn, T. H. Burgoyne. 6680. Lucilla of A., F. Morris.
6675. Cregellie, Miss A. Thayer. 6681. Prince Legio, F. Morris.
6676. Flash II., T. H. Burgoyne. 6682. Rowdy Girl, W. O. Werntz.
6677. Harold, W. R. Adamson. 6683. Shep of A., F. Morris.
6678. Hunter, W. R. Adamson.

DACHSHUNDE.

6684. Fiedel, G. Amsinck. 6686. Wütherich, G. Amsinck.
6685. Halloh, G. Amsinck.

GREAT DANES.

6687. Pluto, Jas. H. Day, Jr.

GREYHOUNDS.

6688. Iuanda, M. H. Raulett.

ITALIAN GREYHOUNDS.

6689. Bruce, B. D. Nuitz.

MASTIFFS.

6690. Beech Grove Gloster, W. Taylor. 6705. Ilford Caution III., George Jackson.
6691. Beech Grove King Agrippa, Geo. Jackson. 6706. Ilford Mark, Wm. X. Huber.
6692. Beech Grove Jack, Thomas W. Shunk. 6707. Lady Belle, Berkshire Kennels.
6693. Champion II., Herbert Edward Stockbridge. 6708. Leah II., J. A. Eames.
6694. Dasia, Geo. W. Simpson. 6709. Melbourne, Chas. E. Bunn.
6695. Eadbert, Wm. Wade. 6710. Minting II., Geo. P. Jones.
6696. Ector, Wm. Wade. 6711. Nora II., Redfield Procton.
6697. Edith, Wm. Wade. 6712. Philammon, J. H. Stone.
6698. Edric, Wm. Wade. 6713. Pilot, Ida F. Warren.
6699. Egric, Wm. Wade. 6714. Prince Bismarck, D. T. Kolliker.
6700. Eureka, Jas. H. Day. 6715. Rex IV., J. L. Hope.
6701. Fortress, Thomas Makemson. 6716. Scott Wilks, Charles A. Pontius.
6702. Harner's Truth, Jacob M. Harner. 6717. Vermont Bee, N. W. Pierce
6718. Vermont Don, G. E. Edson.
6703. Hero, A. S. Hair. 6719. Wacouta Sybil, N. C. Royster.
6704. Huronia, Jas. H. Day.

POINTERS.

6720. David of Delphos, J. W. M. Cardeza. 6722. Floss Bang, Elm Kennels.
6723. Nell III., D. V. G. Curtis.
6721. Duke, B. N. Cook. 6724. Pellet, W. M. Haines.

PUGS.

6725. Tu'penny, Henry A. Allen.

ST. BERNARDS.—ROUGH-COATED.

6726. Basel, Albert Young. 6736. Pell, Halfway Brook Kennels.
6727. Ben Hur, Tracy Gould.
6728. Benito, C. E. Woodman. 6737. Plato, F. L. Usher.
6729. Bruno, Ed. Clayville. 6738. Rex V., J. W. Lovatt.
6730. Countess Sequa, C. C. Chambers. 6739. Silvernorn II., Jas. H. and John H. Gault.
6731. Dolph, Miss J. E. Headley. 6740. Sir Sam E., S. W. Elliott.
6732. Earl of Warwick, E. W. Burger. 6741. The Duchess Armande, Miss Mary E. Wilson.
6733. Kent, Miss E. L. Fuller. 6742. Tip, A. F. Jones.
6734. Little Lord Fauntleroy, Miss Grace Usher. 6743. Vesta III., W. Peirson.
6744. Victor, A. F. Jones.
6735. Nobility, Mrs. B. H. Kathe. 6745. Wm. M., Halfway Brook Kennels.

SMOOTH-COATED.

6746. Cato, Jr., Halfway Brook Kennels. 6749. Isabella, Mrs. B. H. Kathe.
6750. Kara II., Meuthon Kennels
6747. Countess Irma, G. P. Wiggin. 6751. Nona III., N. D. Mann.
6752. Topsy, G. P. Wiggin.
6748. Howe's Elsa, L. Howe.

SETTERS—ENGLISH SETTERS.

6753. Bob Ross, W. H. Wild. 6756. Duke of St. Paul, H. E. Thompson.
6754. Charlie G., Dr. F. D. Brown
6755. Countess Amelia, Elm Kennels. 6757. Echo, A. H. Mason.
6758. Thursday, H. W. Hopkins.

GORDON SETTERS.

6759. Guy II., C. E. Bardwell.

IRISH SETTERS.

6760. Allene II., J. S. Martin. 6765. Iowa Prince, F. H. Perry.
6761. Bang, John Maughan. 6766. Iron King, J. H. Millspaugh
6762. Brano W., C. P. de Allencar Cintra. 6767. Larne, Dr. A. T. Dobson.
6768. O'Donovan Rossa, Michael Flynn, Jr.
6763. Conmara, J. R. Gleason. 6769. Paddy Sarsfield, D. Ward.
6764. Don Pedro, Nelson Royal.

SHEEPDOGS.—BOB-TAILED.

6770. Dame Ursula, Chas. Rosser.

SPANIELS.—FIELD AND COCKER SPANIELS.

6771. Beckey II., O. B. Gilman. 6772. Kobo, Jr., W. G. Clark.

TERRIERS.—BULL-TERRIERS.

6773. Gretchen, H. P. Hopkins.

FOX-TERRIERS

6774. Guess, N. J. Winfield. 6775. Victoria, W. H. Clift.

IRISH TERRIERS.

6776. Sandycroft Vim, Victor M. Haldeman.

ROBINS ISLAND CLUB.

IN the early spring of 1881 Dr. S. Fleet Speir invited some friends to his residence for the purpose of interesting them in the purchase of Robins Island as a game preserve. For many years this island had been used for the Eastern field trials, which are now held at High Point, and Dr. Speir has thus become acquainted with the property, which is situated in Peconic Bay, being a little over a mile from shore.

It was decided to purchase the island and organize a club. Mr. William B. Kendall of Brooklyn was elected president, and under his auspices the old house upon the island was remodeled, and on November 5, 1881, the club house was opened for visitors.

It has been the custom of the club to give field trials, in which the members participate by running their dogs and shooting over them in the contest for the All-Aged, Brace and Derby Stakes. In the Eastern, Southern, and Western field trials throughout the country the owner of the dogs run employs a professional handler.

In many respects the Robins Island Club reflects a decided change which has come over the American people concerning healthful sports, and is a recognition of its value in counterbalancing the evil of overworked humanity. The great strain caused by competition in the race for wealth undermines the physical forces, strains the nerves and overtaxes the brain. The relaxation taken in England and on the Continent in sport and in the chase has been fruitful in developing a healthy people. Many persons to rid themselves of vexatious care seek rest in an ocean voyage and travel among a more quiet people, who wear a silken thread of pleasure through their business life.

Should more of these sporting clubs be formed and the islands and wild lands be kept as preserves for native game, there would be saved to our country much of beauty, and money would not be lavished in foreign countries that are not so rich in natural resources.

There is wanted knowledge as to the care and management of our game. An English gamekeeper is not able to cultivate the land so as to provide food in a natural way, that

he varied kinds may be raised for use for all seasons of the year.

The land upon Robins Island, that is not woodland and thick underbrush, is planted with wheat, rye, buckwheat, sorghum, golden millet and other cereals, which are left standing in the fields, so that the birds may gather their food in the natural way. During the winter season protection is given the birds by the piling up of underbrush and the building up of low covers, and the birds are provided with wheat screenings, purchased by the ton at a very low price.

The old club house caught fire and burned to the ground just before the meeting, November 15, appointed for the field trials of 1887. The Board of Directors decided not to rebuild at once, but leave it to the new Board, which would be elected to office in the early spring of 1888. Plans were presented by several competing architects, and that of Mr. Rudolph Laurent Dans of Brooklyn was adopted in June. A new site was selected and the building was begun on July 24. It has been completed in a little less than 100 days by Myron C. Rush, the contractor. The shooting season has opened and the quail are strong and vigorous. There are also a large number of rabbits and squirrels on the island. New kennels and kennel yards have been built for the comfort of the dogs. The club house is in charge of the efficient superintendent, S. W. Beach. Abundant sport may be obtained in the club yacht, as the bay affords good duck shooting.

Officers of the club: President, S. Fleet Speir, M.D.; Vice-President, H. D. Polhemus; Secretary and Treasurer, Samuel B. Duryea; Executive Committee, S. Fleet Speir, M.D., H. D. Polhemus, Samuel B. Duryea.

List of members: S. Fleet Speir, M.D.; William B. Kendall, H. J. Cullen, Jr.; W. B. Dickerman, S. B. Duryea, E. M. Field, L. H. Bullard, Austin Corbin, George S. Edgell, William L. Pomeroy, D. A. Lindley, H. D. Polhemus, Leander Waterbury, Alden S. Swan, W. M. Van Anden, William Hester, Chauncey Marshall, M. P. Grace, J. N. Jarvie, William Rockefeller, E. W. McClave, William Ziegler, W. L. Wellington, William Stanley and J. H. Ballantine.

The new club house will be formally opened by a dinner on November 30.—*New York Graphic.*

DOG TALK.

WE have received the premium list of the Northern Illinois Poultry and Pet Stock Association show, at Rockford, Ill., Dec. 3 to 8. The premiums throughout for the kennel department are $3 cash (or engraved collar, at option of winner) to first, and silk badge to second. Specials of $5 for best kennels of the chief breeds.

Some finely bred pugs are offered for sale by Dr. M. H. Cryer, of Philadelphia. See his advertisement in another column.

AMERICAN PET DOG CLUB.—Minutes of the Annual Meeting of the American Pet Dog Club (Incorporated).—The annual meeting of the American Pet Dog Club as provided for in the by-laws was held Nov. 14, 1888, at 129 East Sixteenth street, New York, the president, Mrs. Wheatleigh, in the chair. On motion Miss Bannister was elected secretary pro tem. The following members answered to the roll call: Mrs Chas. Wheatleigh, Mrs. M. E. Randolph, Mrs. Frank Leslie, Miss Marion E. Bannister, Dr. M. H. Cryer, Mr. W. J. Fryer, Jr., Mrs. Henry B. Cowles, Mrs. H. E. Abbey. The minutes of the last meeting held Oct. 15 were read and approved. Two names were proposed for membership, Miss Lena Thomas and Mr. E. D. Bruce, both names being unanimously accepted. The two names accepted at the last meeting were then declared members, as per provision in by-laws. The meeting then proceeded to the election of officers for the ensuing year with the following result: President, Mrs. Chas. Wheatleigh; Vice-President, Dr. M. H. Cryer; Treasurer, Mr. W. J. Fryer, Jr.; Secretary, Miss Marion E. Bannister. Executive Committee, Mrs. Chas. Wheatleigh, Mr. W. J. Fryer, Jr., Miss Marion E. Bannister, Mrs. Frank Leslie, Mrs. M. E. Randolph, Mrs. H. E. Abbey, Mrs. H. B. Cowles. The treasurer presented his report, which was accepted and ordered on file. The proposed changes in the by-laws as per notice in minutes of last meeting were made by a unanimous vote. A committee consisting of Dr. Cryer, Mrs. Leslie and Miss Bannister was appointed to revise the by-laws and present the same at the next meeting of the club. The meeting then adjourned on regular motion.—MARION E. BANNISTER, Secretary pro tem., A. P. D. C.

SOUTHERN FIELD TRIALS.—Marietta, Ga., Nov. 12. —*Editor Forest and Stream:* In mailing your list of the All-Aged dogs in the Setter Stake I omitted to give Mr. Geo. T. Hodgson's two entries. They are: Mr. Geo. T. Hodgson's black, white and tan bitch Lady Piedmont (Dashing Rover—Raine), and his red setter bitch Vic. This makes the total number of entries in the All-Aged Stake sixty-four instead of sixty-two.—T. M. BRUMBY, Sec. and Treas. S. F. T. C.

CHANGE OF ADDRESS.—*Editor Forest and Stream:* To my many correspondents, readers of your valuable journal, let me say that after Dec. 1 my kennel of English beagles, known as the "Allegheny English Beagle Kennel," and myself will again, as formerly, be located at Wrightsville, York county, Pa., to which place I remove the latter part of this month.—A. C. KRUEGER.

THE POINTER CLUB.—*Editor Forest and Stream:* The members of the Pointer Club of America are requested to meet in New York city on the 20th day of February, A.D. 1889, at 4 o'clock P. M., the same being the second day of the W. K. C. show. All members are requested to meet at said time in the building occupied by the W. K. C. for their show.—C. J. PESHALL, Chairman.

CLARENCE F. SPEIR.

Editor Forest and Stream:

It is with feelings of extreme sorrow I bring to the notice of those readers of FOREST AND STREAM who are interested in all matters appertaining to dog and gun the passing away of young Clarence F Speir. Although but a lad in years he had hunted so much and over so good dogs that he had become a sportsman of no mean degree. The love of the hunting dog he came by honestly, for his father, Dr. S. Fleet Speir, has been so long identified with shooting matters that his name in that regard is as familiar as household words. The son was worthy of the sire, and would without doubt, had his life been spared, have been an ardent patron of both bench shows and field trials.

Clarence was already a capital shot, and could handle the setters and pointers of his father's kennels with the skill of a veteran. He could discern good work from bad as quickly, if not better, than many an older hand in sporting experience. A constant attendant at the Robbins Island Field Trials he had learned much, and his enthusiasm over a good bit of canine cleverness was to the full as great as was his disgust at the work of a slovenly, careless fielder. With the latter he had no patience. To tell the truth, accustomed as he was to the working of such dogs as Romeo, Brighton, St. Elmo IV. and St. Elmo VI., he cared not a whit to hunt over an inferior animal. Handling and loving the good ones, he cared nothing for those lacking excellence in pace, nose or intelligence.

The lad was but eighteen years of age, tall and agile; he was the last one to be looked upon for an early separation from all and everything he held so dear. In looks he was the picture of health. He was animated in conversation, enthusiastic in speech when talking of his dogs or gun. His eyes were as bright as diamonds, while lips and cheeks glowed with the rich luster of the ruby. His every movement was quick, alert, body and mind in perfect accord.

His passing away was a severe shock to all who knew him. It was as sudden as a flash of light. He had just finished his school studies, and had entered himself as a student in the New York Medical College. In some unknown manner he contracted diphtheria, the attack being a quick sharp one. So splendid was the lad's physique that, acute as was the cause of the disease, he rallied quickly and convalesced in marvelously quick fashion. In two weeks he was up and about, apparently feeling no ill effects, and showing none save a slight lassitude. His father, knowing full well the insidious character of the disease, watched him carefully, but as day by day passed the anxiety wore off. They started together for a visit to Robins Island, and while on the way thither the young man had a slight faint spell in the cars, but it was of so short duration that it was attributed more to fatigue and the vitiated air of the car than to aught else. He was not tired by the journey, and on reaching his destination ate a hearty supper, and after chatting gaily with his father and friends retired early. In the morning he was among the first astir and started for a short walk. From that walk he never returned. He walked from the house along quite a lane until the main road was reached. Turning into this he had scarce gone a rod ere he was seen to fall by a young lad who was near him, who gave the alarm, and help was at once at hand. All proved of no avail, for the hopeful youth had passed to other hunting grounds. We cannot but sorrow over such departures and think not once but often of had he lived to man's estate, "what might have been."

The cause of death was heart failure. JACOB PENTZ.

BROOKLYN, N. Y.

"OUR PRIZE DOGS."

OUR PRIZE DOGS. Descriptions and criticisms of the prize winners of 1887, with thirty-one artotype illustrations from life. By Charles H. Mason. New York: Forest and Stream Publishing Co., 1888.

The first impression made by this portly volume is one of surprise at its bulk and the luxurious style of its preparation throughout. All those engaged in its manufacture have combined their skill to present it as a magnificent triumph of sumptuous book making. Photographer, compositor, pressman and binder have done each his part, and in all respects, artotype illustrations, type, paper, presswork and binding, the result attained is most pleasing. "Our Prize Dogs" is a volume of 588 pages (8× 11in.), and generously illustrated (or as it was once the way of putting it, embellished with plates) and bound in green and gold, the cover stamp being an animated portrait of the collie Scotilla. The illustrations are artotypes, or permanent photographs, and they give exact presentations of the subjects as they are. In richness, fidelity of portraiture, and effective picturing of the subjects so that they may here be studied as they really exist, these artotypes are an invaluable aid in setting forth the characteristics of the breeds. The subjects, Mr. Mason tells us, were selected as these most typical; they are:

Bulldogs: Robinson Crusoe, Britomartis.
Collies: Scotilla, Dublin Scot, Scotilla, Flurry II.
Deerhounds: Chieftain, Wanda.
Greyhound: Mother Demdike.
Italian Greyhound: Fannie.
Mastiffs: Homer, Minting.
Pointers: Bracket, Graphic, Revel III.
Pug: Bradford Ruby.
St. Bernards: Duke of Leeds, Otho, Hector, Leila.
Setters: Rockingham, Cora of Wetheral, Royal Duke, Tim.
Spaniels: Obo II., Newton Abbot Beau, Milwaukee Charlie.
Terriers: Count, Bacchanal and Lucifer.

Turning now from the external and artistic points of the book to its letter press, we find a ready explanation of the delay in publishing "Our Prize Dogs," for here is detailed treatment of nearly a thousand different specimens. The list includes all the winners of first, second and third prizes at the Buffalo, Newark, Providence, Boston, Pittsburgh, Philadelphia, Hartford and New York shows of 1887. A complete record is given of the show winnings for 1887 and previous years in America and abroad. Other details are of color and markings, sire, dam, date of birth, height at shoulder, weight in show condition, and names of breeder and owner. To collect and compile these particulars must have been an undertaking of such magnitude as to discourage any but the most enthusiastic, courageous and indefatigable. Here are something like ten thousand details to be set down in cold type; and every individual one of the ten thousand must be set down correctly, for exactitude and accuracy are the first qualities demanded, they are absolutely essential if the book is to be of practical value to breeders, as it is designed to be. But this is not all. To the description of each specimen is added a criticism setting forth the points of excellence and noting the defects. This is the bone and sinew. It is here that the author's profound knowledge and rare critical faculties are shown in every line. Mr. Mason is a judge of dogs, a born judge, and a critic whose innate gifts have been supplemented by a lifelong devotion to study of the several breeds of dogs. He is a judge of dogs as some men are judges of horses, and others of the arts. He is a critic whose opinion of a dog is determined by one thing alone—the actual merits of the specimen, as he sees them. He is by far the most competent all-around judge we have in this country to-day; and when such a man sets down his criticisms, as here given, they may well be studied with care and profit —the more care the more profit. "Our Prize Dogs" is not only a compendium of information and intelligent criticism; it is an educational text book, and as such, not less than by reason of the elaborate scope and the beautiful workmanship, its publication is to be welcomed.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Pollywog. By Warner & Hamilton, Canaan Four Corners, N Y., for dark fawn English pug bitch, whelped Aug. 7, 1888, by Cricket (Toodles, A.K.R. 2147—Tuck, A.K.R. 4960) out of Trinket (Dandy—Pansy Blossom, A.K.R. 5458).

Hector Gordon. By Chas. Bolzin, Kellogg, Ia., for black and tan Gordon dog, whelped July 8, 1888, by General Gordon (Turk —Gyp II.) out of Floss II. (A.K.R. 6267).

Nellie Gordon. By J. T. Pauntin, Coralville, Ia. for black and tan Gordon bitch, whelped July 8, 1888, by General Gordon (Turk —Gyp II.) out of Floss II. (A.K.R. 6267).

Clifford II. By E. P. Baldwin, Norwich, Conn., for red, white spot on breast, Irish setter dog, whelped Oct. 4, 1887, by Irish Laddie (Glencho—Tara) out of Colleen Bawn II (Dirk—Maud II.).

NAMES CHANGED.

Little Dot to Rural Dot. By Rural Kennels, Wakefield, Mass., for black, white and fawn beagle bitch, by Flute M. (Flute—Collette) out of Belle (Mark Antony—May Belle).

May B. to Rural May. By Rural Kennels, Wakefield, Mass., for black and white English setter bitch, by imported Belthus (champion Rock—Cockerton's Meg) out of Daisy.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Cleopatra B.—Pericles. Geo. Rupprecht's (New York) mastiff bitch Cleopatra B., A.K.R. 6448 (Debonnair—Boss's Minnie) to his Pericles (A.K.R. 6450), Oct. 5.

Lady Dido—Bradford Harry. W. D. Reid's (Elmira, N.Y.) Yorkshire terrier bitch Lady Dido (Prince—Flora) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), Nov. 4.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Passaic. Somerset Kennels' (Bernardsville, N. J.) beagle bitch Passaic (My Maryland—Gill), Oct. 25, five (three dogs), by their Potomac (champion Lee—Countess).

Queen Victoria. Somerset Kennels' (Bernardsville, N. J.) fox-terrier bitch Queen Victoria (Kennedy's Rip—Burrill's Jewel) Oct. 5, six (three dogs), by their Somerset Mike (Belgrave Primrose—Smuggles).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

Little Dot. Black, white and fawn English beagle hound bitch, by Flute M. out of Belle, by W. E. Deane, Somerset, Mass., to Rural Kennels, Wakefield, Mass.

Minting - Lady Beatrice whelps. Fawn mastiff dogs, whelped July 26, 1888, by E. H. Moore, Melrose, Mass., one each to Arthur J. Purinton, Lynn, Mass.; Jas. Thompson, Baltimore, Md.; J. E. Jenkins, Lynn, Mass., and Chas. E. Bunn, Peoria, Ill.

Linden King. Fawn mastiff dog, whelped July 25, 1888, by Minting out of Beaulah, by E. H. Moore, Melrose, Mass., to John Coles, Linden, Mass.

Minting—Bess' whelps. Fawn mastiff bitches, whelped April 15, 1888, by E. H. Moore, Melrose, Mass., one each to Jas. Thompson, Baltimore, Md., and H. F. Palmer, New Bedford, Mass.

Ilford Mark. Fawn mastiff dog, whelped May 25, 1888, by Ilford Caution out of Countess, by E. H. Moore, Melrose, Mass., to Wm. X. Huber, 229 Vine street, Philadelphia, Pa.

Minting—Duchess whelp. Fawn mastiff dog, whelped Aug. 15, 1888, by Minting out of Duchess, by E. H. Moore, Melrose, Mass., to Jas. W. Whitney, Rochester, N. Y.

Alp II.—Myrtle whelp. Orange and white St. Bernard bitch, by Alp II. out of Myrtle, by E. H. Moore, Melrose, Mass., to W. D. Page, Fort Wayne, Ind.

Rex Bernard. Orange and white St. Bernard dog, whelped June 27, 1888, by Hector out of Countess, by E. H. Moore, Melrose, Mass., to C. C. Chambers, Waterbury, Conn.

Alp II.—Mollie whelps. Orange and white St. Bernards, whelped July 7, 1888, by E. H. Moore, Melrose, Mass., a dog each to C. H. Smith, St. Stephen, N. B.; W. S. Gray, Lyons, Texas; J. N. Camden, Jr., Parkersburg, W. Va.; Charles Young, 23 East Kinney street, Newark, N. J.; H. M. Carpenter, 76 Wall street, New York city, and J. E. Jenkins, Lynn, Mass.

Lady Kalashin. Orange and white St. Bernard bitch, whelped July 7, 1888, by Alp II. out of Mollie, by E. H. Moore, Melrose, Mass., to H. M. Charlesworth, Owen Sound, Ont., Can.

General Scott. Orange and white St. Bernard dog, whelped May 26, 1888, by Merchant Prince out of Bernie V., by E. H. Moore, Melrose, Mass., to Louis Zettwick, Syracuse, N. Y.

Plato. Orange and white St. Bernard dog, whelped May 26, 1888, by Merchant Prince out of Bernie V., by E. H. Moore, Melrose, Mass., to Frank L. Usher, Potsdam, N. Y.

Little Lord Fauntleroy. Orange and white St. Bernard dog, whelped May 26, 1888, by Merchant Prince out of Bernie V., by E. H. Moore, Melrose, Mass., to Miss Grace Usher, Potsdam, N. Y.

Vesta. Orange and white St. Bernard bitch, whelped May 26, 1888, by Merchant Prince out of Bernie V., by E. H. Moore, Melrose, Mass., to Walter Peirson, 514 New Market street, Phila., Pa.

Confidence. Orange and white St. Bernard bitch, whelped May 26, 1888, by Merchant Prince out of Bernie V., by E. H. Moore, Melrose, Mass., to W. S. Gray, Lyons, Texas.

Merchant Prince—Bernie V. whelps. Orange and white St. Bernard dogs, whelped May 26, 1888, by E. H. Moore, Melrose, Mass., one each to Geo. H. Curtis, Adrian, Mich., and M. L. Stover, Amsterdam, N. Y.

Champion Merchant Prince—Bernie V. whelp. Orange and white St. Bernard bitch, whelped July 19, 1887, by E. H. Moore, Melrose, Mass., to D. Driscoll, 19 Chatham street, New York city.

Merchant Prince. Orange and white St. Bernard dog, whelped July 10, 1886, by champion Merchant Prince out of Miranda, by E. H. Moore, Melrose, Mass., to C. G. Wheelock, Arlington, Mass.

May B. Black and white English setter bitch, by imported Belthus out of Daisy, by W. H. Walton, Lynn, Mass., to Rural Kennels, Wakefield, Mass.

Clifford II. Red, white spot on breast, Irish setter dog, whelped Oct. 4, 1887, by Irish Laddie out of Colleen Bawn II., by O. S. Kelsey, Parkville, Hartford, Conn., to E. P. Baldwin, Norwich, Conn.

Adonis. Black and white cocker dog, whelped June 23, 1888, by Giffee out of Flirt (A.K.R. 661), by Frank E. Curtis, Simcoe, Ont., to Rev. H. H. Waters, New Orleans, La.

Bobo. Black cocker spaniel dog, whelped June 24, 1888, by Master Shina out of Woodstock Ruby, by Andrew Laidlaw, Woodstock, Ont., to Howard B. Rathbone, Syracuse, N. Y.

Brownie. Chestnut cocker dog, whelped Jan. 3, 1888, by Mack out of Nina, by Frank E. Curtis, Simcoe, Ont., to T. G. Jackson, Bradford, Pa.

Champion Little Red Rover. Red cocker spaniel dog, whelped June 30, 1885, by champion Obo II. out of Woodstock Dinah, by Andrew Laidlaw, Woodstock, Ont., to Theo. J. Hook, Rome, N. Y.

Guess. Liver and white cocker dog, whelped Jan. 10, 1888, by Sport, Jr., out of Flirt, by F. E. Curtis, Simcoe, Ont., Can., to T. G. Jackson, Bradford, Pa.

Luago. Black cocker dog, whelped June 28, 1888, by Giffee out of Flirt (A.K.R. 661), by Frank E. Curtis, Simcoe Kennels, Simcoe, Ont., to W. H. Caldwell, Milton.

Robin. Red cocker spaniel dog, whelped July 4, 1886, by Andrew Laidlaw, Woodstock, Ont., to Brant Cocker Kennels, Brantford, Ont.

Master Shina—Belle whelp. Liver cocker spaniel dog, whelped July 4, 1888, by Andrew Laidlaw, Woodstock, Ont., to Edwin R. Burrell, Kalamazoo, Mich.

Lady Dido. Blue and tan Yorkshire terrier bitch, whelped Oct. 4, 1884, by Prince out of Flora, by P. H. Coomos, Bangor, Me., to W. D. Reid, Elmira, N. Y.

Gun—Victoria Laverack whelp. For "two black, white and tan," etc., under this head in last issue, read one black and white English setter dog (Gun—Victoria Laverack), by Chas. York, Bangor Me., to W. H. Wild, Jersey City.

Rifle and Tray Shooting.

RANGE AND GALLERY.

NEW ENGLAND VS. OLD ENGLAND.

THE suggestion made in the FOREST AND STREAM that Massachusetts alone might step forward as representing American riflemen and get back that championship at military team shooting which Great Britain now holds, has been taken up in earnest, and the following correspondence may be the first chapter in the story of the international rifle match of 1889:

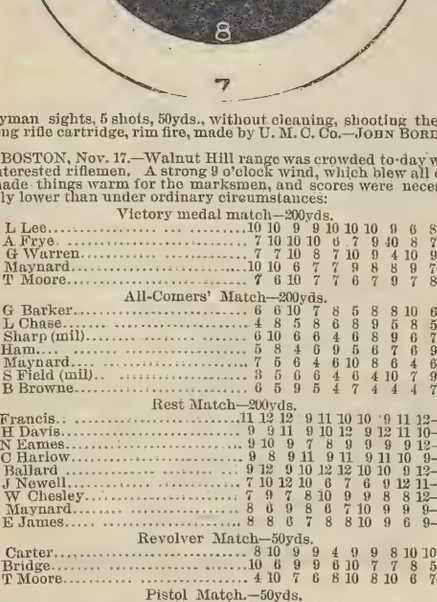
HEADQUARTERS SECOND BRIGADE, M.V.M., BOSTON, Nov. 12.—*Maj.-Gen. Samuel Dalton, Adjutant-General M.V.M.:* The gratifying success of the Massachusetts riflemen at Creedmoor and Chicago during the past three years is a matter of record in the army and national guard from the Atlantic to the Pacific, and the honest, faithful and uniformly successful results of these competitions seem worthy of a fitting recognition at the hands of the citizens of this Commonwealth. I therefore have the honor to request permission to open official correspondence with the National Rifle Association of Great Britain and kindred organizations of the English Volunteers, with the view of arranging a series of competitions between the volunteer riflemen of England and the marksmen of the Massachusetts volunteer militia. Should such correspondence indicate that a Massachusetts militia team would meet with welcome, and that competitions with the service rifle of each nation be indorsed by the proper authorities, I further ask that permission be given me to form a rifle team, to be composed, so far as practicable, of the members of the State teams of 1887 and 1888, with the view of visiting England the coming July, to participate in the annual meeting of the National Rifle Association of Great Britain; the expense of such a trip to be borne by private subscription, and I earnestly ask your co-operation and that of the inspector-general of rifle practice in the undertaking. I am respectfully, your obedient servant

J. P. FROST,
Major and Assist. Inspect.-Gen. Rifle Practice, 2d Brig., M.V.M.

HEADQUARTERS, SECOND BRIGADE, M. V. M., Boston, Nov. 12, 1888.—Respectfully forwarded. I heartily approve the request of Major Frost, and believe that the idea is one which cannot fail to receive the hearty indorsement and support of every friend of the Massachusetts Volunteer Militia. The record of our militia riflemen is most brilliant, and I believe that the benefits of such trip would prove of inestimable advantage to our expert shots. In Major Frost I have the utmost confidence. His well-known reputation as an experienced rifleman, his enthusiasm and love of the reputation of the militia, especially in him for this important undertaking, and I feel confident that every endeavor which human ingenuity can devise will be brought forth by him to sustain the reputation of the State.—BENJ. F. PEACH, Jr., Brig.-Gen.

COMMONWEALTH OF MASSACHUSETTS, ADJUTANT GENERAL'S OFFICE, Boston, Nov. 15, 1888.—Respectfully referred to Colonel H. T. Rockwell, the Inspector General of Rifle Practice, M. V. M., for his consideration, who will return this paper with his opinion indorsed thereon. By order of the Commander-in-Chief, SAMUEL DILLON, Adjutant-General.

OFFICE OF THE INSPECTOR-GENERAL OF RIFLE PRACTICE, M. V. M., Boston, Nov. 16, 1888.—I should disapprove of any such project as here outlined, unless the party making the excursion is composed of representative men, capable of maintaining the record made by Massachusetts in late years. But if a party can be properly made up, and can go abroad with the expectation of meeting the volunteers of England on equal terms, I should approve of authorizing the necessary preliminaries. I think the request of Major Frost for permission to open correspondence



should be granted. This will develop any obstacles in the way, and determine whether the suggested plan can be carried out, with a fair promise of maintaining abroad the prestige which our State troops have established at home.—H. T. ROCKWELL, Colonel and Inspector-General Rifle Practice.

COMMONWEALTH OF MASSACHUSETTS, ADJUTANT-GENERAL'S OFFICE, Boston, Nov. 16, 1888.—Respectfully returned to Major J. P. Frost, assistant inspector-general of rifle practice, Second Brigade, who is authorized to open correspondence on the subject matter contained within, it being understood that the team will not be formed or any expense incurred without the approval of this office.—SAMUEL DALTON, Adjutant-General.

HEADQUARTERS SECOND BRIGADE, M. V. M., Boston, Nov. 17, 1888.—Respectfully forwarded by order of General Peach.—CHARLES C. FREY, Assistant Adjutant-General.

Major Frost will immediately open correspondence, and the matter will probably reach a conclusion the first of the new year.

A .22 TARGET.—Tiverton, R. I., Oct. 25.—I inclose copy of target which I made on Oct. 13 with a Stevens' 5½lb. rifle, using

Lyman sights, 5 shots, 50yds., without cleaning, shooting the .22 long rifle cartridge, rim fire, made by U. M. C. Co.—JOHN BORDEN.

BOSTON, Nov. 17.—Walnut Hill range was crowded to-day with interested riflemen. A strong 9 o'clock wind, which blew all day made things warm for the marksmen, and scores were necessarily lower than under ordinary circumstances:

Victory medal match—200yds.

WILMINGTON, Del., Nov. 13.—The delightful weather this afternoon served to brighten the sport of the riflemen at Healdmoor rifle range, and added to the enjoyment of which everyone had a full share. Steady work and generally good scores were the order of the day, and darkness arrived before any one was aware of how rapidly the afternoon had passed. The scores were as follows at 200yds. off-hand, standard American target:

Continuous Prize Match.

J F McCafferty	6	10	6	8	7	8	6	10	9	8—78
S J Newman	10	7	7	9	6	10	8	6	9	4—76
H B Seeds	7	7	5	9	5	5	8	9	7	8—70
H Simpson	9	8	7	9	7	6	6	6	6	5—69
J S Newman	5	5	8	10	7	10	8	3	6	7—69

Record Practice.

J F McCafferty	10	6	10	8	6	6	7	9	5	6—73
J E Newman	6	5	5	6	5	8	8	7	10	8—68
W A Bacon	7	7	4	3	9	9	7	6	8	5—65
H Simpson	7	4	10	3	5	4	5	5	9	9—63
H Simpson, mil	4	10	8	6	4	6	4	5	5	8—60

Revolver Match, 60yds., S. A. Target.

E J Darlington	6	5	6	10	10	6	8	2	7	7—68
J T Williamson	6	7	6	9	5	4	5	6	6	7—60
H Simpson	5	8	10	4	5	5	3	5	9	10—59
E Darlington	2	5	5	5	7	7	2	6	6	0—45
W S Darlington	5	3	2	1	1	7	4	7	4	5—39

Military Match, 200yds., Creedmoor Target.

I R P Simpson	4	5	5	4	4	4	4	4	4	5—43

At 100yds., Standard American Target.

J T Williamson	9	10	10	10	10	10	10	9	9	9—96
E J Darlington	7	7	8	9	10	8	6	8	8	10—82

W S Darlington	9	5	10	6	4	5	6	9	9	6—67

The range will be open Thanksgiving Day.

BRADFORD, Ont., Nov. 10.—The second rifle match for the championship of 1888 was shot between King City and Bradford clubs on the range of the latter, and resulted in King City being defeated by $52^{9}/_{10}$ points. The day was a very dark one, with some fog and a very tricky wind.

Bradford.		King City.	
N A St Clair	82	W J Ross	90
W Lowery	82	H Rogers	83
W Homes	80	J H Ross	80
R Neilly	80	1 Bradford average	$74^{9}/_{10}$
P Matt	76	1 Bradford average	$74^{9}/_{10}$
S A Neilly	75	J W Crossley	78
J A Neilly	75	Dr Norman	71
Joe Neilly	72	W J Crossley	53
Dan Neilly	69	E J Davis	49
W J Tindall	58—749	A Ransom	48—$696^{9}/_{10}$

Nov. 15.—A very interesting rifle match between King City and Newton Brook was shot to-day over the range of the latter, King City winning by 62 points. The score is as follows:

King City.		Newton Brook.	
W J Ross	88	B W Clark	81
Dr Norman	81	T Humberston	80
W J Crossley	78	A Muckle	79
J W Crossley	78	C Homes	74

UNSER FRITZ.

TOPEKA RIFLE CLUB.—Topeka, Kan., Nov. 13.—Regular weekly shoot at 200yds., off-hand:

G E Morrison	8	8	10	10	5	9	6	10	8	9—83
R Thompson	9	10	8	10	9	9	8	6	4	9—82
I R McCarter	10	8	10	9	10	7	9	4	7	6—80
J L Fuller	4	6	10	8	7	8	8	10	7	10—78
C R Paine	10	8	8	10	8	8	5	10	5	6—78

NEWARK, N. J.—An effort will be made to get up a Newark team to take the laurels from New York in gallery work. The Our Own Rifle Club is being strengthened by the election of a number of the "old-timers" who shot on various clubs during the tournaments of the Newark Rifle Association. The club can now turn out the best team in the city. Challenges have been sent to the strong Zettler and Barry Rifle Clubs, of New York, and the Miller Rifle Club of Hoboken. It is understood that the latter has already been accepted, the match to be shot in this city. A challenge will also be sent for a match in which the Our Owns will put a team against a team selected from among the members of the seven clubs comprised in the United clubs. It is doubtful if the latter organization could turn out a team to defeat the Our Owns.

GRAND ARMY SHOTS.—A new city organization is the Grand Army Rifle Club, with headquarters at No. 634 Third avenue. The association is composed of some of the best and most noted shots in the country. At the last meeting the following scores were made at a long gallery range out of a possible 50: Judson 50, Pratt 49, Hofele 48, Henderson 46, Pipenbring 45, Mitchell 45, Clark 45, Livingston 44, De Forge 43, Smith 42, Combs 42, Paget 40, Gray 40, Moore 38, Morand 35, Champlin 35, Hess 33.

ARMORY FIRE.—A Paris cable under date of Nov. 15, says: The government works for the manufacture of small arms at Chatellerault, in the Department of Vienne, have been destroyed by fire. This will necessitate the suspension for a time of the manufacture of the Lebel rifle. The fire is believed to have been due to an accident. The loss is place at 1,000,000 francs. There were no fatalities.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WALNUT HILL, Nov. 14.—The trap shooters turned out in liberal numbers to-day to shoot in the twelfth competition for the gold coin prizes, and the sixth for the climax diamond badge. Barring a brisk wind, the weather conditions were all that could be desired. One event which did not appear on the programme produced abundant amusement for some and considerable disgust to others. The trappers at the range had adjusted—true to life—a dead woodpecker (*Picus auratus*) on top of the tall wind dial, and some half a score of unsuspecting new comers, arriving from time to time, in their eagerness to establish a reputation for skill and obtain a rare specimen for their ornithological collection, shot at the bird, not discovering their mistake until being regretfully made aware of it by the hearty guffaws of their designing and jubilant companions. In the contest for the climax badge competition was close enough to make it highly interesting, as will be seen by the following scores. Messrs. Scott and Best tied for the much-coveted trophy, but owing to the lateness of the hour and the darkness, did not shoot off.

Climax diamond badge match, 20 clay-pigeons from 5 traps and 20 standard targets from 3 traps:

Hartford	0011100101— 5	0000001101— 5— 8

The summary of minor events is as follows:

First, 5 clays—Bert first with 4, Bowker and Snow second with 2.

Second, 6 standards—Bert first with 6, Dan and Bowker second with 4.

Third, 5 clays—Bert and Perham first with 5, Bowker and Nichols second with 3, Knowles third with 3.

Fourth, 6 blackbirds—Bert, Knowles and Rule first with 6, Dan second with 5, Perham third with 3.

Fifth, 6 Macombers—Nichols first with 6, Perham and Snow second with 5, Bert third with 4.

Sixth, 3 pair clays—Bert and Knowles first, with 6; Bowker second with 5, Rule third with 4.

Seventh, 6 Macombers—Bert, Bowker and Knowles first with 5, Dan and H. Swift second with 4, Curtis third with 3.

Eighth, 10 clays—Best and Rule first with 9, Curtis and Knowles second with 8, Stanton and H. Swift third with 7, Bowker fourth with 6.

Nine, 3 pair standards—Nichols first with 6, Bowker, Knowles and Rule second with 5, Best third with 4, Curtis fourth with 3.

Tenth, 10 clays—Bert, Bowker and Perry first with 9, Hammond and Stanton second with 8, Rule and H. Swift third with 7, Scott fourth with 6.

Eleventh, 6 Macomber targets—Lang, Rule and Stanton first with 6, H. Swift and Knowles second with 5, Nichols and F. Swift third with 4, Scott and Warren fourth with 4.

Twelfth, 10 clays—Knowles first with 10, Bert second with 9, Lang, Perham and Scott third with 8, Chase, Rule and Savage fourth with 7.

Thirteenth, 10 standards—Nichols and Stanton first with 9, Bert, Chase and Rule second with 8, Dan, Hammond, Perry and Savage third with 7, Bowker and Scott fourth with 6.

Fourteenth, 20 clays—Bert and Dan first with 18, Bowker, Knowles and Stanton second with 17, Savage third with 16, F. Swift fourth with 15.

Fifteenth, 20 standards—Scott and H. Swift first with 18, Bert and Bowker second with 17, Knowles and Stanton third with 16, Dan fourth with 15.

Sixteenth, 6 Macomber targets—Stanton, Snow and Scott first with 6, Brown, Chase, Nichols and Rule second with 5, Bert third with 4, F. Swift fourth with 3.

Seventeenth, fifteen clays, Bert and Knowles first with 14, Scott second with 11, Rule and Stanton third with 10.

Eighteenth, 6 Macomber targets, 21yds. straightaway—Snow first with 4, Nichols second with 3.

The next competition in the current series of matches will be held Wednesday, Nov. 28, when the thirteenth contest for the gold coin match prizes will occur and the usual sweepstake shooting will follow. As this is the open season for woodpecker shooting, and Walnut Hill a favorite haunt for this wary bird, lovers of the sport, both experienced and inexperienced, are cordially invited to attend the coming shoot and avail themselves of such opportunities for this amusement as the occasion may offer.

SPRINGFIELD, N. J., Nov. 7.—*Editor Forest and Stream:* At the Union Gun Club grounds here this afternoon E. D. Miller, of Springfield, and C. H. Johnson, Jr., of Union, shot a match at 100 single bluerocks for the Atlantic Ammunition Co.'s championship trophy for the State of New Jersey. The day was all that could be desired with perhaps a little too much northwester at the start. Johnson won the toss and sent Miller to the score first to set the race, and for the first 14 birds he made it pretty lively for Johnson, who missed his second bird, a darling left quarterer. From then on to the fiftieth Johnson steadily gained. When this point was reached, and the guns getting hot a ten minutes' rest was taken. At its expiration the match was resumed, but the "Judge" still continued to let one slip now and then with Johnson letting an occasional one get through the pattern, but not enough to lose the lead. When the result was figured up it was found that Johnson had won, breaking 87 to Miller's 80. Miller at once challenged Johnson for a return match, which will take place on the same grounds on Saturday, Dec. 1, at 3 P. M. There is also another match set for the same day and place between six of the U. G. C. boys. Following is the score and conditions of to-day's match; 100 single bluerocks, 3 screened traps, N. G. A. rules, Benjamin Pudney referee, Dr. Conover scorer.

Miller	1111111111111010111011110—21
	0111100111101101101111111—18
	1111111101111101000111111—20
	1100101111111111111011111—21—80
Johnson	1011111111111111111111111—24
	1111001111111001011101111—19
	1111111111111101111111111—24
	1111011111101111111111010—20—87

Miller used o 9lb. 10-gauge, L. C. Smith hammerless, U. M. C. Club shells, loaded with 3¾drs. of TFFG, Deadshot and 1¼ oz. No. 9 chilled shot. Johnson used an 8lb. 12-gauge L. C. Smith hammerless, U. S. Cartridge Co.'s first quality shells, loaded with 3drs. of Schultze and 1¼ oz. No. 9 chilled shot. Dr. Conover advised Miller (when he went to the score for his 81st bird) to procure some chewing gum, as it might help him a little, and gave as his reason that he noticed Johnson was keeping his jaws moving all the time, and smashing nearly every time he called pull. "Judge" would not partake, however.—12-BORE.

WOODSIDE, L. I., Nov. 13.—Northside Gun Club of Long Island Eighth average shoot. Weather fine, birds strong. Shoot at club grounds, Train's Meadows. Match at 7 live birds each, 5 kings; ground traps; handicap; 80yds. bound, no back bounds Shot under club rules; gold badges and four moneys:

Bussell (27)	1110011—5	Biglow (24)	1001111—5
Duryea (28)	1111111—7	Dr Franz (25)	1100111—5
Manning (27)	1111110—6	Winholz (28)	1111111—7
Berger (24)	0110010—3	Barlow (28)	1101101—5
Lyon (26)	0010111—5	Eberhaken (27)	0111101—6
Merckens (23)	1000100—2	Chr Meyer	0110100—3
Eberhardt (28)	1111111—7	Co Meyer	1111111—7
Ties:			
Duryea	010—1	Winholz	111—3
Eberhardt	100—1	Co Meyer	011—2

Mr. S. Lyons, referee; C. E. Smith, scorer. Next match Tuesday, Dec. 11, 1888.—AUGUST H. EBERHARDT, Sec'y.

TORONTO, Ont., Nov. 15.—Notwithstanding the gloomy weather which threatened at one time to mar the pleasure of the day, quite an assembly of shooters were present to do battle for the handsome prizes offered. Mr. Phil. Wakefield led the field, winning two firsts and one second prize with a total score of 29 out of 34, with Messrs. Bestey and Keup following close in his wake. The shoot was started at the new Macomber bird, which worked very satisfactorily. The following are the scores.

First match, at metal birds, 4 prizes:

C Kemp	1101101111—8	W McDowall	1100111011—7
P Wakefield	1011001111—7	J Johnson	1110111000—6
M Bestey	0111101011—7	F Jones	0111010001—5

Second match, at Peoria blackbirds:

Wakefield	111111011010—10	J Barrett	110000110000—4
Bestey	010111111111— 9	R Barrett	101110001101—7
Kemp	111101110010— 8	McDowall	101010100111—7
Dick	111110011100— 8	Jones	001011011010—6
Moore	101110010111— 8	Cornwall	110010101010—6

Third match, 4 prizes:

Wakefield	111111111112	Moore	011111100110—8
Bestey	111101111111—11	Dick	111101010011—8
Kemp	011110111110—10	Harrison	100110100111—7

Three others retired.

Three sweeps were shot at Stark's grounds to-day at pigeons, all at 20yds. rise. The first was at 5 birds each, and the scores were:

George	11010—3	Rice	11100—3
Evans	11000—2	The threes divided the money.	

The second was also at 5 birds:

George	11010—3	Hoffman	10011—3
Smith	01101—3	Mauthie	01101—3
Evans	01111—4	Charles	01111—4
Rice	11101—4		

The fours divided. Another shoot was at 4 birds, George, Rice and Roberts getting 3 each.

MONTREAL, Nov. 15.—The second annual match of the Independent Rod and Gun Club was held this afternoon at their grounds, St. Gabriel, when some good sport was witnessed by a large number of spectators. The conditions were 10 birds, ground traps, 35yds. rise, and the score was as follows:

J Ryan	1011111011—8	P Donnelly	1010101101—6
W McNabb	1110109101—6	J Mohinney	1101000011—5
P Lecour	1111110011—8	Thos Retil	1010100011—5
J Moffat	1111110000—6	T Hocking	101100w.
J Drake	1000101011—6	J Mathewson	111110w.
J Grant	10010w.	M Moffat	110111w.

The shoot-off was postponed for a week.

TORONTO, Ont., Nov. 10.—At McDowall & Co.'s shooting grounds this afternoon, in spite of the miserable weather that prevailed, quite an interesting time was spent at the traps. The following are the scores:

First sweep, 7 birds:

T Sawdon	1111111—6	Besty	0101011—4
Clorie	1101100—4	Tompson	0100111—4
Harrison	1001101—4		

Second sweep, 7 birds:

Clorie	1101110—5	Sawdon	1101001—4
McDowall	1011101—5	Besty	0101010—3

THE OAKLEY-DALY MATCH, set down for Nov. 16, was not shot. It is down again for Thanksgiving Day.

BROOKLYN, Nov. 8.—The attendauce at the eleventh monthly shoot of the year of the members of the Unknown Gun Club, was not so large as usual to-day. The shoot was held at Dexter's Park. This was easily accounted for, as the majority of the members, who are well-known game shooters, had availed themselves of the opportunity to indulge in their favorite sport on Long Island. Only fifteen competed for the club badge and extra prizes but some good shooting was done. Under the rules only one barrel was used to kill each bird. Nearly all clubs use both. H. Van Staden, 22yds., and H. Rankin, 23yds., killed 7 birds each and tied for the gold badge and first prize. On the shoot off H. Van Staden won, killing 3 more to Rankin's 2. J. Boyle, 23yds., J. Bohling, 23yds., and J. Cahill, 22yds., killed 6 each, tieing for second money, which was divided. G. Eberhard, 21yds., J. Hubbell, 23yds., and H. Muller, 21yds., killed 5 each and divided the third money, it being too dark to shoot off. In a sweepstake that followed 8 entered to shoot at three birds each, miss and out. H. Van Staden was again a winner, killing all his birds and taking the money. Van Staden, who is nearly 60 years of age, killed all the birds he shot at, a total of 13 straight.

J Boyle (23)	111101—6	M Brown (26)	0110010—3
J Bohling (23)	1111101—6	J Hubbell (23)	0101111—5
J Cahill (22)	1111011—6	F Hillmer (21)	1010011—4
D Monsees (28)	1110000—3	J Behrman (23)	0000w —0
H Rankin (23)	1111111—7	W Gilman (23)	0001111—4
H Van Staden (22)	1111111—7	H Muller (21)	1101110—5
G Eberhard (21)	1101110—5	Dr Hopkins (25)	1001010—3
H Knebel, Jr (27)	0011110—4		

Tie for badge and first money won by H. Rankin. Score of sweepstakes:

W Gilman (23)	100—1	Dr Hopkins (25)	000—0
M Brown (26)	110—2	H Van Staden (22)	111—3
J Hubbell (25)	110—2	G Eberhard (21)	001—2
J Behrmann (23)	010—1	J Bohling (23)	010 –1

Referee and scorer, R. Stillwell.

MONTREAL, Nov. 15.—Thanksgiving, notwithstanding the disagreeable weather, proved a gala day for the Dominion Gun Club, and an exceedingly large number of spectators went out to their grounds at Cote St. Antoine to witness an open shoot for a magnificent silver and gold cup. This cup match was, of course, the event of the day, and for it there were 14 entries. Following is the result of the match with the full scores:—Cup match—25 Peoria blackbirds, 18yds. rise:

A Alexander	0101001000011011001011100—11
W Alfred	1011000011100000101111111—14
B Richmond	1101010110011111111010111—18
W Lewisden	0110111111001011011111101—18
W Ferguson	1111011011111110010111111—20
J Smith	0111111101101111010011101—19
J Jones	1110101101111111101111110—19
C Horsley	0001111011111010100111111—17
T Murray	0111101101010011101111111—18
J Cook	1100111111110011100111001—18
L Huckwell	1101110111011010110111100—17
C Aubin	1110110101100011111100110—16
A Aubin	0000011100001111111101101—14
F Williams	1101111010110111111010110—18

The match for the Horsley gun also brought out a good field, twelve competitors putting in an appearance. The first match for the gun was won by Mr. Robertson, the second by W. L. Cameron, the third by Mr. Emund, and to-day's match by Mr. Horsley. Following is the result of the match: Fourth match for the Horsley gun—20 Peoria blackbirds, 18yds. rise:

Ferguson	10011011111001100101—12	Cook	1101010111110111011—15
Horsley	00111111110011111111—17	Murray	1111011111011101011—16
Dr Tolley	0000000000001100010— 3	Walpole	0100101101000011110010— 7
Smith	10101100101110011111—12	Sly	0100100001000000100— 4
Jones	11110101011111000111—14	Cundlish	0011001101001110110—11
Huckwell	10011111111101011000—13	Cameron	1101111010110101010110—14

At the conclusion of the two big shoots two sweeps were shot off. The following were the leading scores in the first sweep: L. Huckwell, 10 straight; C. Horsley, 8; J. Cook, 7. The second sweep was captured by W. Ferguson, with 10 straight; J. Jones, second, 9; J. Smith, third, 8.

FALL RIVER, Nov. 10.—John Congdon, of Newport, and John F. Hall, of Raynham, shot a clay-pigeon match this afternoon on the Olympic football grounds, 250 birds each, $500 a side and entire gate receipts, loser to pay all expenses. Five hundred people were present. Over $8,000 was wagered even. Congdon won by a score of 204 to 201.

MONTREAL, Nov. 10.—The first shoot of the series for the open Greener gun took place to-day, on the Montreal Gun Club grounds, Mr. Aubin, of the Cote St. Paul Gun Club, securing first flen on the handsome gun, presented by Mr. W. W. Greener. The rain came down in torrents all afternoon, but the plucky contestants did not seem to mind it much. Umbrellas, however, were in great demand, some of the shooters having a friend to hold that useful article over them when firing. The entrants deserve all credit for turning out on such a day. Had the weather been anyway favorable the number of entries would have been materially increased. The scores made were remarkable considering the weather and background. The ties between Messrs. Smith and Aubin were very interesting, no less than three ties being shot off to decide the competition, Aubin was shooting in great form, and although Smith was doing some grand shooting, he was beaten by one bird. There were one or two close decisions, but Mr. Botsford, the referee, as usual, gave general satisfaction. Following is the score:

Conditions, 20 Peoria blackbirds from 5 traps, 18yds. rise, National rules to govern, gun to be won three times before becoming property of a competitor. Referee, Mr. O. F. Botsford, M. G. C.; scorer, Mr. R. Lucas, L. G. C.:

Ferguson	11111101111111010101—16	Paton	11100111101111011010—14
Lumsden	11101101010011101111—14	James	11110111001110110000—13
Smith	11010111111111110011—17	Aubin	11110111111111111001—17
Alberts	00001110101011111101—12	Alex'nd'r	10100101000110010100— 8
Roberts'n	01010011001010101111—11	Brown	10100101011101111111—14

Ties for first:

Smith	11101	01101	11011	Aubin 11110 00111 11111

A sweep at five birds was shot, resulting in Ferguson taking first place with 5, and Robertson, Smith, Lumsden, Brown and Alexander in tie with 4. On the shoot-off Robertson won second place. The next shoot for the gun is fixed for Nov. 24.

WELLINGTON, Mass., Nov. 17.—The weather conditions were favorable for good scores to day, and some good shooting was done in the badge and merchandise matches. In the badge match Schaefer scored a point by breaking 20 straight. The scores made in this match were: Schaefer 20, Grimes 11, Conant 12, Melcher 16, Sanborn 13, Bradstreet 11, Archibald 8, Tribble 13, Ernest 15, Snow 14, Swift 15, Perry 17, Frank 13, Moore 14, Bert 17, Choate 19, Stanton 16, Scott 19, Shumway 19, Nichols 13. In the merchandise match Grimes had 11, Conant 12, Melcher 15, Sanborn 17, Bradstreet 14, Tribble 15, Ernest 9, Snow 15, Scott 18, Perry 16, Moore 13, Bert 19, Choate 17, Stanton 14, Schaefer 18, Swift 19, Shumway 15, Nichols 8, Baxter 16. Following are the winners in the sweepstake matches: Six clay-pigeons, Snow and Swift; 6 bluerocks, Shumway; 6 bluerocks, Stanton; 6 bluerocks, Bert; 6 clay-pigeons, Moore and Scott; 6 bluerocks, Frank, Schaefer and Scott; 10 bluerocks, Schaefer, Scott and Choate; 10 clay-pigeons, Perry, Stanton and Schaefer; 10 clay-pigeons, Swift, Schaefer and Bert; 10 bluerocks, Scott; 7 bluerocks, Shumway, Moore and Scott; 3 pairs bluerocks, Choate, Bert and Frank; bluerocks, miss and out, Bert and Scott; 6 clay-pigeons, Moore, Scott and Baxter; 3 pairs bluerocks, Snow. The club will hold an all-day shoot Thanksgiving Day.

CLEVELAND, O., Nov. 15.—Three visitors kept five members of the East End Gun Club company in the regular badge shoot on the club range this noon. The conditions were 25 standards, 3 traps, at 18yds. H. J. Martin won the first badge with a score of 21. J. Storey and W. Sweetman tied for second, each having broken 20. In the shoot-off Storey broke 3 and won, Sweetman breaking only 1.

PHILADELPHIA.—The Manhattan Shooting Club has elected the following officers: Captain, Henry W. Meyer; First Lieutenant, Henry J. Monsees; Recording and Corresponding Secretary, Geo. Wellbrock; Treasurer, William A. Lappe; Shooting Master, Henry H. Lappe; Assistant Shooting Master, Henry C. Kruse; Ensign, Henry H. Flottmann; Sergeant-at-Arms, J. D. Monsees.

DEVOTION OF A POINTER DOG.—Fort Smith, Ark., Nov. 20.—The most sensational murder case that has been in the Federal Court for years terminated to-night in a verdict of guilty as to Henry W. Miller and William Woods, two citizens of Donovan county. On Nov. 25 last Woods left home with an old schoolmate and friend named John Hantz for a hunt in the Indian Territory. They subsequently picked up a companion in a stranger named Miller, who went with them. They were gone three months, and were seen in various parts of the Chocktaw Nation. When they returned Hantz was missing, and a searching party found his body in the Vendegras River with a bullet hole in his head. His watch was found in Miller's pocket. The evidence was purely circumstantial, and the recovery of the body was due mainly to the devotion of a pointer dog belonging to the murdered man. The dog refused to leave the place of its master's murder, and bayed continually until too weak to move, until the body was found. Both Woods and Miller have been regarded as respectable citizens, and several prominent attorneys defended them.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: R. W. Gibson. } Albany, N. Y.
Secretary-Treasurer: F. L. Mix. }
Vice-Com. Rear-Com. Purser.
Central Div..W. R. Huntington. E. W. Masten. T. H. Stryker, Rome, N. Y.
Atlantic Div. W. P. Stephens. L. B. Palmer. F. L. Downs, 186 Jerolomon St., Brooklyn.
Eastern Div..H. E. Rice, M. D. Maxton Holmes. H. D. Marsh, Springfield, Mass.
N'thern Div..Robert Tyson. S. S. Robinson. Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of applicat on by addressing the Purser.

THE A. C. A. MEET OF 1888.

EQUIPMENT.

(*Continued from page 216*).

THE great superiority of the modern canoe over all other small boats lies less in excellence in any one feature than in the wide range of use for which it is very well adapted. As a racing boat it has formidable rivals in other varieties of small craft—the ducker, the tuckup, the St. Lawrence skiff. For mere pleasure outings the light rowboat or even the small steam launch have each certain advantages over the canoe; while for cruising there are miles of water which may be better covered by the canoe yawl, small cruiser or sneakbox on the one hand or the light open canoe on the other. When it comes to all-around work, however, all of these must give way to the standard type of 15×30 canoe; the tuckups and St. Lawrence skiffs are too large to be taken about the country to races and meets, and cannot readily be shipped by rail; the rowboat and the steam launch are entirely too mechanical, however speedy they may be, and cannot compare with the canoe in graceful forms and poetry of motion; while for general cruising the canoe is fitted to a wider variety of waters than any other craft. The best type of canoe, then, combines in one boat the specialties which belong to a dozen different craft, and though, as a matter of course, some sacrifices are made necessary in such a combination, the canoe stands far ahead of all the other boats mentioned as a combination craft. Even though it be conceded that the all-around canoe cannot sail with success against the modern "canoe-hiker" with no well and a standing rig, it is thoroughly proved that very fine sport in canoe sailing is possible with cruisable craft; and at the same time the boat is perfectly adapted for taking a fair passenger for a moonlight paddle, for an hour's outing under sail or paddle after the day's work is over, for a cruise of three days or three months, and for easy shipment to distant points in cruising, racing or visiting the meets.

Though the "canoe-hiker" is this year an accomplished fact, it is as yet few in numbers, so far as model is concerned, and the great majority of canoes are still composed of good cruising hulls, whatever the arrangements and fittings. Given, then, the average decked canoe, 15 or 16×30×10 to 11in., with well of fair size and both cruising and racing sails, there is still necessary to make her complete and perfect for all her diffent uses, the equipment. Ten years ago this was considered almost the first feature, more time and study was given to it than to either model, rig or build; these points being largely left to the builder. When we consider then the great interest which canoeists themselves have lately taken in designing and rigging their canoes, it is a disappointment to find that in the matter of equipment there has been little or no improvement, on the contrary many points once considered essential have been neglected entirely. The list of detachable articles which should be added to the canoe after the rigg ng is complete and the fixtures, such as board and bulkheads, are in, is a long one, but the principal essentials are as follows: name, double-blade paddle, painter, hatches and apron, seat, mess chest, bedding, tent, lamp, stove, anchor and cable.

As we have tried to place the above items approximately in the order of their importance, it may seem strange to put the name first, as many consider it an unnecessary but undesirable, and are content to jog along under their A. C. A. number, or even with no means of designating their boats. This may do for the man who looks on his canoe as merely a machine for winning races, with no more individuality or identity than a pair of skates or a billiard cue; but to any man worthy of the name of canoeist his boat is far more than a mere wooden machine, it is a friend, a companion, a sweetheart, and worthy at least of a name and an identity of its own. Not only should it have a name of some kind, but the name should as far as possible belong to it alone. Fortunately for the history of American canoeing, when it shall be written, there have been many among the leaders who have not followed the foolish English plan, but have given to each boat which they have owned a name of its own, which has belonged to no other canoe. A good many pages of canoe history will be filled with such names as Dot, Lassie, Sea Bee, Snake, Vesper, Notus, Venture, Pecowsic, Lacowsic, Thetis, Rat, Peggy and Mona; while the direct confusion must follow any attempt to follow up the tangled records of Shadow No. 10, Girofla No. 4 or 5, Guenn No. 4, Narka No. 2, Wraith No. 3, etc. The names Rob Roy, Pearl and Nautilus are a part of the very foundation of the history of the modern canoe, and the development of the many canoes owned by Messrs. Twedwen and Baden-Powell from the original Rob Roy to the present craft would be a most interesting study; but it is almost impossible from the fact that the identity of the dozen canoes built by each is completely lost under the general name Pearl or Nautilus, with nothing to distinguish one canoe from another. The sequence of Dot, Sea Bee, Lassie and Bo Peep, or Snake, Vesper and Notus, with the difference between each successive boat, is well known to every canoeist; but no one save the owners can tell in what way Nautilus No. 5 differed from Nautilus No. 7, or Girofla No. 1 from Girofla No. 3. The naming of a canoe is not a matter that rests with the owner alone, but the fraternity at large has a right to expect that every canoe will be designated in some way which will enable its history and record to be readily followed, and some judgment to be formed as to its merits. Looking at the record of the present year, one finds such familiar names as Narka, Dimple, Guenn and Girofla, and at once sets to work to find why a boat that makes a good showing this year did so badly in 1886 or 1887, or the reverse; but such comparisons can tell little in the case where the name is merely transferred from an old boat to a new one of totally different model. The records of the leading racing canoes are studied pretty carefully by canoeists all over the country, especially by those who are absent for a year from the meets, and it is only fair to canoeists at large that boats should make a record under one name only.

Not only should a canoe have a name, and a good one, but it should be plainly printed on the bow, so that all that sail may read. It was once an uncommon thing to find a canoe without a name on her, but now it is rather the proper thing to do. Eclipse, Charm, Vagabond and many others, including the three or four very handsome canoes that came from Lowell with the Fly, have nothing on them by which they can be identified, a source of great confusion to those who have to make records of the racing. One of the most amusing things about canoe names is the tenacity with which men will stick to a poor one. We have known a dispute as to which one of the canoes should be enrolled in the A. C. A. book as plain Sallie, and which Sallie No. 2.

The true distinguishing mark of the canoeist, the blade by which he swears, is the double paddle, once considered the first essential to the canoe; but it is a sad fact that it has declined in favor, and that not a few canoes do not carry one. Charm was armed with a little single blade, her owner, an old canoe sailor, never having tried a double blade until this summer. When here in the Pearl two years since he had but an apology for a single blade, depending upon borrowing a paddle when its use was imperative. The "canoe-hiker" is seldom equipped with a good paddle, her owner never paddles if he can help it, and at best he is content to carry a broken half paddle picked up about the boat house. If a man prefers sailing to paddling, well and good, but the uncertainties of a dependence on the wind alone, in any kind of craft, are so great as to make an independent means of propulsion of the greatest importance; and in the canoe a very efficient means may be had at the expense of a couple of pounds extra weight. In match sailing it may be justifiable to depend on a single blade or a half paddle in case of emergency, but in cruising, or even short sails on almost any waters, a strong and powerful double blade should always be at hand, as on it may depend the life of the crew in an emergency.

The weight and windage of a dozen feet of small, but strong line, securely fastened to the stem of a canoe would be a difficult matter to calculate, but there are a great many canoeists who will not carry a painter in racing or even in ordinary work. One canoe, which capsized in a race at the meet, was without any hole or projection to which a line could possibly be made fast to tow her in, while many that did not upset were no better provided. One canoeist on a cruise about the lake after the meet carried no painter, but was content to beg or borrow a piece of twine and tie it to the rudder brace or any other available place, there being no eyebolt because it would be too heavy, and no hole in the stem because it would spoil the looks. The painter need not be a heavy cable, but every canoe should have at least a dozen feet of strong fine line, securely spliced or knotted in a hole in the stem and led into the well, not being allowed to hang slack. It is always useful, often very necessary, and never in the way to any extent. The hole should be well back in the stem and an inch or two below the deck, so that there is no danger of splitting the point of the stem off. A second hole, just about the waterline, is very handy in a cruising canoe, as the boat may be towed or dragged over the mud with greater safety than if a heavy strain were put on the stem head.

For match sailing in fair weather or for ordinary work, the movable hatches and apron may be dispensed with; but, at the same time, no canoe can be considered complete unless she has some means of effectually covering the well in rough water or rainy weather. The small manhole is to be condemned in every way; the well should be large enough to allow the canoeist to sit and move in comfort, but with this there is danger of the other extreme, a very large well with no means of covering it. This was the case last summer at Ballast Island, where Notus started in a race with her hatches ashore and swamped in the heavy sea. It cannot be denied that hatches are more or less of a nuisance, according to the manner in which they are fitted; but at the same time their usefulness is evident. For racing a canvas covering is easily fitted to lace tightly across the well, covering as much as may be desirable, leaving an opening large enough for the legs, as the crew sits on deck. If of thin oiled duck or drilling the weight is not worth taking into account, and it may be quickly removed, iolled up and stowed away. A similar cover will answer rn cruising, but in rough water a wooden hatch is very much better. If made flat instead of with a crown, and with the grain of the wood running across instead of fore and aft, such a hatch can be very strong and light; and, being built without any framing, two or three can be stowed in a small space, say beneath the seat. When needed they may be quickly put in place, covering a part of the well. It is a good plan to have the apron, which will fit closely about the body, the flaps coming well up under the arms, so long as to cover the entire fore part of the hatches, so that all is kept dry below. A little wetting does not make much difference on a short run, but there are times in cruising when a man is glad to be able to stow his sails, fit on the hatches and draw the apron tightly around his oilskin coat, and then settle down for the last few miles to camp, regardless of breaking seas and driving rain; and when he may proceed in safety and tolerable comfort under conditions which would stop him entirely in a canoe with only a large open well. Hatches and aprons are things that a man does not feel the need of very often, and that are in the way when not in use, consequently they are usually dispensed with entirely. At one time a great deal of ingenuity was expended on both, but of late there is little to chronicle in the way of improvement.

If any paddling is to be done, a seat of some kind is a necessity, but little new has been invented of late, a soap box to sit on serving all the purposes of the racing paddler. It is an unusual thing to see the backboard, which was formerly found in every canoe, the two parallel strips with cross bars invented by MacGregor. While not always as comfortable as one could wish, it was a great rest in steady paddling, and something of the kind is still necessary. The cork cushion is now used, one part making a seat and the other a back for paddling, and this answers very well. The cushion is placed on a low wooden seat or on the mess chest.

This latter is a most important part of a canoe's furniture, or at least it should be; and not only in cruising but in ordinary work about home waters. It need not be very large or heavy, but in it can be stowed a few simple utensils, plates, knife, fork, can opener, etc., some cans of sugar, coffee, tea, salt, etc., a pot of pickles, one of condensed milk, extract of beef and similar stores. Kept close at hand in the boat house it is stowed in a moment, and only a little fresh stuff, such as bread, eggs, a couple of chops, etc., is needed to complete the material for a couple of meals. Even when going out for but half a day it will pay to toss in the mess chest, thus being able to set up a lunch at any time, or to prepare a full meal if delayed until late.

In the same way it is always convenient to have a good pair of blankets or a sleeping bag done up in its oiled bag and tightly strapped up so that it can be stowed away at a moment's notice. If strapped very tightly the bundle will stow in less space, but in the event of a capsize it will keep much dryer than if thrown in loosely. The canoe tent should also be fitted complete so that it can be set up in the dark or in a hurry, and it should be kept in a special bag of its own. A good lamp is a most important addition to the outfit, as it is never safe to run at night without one. Colored lights are not necessary in so small a boat, a good white light complying with all legal requirements and being much more easily seen, as it is practically impossible to show side lights, or even the two sides of the colored box lamp under all circumstances in so small a boat with no shrouds. The cleanest and most convenient is a candle lantern, a very good make, having four sides of heavy plate glass, giving a good light in the tent or afloat.

For such cooking as can only be done on board, the best thing is the *gamma forcé* to burn alcohol or methylated spirits. With it a cup of coffee or hot beef tea can be made, or a few eggs cooked up, and with two lamps quite a meal can be prepared while afloat; but this is about the extent of cooking possible while seated in the canoe, and for shore use it is generally best to depend on a camp-fire of wood rather than to carry a heavy and dirty stove. When no fuel can be had the alcohol is still in reserve, but in most cases dry wood for a camp-fire can be found somewhere near camp.

A. C. A. EXECUTIVE COMMITTEE.

THE annual meeting of the Executive Committee of the American Canoe Association was held on Nov. 17 at Toronto, Can. The meeting convened at the house of the Toronto C. C. at 3 P. M., with Com.-elect H. C. Rogers, of Peterborough, in the chair. Neither Com. Gibson nor Sec'y-Treas. Mix were present, the representatives being, besides Com. Rogers and the new Sec'y-Treas., Mr. Geo. W. Hatton; Central Division, Vice-Com. Huntington, of Rome, N. Y., and F. F. Andrews, Rochester, N. Y., Executive Committee. Northern Division, Vice-Com., Robert Tyson, of Toronto; Purser Colin Fraser, of Toronto; F. S. Rathbun, Deseronto. Atlantic Division, Vice-Com. W. P. Stephens, Bayonne, N. J. None of the Eastern Division were present. There were eight members in all, making a quorum, but not the two-thirds of the committee necessary to adopt the proposed amendments to the constitution; so these were discussed and voted on by the members present, the secretary-treasurer being instructed to ask the votes of the absent members by mail.

The first business was the report of the camp site committee, including a number of letters relating to various proposed sites. The Bay of Quinte and the Rideau Lakes were dismissed after a little discussion, the unanimous opinion being in favor of a site on the St. Lawrence River, near Grindstone Island, the camp ground in 1884, '85 and '86. Com. Rogers and Vice-Com. Tyson, who have lately visited the locality, described several available sites on Stave and Sugar Islands, and other places near by, and after a thorough discussion Sugar Island was unanimously chosen on a motion by Vice-Com. Stephens, seconded by Mr. Andrews. The question of the date of the meet was discussed; a motion by Vice-Com. Tyson fixing the date from Aug. 16 to 30, was finally carried.

The report of Secretary-Treasurer Mix was read and accepted after the report of the auditors, Messrs. W. L. Palmer and C. V. Winné was accepted. A letter from Com. Gibson, making a number of suggestions in regard to the regatta programme, camp rules and similar matters, was read. Com. Rogers then appointed Messrs. Ford Jones, of Brockville, and C. E. L. Porteous of Kingston, as additional members of the site committee, and also ap-

pointed as transportation committee Messrs. R. S. Oliver, Albany; W. J. White, Montreal, and J. W. MacKendrick, Galt.

The following resolution was introduced by Mr. Andrews and seconded by Purser Fraser: "Resolved, That the executive committee of the American Canoe Association deprecates most strongly the introduction of special racing appliances that are incompatible with the requirements of cruising, and recommends to the regatta committee that the programme of the races shall be so arranged as to encourage as far as possible the legitimate cruising canoe." The resolution was carried unanimously.

The following resolution was introduced by Vice-Com. Stephens, being in accordance with the suggestions in Com. Gibson's letter. It was seconded by Vice-Com. Tyson and carried unanimously: Resolved, That in view of the necessity of preserving order and quiet in camp during the night, the hour of "taps" shall be changed from 10 to 11:30 P. M.; after which hour quiet must be maintained.

Vice-Com. Stephens then offered the following amendment to Article V, Sec. 2, of the Constitution: To omit all of the last clause after the word "herein," and substitute as follows: "The term of office of all division officers shall begin with the termination of the A. C. A. meet of the following year." The following amendment was suggested by Purser Fraser, and after discussion was accepted by Vice-Com. Stephens, the new amendment being seconded by Vice-Com. Huntington: The term of office of all division officers shall begin with the meeting of the executive committee in October or November, and shall end with the executive committee meeting of the following year. This amendment was not approved by the eight members present, and the vote of the other members will be taken by ballot.

Vice-Com. Stephens also introduced an amendment to Article VIII., making the date of appointment of division regatta committees not later than Feb. 1, which was carried as above. The following lady honorary members were then elected: Mrs. Clarence E. Williams, Miss Anne Huntington, Mrs. John S. Wardwell, Rome, N. Y.; Miss Bessie Woolworth, Albany, N. Y.; Mrs. R. B. Lundy, Miss S. E. Vair, Peterboro; Miss Aggie McDougal, Miss Jennie Owens, Galt; Mrs. Thos. B. Dean, Lindsay, Ontario. The meeting then adjourned.

In the evening a dinner to the guests was given by the Toronto C. C., at which nearly seventy canoeists were present, including Messrs. E. B. Edwards, of Peterboro; Samuel Britton, Judge Dartnell, Ford Jones, Brockville; Johnson, Hamilton; J. G. Edwards, A. D. McGachen, Lindsay, and representatives of the other boating clubs of Toronto. The dinner was followed by songs and toasts, and it was well after the new hour for "taps" before quiet was restored.

Yachting.

Small Yachts. By C. P. Kunhardt. Price $7. Steam Yachts and Launches. By C. P. Kunhardt. Price $3. Yachts, Boats and Canoes. By C. Stansfield-Hicks. Price $3.50. Steam Machinery. By Donaldson. Price $1.50.

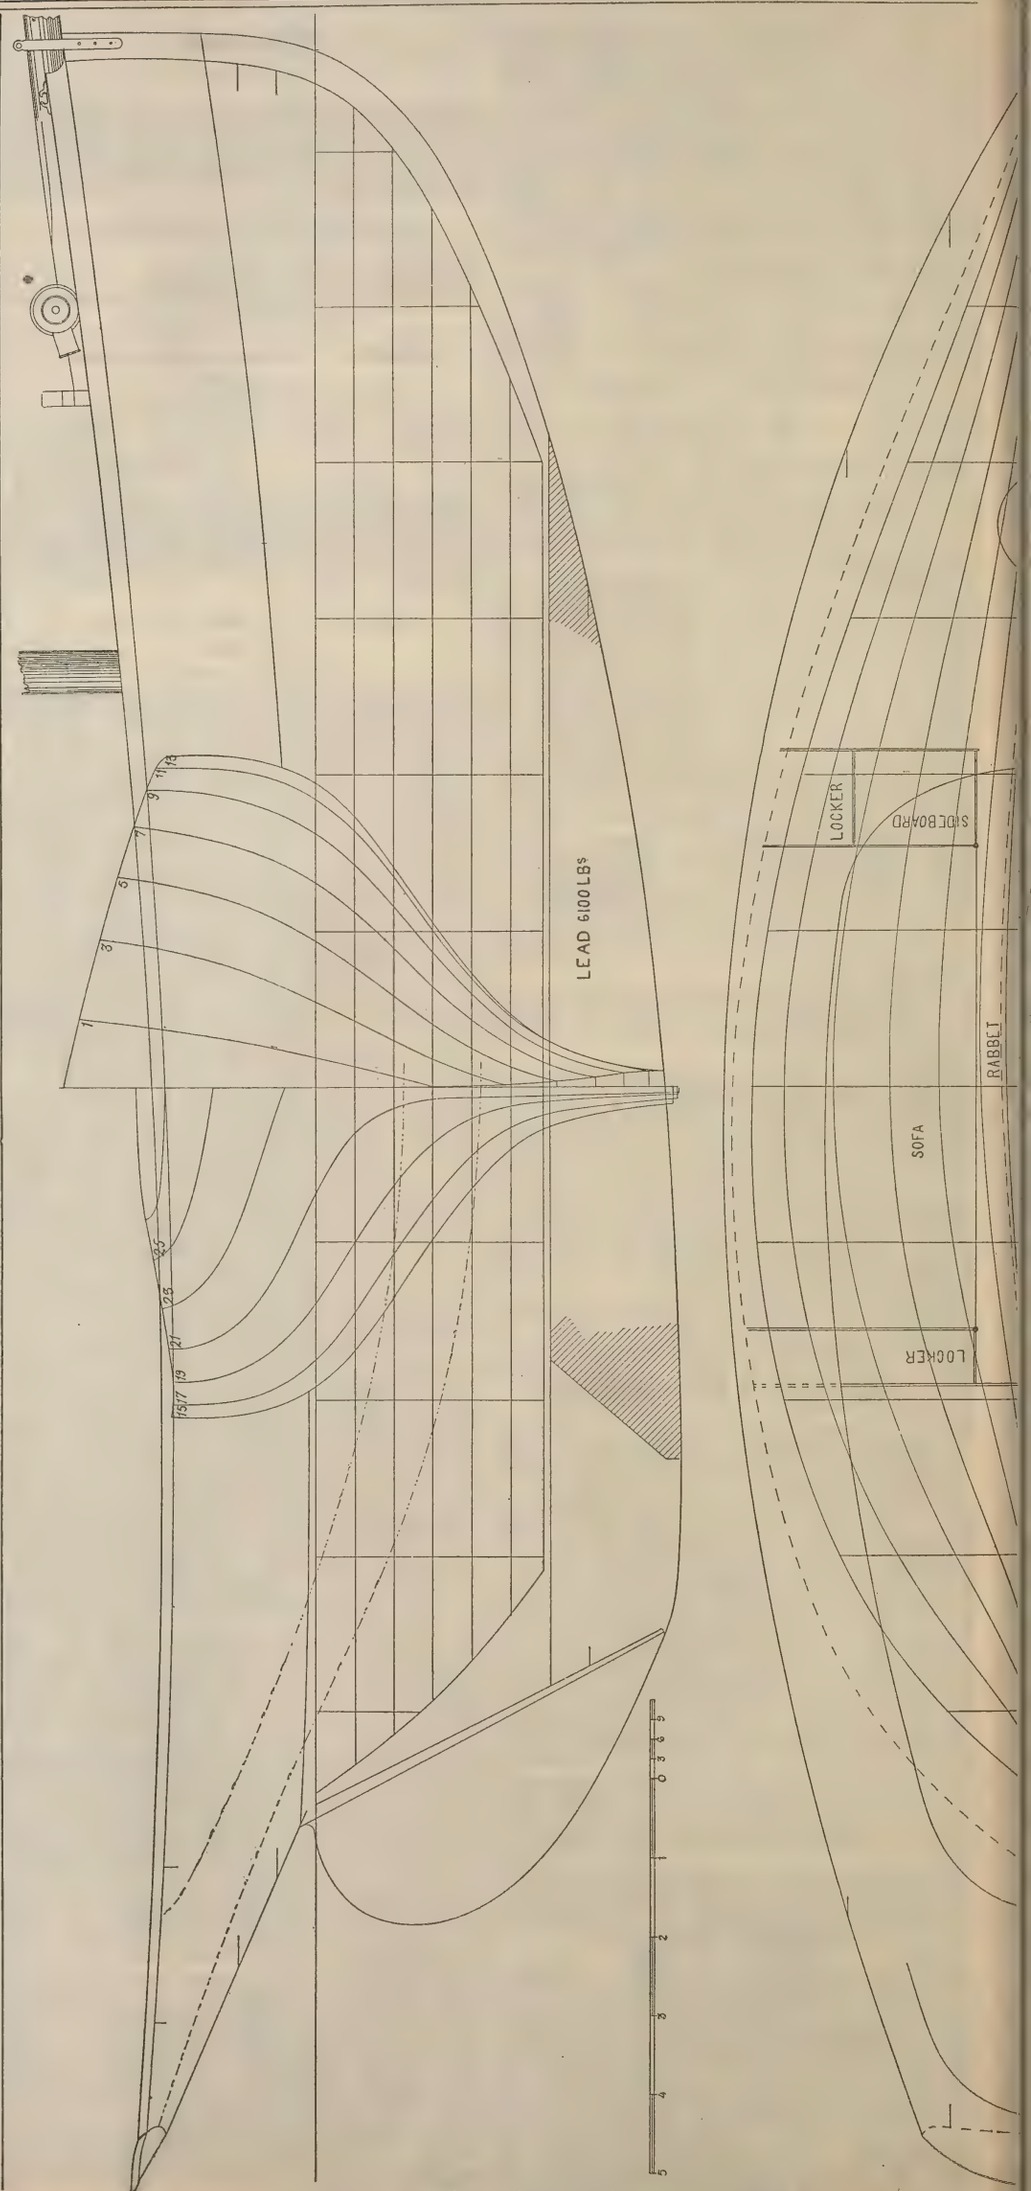
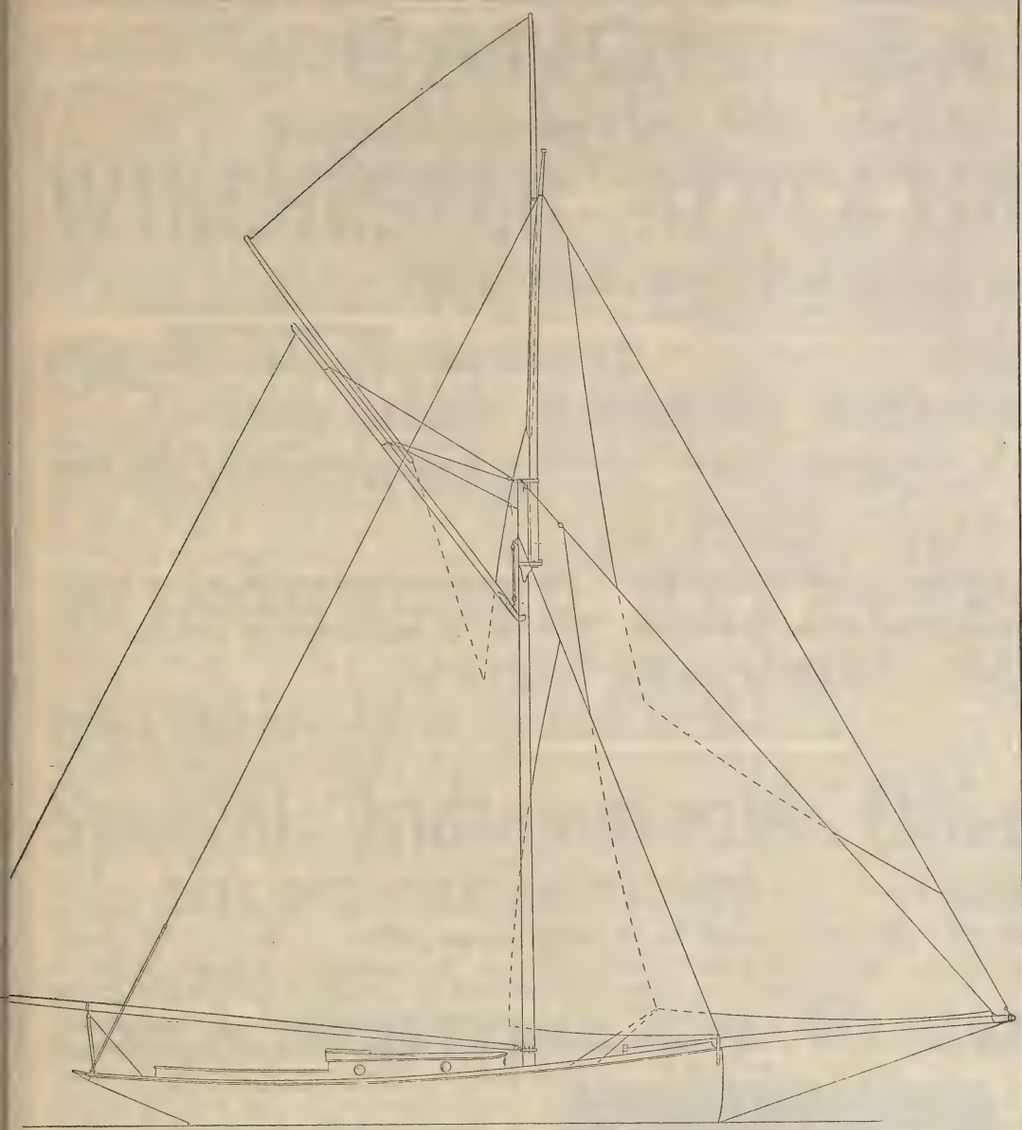
WONA.



WHILE the first home of the cutter about New York was in the deep water along the Staten Island shore of New York Bay, the opposite shore has from the earliest days of yachting been the chosen stronghold of the shoal centerboard sloop. That this was so in the first instance was a matter of course, as the yachtsmen of the time were compelled to take whatever locations they could get, which were invariably in spots where the shoal water made the ground of little value for shipping purposes. Such places as Gowanus Bay, however, were not too far distant by the existing means of transit, and at the same time were not needed for docks and piers, so they answered very well the purpose of the yachtsmen of a generation ago or less and the yachts were naturally built to suit the waters where they found the best anchorage. Under these circumstances it was but natural that the shoal wide boat should flourish, to the exclusion of all other types; and further, that once owning such boats, yachtsmen should champion them, in spite of their many obvious failings, as the best possible craft.

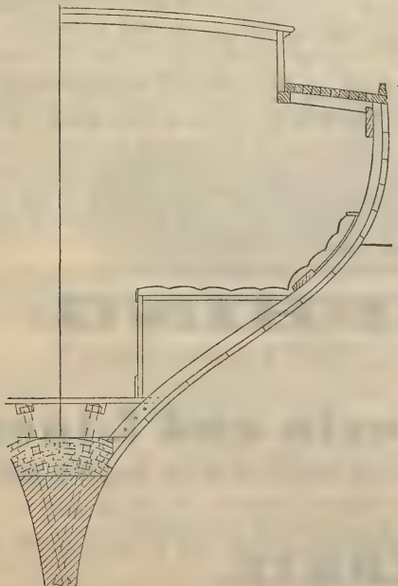
This was all very well as long as the conditions compelled such a boat or none, but it is now a very long time since these conditions disappeared entirely; since the ancient theories as to depth and resistance were proved entirely false, and since many most important principles were brought clearly before the notice of American yachtsmen. The old anchorage grounds were abandoned for new ones near Bay Ridge, where an ample depth of water could be had; the pet craft of the Long Island shore, sailed by picked skippers and crews, were utterly routed by the narrow cutter; and coming down to a still later day, the keel boat of various models has scored one success after another over the old centerboard favorites. Sturdy and bitter as the opposition has been to all new-fangled notions, to the keel, the cutter rig and to outside ballast, it has somehow happened that at last the keel craft has fairly invaded Bay Ridge, and is likely in the near future to give even the best of the modern compromise centerboards a very hard task to avoid being driven out as completely as in Eastern waters. No other series of boats perhaps offers a better illustration of the course of improvement than that which began in 1883 with the Gleam, a very good example of the Ellsworth model of centerboard craft, built for Mr. Newbery D. Lawton, a thorough Corinthian sailor. In rig and ballast the Gleam was better than many of her class, but still she was not widely different from the average centerboard sloop, with inside iron ballast and single jib sloop rig. In describing her under the date of Feb. 1, 1883, the FOREST AND STREAM made the following prophecy: "The prediction a few years ago that the centerboard would disappear in Eastern waters seemed quite as improbable of fulfilment as a similar prognostication made to-day regarding yachts in New York. Yet we have lived to see the board practically abandoned around Cape Cod, and we venture to assert that it is only a matter of a few seasons more before the keel will be given a like preference here in New York. All indications point that way, and we certainly consider the time not far distant when the centerboard shall be relegated to special contrivances built to meet the purely local exigencies of certain limited stretches of shoal water; until then, we must expect to find yachtsmen pass through preliminary stages of experiment, going from the trap first to deep centerboard boats, then to semi-keels and partial outside ballast, and finally oringing up in safe, creditable constructions, possessing the advantages incorporated in the cutter."



The end of one season saw the beginning of the change outlined above in the Gleam, her inside ballast of 4,500 lbs. was supplemented by nearly a ton of lead added by way of outside keel. Following this the short Ellsworth stern was spun out into as near a semblance of a cutter's counter as the lines of the afterbody would admit, while the boat was improved in minor details. When, after three years, Mr. Lawton was ready to go into a new and larger boat, she was still an Ellsworth model, but a marked departure from the older craft of the same designer, a boat of great displacement, deep draft, lead keel and cutter rig. This boat, the Arab, he has also used for three seasons; last year in addition being largely concerned in the design and construction of another and larger Ellsworth boat, the Eurybia, a still greater departure from the old type. The result of this evolution of six years, during which Mr. Lawton has practically built three boats, and had perhaps as thorough an experience as any one in sailing centerboard craft of all models, is in every respect a literal fulfillment of the prophesy of FOREST AND STREAM. The new boat, to succeed Arab as she succeeded Gleam, is a modern keel cutter, not indeed a narrow boat, but as much of an extreme in draft, and far more in sail area, than the narrowest of the type.

The course of evolution that has brought the modern Burgess cutter to anchor at Bay Ridge has been as costly as it was unnecessary. The money that has been expended in altering not old boats only but new ones, would have built and equipped a racing fleet equal to any in the country. The Gleam is only one very small instance, another is shown in the Athlon, built as late as 1884, to which has been added a double head rig, a lead keel, and now an overhang, all of which she might better have had in the first place. It is true that Bay Ridge escaped the "cutter craze" so far as extreme narrow beam is concerned, but in the modern Burgess cutter she is likely to have a boat that is almost as radically different from the old sloop which once was found in such numbers, as the Madge or Ulula, certainly so far as principles are concerned.

The yacht whose lines we give herewith is now enrolled in the Atlantic Y. C., though built and first owned in Boston, and is one of the best examples of the small keel cutter of wide beam that has yet been built in this country. Like the new Lawton boat, she was designed by Mr. Edward Burgess, being built last year for the Messrs. Cunningham, of Boston and Gloucester, by Lawley & Son. Wona was designed at the same time as Pappoose, and is



"WONA" CUTTER—DESIGNED BY EDWARD BURGESS.

"WONA"—SAIL PLAN.

very similar to that noted flyer. Her dimensions are as follows:

Length, over all	27ft.	6½in.
L.W.L.	22ft.	6 in.
Beam, extreme	8ft.	6 in.
L.W.L.	7ft.	9 in.
Draft, extreme	4ft.	8 in.
Least freeboard	1ft.	10 in.
Displacement, long tons	5	
Ballast, all on keel, long tons	2.72	
Ratio of ballast to displacement	.54	
Area, L.W.L. plane	112	sq. ft.
lateral plane	87	sq. ft.
midship section	14	sq. ft.
Mast, from stem at L.W.L.	7ft.	11 in.
deck to hounds	21ft.	3 in.
head	3ft.	6 in.
Topmast, fid to sheave	15ft.	
Boom	24ft.	9 in.
Gaff	15ft.	9 in.
Bowsprit outboard	12ft.	
Spinaker boom	25ft.	
Area lower sails	630	sq. ft.

"WONA"—BODY PLAN.

The cabin is 8ft. long, and 5ft. from floor to underside of roof, the forecastle is 7ft. 6in. long, and the cockpit 6ft. 9in. The cabin has a good locker on each side, with a deep closet at the after end and a sideboard and locker at the fore end. The forecastle gives good room for cooking and stowing lines and stores, or even for a boy by way of crew. The yacht is cutter rigged, with standing bowsprit, housing topmast, and jib set on a stay, though originally rigged to set flying. The lead is all on the keel, 6,100lbs. The construction is simple but strong, and no room is wasted about the boat.

Last summer the Wona was purchased by Mr. F. L. St. John, of the Atlantic Y. C., who now owns her. She was raced very little in her first season, and has sailed but one race here, on Aug. 25. She was not regularly entered for this, as she carried a small sprittopsail (not the clubtopsail shown in the plan), which is not allowed by the club rules. She was allowed to sail with the Gleam, Frolic and Wave, all of which carry very long topmasts and working topsails. The result was that she beat all three centerboard boats easily to windward, and finished within 18s. of the winner, Frolic, 24ft. 6in.×10ft. 6in. On corrected time she would have won by 2m. In the little brushes about the Bay she has proved fully able to hold her own with the centerboard boats, though kept for cruising and sailing rather than racing, in fact to compete successfully under the club rules it would be necessary to increase her topmast materially. If raced in good shape next season she will give the centerboard boats all they want to beat her, though not up to the limit of her class; and in the 41ft. class the new Lawton boat is likely to make it equally exciting for her classmates.

This boat, as we have previously stated, is 39ft. 6in. l.w.l., about 13ft. 6in. beam and between 8 and 9ft. draft, with heavy lead keel and no centerboard. In addition to these two, Mr. Burgess has still another new yacht in the Atlantic club, the Beatrice, owned by Messrs. Dunham. She is a compromise boat, lead keel and centerboard, about 35ft. l.w.l., with a very neat sheer and an overhang at each end. With the advent of these boats there begins a new era in yacht building at Bay Ridge, the end of the period of addition and alteration by which it has been sought to make old models and methods equal to new, and the beginning of a period in which the place of the trained designer will be recognized as even more important than the skillful and conscientious builder.

DUCK SHOOTING UNDER DIFFICULTIES.

(Concluded from page 336).

THURSDAY, Sept. 25.—Ashore in about 2½ft. at low water, having made no water in the hold, which speaks well for the strength of the boat. About 7 A. M. Mr. Anthony Adams, of Neguac, came along in his birch canoe, kindly offering to send us any assistance we might want. He had spent the night in a tent in the point of woods spoken of on the road into the plains. They got a goose on one of the ponds just after we left, and would have got more had not darkness come on so soon; had the wind held to eastward they would have remained longer.

To return to our narative, Walter said he would go to Neguac with Mr. A. and send down a good man accustomed to such work as we would require, Mr. John Graham, whom we expected would be there on his way to Tabusintac. Charley also went with him, to get a dry change of clothes. Walter said on leaving that if we could spare him he would continue on up river in the steamer that afternoon and report our safety to our friends up river, so we consented to his going. He got up to N. just in time to catch Graham harnessing his horse for T., and persuaded him to come down to us.

Mr. G. arrived with Charley about 11 A. M. It was agreed that nothing could be done but to prepare a sampson post, and get down a good pair of double blocks and tackle for the same. The latter he had to go back to N. for. Our principal hope was that one of our steamers was expected down in the afternoon with a tow of barges on her way to Tabusintac. Being in charge of Mr. G. he had left word at N. that as soon as she arrived she was to go on down to us with two barges, and our plan was to get one on each side and lash the boat to them at low water and float her off. We could see we were not going to cause her any delay in her work, for from Neguac, fully to Tabusintac, she would have to take her tow outside the beaches, which she could not do that night anyway, on account of the roll outside. Our hope was that it would not be too rough for her to come down the inner bay. Walter also said he would watch for her and let her know we wanted her assistance. It turned out afterward that he got the Miramichi to go out of her course to speak to them, which they very kindly did. We were not forgotton up river, for the Commodore had given the Laura orders to keep a lookout for us.

Having a good view as far as Hay Island from where we were stranded, an anxious watch was kept for the steamer with our glasses; in the meantime we rigged our sampson post and carried out both anchors. The former we rigged at her bow, and as the water rose we tried to lift her bow and drag her into deep water with her head off shore, but our tackle was not strong enough and the tide rose very slowly; in fact, there was very little rise, not more than a foot up to 4 P. M., and we made little or no headway, and we began to despair of getting off that night if the L. did not come with the barges. Much to our gratification she did appear in sight about 4:30, running for the bay but leaving her barges, at which we were disappointed, and coming down alone to us, for we thought she could not possibly get us off without them, and were fearful that she would do us some damage, there not being tide enough to float the yacht on an even keel. However, as time was getting short and dark approaching, we decided to let her have a try any way. Fortunately she had a long towline. I suppose she had to anchor 100yds. from us. We sent out our double canoe (log), the latter Graham had borrowed at R., our dingy being too small, and brought the line to us and made it fast to our bitts, and got everything ready before dark; but as the tide was not expected to be full till about 9 P. M., we allowed those on the steamer to take their supper before taking a pull at us, while we waited.

The wind began to rise from S.W., blowing pretty well on to shore, which made us more anxious to get off, as she was beginning to lift and pound some, of which we thought we had had enough on the previous evening.

We arranged a code of lantern signals the same as those used on the railway—waving backward and forward to go ahead, up and down to stop, and from left to right to go to right and *vice versa* to left. This was so arranged on account of the captain of the Laura having once served some time as a locomotive fireman, except the last two signals, supposing a railway train to know neither right nor left.

The time having come for a trial, it now having grown quite dark, with a good stiff breeze on shore and able to see only the lights on the steamer, it became quite interesting. When all was reported ready the lantern was waved and we got a pull that sent us on our beam ends and broke the line to our bitts, but hauled our head off shore. Fortunate it was the line parted, for it would have done more damage, probably have hauled the bowsprit out of her. The lantern was raised up and down pretty lively for a minute or so till we had her stopped. We found it was not the main tow line, but a smaller piece that we had doubled and put on to make the line long enough, that had parted at the bitts; so Graham and Charles took the canoe again, ran out to the steamer and got another long, strong rope, picked up the tow line again and ran back to us. We then ran the line entirely round the yacht under her counter, just above the rudder, fastened it securely, and put a line over deck of yacht at cockpit and forward at mast to keep it from slipping down on her bilge, and then took the tow line, fastened it to this sling, leaving a long enough end to take a whole turn round the mast without making it fast, and put Tom at the end to hold and give the mast a little of the strain as well, but with strict orders to let it run should anything give way causing all the strain to come on mast. The bottom was of very gradual rise shoreward, for the steamer must have taken more than a dozen pulls at us (with a steady pull she could do nothing,) before we began to feel that the yacht was off, at first only a foot or two at a time, then increasing to 4 to 6ft. At last away she went, much to our joy, about 10 P. M. We had some little excitement at times during the tugs at us, it being so dark that it was impossible to tell just when we were going to get one. During one of the lulls I thought I might have time to fill and light my pipe, so set the lantern down on deck outside the cabin trunk, had filled and was bringing the lighted match up when the pull came. I had not time to grab the lantern before it was overboard and lost, and I saw Tom groping around for his rubber boots which were outside drying, but they were nowhere to be found; they had apparently shared the fate of the lantern. Having a spare one of the latter it was easily replaced, but the former were gone till washed up on the shore, to be picked up by some poor beggar that wanted them more than Tom.

Having a high head of steam, Jack, the engineer of Laura, gave us a fast trip, about twice the speed we ever made under sail, up to the wharf at Neguac, about two and a half miles, (going across the bay it was pretty rough, but the speed never slackened, and we did not get back without a little excitement. The double canoe (called double here because they are too large to be made of one tree, half of canoe being hollowed out from one piece of tree and the corresponding half from another) broke adrift, but having one of our anchors in it, the line being coiled up on our stern. When it broke away Charley made a spring to do something, landing on the coil of rope, which, before he knew what he was about, was hauled out from underneath him, which gave him a great scare; the wonder being that it did not catch a turn round his legs. Fortunately he escaped. Up to this time the writer, who was steering, did not know the anchor was in the canoe, and was surprised to see a very taut line coming from the bow astern right alongside of him. Turning round he just caught sight of the canoe taking a frantic sheer off to windward, and then pass away out of sight in the darkness; the anchor having broken its hold on the bow deck of canoe and jumped overboard, then jumping along on the bottom. I expected every moment to see the rope break, but it was a good new one, and kept the anchor skipping along on the bottom. The lantern was waved up and down frantically, but on the steamer they were not expecting any such signal, and it appeared to us some little time before we got her stopped, got our own little boat from the Laura, and sent two men after the canoe, and got our anchor up again.

When the steamer got ready to pull on us the anchors that we had out had to be taken in; this one being the last happened to be left in the canoe to be out of the way, the coil of rope being laid on the stern and the painter made fast and forgotten in the hurry of getting the boat off.

Arrived at the wharf at about 10:30 and made fast outside of the Laura, and turned in shortly after a cup of tea kindly tendered us by the crew of the steamer, and a talk over the events of the past two days.

Friday, Sept. 28.—Turned out about 6 A. M.; wind S.W., weather unsettled. Laura served us with some fine fresh mackerel for breakfast, which was a toothsome dish after so much canned meats. While at breakfast we were agreeably surprised by a visit from our friend Mac, an enthusiastic Quebec yachtsmen, about the last person we expected to see in this out of the way part of the country. Being down on business he happened to see at the wharf a rig which he thought looked familiar, having been out once before on a cruise with us during the summer. On looking down the cabin the first greeting we got was, "Holy Smoke! I'm surprised to see you!" We hardly needed to look up after hearing the expression to know who our visitor was.

Charles promised to sail up to Cnatham with us, but he never put in an appearance, perhaps he had had enough of it. Walter having gone left Tom and the skipper to sail up alone. After the buffeting we had had we came to the conclusion that we were rather shorthanded for the trip, so we tried, there and then, to impress Mac into service, but he said he could not possibly go with us from there, but would come aboard at Church Point, having some business that must be attended to there; so there was nothing for it but 8 or 9 miles without him. After breakfast we commenced our preparations for a start; the weather looking dirty, and first part of sail likely to be roughest we double reefed mainsail, lowered topmast, reefed bowsprit and foresail, and with good wishes but shakes of the head as to the weather we were going to get, bid our friends of the Laura good-by and shoved off, making a close haul to clear spar buoy off Hay Island. We have omitted to give the results of the gale we experienced at Neguac; 4 small schooners were high and dry above the wharf where we thought we might have run for anchorage. Mr. Adams's yacht of 25 feet had also broken adrift, the wharf was considerably damaged, and, as we approached Hay Island, we noted another good sized schooner had come to grief, being high up on point of the island.

The wind fell light, giving us all we could do to work up against wind and tide by the island but at last we managed to get the Indian church at Burnt Church abreast of us, when in the distance we saw what looked like a small steamer coming down the bay, which we soon made out to be the Lily steam launch in charge of the Commodore with Messrs. Yeoman and Hutchinson as crew, who were on their way down to the wreck. They were given a hearty greeting from our log horn, which they responded to with their whistle. Many were the congratulations on our safe delivery from our mishap.

They kindly offered to give us a tow, but before doing so we asked them to run up to Church Point about a mile and get our friend Mac, which was another surprise to him and brought out his favorite expression again.

Having got alongside again we invited all the crew of Lily, except the engineer, to come aboard, and gave them our crew Tom

in exchange for a steersman. We lowered and stowed our sails as the wind had got quite light, and stood away for up river in tow of the Lily. We had to answer many questions as to our experiences, and had a jolly trip up with the exception of a steady rain that came on just below Sheldrake Island. Arriving at Chatham at 6 P. M. we waited there about half an hour for Mac to go ashore, and started again up river, leaving Mr. H. at Douglastown; from here up it was very dark, but arrived safely at Newcastle about 7:50 P. M.

MILLERTON.

BOATS AT THE AMERICAN INSTITUTE.—At the fair of the American Institute, now open in New York, a large and handsome display of boats and canoes is made by John J. Beckee, the representative of A. Bain & Co., of Clayton, N. Y. The largest boat in the collection of 14 is a steam launch, propelled by a vertical engine, using kerosene as fuel. The boat is very neatly finished and fitted out with air cushions, to be used if needed as life preservers, while it is lighted by electric lamps and storage batteries. Besides several small skiffs and rowboats of plain finish there are shown three of the famous St. Lawrence River skiffs, about 18ft. long, and very handsomely finished. One of these in particular, finished in mahogany, is a very fine boat. A large cruising canoe and two small open canoes are also shown, one of the latter having a smooth lap and the other being smooth-built of very narrow strips, making a handsome boat. A 16x30 canoe of the same build, decked and rigged complete, is also on exhibition. It is very finely finished, with mahogany deck and fittings, drop rudder, etc.

New Publications.

ROCKS AND SOILS. Their origin, composition and characteristics, chemical, geological and agricultural. By Horace Edward Stockbridge, Ph. D., Professor of Chemistry and Geology in the Imperial College of Agriculture, Sapporo, Japan, Chemist to the Hokkaido Cho. Octavo, 259 pp. New York: John Wiley & Sons. This is a work devoted mainly to the chemical constitution of rocks in their relation to agriculture, with a special chapter on the soil as related to the production of plants, and an appendix giving the ash and nitrogen constituents of agricultural products. In substance the work was primarily prepared for a series of lectures on chemical geology for students in agricultural colleges, but the desire for their permanent preservation led to the re-arrangement of the whole subject in the present accessible form. It is a work of the highest value to the student of scientific agriculture, embodying a thorough treatment of the subject in the most compact form.

DAYS SERENE. Illustrated from the original designs of Margaret McDonald Pullman, engraved on wood and printed under the direction of George I. Andrews. Boston: Lee & Shepard. This beautiful book is well calculated to inspire us with something excusably like envy for the perfect serenity of mind indispensable to its preparation. It brings before us the gifted artist at home with her favorite poets, realizing each scene as described, with the true artist's insight, and fixing the fleeting conception with her pencil. There are 25 illustrations of charming scenery, each with the poetic text that suggested it, and the work designed for the reception room table is gotten up in the best style of the publisher's art.

THE KING OF THE GOLDEN RIVER; or, The Black Brothers. A legend of Stiria. By John Ruskin, M. A. Illustrated by Richard Doyle and published by Lee & Shepard, Boston. With such an array of good names in the several departments of book production, this book may be safely left to herald itself by its title.

A PHYSICIAN'S PROBLEMS, by Charles Elam, M.D. Boston: Lee & Shepard. This is another of Lee & Shepard's Good Company series, and deals with those outlying regions of Thought and Action whose domain is the "debatable ground" of Brain, Nerve and Mind. The subjects treated are natural heritage, race degeneration, moral and criminal epidemics, body and mind, illusions and hallucinations, somnambulism, and the effects of prolonged revery and abstraction. All these subjects are handled with masterly skill, in harmony with the scientific conception that psychological phenomena are but manifestations of the physical condition of the nervous system.

THE BLUE AND THE GRAY SERIES. Taken by the Enemy; by Oliver Optic, author of the Army and Navy Series, Young America Abroad, etc. Boston: Lee & Shepard. Illustrated. Taken by the Enemy is the first of a new series of six volumes which are to be associated under the general title of the Blue and the Gray Series. The title sufficiently indicates that the story is concerned with the "little misunderstanding" between the North and South of a quarter of a century ago. The subject is and will continue to be of fascinating interest to all Americans, and the story will not fail to achieve the popularity of the writer's earlier works.

THE LAST OF THE HUGGUMUGGERS. A great story with illustrations, by Christopher Pearse Cranch. Boston: Lee & Shepard. The last of the Huggumuggers is a very amiable giant, in fact he is only a good-natured specimen of overgrown humanity whose family waxed great on abundant supplies; the dwarf Kobboltozo on the contrary, who is green with envy because he is dwarfish, crooked and ugly, is a really malevolent being, and of course comes to a bad end. The book is full of marvelous adventure.

KOBBOLTOZO. A sequel to the last of the Huggumuggers, with illustrations. By Christopher Pearse Cranch. Boston: Lee & Shepard. Those who have read the Last of the Huggumuggers will know by anticipation what manner of book Kobboltozo is; for those who have not it must suffice to say that it is a story of the imagination, dealing with a race of dwarfs who aspired to become giants, and written for the amusement of little folks and the edification of grown-up folks.

ALL AROUND THE YEAR, A PSALM FOR NEW YEAR'S EVE, AND A CHRISTMAS CAROL, are the titles of three several sets of dainty holiday cards, published by Lee & Shepard, Boston; the former a calendar, the two latter with words by Dinah Maria Mulock, and all charmingly illustrated by J. Pauline Souther.

THE ADVENTURES OF A CHINAMAN IN CHINA. From the French of Jules Verne. By Virginia Champlin. With fifty illustrations. Boston: Lee & Shepard. Jules Verne's fancy is inexhaustible; he never wants for variety, and although in the present volume he makes a Chinaman his hero, he inspires the reader with a ready sympathy for him, which makes us follow him through a series of critical adventures with breathless interest. Suffice it to say that the hero of the story is a pampered young millionaire who has no conception that life is worth living until exposed to the daily apprehension of losing it.

THE LOVER, and selected papers from "The Englishman," "Town Talk," "The Reader," "The Spinster," by Richard Steele. Boston: Lee & Shepard. This is one of Lee & Shepard's Good Company series. The Lover consists of a series of essays, in which the tender passion is analyzed and studied in all its varied forms and phases by a writer unsurpassed for the delicacy of his sentiments and the spontaneous flow of the purest and most graceful language in which he conveys them. The other papers are short essays in the same classical style, and worthy a place in the same volume.

FIGHTING PHIL. The life and military career of Philip Henry Sheridan, General of the Army of the United States. By Rev. P. C. Headley, author of lives of General Grant, General Sherman, Admiral Farragut and others. Boston: Lee & Shepard. This is one of the series of "Young Folks' Heroes of the Rebellion," and the concluding volume of the series. Of all the generals of the late war, Fighting Phil, the dashing cavalry officer, was the soldiers' idol, and the one who must always come to the top as the young folks' hero; and the author, in describing his brilliant achievements, has thrown over the deadly struggle in which he played so prominent a part all the glamor of a fascinating romance. The record of Fighting Phil's achievement will be handed down through untold ages and fire the patriotic ardor of nations yet unborn.

QUICK COOKING, a book of culinary heresies for the busy wives and mothers of the land, by one of the heretics. G. P. Putnam & Sons, New York. This is an age of ideas, and the author of "Quick Cooking" starts out with the idea that for the average housewife it will not pay to devote four hours to the preparation of a dish that is disposed of in ten minutes. He gives 630 recipes for dishes to be prepared, in short time, and 340 of these in from five to fifteen minutes; recommends order, method and the use of the gas stove as the essential conditions of economy, and especially of economy in the housewife's time, health and temper.

MANNERS, HAPPY HOMES AND GOOD SOCIETY ALL THE YEAR ROUND, by Mrs. Sarah J. Hale, author of "Womans' Record; or Biographical Sketches of Distinguished Women. Boston, Lee & Shepard. This is a volume of manners, habits and social observances, as affecting social intercourse and the constitution of the home circle. The volume is essentially patriotic, and no less deeply religious, and while, as the author tells us, gleanings have been made from the best writers on the subjects indicated, the foundation principles of love and duty, the pillars of domestic peace and social improvement, have been built up from the Bible, "the only book which is just to woman."

LITTLE MISS WEEZY'S BROTHER. By Penn Shirley, author of "Little Miss Weezy." Little Miss Weezy's brother Kirke is a chip off the same block as Little Miss Weezy, and whittled by the same hand. Miss Weezy's brother too leads a home life the greater part of the time, except when he runs away, and all the little people who are interested in little Weezy can keep up their acquaintance with her and watch her unfolding, while following the adventures of Kirke. A genuine child's story, and full of loving interest for children.

DREAMTHORP. A book of essays written in the country by Alexander Smith, author of a life drama, city poems, etc. Boston: Lee & Shepard. Dreamthorp is but the author's environment, the place in which the essays were written in retreat from the actual battle of life from which they draw their inspiration. The essays themselves reflect earnestness, calm philosophic speculation, generous emotion, and perhaps the most charming of them all is the essay on vagabonds, in which, carried away by the author's passionate pleading, we sympathize with all the world's great vagabonds, from Ishmael to Shakespeare's merry vagabonds in the forest of Arden.

A MANUAL OF VERTEBRATES.—A Manual of Vertebrate Animals of the Northern United States, including the district north and east of the Ozark Mountains, south of the Laurentian Hills, north of the southern boundary of Virginia, and east of the Missouri River, inclusive of marine species. By David Starr Jordan, President of the University of Indiana. Fifth edition, entirely rewritten and much enlarged. Chicago: A. C. McClurg & Co., 1888. A new edition of Prof. Jordan's concise and excellent work has just appeared. It is much larger than the former editions and covers much more ground, taking the marine vertebrates, which are omitted in the former publications. The world-wide reputation of Prof. Jordan as a careful and accurate naturalist of the first rank is a guarantee that the book will become a standard for reference for all who are interested in determining the beasts, birds, reptiles and fishes which come under their observation. The descriptions in a work covering so wide a field are necessarily brief and much condensed, but the main points necessary for identification are preserved so that the student may determine species without difficulty. Where it has been necessary to use technical terms they are used, and a glossary of them is added, but these are avoided as much as possible. As a work designed to give students and collectors a ready means of identifying the vertebrates of the region which it covers it is invaluable, containing a vast amount of information in a very small compass, being readily carried in a large pocket or small satchel. A system of analytical keys is used for the generic characters, and this is of acknowledged value to the student. In the older editions artificial keys were used to a great extent, but in the present work these are mostly set aside. The arrangement of the fishes is essentially that of Jordan and Gilbert's "Synopsis of the Fishes of North America," and almost exactly that of Jordan's "Catalogue of N. A. Fishes." The arrangement of the batrachians and reptiles based on the various papers by Prof. Cope, while in the nomenclature and classification of birds the author has followed the "Check List of North American Birds," published by the American Ornithologists' Union, the analytical keys to the genera being those of Ridgway's "Manual" and of Coues's "Key." Prof. Baird's "History of N. A. Mammals" has been the guide to this department. In the present edition the order of the former ones is reversed, it begins with the lowest form of vertebrate and ends with man.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

C. M. B.—There are ruffed grouse in the Pocomo Mountain country, squirrels, and you may find a bear.

SCOTLAND.—We will send you the name of a person in Canada who will supply the information your friend seeks.

P. N. VAN C., Brooklyn.—1. The best song bird to keep in a cage is a canary. 2. The bird stores supply a powder which rids birds of lice.

G. C. C., Rochester.—1. There is but one recognized breed of bull-terriers. 2. The bullet-headed terriers shown at Boston last spring were mongrels.

C. A. H., New Haven.—We recommend you to go to the Pamlico River district, making headquarters at Durham Creek. See advertisement of the resort elsewhere.

AMATEUR, Lockport.—For grouse, quail and woodcock, an all-around dog, choose a pointer or a setter, as your fancy dictates. Many advocate spaniels for woodcock shooting, see recent article in our gun columns.

E. A. F., Rochester.—The discussion of rifles for general use has been published in our recent numbers, and we have further communications on the subject for immediate publication. The repeating arm you name is growing in favor. You must decide about it for yourself.

F. H.—A friend and fellow sportsman in poor health and with moderate means, supplied with a camping outfit, intends to spend the winter in some pleasant southern climate, and would be under obligations to you if you would kindly point out to him a suitable location where he could find health and recreation. Ans. Georgia, Florida, the Gulf States and southern California all have an abundant supply of territory suitable for winter camping, but a physician should be consulted to determine the climate best adapted to an individual case. It is not advice that can be given by laymen and strangers.

H., Newton, Mass.—I have a pointer pup three months of age. She is of good proportions and in good condition, just fat enough, and very active when out in the yard. Yet her front legs are somewhat bowed and her shoulders turned out from the body, so it detracts from her appearance very much. I keep her in a stall in the barn, with bottom of stall covered three or four inches thick with sawdust or leaves. She is allowed to run in the yard every day more or less. What can I do to remedy this trouble? Will anything but exercise help the case, and what could have caused such a defect? Ans. The trouble may have been caused by the bitch having lain in a low place, or in a damp place; or it may have been caused by over feeding when she was just weaned. The only course to effect a cure will be to give her full liberty to run at all times; do not confine her at all in the day; if she can have the liberty of a warm place, like the kitchen, so much the better. Feed her three times a day, not too much, but something good, a little broth and some meat, with a tablespoonful of cod liver oil. Do not overload her stomach at the expense of her weak legs.

THE BEAR AND THE PARALYTIC.—The New Orleans *Picayune* prints a story, which goes pat with the tale recently told in these pages of how one of Agassiz's companions was scared into use of his limbs: "Some years ago, just before leaving the Asiatic Station for the United States, the flagship Tennessee visited one of the ports in the China Sea not much frequented by our men-of-war, and upon her departure the Admiral was presented by the Governor of the province with a small brown Burmese bear. At first bruin was kept in a cage, and every one stood in mortal terror of him, mistaking his friendly advances for a thirst for blood; but before many days it was discovered that he was not very vicious, and he was accordingly released from his cage, but kept chained. This, in turn, was found in a short time to be unnecessary, as the little fellow soon became accustomed to his surroundings, and ere long he was a privileged character on board, roaming at will on the upper deck, and affording no end of amusement to the crew. One of the peculiar features of this bear, and one which had led to his being misunderstood at the outset, was his growl. It was big enough for a bear twelve times his size, and perfectly blood-curdling in ferocity; but it seemed to be his way of laughing. He would climb the rigging, and, when some unsuspecting person was below him, suddenly let go and come down on top of his victim, letting out this frightful growl. The first time he tried this trick he landed on top of a midshipman, who fainted on the spot. One day, all hands being at the time on the upper deck, the bear fell down a hatchway, finding himself in a new world—on the gun deck. Being of an investigating turn of mind, he started on an exploring expedition, and finally found intense amusement in walking round and round the hatch over the sick quarters, situated on the deck below. In a cot in the sick bay, directly under the hatchway, lay a sailor who had never heard of the bear. He had been in his cot a month, suffering with paralysis of both legs. He lay now reading a newspaper, which he held in such a way as to shut out from his sight everything overhead. Deeply absorbed in the paper, he saw and heard nothing of the bear above him. Suddenly and without a moment's warning, down came the bear on top of the paralytic, with his awful growl. The paralytic gave a yell; forgetting all about his paralysis, he jumped from his cot and ran screaming along the deck; the bear, unused to such a reception and thoroughly angered by it, pursued him. On went the paralytic, scantily attired in red flannel; on came the bear, murder in his eye. Reaching one of the doors of the officers' quarters, the paralytic rushed in yelling, 'Look out for the bear!' The officers and paralytic rushed pell-mell in the opposite direction, and bruin, who had pursued his prey, was caught, the doors being shut on him. Poor bruin never recovered his good humor, and had to be killed. But the paralytic? He claimed that the bear had cured his paralysis, but others thought differently, and to insure against a relapse severe punishment was inflicted upon him for fooling the doctors and shirking his work."

Prof. F. Nicholls Crouch, the composer of the world-famed "Kathleen Mavourneen," writes as follows from Baltimore, Md., under date of Oct. 27: "With a strong head wind, an unusually rough sea, and a stormy outlook, we shipped our moorings at Boston and plunged ahead on a southern passage to Baltimore, Md. In the morning after breakfast the forward lookout roared out: 'Big fish! Weather side.' Directing our optics over the side, we saw a great commotion in the seething waters, in effect similar to that noticed when a propeller first puts its wheel in motion. Our steamer was driving ahead at great speed. The commotion in the perturbed waters was amidships, where our attention was called to it by the lookout. We saw a gigantic black arm, some thirty feet in length, protruding from the sea, instantly followed by a second evidently in the act of seizing something within those grappling fangs. The creatures—pursued and pursuing—were both below the surface of the water. As these enormous claws emerged from the depths, a hugh swordfish leaped into the air some five feet high, curving like a bow as it descended head and horn downward. The outline of the pursuing fish, fully seen and fully developed, was some eighteen or twenty feet in length, and in circumference it was not less than two yards over the shoulders. The pursuit continuing, it naturally drifted into the steamer's wake, and from time to time this contest for capture could be seen renewed again and again, until distance made the object invisible. Philosophizing on the singularity of the occurrence, we came to the conclusion it was a struggle for life between an octopus and a swordfish, the horn of the latter defending itself in the depths below its crab-like antagonist; but forced to the surface, the mammoth arms of the octopus grappled distance and everything within reach. Consequently the means of escape was for the swordfish to spring high in the air, judiciously diving at some distance away. Of course this relation as well as our solution of the strange cause and effect, can produce nothing but surmise and the repetition of the old saw, 'travelers see strange sights.'"—*Detroit Free Press.*

In the Stud.

AT STUD. FEE $50.
The Champion Mastiff

WACOUTA NAP.

Winner of the following prizes: 1st, Buffalo; 2d, Newark; 2d, Providence; 1st and special, Pittsburgh; 1st and special, Detroit; 1st, special and head of winning kennel, St. Paul; champion and head of winning kennel, Milwaukee—all in 1887.

To those who wish to breed mastiffs of size, weight, power and activity, free from the faults due to so much intense inbreeding—dogs that exactly meet the requirements of the mastiff standard, Wacouta Nap is especially commended; for no dog in America promises as well to eliminate the faults in the blood of bitches of deeply inbred strains as this one.

ST. JOE KENNELS,
Niles, Mich.

The Syracuse Kennel Club

Offer the services in the stud of the famous English setters:

ANSWERS TO CORRESPONDENTS.

BUFFALO BREEDING.

WE have already recorded the transfer of the celebrated Bedson herd of buffalo to the well-known "Buffalo" Jones of Kansas. Our Chicago correspondent in his notes printed to-day, reports the arrival of the herd at Minneapolis on its way to Mr. Jones's ranch at Garden City. In the estimation at least of those who take pleasure in the study of our large game, either as sportsmen or as naturalists, this transfer of live stock is an event worthy of more than passing note.

The last year of the great buffalo herds in the Canadian Northwest was 1878. During that summer the great plains of the Saskatchewan were dotted and darkened with buffalo herds for hundreds of miles, and in the words of a recent correspondent of this paper the country was "one robe." Of course the hunters of all kinds repaired thither from all regions, and the slaughter was great. The supply of robes then sent to Winnipeg is hardly yet exhausted.

One band of Indians returning to that city laden with spoil drove in alive five buffalo calves. These calves became the property of Mr. James McKay, a prominent half-breed, better known as "Tonka Jim" from his immense stature. For four years these buffalo were allowed to ramble about the prairie on the outskirts of the town, in company with the ordinary cattle of the vicinity, nor were they disposed to molest any one nor to move away to distant regions, but continued to thrive and multiply without care or attention until 1882, when the whole herd, now numbering twenty-three, including hybrids with the domestic cattle, were sold to Mr. Samuel L. Bedson, the warden of the penitentiary at Winnipeg, and an enthusiast on the subjects of domestication and improvement by breeding of more than one species of indigenous wild animals.

Having received the material for his experiment, Mr. Bedson set about endeavoring to supply a ranch animal that was better adapted to withstand the rigors of the climate and scarcity of food than the common neat cattle now universal on the ranches of the Northwestern States and Canada. Setting the buffalo and the neat kine side by side with a view to comparison of their respective advantages as ranch beasts, we find first, that the domestic animal is liable to great mortality from drought, frost, snow, starvation, disease, stampede, and to some extent from wild beasts. Its flesh certainly is of the highest grade, but its hide is not worth more than a couple of dollars, and the great cost of herding all the year round and of feeding through the winter, is enough to turn the balance of profit into dead loss whenever, as is now the case, the cost of marketing or the price in market takes a turn for the worse.

The buffalo's characteristic disadvantages are the comparative inferiority of its flesh, the great size of the forequarters and the slightness of the hindquarters; all of which is just the reverse of what a beef animal should be. On the other hand, all records and all Mr. Bedson's experience go to show that the buffalo enjoys complete immunity from all disease; and in winter and summer it can feed itself on the prairie grasses even when it has to dig for them through a couple of feet of snow. To frost and snow it is entirely indifferent; as an example of this we may cite the case of a buffalo cow which brought forth a calf on the open prairie in January, 1884, and although at the time the thermometer registered 38° below zero, neither cow nor calf appeared to suffer the slightest inconvenience. Numerous other instances might be given to illustrate the complete hardiness of the buffalo; but, as a matter of fact, this is a point on which no one who has had any experience with the animal can have any doubt. It is, moreover, quite certain that all losses from mortality that ensue with the present cattle would be saved with the buffalo, for all reductions of the Bedson herd were made either by the butcher's knife or by the rifles of maliciously disposed neighbors.

Again, the hide of the buffalo is worth from $10 to $15, and it has established itself in the position of an indispensable wrap in our northern climate. Once a year the buffalo sheds its fleece, scraping it off in great flakes against the bushes and trees. This wool is easily gathered and readily worked up into a yarn that will compare favorably with that produced by the inferior breeds of sheep. This it will be seen is no inconsiderable item when we are told that each animal yields from 10 to 12lbs. of the raw material. Many years ago there was in Winnipeg a cloth factory for the manufacture of buffalo wool, and its operations ceased only with the extirpation of the animals in the vicinity of the town.

In one particular the buffalo is greatly the inferior of its domesticated relative, and that is as a milker, but to the ranchmen this item is of no consequence whatever. As a draught animal it is stronger, quicker and more enduring than its short-haired relative.

It is a remarkable fact that the buffalo and the *Bos taurus* are inter-fertile in all degrees of hybridity, so that Mr. Bedson found his material plastic enough when he set about his experiments, and yet it proved necessary to exercise caution, for it was believed that though the buffalo cow could readily bring forth the hybrid calf, the common cow could not always do so on account of the great size of the young one's shoulders compared with the orifice in the pelvic bones. But beside this one mechanical obstacle there was no barrier to indiscriminate interbreeding.

As a result of crossing Mr. Bedson has succeeded in producing an animal which in a great measure unites the best qualities of both species. It is of nearly the same shape as the common steer and therefore much better for beef; it is invested with a robe of long, soft, glossy fur, which is almost even in length all over the animal and varied in shade from light brown through brindle to pure black. It is also improved as a milker, but it must be confessed that the animal is more or less liable to kick during the process of milking. It, however, retains the hardiness of its wild progenitor, and altogether gives good promise of being the ranch beast of the future.

In January, 1885, the herd numbered forty-one; of these nine were half-breeds, six were three-quarter bred and the rest were pure buffalo. During that year the Northwest Buffalo Breeding Company was formed, with Mr. Bedson of course as its central figure. Major Bell, of the Bell Farm at Qu'Appelle, also took a prominent part, and the herd was divided, so that a large portion was under the supervision of the latter gentleman.

In January, 1887, the remainder of the original herd numbered something over sixty; and if we are informed aright, it is this remaining lot, with its natural increase of the last two years, numbering now some eighty odd, that has become the property of "Buffalo" Jones, of Garden City. That the Kansas breeder may succeed beyond his highest expectations in preserving this grand animal from extirpation, in giving us a new and valuable addition to the stock farm, and in reaping the golden harvest he so richly deserves for his energy and enterprise, must be the wish of every one who is watching his experiments.

SNAP SHOTS.

OUR gun columns have been specially useful in recent numbers, because of the many reports of shooting localities. Numbers of our readers are on the lookout for information respecting desirable game resorts, and notes giving such directions are always acceptable. It is by the free interchange of advice of this character that the shooting fraternity can make the columns of FOREST AND STREAM most useful to one another.

The seventh annual meeting of the American Forestry Congress will be held at Atlanta, Ga., Dec. 5, 6 and 7. Special passenger rates have been provided, particulars of which may be had on application to Hon. Sidney Root, Atlanta. The sessions will be open to the public, and as interest in forestry is rapidly growing in the country, it is expected that the Atlanta Congress will be more largely attended than any of the previous ones. The secretary is Mr. E. B. Fernow, of Washington.

The suggestion made in these columns that the female deer should be spared, was intended to apply specifically to the Adirondack game region of New York. The necessity of reasonable restrictions of game destruction in that area is very generally recognized. Without discussing the economic advantages of a general observance of a rule to spare the does in all hunting localities, without considering even the practicability of such a rule were its general application desirable, there can be no question of its beneficial effects on the North Woods nor of the feasibility of observing it there. Indeed, the rule is actually in force, by common acceptance, in certain localities, where guides and visitors are agreed upon its advantages.

The season of 1888 is not to be recorded as the ideal with respect to weather conditions. There has been much rain, and of the days set apart for shooting a large proportion have proved to be disagreeable. Hunting parties who have returned from the far Northwest report exceeding disagreeable weather there, with much snow and storm through October and November, making successful hunting an utter impossibility. The mild temperature which has prevailed in the vicinity of New York has not helped the duck shooting; but a change came with the storm of Sunday, Monday and Tuesday which has prevailed very generally over the country, and we may now expect to hear of successful wildfowling excursions.

Missouri sportsmen have set on foot a movement to provide for that State a game warden system similar to those of New York, Michigan and others. This is the only machinery yet devised to secure game protection, while associations like that of the Connecticut sportsmen and farmers, which is now attracting attention because of its activity, answer the purpose in specific cases, and for a short period, so long only as the initial enthusiasm holds out; but they fail in the end from the very nature of things. It is not to be expected of average human nature that private citizens shall keep on forever doing the work which properly belongs to the State or town administration. Game law enforcement, like all other law enforcement, is a public concern; provision should be made for it by the community at large. Missouri and all other States which supply the Eastern markets with game must, as steps of political economy, control the traffic by a system of public officials paid to do the work. Why is it that at the present time, when local supplies have been exhausted, the New York game dealers buy their quail about as cheap now as they did twenty years ago? Because transportation facilities are such that they can bring their game from a great distance by a "long haul" at about the expense formerly attaching to a "short haul," and they are thus depleting the supplies of the West just as they have those of the East.

The Sportsman Tourist.

IN NEWFOUNDLAND.

ON Saturday, the 15th of September, the writer embarked at Halifax on the steamer Portia, 732 tons burden, bound for St. Johns, Newfoundland. This vessel, which is of iron, leaves the port of New York fortnightly for Newfoundland, touching en route at Halifax, there it remains from sixteen to eighteen hours before leaving for its destination. The time occupied in the passage is about fifty-two hours from New York to Halifax, and the same time is taken from Halifax to St. Johns. This steamer is staunch and strong, and the master, Captain Dawson, a good seaman and successful officer. We had very fine weather, the air being mild and the sea tranquil. As most of such voyages are, so was ours uneventful for a short time. When well out to sea we had the company of about fifty porpoises, which sported on the surface of the water and ducked beneath it in their gambols; these soon left us, and in their place we caught sight of a huge whale, which showed itself but twice. The tedium of our monotonous journey was again broken upon by the arrival of an occasional land bird about our decks; indeed there were a pair of linnets which remained several hours around our vessel, hoping about and picking up such food as they could find; these little creatures seemed very tired and hungry. It was on Monday morning that we first caught sight of Newfoundland. As we drew near the high precipitous shores of the island exhibited well the stratification of the rocks, against whose base the sea dashed, and all their foldings and contortions were in full view. From the foot of these cliffs long points in various places ran out far into the ocean.

On the summit of this rocky coast there was a treeless plateau, with hills rising above it, all of which when bare of everything appeared to be covered by a growth of low shrubs, the green of which had a brownish or yellowish hue.

We had been in full view of this rocky land for more than an hour before we saw human habitation. When we did see one it was situated far up at the head of a cove and consisted of a fisherman's white hut. After this we saw in various other coves, as we skirted the shores, little clusters of humble homes; and where there was earth enough to cover the rocks the sward growing on them was of a brighter green than what one usually sees elsewhere, reminding me of that green which meets one's view as he approaches the shores of Ireland. Fishing boats were frequently met along the coast; in one instance I counted forty-four all hard at work in one place. Here and there were seen substantial and well cared for lighthouses. When we first came in sight of the island the ordinary color of the rocks on the shore was gray, but when not far from the Bay of Bulls this was changed to red. In several places in this vicinity there were great cavities in the steep shores where masses of rock had tumbled out. Sometimes, indeed, they were seen lying on the beach beneath.

As we drew near to what we were told was the harbor of St. Johns we could see no entrance to it. At the distance of a mile a deep depression in the rocks was visible, but that was all. Coming a little nearer the water became visible and the whole grand entrance between these steep, massive and variously contoured hills gradually came in full view. The entrance to St. Johns harbor at the narrowest point is but 165yds. wide.

The hill on the north of this entrance, which is called Signal Hill, is 520ft. high, while that on the south side is 560ft. above the water line. Once in the entrance you have a full view of the city of St. Johns, which is built at the foot and on the slope of a steep hill facing the entrance to the harbor, which is more than a mile long, and about three-quarters of a mile wide. The city has a population of about 25,000.

Our steamer was soon at the wharf, and stepping ashore we were met by the polite customs officer, who immediately passed our baggage. I walked up to the Atlantic, a large, new, convenient and commodious hotel.

I had not been long in it until I was reminded of the existence of game in the island by seeing two gentlemen enter with game bags well filled with ptarmigan. The shooting season begins here on Sept. 15.

The day after my arrival I drove for nine miles over the strange treeless hills, among which one sees in all sort of odd places equally strange lakes, or, as they are called here, ponds. These were surrounded by low shrubs, hardly a tree being visible. We were on our way to Petty Harbor, a fishing village, which we at last found nestled down in a deep, rocky valley, so surrounded by high hills that it reminded me of the entrance to the pass of Glen Lyon, in the Highlands of Scotland. Wherever any earth was to be found on the steep sides of these hills and in the narrow valley, through which a large brook tumbled, little patches of potatoes were planted. I heard of one case where a poor woman had carried on her back many loads of earth—enough to make a garden in front of her little cottage, in which garden she had all of her vegetables planted.

On our way to Petty Harbor we were again reminded of the ptarmigan by seeing a sportsman on his way home, who told us that he had that day secured fifteen of them. In order to give some idea of this bird, whose flesh is more delicate than that of either partridge or grouse, more especially during the months of October and November, when it attains its highest flavor, I obtained from Mr. Richard White, a well-known sportsman of St. Johns, the following facts: During the winter, at times when the weather is foggy and moist, these birds frequent the high hills, feeding on the buds of shrubs of various kinds; but when it is boisterous and cold they desert these haunts. They mate in February and lay their eggs early in June; these usually number from eleven to fourteen. The nests are very rough affairs, consisting of a few sticks and straws collected together; they are constructed on the borders of marshes and among low shrubs. The young usually make their appearance in July, being about able to fly in the middle of that month. They are in good condition on Sept. 15, when the season has been a favorable one; when, however, it has been cold and backward they are small at that time. Their color is then brown, their wings being partly white. In October their color begins to change, and by the last of December they are nearly entirely white, with the exception of the tips of their tails, which remain black. The legs in winter are feathered down to the toes. When it is stormy and snowing in the winter they do not seem to feed, but remain in one spot for more than a day. During the autumn they feed on berries, which are abundant on the island.

The ptarmigan is found all over Newfoundland. The best shooting grounds near St. Johns are Cape St. Mary's, Cape Pine, Trepassey and the coast stretching from it to St. Johns. Ptarmigan are also shot in the immediate neighborhood of St. Johns. On Saturday last, Mr. White and his brother shot thirty-one of them within six miles of that city. The shooting is all done on the wing, the dogs made use of being generally the Gordon setter, these being much preferred to the pointer on account of their superior endurance. Early in the fall the full covey rise at a time, and when undisturbed they always keep near the place where they were hatched. Later on in the season they are started in twos and threes. The heaviest bird which Mr. White had shot weighed 1lb. 14oz. The average weight at the last of October is about 1¼lbs. each. Up to the 1st of October three-quarters of the birds are shot at distances not exceeding 40yds. After that, when they are stronger and more timid, they rise when one is within 50 or 60yds. Mr. White says the largest number of birds ever killed by him in a day was 27.

Sportsmen coming to Newfoundland will during the summer find access fortnightly to all parts of the shore of the island (with the exception of those on the Straits of Belle Isle) by means of the mail and passenger steamers, Conscript, 440 tons, and Volunteer, 450 tons. These boats are well manned and provided; and starting from St. Johns one takes the southern, the other the northern coast, touching at the various harbors on their routes.

There are thirty lighthouses on the island belonging to the government of that colony, and several others which were erected by the government of Canada. Indeed, the salient points of the island are so well lighted that a vessel in clear weather has a lighthouse always in view when coasting along its shores.

EDWARD JACK.

NOTES ON WESTERN FLORIDA.

IV.—CRUISING DOWN THE COAST.

We did not stop on our return at Carabelle, but sailed out at once into the sea, where a strong favorable breeze was blowing, and we made good time to the east, anchoring at night off Alligator Point in only three feet of water. The following morning, to our intense surprise and chagrin, we found ourselves high and dry, left by the receding tide. There was nothing to do but go ashore, or rather, step aground, and spend the morning shooting snipe and beach birds. We had very fair sport until the returning waters liberated the Geline from her unaccustomed position, and we once more headed to the east.

South Cape is a well defined point of sand that makes out into the Gulf and forms one of the arms that inclose Ockolockone Bay. I have beaten around this veritable "Cape Horn" several times in the course of my expeditions, but never yet have I been aided by a favorable wind. So it was with Rusticus and I; we tacked almost in the eye of a wind that seemed to shift to oppose every turn we made, and baffled and worried our crew entirely out of patience. We, of the cabin, took it very easily, but Captain Joe frowned and swore in a most outrageous manner, and worked himself into a tremendous state of fury, cursing, not only at the wind, but railing at its maker and calling out in an excess of fury for the Almighty to come down from on high and give the management of the weather to him, and he could do a better job of it, he knew. It was very sacrilegious and just a bit ridiculous to hear this man, this creature of some seventy inches in height, defying and railing at the Almighty Power, which, whether under the Christian name of God or the scientists' name of Nature, rules the vast universe with inscrutable wisdom and boundless force. This same man a few days after, during a terrific thunderstorm, cowered as the forked lightning played in the heavens and repeated the prayers of his Catholic church in terror, as if it were worth while to create so grand a combat of the forces of nature to slay so small an atom of the animal world.

The woods of the cape were on fire and cast a great light over the beach and the sea, as we anchored just around the point, some three hundred yards from shore. Then came the "grog," the pipes and the tales of sea and land. Sailors are generally put down as notorious "drawers of a long bow," and their yarns are seldom believed whenever they vary in the least from the landsman's idea of the normal condition of things. This is, I think, very unjust. Of the vast, unfathomed depths of the ocean, which is literally unknown save on the very surface, and of the strange, unvisited lands of unexplored continents, it does not seem surprising to me that tales are told—true tales, too—that may seem improbable to stay-at-homes.

During the night all hands were awakened by a most terrific tossing of our vessel. We hurried on deck and found that a storm of considerable severity had sprung up, the rollers coming in with great force from the open sea and breaking all around us, while the anchor rope was tugging and pulling in a way that must either soon cause it to part or the hold to give; in the former case our fate would be swift and sure to be dashed against the beach and utterly wrecked. All hands were called to hoist up the anchor; it was hard work to get on deck that mass of iron, for it tugged against us as the breakers beat on the bow of the little vessel, but at last it was accomplished; then up went the mainsail, I flew to the helm; it was an exciting moment; we began to drift broadside into the very midst of the mass of foam, a breaker came rushing in on us, ghostly white in the darkness, and broke on our starboard bow, heeling her over until I feared we never would right again, then another caught us, carrying away the cabin hatch and sweeping us to withing fifty yards of the shore. "Hard a port" sang out Joe. I put the tiller down as far as I could; the wind caught the sail and we rounded to just in time to avoid grounding in the midst of the surf. It was a pretty close call. By very careful handling we now ran up the bay and in an hour anchored once more—this time in still water.

Ockolockone Bay is a large indentation in the coast that receives the waters of a stream known by the same name. We spent several days idling about the bay and up the river, having excellent sport with cormorants and summer ducks, and also killing great numbers of snipe and plover.

It is a wild desolate region of forest and marsh, sparsely inhabited and fever bound by the swamps that everywhere exhale their noxious vapors. But nature is here very beautiful; the forests are grand; tall pines shoot straight up into the blue sky like the columns of some great temple; there are sycamores and gigantic oaks festooned with the melancholy gray moss, through which the sunlight comes in a subdued mood, as the light from cathedral windows; here and there palmettos and Spanish bayonets add variety and beauty to combinations already beautiful, and the ground, carpeted with the moss and mold of years, silences footfalls that otherwise would disturb the singing of a thousand birds. One of these songsters seems only to sing during the heat of the day, when all others have ceased; the melody is wonderfully sweet and clear, not unlike the notes of the northern wood robin, but far more lovely. So shy is the singer, however, that, though I have heard it a hundred times, and have tried with all the caution of a naturalist to identify the species, I have always failed; the sound, phantom-like, is always just ahead.

Squirrels and other small game are everywhere in these silent woods, and the many tracks are evidence of the presence of deer, but somehow we never chanced upon any large game in the Ockolockone region, and, as we can neither shoot nor eat a track, we got no venison.

There was a small settlement at the ferry crossing of a road over the Ockolockone River, opposite this village (nameless). Here we anchored one evening and spent a day or so in roaming around. The people were at first very conservative toward our party, but by a judicious distribution of tobacco and other passports, we managed to get acquainted at last. Climatic influence may have great effect upon the dispositions of men, but it is hard to realize that these people are of the same Caucasian race that produces the noblest specimens of the human kind. Utterly devoid of ambition and content to pass their idle, shiftless lives in perfect apathy and the darkest ignorance, they form perhaps the lowest type of our race. They live in the rudest of huts, often whole families occupying one room. Men, women and children go shoeless, and, according to our notions, almost unclothed. They drag out their existence by hunting and fishing, and as the woods are full of game and the waters swarm with fish it is no very hard matter to get enough to eat. Occasionally the family ox will be harnessed up to the rude home-made cart and driven to Crawfordville—some thirty miles away—where the supply of skins, and perhaps wax and honey, will be traded off for the necessaries of life—flour and quinine. Some of the more active cultivate a small garden patch of corn and potatoes, or tend a few head of cattle; and thus live from one year's end to another's, knowing nothing of the great world beyond their forest home, and caring still less. Well, ignorance is bliss; and perhaps after all they are in their way happier than he who toils and wrestles with the cares of the world in the struggle not to be forgotten. The country is exceedingly unhealthy; the hollow, shrunken eyes and livid, yellow complexions showing how strong a grasp the fever holds over this beautiful but deadly land. The sandflies here exceeded anything of which I had ever dreamed, they actually would gather in such numbers late every evening as to make hunting impossible and necessitate a retreat to our boat in order to escape the pests. The natives did not seem to mind their bites in the least, but would sit in the most unconcerned manner, apparently oblivious of the fact that dozens of the insects were trying to draw the blood through their toughened hides.

One day in talking to an old citizen about the country, I asked him if rattlesnakes were very abundant. "Well," he said, "thar used to be a right smart o' them, but they has been killed and adulterated off and thar ain't many left now!" I knew that science had aided in the adulteration of many articles, some of them equally poisonous, but it was rather startling to hear of the adulteration of so deadly and useless an article as a rattlesnake.

One morning during our stop at the village I woke up rather early. The mist was rising from the water like clouds of steam from a kettle, a sign that did not promise well for the healthfulness of the spot, and my blanket was dripping wet from the heavy dew. The woods were ringing with the songs of mockingbirds and grosbeaks; and just opposite the schooner, on a bank, stood a stately white ibis, poised on one leg, its whole attention centered upon the dark waters—a model worthy of any lady painter as the subject for a plaque or a tile. The river swarmed with alligators and a dozen black snouts were moving silently in search of the morning meal. I reached into the cabin for my rifle and aimed at the eye of a huge fellow that lay some 50yds. away. The shot passed rather high and rebounding skipped in increasing jumps down the river, while the report awakened the echoes of the woods, startling cranes and ibises from the shore and rousing my comrades from the morning nap. The reptile moved away with serene equanimity. My next attempt was more successful; at 100yds. the ball found its mark in his shoulder, and the huge beast leaping clear of the water showed his entire length, and then splashed toward the shore leaving a bloody trail. Hastily manning the dingy, Joe and I in picturesque deshabille, started in pursuit. Our quarry had gone to a swamp, in which there was, perhaps, two feet of water, the surface of which was so covered with aquatic plants as to almost impede the progress of a boat, while high over head the trees arched so as to cause the light to be quite dim.

For several minutes we paddled around, but seeing nothing, were about to give up the search, when all at once, from behind a cypress stump, some twenty feet away, the alligator made at us, mouth open and evidently meaning business. I had but time to cock my rifle when he was upon me, and I fired with the muzzle against his head, blowing it to pieces. The impetus of his charge was so great that he convulsively fell half into the boat, lashing out viciously with his tail, while Joe and I, unwilling to argue possession with so low a member of the animal creation, vacated and took to the swamp, thus acquiring knee boots of slime and mud; but he was soon done for, and after a few convulsive struggles lay over dead. He measured a little over eight feet. This is the only instance that I have ever seen of an alligator turning on a man; indeed, authentic cases of such action on their part are extremely rare, and the fury of this one must be ascribed rather to the pain of his first wound than any natural ferocity. My first shot had caught him in the shoulder, making a glancing wound and cutting a

broad, deep gash across his back. There is much difference of opinion about the size of alligators. One hears of them from fifteen to twenty feet in length, but I can only say that the longest one I ever saw in Florida measured some few inches under nine feet. Of course, in the Everglade region of the South there probably are monsters that exceed that length, but in a somewhat extended experience on the west coast I never have seen one of over the above dimensions. An alligator lying on a bank looks about twice as big as he really is, and a novice in the country would doubtless call a six-footer at least twice his actual size.

One day, in a long and solitary ramble through the woods, I came most unexpectedly upon a shanty, far away from any other settlement, standing alone upon the banks of a little bayou. Being very thirsty and wishing to see what manner of people this hermitage contained, I hailed and was answered by a young girl of perhaps eighteen years. Nature prepares many surprises for us, and the traveler in unfrequented parts is constantly stumbling upon the most extraordinary contrasts, but the beauty of this girl almost took my breath away. The difference between her and her sallow shrunken sisters was startling. The coarse calico gown could not hide the symmetry of a figure which, unaided by any of the appliances of modern fashion, was in itself perfection; with her fair, pale face, teeth of the most dazzling purity, long plaits of luxuriant brown hair, and eyes, the wonderful depths of which it would be presumption to attempt to describe, she formed my ideas of a Marguerite. Her sweet childlike face was innocence itself, her mien simplicity uncultivated. She gave me a drink of water from a gourd. I suppose that I ought to go into ecstacies over that drink from such hands, but I cannot; it was vile, muddy stuff. I could not help thinking of Maud Muller, however, as I saw her tiny, bare, brown feet; but all simile cease here, for the Judge in the poem had clear water, while I had to put up with a decoction of mud, strongly resembling railway coffee. I am not generally an admirer of what is known as rustic beauty or rustic simplicity; in nine cases out of ten a milkmaid is anything but the charming creature that poets and sentimentalists would have you believe. She generally has a hand like a ham and a foot like a pancake, smelling like a cow, while her figure seldom has anything of the "wild free grace of the deer," and her simplicity you discover to be a delusion, as she cold-bloodedly swindles you in your milk bill. But this girl was truly superb, one of those rare beauties that one sometimes meets under just such circumstances, and that seem all the more lovely by the surroundings and contrast. And to this vision—this ideal—would probably soon come the "country lad acourtin' " in the shape of a long, lanky, pigeon-toed son of the forest, who would make her his slave-wife, and she would pass the rest of her life cooking for her great lazy lout of a husband. I am not generally an enthusiast, but really this girl properly arrayed and refined, would have caused a sensation in any ballroom in the land.

A rather curious feature, which we noticed on the Ockolockone, and indeed in all the fresh-water streams, was the total absence, during the early summer, of musquitoes. There were absolutely none; but when once we approached salt water they again appeared in countless hosts.

Birds were not very abundant; we managed to kill enough ducks to supply our table, and also to shoot a few partridges (very unsportsmanlike I grant, but we were shooting for food, not fun).

I saw a great many of the swallow-tailed hawks, and several of the nests were in dead cottonwoods that lined the bank of the river. I should have obtained the rare eggs of this beautiful bird, but the trees were absolutely unclimbable.

One morning we ran down the river to a little canal that connects the waters of Ockolockone with the Sopychopy River, and, passing through, entered the latter stream. This canal is no very grand triumph of engineering skill; it is only one hundred yards in length, and was opened by the lumbermen, through which to float their rafts of timber from the upper Sopy-chopy. Small as it is, however, perhaps De Lesseps would find it a good speculation on which to raise bonds to the amount of—well—several millions.

The Sopy-chopy is certainly one of the wildest, most gloomy streams that I have ever visited. It is of great depth in proportion to its width and winds and twists about in a most perplexing manner. A few miles above the canal the banks were scarcely thirty yards apart and the trees in places actually met overhead in an arch. Of course sails in such a place were useless and we were obliged to pole our way laboriously along.

The stillness was intense—no sound of bird or beast disturbed the solemn silence of the solitudes. I do not think that we saw a single living creature all day, but slowly ascended in perfect silence. It was really awe-inspiring, we felt like explorers in an unknown land, and vague memories of Ponce de Leon were awakened as we cleaved the dark waters beneath the lowering arch of trees. Cypress with hydra roots rose from the black surface, like Dante's imaginations of a damned race, their contorted forms writhed like lost souls in agony. Long vines hung drooping from trees, like serpents to stay approach to the recesses of the swamp. Slight, mysterious noises back in the dense woods made the silence all the more intense. All was somber, all was dark, the very sunlight was excluded for most of the day by the solid mass of foliage that made the river lie in one almost continuous shadow.

Nine miles above the canal, we had been told, lived an old Scotchman. This point was made for slowly, and darkness found us still making our tedious way upward. About 9 o'clock I got out an old hunting horn and blew a mighty blast, that roused the echoes of the swamp; but the old Scot either did not hear it or, with some pre-existent warning from his former self, remembered the Viking horns of his native rock-bound coast, and kept silence, giving no answer to our signals. It was 11 o'clock when his little farm was finally reached, and we were quite worn out from the day's poling. The farm was certainly one of the most progressive spots that I saw during the cruise. Mr. —— had forty acres in cultivation, and the general air of thrift and industry was most surprising, and showed that the sturdy Scotch character yet retained its peculiarities, notwithstanding some twenty years' burial in that energy-sapping clime. A. M. REYNOLDS.

[TO BE CONTINUED.]

Natural History.

THE ANNUAL MEETING OF THE A. O. U.

THE sixth annual congress of the American Ornithologists' Union, which has just been held at Washington, was without doubt the most successful meeting the Union ever had, viewed with regard to attendance, harmonious transaction of business and number of papers and addresses presented, as well as popular interest excited and the impetus given to purely scientific investigation.

Through the kindness of Prof. Langley the lecture room of the National Museum was placed at the disposal of the Union, and here at 11 A. M. on Nov. 13 the meeting was opened with Dr. J. A. Allen, the president, in the chair.

After the secretary, Dr. C. Hart Merriam, had called the roll, reports from the various committees on Migration, Geographical Distribution, Food of Birds, English Sparrow, Avian Anatomy, etc , were presented. The long-expected report on Bird Migration was referred to at length by the secretary, and the meeting was informed that in the very near future copies of the work would probably be placed in the hands of each member.

Dr. Merriam made a verbal report on the investigation of the Geographical Ranges of Birds, showing his method of keeping the records by a system of double entry that seemed to answer every purpose. He also exhibited maps of the breeding ranges of certain species and explained his *modus operandi* in arriving at the conclusions that these represented. Having first collected and arranged all the available records for the species, each was entered on this map in an exactly located spot of red, and when sufficient of these red spots had been entered to justify the generalization, a faint tint of red was laid over the part of the region chiefly involved, but so done that the original red entries would in no wise be obliterated. Several of these maps were exhibited, and the report concluded with a brief forecast of many interesting conclusions arrived at or pointed to by the investigation.

A part of the report on the Food of Birds, viz., that relating to hawks and owls, is already in the hands of the public, and demonstrates the fallacy of many popular views regarding their utility, and establishing the conclusions arrived at in a comparatively early systematic investigation of their food habits, published by Dr. B. Harry Warren of West Chester, Pennsylvania.

The English sparrow came in for his usual measure of opprobrium. Prof. Barrows referred at length to the somewhat unusual granivorous propensities of the nestlings, also to the immensity of the damage done by the species at large, both in the new and old worlds. With regard to the insectivorous proclivities of the species, he stated that the stomach of a single cuckoo (*C. americanus*) contained more noxious insects than the aggregate of some hundreds of sparrows' stomachs examined. In summing up the evidence, he pointed to the certainly damnatory nature of a verdict founded on all the facts that could be brought to bear, and emphasized the necessity for the destruction of the species—the sparrows on the other side of the window glass meanwhile noisily and busily engaged in constructing their nests about the building and devoting the whole of their not inconsiderable energies to the solution of the great multiplication problem, quite oblivious of the Damoclesian sword that hung suspended above their heads as a race, and was even then threatening to break from its slight fastening at the word of the speaker and forever exterminate the *Passer domesticus* in America.

Dr. Coues spoke in this connection, referring to the original foolish importation of the species, its spread, and its firm hold in this country, taking up the parts of the case one by one, and one by one referring to them as fulfillments of his early prophecies. He also spoke in a kindly manner of the work of the Sparrow Committee, urged them to continue at their pleasant occupation, and, if they deemed it their unpleasant duty, even to go the length of pronouncing the dread sentence of death. In the meantime he might state it as his present conviction that the sparrow had come, and had come to stay.

The report on Avian Anatomy was presented by Dr. Coues, and consisted mainly of investigations by Dr. Shufeldt, many of the conclusions from which were both original and startling.

The report on the condition of the Society showed a most encouraging condition of affairs. The *Auk*, the organ of the Union, is now self-supporting, and the subscription list so greatly increased that the committee in charge propose to greatly augment its size. The Union has not only disencumbered itself of the heavy liabilities that were on the books some little time ago, but has now even a surplus in the treasury.

The incorporation of the Union under the laws of the District of Columbia was resolved on and completed without delay. The following associates were elected to active membership: Messrs. Chapman, Dwight, Foster and Trumbull. A large number of outsiders were added to the associate list.

Papers were presented by Col. N. S. Goss, of Topeka, Kan., on Additions to the Avifauna of Kansas; Witmer Stone, on Graphic Representation of the Migration of Birds—an interesting and somewhat novel method of illustrating diagrammatically the increase of species and of individuals through the season and the correlation of this variation with meteorological changes by sinuous lines on a scale.

Dr. Louis B. Bishop gave a most interesting paper on the Birds of the Magdalen Islands; many of his observations were altogether new and of great scientific value. The breeding of the species of petrel there found he described at length. He also exhibited one of the nests, taken by himself from one of the burrows, to show that the commonly accepted idea of their making no nest is erroneous. Col. Goss, however, reminded the speaker that the islands where the petrels bred were also infested by mice and stated his conviction that the nest presented was the work of a mouse, and the circumstance of the petrel eggs having been found in it was a mere coincidence of a kind likely to be common under the existing state of affairs.

Mr. Wm. Dutcher, well known as the ornithological guardian angel of Long Island, presented a paper by his son. It consisted of observations on the birds of Little Gull Island at the northeast corner of Long Island. One of the most curious occurrences recorded was the imprisonment for some weeks of a pair of crows by the terns. The crows had landed on the island early in the spring, doubtless with the best of motives, but whenever they attempted to rise in the air with a view to leaving they were so mobbed and persecuted by the terns that they were glad to get back to earth again. When "collected" by the observer they were in very bad condition, their plumage being defaced with guano deposits and worn and tattered almost beyond recognition. Their demoralization was so complete that the ornithologist could almost capture them by hand.

Mr. Ernest E. Thompson of Toronto, Canada, spoke for a short time on the "Methodic Study of the Habits of Birds," giving some interesting conclusions from a season spent in study with reference to a single species, and concluding his address with a quotation from Agassiz's well known essay on classification. The quotation appeared to rankle in the breast of Prof. Gill, who took advantage of the call for comments to enlarge on the utter worthlessness of that naturalist's views in general and on his particular unsoundness on many points in no wise related to the quotation in question. The professor was evidently at home in the field of his discourse, his manner was animated and his language fluent as he warmed with his subject, so that he held the audience interested for some minutes. The discussion was curtly closed by the chairman (Dr. Coues) rising and intimating that the whole issue was foreign to the subject.

Dr. C. Hart Merriam spoke briefly on a remarkable phase of hawk life observed by him in Oregon. In one of the secluded valleys of that region, during a grasshopper plague, a band of 200 hawks (*Buteo swainsoni*) had been observed daily carrying on an organized crusade against the insect hordes. From the crop of one hawk he took between 100 and 200 grasshoppers and estimated the daily destruction by the band at 40,000 grasshoppers.

At the call for comments Mr. Thompson remarked that he had observed this same disposition to band together in the fall and prey chiefly on grasshoppers in the sparrow-hawk (*Falco sparverius*).

Mr. W. E. D. Scott gave an interesting address on several of the larger herons, whose taxonomic standing is yet a moot point. His ideas seemed all to tend in the direction of fusion as he maintained and showed, so far as the specimens presented went, that many of the so-called specifically diagnostic varieties have no constancy whatever.

One of the most interesting addresses of the occasion was from Professor McGee, a geologist, showing how the distribution of the eastern and western meadowlarks (*Sturnella magna et neglecta*) was correlated by the distribution of land during the last glacial epoch.

Dr. Coues stated that this could not be accepted as an explanation of differentiation, as it was unlikely that at that age the genus *Sturnella* was represented at all in North America.

Prof. Riley gave some instances among insects that were parallel with and dissonant from the theory. Almost all the speakers on the question formulated objections, but the general impression of the meeting was that Prof. McGee's idea was founded on something more than a mere superficial coincidence, and might contain the germs of one of the great underlying principles of distribution.

A number of other papers were presented by title only, as the whole of the allotted three days had already been consumed.

Committees were formed to revise additions to the list since the publication of the formal A. O. U. List of Birds: to publish a cheap check and label list of the North American Avifauna; to formulate rules of measurement and consider the advisability of adopting the metric system. [The committee has reported against the adoption.]

After resolutions of thanks to Prof. Langley for the use of the hall and to the reception committee for the hospitality extended to the visiting members during the three days' congress, the meeting adjourned, to hold its next session in New York on the second Tuesday of November, 1889.

Among the pleasant social features of this congress were the evening receptions given to the Union, on Tuesday evening by Dr. and Mrs. Coues, and on Wednesday evening by Dr. C. Hart Merriam and Mr. W. H. Henshaw. Divested of the formality of the regular meeting of the A. O. U., but consisting of the same men, such gatherings serve the double purpose of fostering a genial feeling among ornithologists, and of bringing the younger men into contact with their godfathers in the faith, and of giving them the advantage of actual acquaintance with those whose names have so long been their familiar acquaintances on paper.

THE WAYS OF SNAKES.

Editor Forest and Stream:

I have read with pleasure and interest the various articles appearing in FOREST AND STREAM during the past few weeks, but I think the articles on snakes have been fully as interesting as any. Having spent most of my days on a farm, where I could observe snakes to some advantage, I would like to add another mite to the vast fund of evidence in favor of snakes swallowing their young. I know that the so-called "striped snakes" of the Adirondacks will swallow their young, for I have seen them in the act several times, and to satisfy myself that I had not been deceived I killed the old snake and found several young ones from 4 to 6in. in length inside the parent. These young snakes were not hurt by the swallowing. They were very active when brought to the surface and it was with difficulty I could count them. The fact that the young snakes were alive and active goes to show that the swallowing process is natural and that the old snake only wishes to hide her young from sight and thereby protect them from any threatening danger. My brothers have witnessed this swallowing process and will testify as to the truth of my assertions. G. L. B.

ELIZABETHTOWN, N. Y.

Editor Forest and Stream:

Seeing a number of letters in your paper about snakes swallowing their young, I add that I have been an eye-witness to the fact and saw a large striped snake lie perfectly still till nine small ones had run down her throat. Then I killed her and found the nine young and lively ones inside, which I also killed. W. A. B.

ATHOL, Mass.

HEAD OF SOUTHERN JACKASS HARE (*L. c. callotis*); ADULT MALE; HALF SIZE OF LIFE.

Drawn by the author from a photograph made by himself from a specimen of his own collecting.

habits are very much the same, while they differ principally in their markings and a few minor particulars.

Much yet remains to be done by naturalists and others in the way of defining with precision the more exact geographical ranges of these our sixteen species of hares, and no occasion should be lost by those who enjoy the opportunities of sending skins to the Curator of the Department of Mammals of the U. S. National Museum for determination. Take for instance such a species as *Lepus sylvaticus arizonæ*, we stand still in need of more definite description as to the limits of its range; in the "List" it is carried as occurring in southern Arizona and Kernville, California.

Anatomically the rabbit of Europe has been worked out with no little thoroughness by Prof. T. J. Parker, C.M.Z.S., and published in his admirable little work on vertebrate zoötomy. In many particulars rabbits afford capital subjects for dissections, as they are clean, nearly always entirely devoid of fat, and of a convenient size. I am unfamiliar with any better course to pursue as an introduction to the subject of the structure of mammals than is offered by one going first carefully over the chapters on the rabbit with material constantly employed and studied, as laid out by Prof. Parker, and then follow it up by a thorough examination of the anatomy of the common cat, with Mivart's work on that animal at your hand. In my next contribution I trust to be able to have a word to say about the bats, and continue the publication of the Provisional List of Mammals as given by the U. S. National Museum.

So far as the ground gone over by me in the present article is concerned, the following works in addition to those already enumerated in previous papers on the *Rodentia*, may be consulted with advantage: Jordan's "Manual of Vertebrates;" T. J. Parker's "Zoötomy;" Arts. "Mouse," "Porcupine," "Hare" and "Rabbit" in the 9th Edition of the Encyclo. Brit.; "Something about Jack Rabbits," R. W. Shufeldt in *The Swiss Cross*, July 1887; Professors John Strong Newberry's and C. B. R. Kennerly's Reports on "Mammals" in the "Pacific Railroad Surveys" (1859); Ludwig Kumlien's "Contributions to the Natural History of Arctic America," Bull. No. 15, U. S. Nat. Mus. the part devoted to "Mammals." Audubon and Bachman's "Mammals of North America:" The Standard Natural History. Vols. on Mammals, order "Rodentia;" Wallace's "The Geographical Distribution of Animals," 2 vols. 1876. Cope's "The Mechanical Causes of the Origin of the Dentition of the Rodentia," and others by the same distinguished author.

THE AUDUBON MONUMENT.

THE movement inaugurated by the Academy of Sciences for the erection of a monument to commemorate the labors of the distinguished pioneer-naturalist John James Audubon is being quietly persisted in. Funds are not coming in very fast, for a naturalist, however great his achievements, does not awaken the enthusiasm of the masses, but the people of the United States, and more especially the more highly educated section of them, are proud of Audubon; and the committee, appreciating the substantial nature of his claims to public recognition, are not to be deterred by unexpected difficulties. The absence of nearly all the members of the committee from the city during the vacation season led to the temporary suspension of activity, but a preliminary meeting of the committee was held in the library of Columbia College on Wednesday evening of last week, and preparations made for a renewal of the campaign.

The secretary and treasurer, Dr. N. L. Britton, read several letters from influential people expressive of sympathy and a desire to co-operate in the movement, and all afforded evidence of a widespread sentiment that the living owe it to themselves to make some substantial recognition of Audubon's sterling services to his country and to the cause of science.

Professor Egleston, the chairman, then produced a portrait of Audubon, struck from a new plate, which he had had made in accordance with a suggestion at a previous meeting, that a memorial portrait should be struck for distribution among those, and those only, who contribute toward the erection of the monument.

This portrait is a reproduction, and the only one, from the original portrait by Cruikshank, which is said to be the best likeness of Audubon extant, and after some discussion it was decided that a copy should be forwarded to all subscribers of a dollar and upward to the monument fund. The limitation of the portrait to subscribers to the fund only will give it a high value, which will be enhanced with time.

Another meeting will be held in the first week of December, and the plan of campaign for the immediate future organized.

Subscriptions may be sent to Dr. N. L. Britten, Secretary and Treasurer, Columbia College, New York, or to the office of FOREST AND STREAM. The Linnæan, Audubon and other kindred societies, are also represented on the Audubon Monument Committee, and are prepared to receive subscriptions in aid.

GAME IN TOWN.

ELMIRA, N. Y., Nov. 20.—I notice in your journal of last week several articles under the heading of "Game in Town," which were quite interesting. A few days since, as Dr. Palmer, of this city, was sitting in his private office in rear of his drug store, on South Main street, he was startled by what he at first believed to be something thrown heavily against one of the large plate glass windows in the front of the store, and he was not a little surprised, on stepping to the door, to find a ruffed grouse on the walk, struggling from the stunning shock it had received in its contact with the glass. The Doctor says the bird was a fine one and afforded him a very palatable dish at dinner the next day. Verily the grouse, like the country youth, seem desirous to explore the ways of the city, and frequently get bewildered and come to grief.

L. J. S.

LAFAYETTE, Ind., July 24, 1888.—*United States Cartridge Co., Lowell, Mass.:* DEAR SIRS—I find your Climax paper shot shells excellent and quite equal to Eley's. There is no hang fire or tendency to do so. I intend using your shells in a match next week. I will give them a good boom, as they deserve it.

Yours truly,

—*Adv.* (Signed) W. GRAHAM, Champion English Shot.

Game Bag and Gun.

CHICAGO AND THE WEST.

CHICAGO, Nov. 19.—Last Saturday evening Mr. John B. Drake, of the Grand Pacific Hotel here, gave his annual game dinner, an event which has come to be about as swell an affair in this city as any of the year. Thirty-three years ago, Mr. Drake, then of the Tremont Hotel, gave his first game dinner, and since then he has repeated it each year, and each year more elaborately. In 1855 he had not so far to go for his game as he has now, and game was not then so much prized. For the dinner of 1888, as may be seen, he fairly ransacked the Rockies to the sea. There were 550 guests present, both ladies and gentlemen appearing in full dress, and the occasion was one of magnificent detail in decoration and all else Among others, the following varieties of game are known to have been served: Leg of mountain sheep, deer tongue, blacktail deer, saddle mountain sheep, saddle of antelope, loin of venison, loin of elk, opossum, coon, black bear, wild goose, sandhill crane, grouse, mallard duck, Virginia partridge, redhead duck, sage hen, brant, wood duck, jack rabbit, squirrel, butterball duck, prairie chicken, blue-winged teal, wild turkey, widgeon, pheasant, plover, quail, venison steak, blackbirds, snipe, reedbirds, redwing starling, marsh birds, English hare, squirrel pie, pyramid of game en Bellevue, aspic of birds à la royal, pattie of liver sur socle, boned quail in plumage.

I notice that "Indignation" in last week's FOREST AND STREAM rounds up Mr. G. O. Shields for certain statements in his article on elk hunting in the current number of *Harper's Magazine*. It may not be generally known that Mr. Shields is a frequent contributor to the sporting papers over the pen name of "Coquina." He is, or was, the traveling representative of a hardware house in this city, I believe. I heard lately that he had given up his position and intended to devote himself solely to pure literature. On this account I want "Indignation" to go easy on him. He will have trouble enough all by himself.

I am glad to see also that several gentlemen correct a statement of mine, to the effect that Illinois had the only beds in America of the Egyptian lotus. I confess I would not know an Egyptian lotus it I should meet it right out in the woods, as I was not raised in Egypt. Mr. John Gillespie, an old frequenter of the Illinois lake country, was my informant, and he still insists that this is the genuine Egyptian lotus, or at least that he was so informed by scientific authority. Mr. Gillespie is in possession of seeds of the Egyptian lotus, sent him from Egypt by a friend; he declares he cannot discover a shade of difference in them from the seeds of the native plant here, although I should not think that strange of itself. The Wisconsin Central guide book, written by a man who is said never to have visited the lakes in question, has the following gush about the lotus:

"All round the coast the languid air did swoon,
Breathing like one that hath a weary dream."—*Tennyson.*

Here, in the northwestern part of Grass Lake, and covering an area of more than a hundred acres are the beds of the wonderful aquatic plant, the water chinquapin, classified by the naturalists as the *Nelumbeum luteum*, the beautiful water lily, that so closely resembles the water lily of Egypt as to be mistaken by some as the veritable flower mystically honored, and even worshipped in ancient Egypt.

Theirs was the *Nelumbeum speciosum;* and the difference between *speciosum* and *luteum* is about all the difference there is between the beautiful plants of the Orient and these of the Occident.

Both are brilliant in their coloring; both are fragrant; both load the air with odors that would discount Araby the blest; and both belong to peculiar localities. If the *Nelumbeum speciosum* is mystically honored in China, and adored by the swarthy races in far off India, its counterpart, the *Nelumbeum luteum*, or water Chinquapin, in the lands where the sun sets, has also its hundreds of devotees.

There are few places in the world where the soil permits the rooting of this wondrous flower that loaded the air of the ancient world with such fragrance that the people called it the breathing of a divinity, and bowed the knee in worship.

But we have chanced to find one, and when the sunset lingers o'er the scene, and soft the winds come floating on the deep, there is a sweetness in the air, and dreaminess that makes the soul forget the woes of earth. The lotus flowers, the lily-pad of India, breathes upon the air, and every moving wave of wind is laden to its depths with scented blessings from the holy flower. The Eastern nations drink its fragrance in, and bless their Allah for its good. We, on the shore where oriental sunsets fade and go to kiss the midnight, have here a chance to breathe the same soft air, to dream the languid dream, to lose ourselves in that enchanted sleep where darkness fades and everything is light.

Such is the odor which the lotus brings, and when we pluck them from the stem and bear them off as captives to our wish, they even yield a richer fragrance. The more we crush, the greater is the sweetness they will give.

Here is their Western home, and here they bide.

If I am not mistaken, I recognize the fine Italian hand of Col. P. Donan in the above affiatus. At any rate, the local plant is a very beautiful one. Its stalks stand upright at quite a height above the water, so that when one sits upon his boat seat, the flowers are quite above his head. This is not the case with our ordinary waterlily, as everybody knows. The plant is spreading rapidly through the lakes, and adds much to their attractiveness.

CHICAGO, Nov. 21.—The following is the latest exploit of the irrepressible Buffalo Jones, of Garden City, Kansas, from whom nothing has been heard for several weeks on buffalo matters. It seems that he has bought a whole herd of buffalo at one wipe this time, and a herd bigger than his own. The morning dispatches of Northwestern papers held the following news to-day:

"MINNEAPOLIS, Minn., Nov. 20.—*Special Telegram.*—The Manitoba's fast freight from Winnipeg brought in a queer load of cattle this morning in the shape of a herd of eighty-three buffaloes. The herd is the famous one raised by Warden Benson, of Stony Mountain, N. W. T., since 1877, from a young bull and four heifers. They have been bought by C. J. Jones, of Garden City, Kan., who has for some years been making a special study of the buffalo, and he has at present a herd of about fifty on his ranch in Kansas. He began crossing them with cattle and his experiments have been successful, the half-breed buffalo being a hardy and striking animal, while much less wild in its nature. The raising of the bison has become a profitable business, too, as fifty cents a pound for buffalo meat can be obtained in Chicago. The animals will be shipped South to-night. Cattle raisers everywhere are watching the Jones experiments with much interest. Bison in their wild state are now almost unknown, a fact which makes the attempt to domesticate and perpetuate the species all the more interesting."

When Mr. Grinnell passed through here on his Montana trip, he remarked that he had got track of two or three bunches of domesticated buffalo. If the addresses of the owners are forthcoming, I do not doubt that the rapacious C. J. will absorb these buffalo also, for he seems determined to have all there are in the country. I like this. It is in the good old Western way. It has some go about it. Let Mr. Jones alone, and he will repopulate the country with buffalo, or go half way to it. Look how rapidly the Benson herd has grown. What is there, after all, to prevent the building up of an enormous herd within a few years, and thus proving that what was thought a hare-brained hobby was really a shrewd and plucky enterprise. I hope Mr. Jones will make a half million off his buffalo. If he does, I shall claim my share for feeding that butting buffalo calf down in the Panhandle country, on the hunt when we brought back thirteen calves. Mr. Jones has purchased several other buffalo besides these last; one or two he got, I think, from a Colorado rancher, and as many from the Indian Territory. I have not heard what success he had in cross-breeding this year. One of Mr. Jones's men told me—as I may have stated—that a big black Galloway domestic bull whipped out the buffalo, which were younger.

CHICAGO, Nov. 24.—Mr. F. A. Howe, general agent for the Grand Trunk Railway, and by the way a most kindly though dignified gentleman, is the president of the Tolleston Gun Club, which has perhaps the most seclusive and most sought-after membership of any club in the city. Mr. Howe has grown gray in the interest of duck shooting and railway service, and having been a close student of the habits of the birds of this region, his words are entitled to weight. I had quite a talk with him the other day about the subject of feeding the wild ducks, as the Tolleston Club has this fall done.

"I killed fifteen birds on our marsh yesterday morning," said Mr. Howe, "and among them were blue and greenwing teal. Do you hear of teal being killed now on any of the other marshes? No. Nor do you hear of any other marsh affording such shooting this fall as ours has done. The reason for this, and the reason why our ducks are staying with us so late is that we have made it an object for them to stay. We feed them. And we have got the ducks.

"There is a vast amount of ignorance, even among sportsmen, about the matter of natural feed for wild ducks. I presume very few who push through a wild rice swamp know much about the rice. They think that the blossom of the rice holds the seed. Such is not the case at all, any more than that the tassel of corn holds the ear. As with the corn plant, it is the dropping of pollen from the flower which fertilizes the seed; and the seed of the rice plant, which is all that affords food to the ducks, is really a very insignificant affair. I know what I am talking about when I say that I believe if one acre of the densest of wild rice swamp were gathered and stripped, there would not be a half bushel of seed. Not a very great plenty of feed for large numbers of ducks.

"Very well, let us look further at it. We have armies of blackbirds in this country. The wild rice ripens just about the time the oats are harvested. The blackbirds leave the oat fields and swarm upon the wild rice swamps. Out of the half bushel per acre, how much rice do you suppose they leave for even the advance guard of the ducks? Not very much, you may be sure.

"What is left for the ducks? A little wild celery in the deeper lakes and certain roots in the shallower marshes. The birds do not feed on the grain fields to any extent in this country, but hang close to the water. If water is plentiful, so is their feed, namely, certain grasses and roots. But observe, we have had three exceedingly dry years, one of which is almost unparalleled in that regard. The water has been low all along the Kankakee, and thousands and thousands of acres of grand duck marsh have been burnt over. What is the consequence? Why, the feed roots have been killed, burnt out ten feet below the ground. What is there left for the ducks to live on? I am sure I do not know how our sportsmen should expect any shooting.

"Some of us in the Tolleston club talked over the matter of feed. A great many thought the idea of no value at all. I had the matter in my charge and know just what was done. Since August last we have put down on our marsh, in different places, twelve tons of mill screenings, one ton of buckwheat on the straw, one ton of glucose refuse, and one hundred bushels of corn on the cob, cut up. Now I will tell you how the ducks acted about it.

"I pushed out along a crooked little channel and found a little pond not a quarter of an acre in size. Here I put down a quantity of corn, scattering it near the edge in the water. Three days later I returned, and when my boat broke into the little pond I believe there were 5,000 teal went off, and then I do not know how many mallards. I pushed along the shore where the corn had been put down, and you may believe the mud was tracked up as if it were a barnyard, where the birds had dragged the corn out of the deep water and come ashore to detach the kernels from the cob. In a few moments the birds began to swarm back. I needed no further proof of the efficacy of feed or of the ability of ducks to find it.

"You may be sure that when a duck flies over a marsh he knows mighty well where the feed is, if it be only on never so small a place. You have doubtless seen proof of this in your own shooting. I remember that once in Missouri a friend and I had good mallard shooting over a bed of feed not larger than this room. There was a sort of spiral grass there which we did not see anywhere else, and the birds found it out of all that country, and all the ducks on the bottom came to that one place.

"We noticed how eagerly the cattle ate the refuse deposited near our marsh by a large glucose mill. Left in the air this refuse soon becomes black and fermented; but in the water it remains yellow and fresh. We resolved to try it, and put a few boat loads inshore, throwing it on the lily-pads and lotus stalks as much as possible. A few hours later, when the workmen returned with other boat loads, they found the ducks and mudhens fairly swarming on the grounds. They had torn up the lily and lotus stalks, and fairly spread devastation through the place. They had eaten every bit of the feed clean up.

"If this were not proof enough, the crops of ducks killed on our marsh would furnish evidence in plenty as to the nature of their feed. We therefore know it to be a fact that our experiment of feed has been a success. We have had better shooting this year than for three years past, whereas all the other clubs are ready to give up, and say the ducks have left for good. To me it seems plain, that if all the clubs would feed, all would have shooting.

"It is perhaps not generally believed that ducks will almost invariably go north over the line they took while going south the season before; yet I think this is cer

tainly the case. I know once on the Illinois River we killed a mallard in the spring which had escaped from a market shooter the year before. He had wing-tipped it, and for a time used it as a decoy, tying it by means of a piece of cotton stuff fastened to its leg. When killed, it had a piece of the same string attached tightly to its leg. I think, therefore, that if we once used the ducks to our marshes, they would return to us, and so we would establish a flight large enough at least to afford us a little shooting, and to make us feel that the maintenance of our grounds was not a needless expense. The members of the Tolleston Club are ready to say that they have duck shooting, and are going to have duck shooting."

The Tolleston marsh lies back from the lower end of the lake a few miles, and is five and a half miles long by an average of three-fourths of a mile wide. The ducks sometimes leave the marsh and work over toward the lake, but Mr. Howe does not believe they bank up in the big waters as others report to him. He says that he has watched the ducks of this locality for years, and has found that redheads and bluebills follow the lines of sewage out into the lake, and sometimes form big rafts inside the breakwater, or along the reef of rocks in the shallow water about half a mile off Cheltenham beach; but that mallards and teal do not bank up in the open.

Mr. Howe further thought that there are a good many ducks north of us yet, on the wild celery beds. The Tolleston marsh is too shallow for celery, but the other feed should attract the last flight for a few days before the final freeze up.

CHICAGO, Ill., Nov. 22.—Mr. T. Hart, of Crown Point, Ind., reports an unsuccessful hunt for ducks last week, over country which should be alive with them.

Mr. A. W. Furman bagged 28 mallards on Topping's Marsh, on the Kankakee, one day week before last; and also 18 mallards one evening last week.

Members of the Grand Calumet Heights Club report ducks in bodies as large as 1,500 out on the open waters of Lake Michigan, near the club marsh; but the ducks are not flying and no shooting is afforded.

Mr. H. D. Nicholls will in a few weeks start south on a duck shooting trip, and declares he will go till he gets to them, if that means all the way to the Gulf of Mexico. Mr. Nicholls is a member of the Cumberland club here.

Letters received here this week report mallard shooting on Reelfoot Lake, Tennessee, as very good indeed.

Billy Mussey, known to every shooter in Chicago, is to-day in receipt of a letter from Jack Taylor, at Baldwin, Indian Territory, which states that ducks and geese are there by thousands, and in greater numbers than for years.

Mr. C. M. Cole writes Mr. Mussay from Phœnix, Arizona Territory, that ducks have appeared there in very great numbers.

Word received from Arkansas states that duck shooting is now good there, the water being high and feed plentiful.

Mr. C. D. Gammon, lately back from a very successful trip in Dakota, of which mention has been made, says that he has word from that country that the shallow lakes have all frozen up, and the ducks have left.

A telegram to Mr. A. W. Fish from Lake George, 27 miles below here, a few days ago said, "Plenty of ducks and no shooters." I do not hear of any shooting on those grounds, and think the flight was not steady.

There was a flurry on Fox Lake early this week, at the time of the cold pinch, but the opinion seems general that not much need be expected there this fall after this.

The opinion, therefore, seems to be general among our shooters that the birds have left the north, and are now making their appearance in the country below here. No shooting beyond a chance skurry is expected in this section. Electricity isn't fast enough to get a shooter to the grounds before the ducks are gone.

Asked as to the cause of this desertion of what was once a very noted duck country, Mr. C. D. Gammon says, "We must stop spring shooting. That, and the growing plenty of feed in further western sections is what has hurt our shooting."

Mr. Alex. T. Loyd, president of the Grand Calumet Heights Club, attributes the scarcity of ducks here to the fact that Dakota, Minnesota and other Western regions have settled up and now offer large grain fields for feed, and that in a country where the birds are not much molested. There being no cause for them to visit this region for feed, they stay north until entirely frozen out, and then go by here in a hurry. Mr. Loyd cites the fact of having lately had excellent shooting in northwestern Iowa on canvasbacks and redheads—birds until late years almost entirely unknown in that section. Iowa shooters confirm this report this fall.

The Mak-saw-ba Club planted a number of quail last year and the year before, on their grounds near Davis Station, Ind., but report that the natives have trapped them all off about as fast as they grew. Not much encouragement in that.

Mr. C. S. Petrie, of the city fire department offices, is secretary of the Mak-saw-ba club, has made several trips to the grounds this fall, but has grown skeptical, and will not now easily be lured out by reports of a flight. He says the marsh is too low this year.

Mr. J. A. Kinney, vice-president of the same club, and also of the city fire marshal's office, is more faithful than Mr. Petrie, and has not let a week go by without a trip to the club house. He reports a bag of ten or a dozen too good to complain about now.

There is considerable talk here about the proposed trap shoot between this city and St. Louis, the gun club of Chicago having challenged the St. Louis Gun Club. A letter received to-day from the editor of the St. Louis *Republican*, an officer of the St. Louis club, states that their boys are all out duck shooting, so that they cannot get up a respectable team, but that when they get back they will accommodate the Chicago boys in their ambition, and welcome them with open arms to a large defeat. Mr. Mussey is a member of the Chicago Club, and to-day was obliged by Mr. H. D. Nicholls to place a box of cigars in trust, pending the decision, to sustain the honor of his club. It may not be generally known that this truly modest and diffident body of shooters who constitute the gun club of Chicago is the supporter of the mantle of the former gaudy and impressive "Dude Club," composed largely of Board of Trade men and other magnificents. Mr. Mussey says they do not now brook the appelation of the "Dude Club," since the resignation of one or two shining Board of Trade lights, and the retirement of that luminous sportsman Mr. Henry Miller.

Mr. Henry Miller was formerly with Spalding, Bros.; then he was interested in the proposed manufacture of a cheap hammerless shotgun; he is now agent for a wealthy firm at Kearney, Neb., which has of late been reported as a region of high barometric pressure.

Mr. R. A. Turtle, a well-known and skilled taxidermist, of this city, and a member of the Lake George Club, is ill and absent from his office. At his office to-day I saw a beautifully mounted pair of canvasbacks. I was never before so forcibly impressed with the gamy look of these birds. The beak and head of the male especially are drawn on wonderfully shapely lines. Mr. Turtle's brother showed me some good elk heads. He tells me buffalo heads bring from $150 up. He had just got in a number of heads of mountain sheep for mounting, also several sets of elk antlers in the velvet. I do not like to see antlers in the velvet.

The pushers at Fox Lake are again excited over the appearance of a snow white redhead duck and have made numerous long reaches to secure this phantom flyer. This duck, the pushers all claim, was first seen on the lake eight years ago, and has so far evaded all attempts upon its life. Ed Howard tells of an albino crow duck or mudhen, which he and a friend have often sought to ambush. George Beckwith says a white teal was killed on Pistaqua Lake not long ago, and also an albino rail. They are all white men who tell these stories, and I guess they are so.

The Illinois State Sportsmen's Association has passed seemly resolutions of respect and regret for the late untimely death of their vice-president, the lamented Harry Orvis, which occurred last month from blood poisoning, consequent upon a compound fracture of the ankle, received while alighting from a wagon, during his shooting trip in Dakota. These resolutions will be duly forwarded. Mr. Orvis was a member of the Board of Trade. He was a man of large and generous nature, kindly and genial, and respected, I think, as much as any sportsman in Chicago. It makes the boys sober to speak of him now.

Mr. J. B. Wiggins, of the Mak-saw-bas, starts for Davis station to-morrow. I think I shall also go down. We will try to give the ducks a few lurid mornings yet.

E. HOUGH.

WHAT THE BLIZZARD BROUGHT.

WHOOP, who-o-o-o-p-e-e, oh! we're 'll right! As *Judge* says, "Great Scott! what struck us?" The mellow blizzard is evidently abroad this year early, not only the old-fashioned one, but a new one, cut to order and with frills a yard wide. Old Bliz hunted up Kansas City—he calls it "Kan-zas City," strong and forcible, without a lisp; none of the æsthetic "Sen Lewie" with a drawl, but quick and in a hurry. Bliz said How! Kansas City? and the cold snap and snow brought thousands of ducks to our favorite shooting grounds, and the boys pounded out many a good canvasback, redhead and mallard, fat and in the finest of condition. The turkeys, however, in the Territory, have not been up to standard, a great many having a sort of cholera or fever. I would like to hear from some one who knows absolutely in regard to the distemper so prevalent and what causes it. Quail shooting this season has been abundant, and our markets seem to be filled, as a rule, with fresh wholesome birds. Deer are plenty and in good condition, in fact, I made my supper off a couple of very fine juicy steaks tonight.

Croppie and bass fishing seem to have interested the boys more than usual this fall, and several good catches are reported within fifteen miles of our city. I was present upon one occasion when several as fine croppies were taken from a little lake of only 100yds. in width as I ever saw at the great fishing grounds of the North; the largest measured upward of 14in. in length and 7in. deep, weight about 1½lbs. Our sportsmen, as a rule, are a jolly set, and in most instances prefer to come home with a little story but lots of game, taken without the aid of silver or amateur photography. Still, we have a very select club, with the club house on Current River, down in the Ozark Mountains, where they have a guide. They always send home plenty of game, for it can be obtained of the natives without danger of detection, and at reduced rates where club orders are executed. It is reported that some of our "Sen Lewie" friends have been down on Black River. "Unser Fritz," give us a good letter, with all the detail, and tell us under what head croppie will be classed. I am somewhat at sea with this species. Fishing has become a regular craze here, and many a scolding have I had to endure for coaxing some fond wife's better half off to the lakes, bringing him back on a late train, tired and cross. The fair sex are about to make war on us, so boys brace up and stand together. We will all be "cranks" to the last; let the rod, reel and creel bespeak the verdict in advance. What true sportsman would want a better jury after adding the gun, dog and horse? And where will conviction ever be more true and certain than the same jury would give to the nefarious pot-hunter and hide collector?

This letter will not be complete without giving a little story of our only Uncle Joe Irwin after his turkey. Old Uncle Joe Irwin, as he is known far and near, is one of the best anglers and best posted men of the country when fish and game are the desired quantity. There were Judge White of our Criminal Court, ex-Police Surgeon Wood and several others, with old Bolivar, the colored gemmen, to attend the commissary, with Uncle Joe as chaperon if you please. After a day's good fishing, during which Uncle Joe won a turkey on a little outside issue, we made ready to come home. Bolivar was to catch the turkey after they had gone to roost; but Uncle Joe thought to steal a march and show us all that he was still young and spry; so climbing aloft to the top of the old shed and scanning the turkeys over, he picked out a fine gobbler and snatched him. The commotion was great and of course we all rushed to the scene of conflict. It was short. The gobbler won first knock down and blood. With a flop and parry he unseated Uncle Joe from the rafter and both took a header to mother earth. But Uncle Joe was game. He held to the gobbler notwithstanding in the tumble and stop he received a cut on top of his head about three inches long, and all but cracked a couple of ribs. It took lots of good Kentucky balm to soothe him and—to tell the truth—about six stitches to sew up the cut. Uncle Joe has sworn off turkey snatching, but he is still the same able fisherman and ready to put his skill against the best of us.

KANSAS CITY, Mo., Nov. 17. TILE.

THE LETHEANS.

"A little knowledge is a dangerous thing,
Drink deep or not all of the Lethean stream."

TEN or twelve years ago the above was perpetrated by a pedantic young school teacher, and it is seldom that an aphorism bears on its face such a palpable impress of the truth of its first line. I will have to ask any who read this to believe that it was owing to the use (or abuse) of the word in connection with the above misquotation that a club of five members, mentioned in a former letter to FOREST AND STREAM, was sometimes distinguished by the prefix "Letheans."

Trusting that no one will be any worse off for making their acquaintance, I ask the privilege of introducing the members individually. First there was Aleck, hereinafter referred to as the Doctor, who was certain death on anything within range that would remain quiet long enough for him to train on it his well-charged shotgun, and, indeed, from the number of double and triple slaughters among the muskrats that he had made at single shots he has no right to resent the title of "rat exterminator." Judging from the rack-like fixity with which he holds a shotgun that he could also do very fine work with the rifle, we have often called his attention to the fact, but he always replied that in numbers there was safety, and he never could trust one chunk of lead on an important mission when he could as well send a hundred. Then there was Ed, who liked revolvers, but did not care much for guns; yet he would hunt all day with as much vim as any of us, merely for the sake of assisting the others in having a good time; for as a natural wit and all-round man we could ill afford to spare him. Next comes "Duke, the lone fisherman," who when a boy was always hunting for some one to go a-fishing with him; and lastly Belyea and myself, champion grouse trailers; for we chased the same old cock-partridge during the whole of a November day, and left him at night as good as new; we even harbored the conceit that his next interviewer would find him slightly improved by our society.

There was a singular uniformity, perhaps consistency, in the demeanour of the Letheans; for whether on the marsh or in pursuit of wildfowl or the fragrant muskrat, in the woods after grouse or "Molly-cottontail," or gathered about the bright, open fire in the dining room of the Doctor's ancestral home, (our favorite place of meeting) there was always noise. But it must not be inferred that it was always void of harmony. We had a quartette of whistlers that could carry their parts as easily as a brass band, and the Doctor was a soloist, organist and banjoist of no mean order. As I was often the entire audience I am prepared to prove that the performances were highly appreciated. "Nothing in this world can last," frequently sang our soloist, and, alas! we found it too true; for, as the northeast wind scatters the thistle down from its parent stem, so did fate disperse the Letheans from the scene of their youthful pleasures; but as the germs borne by the down take root, grow and wax strong—some near the soil that give them birth, others in remoter parts of the continent, so did our friends take root and flourish in the places wherein their lot was cast.

We had no real grievance against fate until two years ago, when Duke's health broke down, and in the mountains of Montana he has ever since been trying to present a solid front against pulmonary disease. Then, last fall poor Ed received a summons to the silent land. Things began to look serious; but this was not to end our misfortunes. Last winter the Doctor became afflicted with a bronchial trouble, and three months ago he gave up his practice, and came home to the farm to recuperate. The buoyancy of his spirits is very little less than ten years ago, and from the way in which he laughs and jokes the stranger would never suspect that he was a semi-invalid. However, there is one difference that is painfully apparent to his friends; he seldom sounds a note of music. We trust that he will recover his health in the delightful climate of southern California, to which he has just departed, and that he may have many good years before him yet.

Now the Doctor has a dog, Paddy, whose character is made up of one or two traits, the predominant one being constancy in nothing save inconstancy. I regret that I am unable to name his breed; but were I to hazard an opinion I would say that he is a cross between an Irish water spaniel and a stove-tarrier (not terrier), with a decided leaning toward the habits of the latter. He will rush at a cow as if he intended to swallow her, but no bovine was ever scared by his toothmarks. After prospecting the marsh for muskrats, he will dry himself off by dashing through a field of standing grain with an energy sufficient to demolish ten acres in ten minutes, but he was never known to trample down more than a quarter of an acre at a time. When he starts to dig a rat out you would think that he intended to possess himself of that "varmint" if he tunneled through to China for it; yet, though he has started some "sizable" shafts on the surface, he seldom gets them deep enough to hide his eyes when he thrusts his nose to the bottom.

Oct. 16 was one of the very few fine days that we have had this fall. In the afternoon, the Doctor having assisted in putting a load of grain on the wagon, handed the team over to a hired man, and started off toward the woods for a walk. Paddy, noting the movement, left his occupation of intermittent mouse hunting, and temporarily attached himself to the Doctor's staff. The latter was doubtless in a meditative mood. On the next day he would complete his twenty-eighth year. Perhaps, as Sam Lovel would have put it, "the fog of some of the old times was hangin' around there yit." From the long slope on which he stood he could cast his eye over as fair a country as is usually the lot of man to view, while a little further back from the river were the big woods, resplendent in the hues of autumn; the whole effect heightened by the bright afternoon sun. He may have been smoking his brier root calumet, but I am unable to say with certainty. Suddenly the bell-like notes of Paddy announced that he had stumbled on an object of interest. As may be inferred from what I have said, objects of interest are too plentiful with Paddy to excite any curiosity in his master, but as the Doctor's path through the thin copse lay near the spreading oak by which Paddy was giving tongue, and he saw the dog gazing upward with an unequivocal look of concern, and his muscles all set for instant retreat if necessary, the Doctor naturally looked up to see what was at the end of Pat's line of vision. He saw a large and curiously shaped ball of fur such as could belong to no animal of which he had any knowledge. I might try to work up a climax after the

manner of our local paragraphers by inserting the questions, "What could it be? Was it some unknown monster—a panther? or perchance a grizzly?" but I will not. The sportsman's interest was aroused. He believed it to be something shootable, and knew it must be tough indeed if it would not succumb to the 4drs. of powder and ounce of B shot in his systematically loaded brass shells. He could scarcely leave Paddy to watch the tree with any certainty of seeing the game again, neither was it feasible to send him after the gun. So he shouted to the hired man, "Gillie, get the gun," and Gillie got the gun—not the Doctor's favorite death dealer that, paradoxical as the statement may seem, was broken down in the breaking up apparatus, but a single Forehand and Wadsworth. A moment or so was lost in determining the exact center of the bunch of fur, and then the gun was carefully aimed and fired. If the Doctor had any idea that he was gunning after a rare and dangerous animal he must have been very favorably impressed with the shooting powers of the Forehand and Wadsworth when he saw the game fall to the ground in three pieces, but when he went in to examine his trisected "monster" he found three plump fat coons.

This sounds colossal, but it is a fact. And if the Doctor should chance to run across this, way down in the "city of the angels," and think that I have been a shade too personal in some of my remarks (especially about Paddy), I beg of him to remember my chronic inability to draw the line beween too much of a thing and just enough, and to accept my assurance that, if I have said anything for which I am sorry, I am willing to be forgiven.

McDonald's Point, N. B. L. I. Flower.

THE SLEEPING BUCK.

BY way of preface let me explain why deer are killed in this mountain region while "in the red." Killed, I mean, by hunters who are gentlemen (as the true hunter assuredly is), and who would scorn to cause a little fawn to cry in vain for its dead mother; yet who are impelled by their necessities to kill an occasional buck.

In this cool climate meat seems more necessary as an article of food than in most of the States of our nation. The settlements are very much scattered, being strung along the narrow mountain valleys, while on either hand, for leagues in extent, rise hills and mountains, rocky and forest-crowned, which are simply one vast game preserve. How shall these settlers procure fresh meat for their families? In this sparsely-settled region it is not possible to dispose of a beef animal in hot weather without loss. True, we could go to the meat market occasionally, yet as the nearest one to the spot where this is being written is fifty-two miles distant, the going becomes quite an undertaking.

Any true hunter of experience enough to find a deer at all, can tell at a glance a buck from a doe, at any time after does drop their fawns. The upshot is that bucks are killed in the summer by men who wish to be regarded as law-abiding citizens, yet who feel that, owing to their isolated position, holding as they do the fort between civilization and barbarism, they are entitled to a liberal interpretation of the game laws, and who do not wish to sail under false colors or pose as game protectors in the strict sense which they themselves would deem necessary were they located on Long Island. So much of an honest confession, said to be "good for the soul." To my tale. There came a time when the cry rose up from the kitchen "out of meat," and all eyes were instinctively turned to *paterfamilias*, and then to the big Sharp's on the wall. As the hay crop was not yet secured a deaf ear was turned to the pleadings of the little ones, and all hands returned to the hayfield. Soon my bachelor neighbor living near by was seen approaching. Although unable to kill a deer himself, he was very fond of venison, and had often worked in my place while I hunted and divided the game with him; and as he made known his errand, which was to handle the pitchfork in my place and let me wander the hills with the rifle, and as my two boys joined their entreaties to his, I relinquished to him the pitchfork and the prospect of a hard day's toil under the blazing sun, and with a reluctance (?) which any old hunter fully understands, turned away to the cool shadows of rock and forest and to the music of rippling brooks, near which the wary game lay hidden.

Instead of the usual silence of summer days in these mountains, a rising breeze from the southwest rocked the trees, and the rustling of leaf and branch deadened the sound of my footsteps. Still as everything was very dry underfoot I had taken the usual precaution to dress in soft woolen garments and my moccasins were of softest buckskin.

By the time I had reached the hunting grounds the sun was high in the heavens and the deer were safely hidden away in the cool shadows of the overhanging thickets. Fresh tracks were found in half a dozen places, principally along the banks of a little brook which crept down a deep gorge, but not a glimpse of a red coat appeared in all the surrounding wilderness of green. For nearly two miles I crept on, taking every precaution suggested by experience, yet not a glimpse of the flitting white, nor a glance of ruddy coat, nor even the thump of fleeing hoofs rewarded my most careful search. Finally I came to a swamp, half a mile across, hidden away among the hills. It was dry at this season, grown up in the middle with rushes and tall grass, while around the edge ran a belt of grass, growing very thickly on the ground and about 2½ft. high. Observing a trail in this grass that ran parallel with the shore of the swamp, I proceeded to investigate, and found it full of fresh deer tracks. Following slowly along the trail, deer beds began to appear close to the dense wall of overhanging bushes and trees in full leaf, where the first bound of a startled deer would place him safe from sight beyond the leafy screen.

The deer beds grew more plentiful and my hopes to rise in proportion. Still, I doubted my ability to make a snap shot quick enough and began to realize that it was solely a question of silence and sharp eyes. It is very probable that I should have failed ignominiously save for the helping wind which rustled the waving grass and disguised my stealthy approach. Inch by inch among the fresh sign which momentarily grew more plentiful, I crept along, using all my eyes.

Stop! What was that, which, as the wind for an instant swayed the grass aside, appeared just beyond that treetop fallen years ago and half buried among the tall grass? A dead limb? Not another step, for ears, the most sensitive, may be intently listening, and graceful limbs strung with almost electric speed may dash to atoms the most eager hope with a single bound. See, see, as again the grass sways gently aside, the tips of velvet antlers stand half revealed. No mistake is possible. How far below should aim be taken? The mental estimate is made, the point selected, and as the white front bead of the Sharps swings across the fatal spot the delicate front trigger is pressed, and ere the roar drowns for an instant the rushing wind, and the belching smoke hides everything from view, the terrible 270grs. express bullet has sped, and the great buck has died so painlessly that the dream of his restful sleep seems scarcely to have been broken.

The pleasant tramp through the woods, the successful approach to the sleeping game, and the painless death of the buck, united to make the hunt a most enjoyable one, and when, a few days after, I addressed to my good friend Dr. C. S. Penfield of Spokane Falls, an exulting epistle containing the doggerel which follows:

His coat was bright and red
As he fed;
But I shot him through the head,
Cold and dead
In his bed,
With a little piece of lead.
How he bled!

Promptly the returning mail brought this reply:

"Your muse was quite productive,
And the rhythm was quite seductive;
Your subject being the deer,
Inspired within me feelings queer,
And I fain would have been there,
To have received from fate my share."

Orin Belknap.

DUCKING IN GREAT SOUTH BAY.

RECEIVING word from Jack "ducks are flying," Sunday night saw Uncle Dan and Doc on the train bound for Freeport. An hour's ride brings us to our destination where Ell meets us with his team. Hearty greetings are in order. As it is raining hard we get into our oil skins and dumping our duffle into the wagon, a half-hour's ride brings us to the Lilly, a catboat twenty-four feet long, with an unusually large cabin; she was built expressly for such trips, and easily accommodated five. Uncle Dan and Doc take a catnap, while Ell drives three miles after Captain and the provisions, returning at 11 P.M. We busy ourselves in putting things in ship-shape order until 1:30 A.M., when it being high tide, we make sail.

Getting outside we find a strong southwest wind blowing, which brings us by 3:30 o'clock to Unqua, a point off Amityville. Here we expect to find birds plenty; so we anchor, and after breakfast Uncle Dan and Doc row to a point on Sloop Channel and put out stool. The flight is fair, but the birds do not come to stool, and at 8 o'clock we return to the Lilly.

Ell and the Captain have better luck, however, killing two sheldrakes and a pinhead. After dinner we make our way to Babylon, where we find our friend Johnny awaiting us. The wind has increased, until now it is blowing a three-reefer. We start at once for Fire Island, and at 7 P.M. are anchored off the west shore of Middle Island. This is a noted ducking ground.

After a supper of duck stew—and none ever tasted better, for Uncle Dan is a royal cook—we light the pipes and spin yarns of our hardships until after midnight. We turn in, and are roused in what seemed to Doc a moment by Captain calling: "Be lively, boys, if you want your points; plenty of gunners round here." Birds come to stool better to-day. Uncle Dan and Doc kill six sheldrakes; Johnny, Ell and Captain come in with seven and one broadbill. In the afternoon Captain and Ell go ashore to look for bitterns and stumble on a fine bed of soft clams, which gives us a clam stew for supper. In fact, we made a hole in that bed before we left there. Wednesday we get ten birds, Ell killing a black duck. We are too early for brant.

Thursday it blows and rains so hard that we do not go to points. In the afternoon it moderates and we decide to try Cedar Island, eight miles to westward. We put in at Babylon on our way. Cedar Island is a great feeding ground for ducks, and we have fine hopes for the morrow. Captain gets us up by 3 o'clock, to be sure of our points; but even that was not early enough, for on reaching the best point we know we find a gunner already there. "Hello!" "Hello yourselves." "What time did you start for this point?" "Eleven o'clock last night." "Well, you deserve some birds."

We saw more birds to-day than at any time during the week. They came to stool well, too. On counting up after flight we found we had twenty-one birds, including two black ducks—a good day's sport and enough to satisfy any one but a pot-hunter.

A battery shooter lay to windward of us, and he shot from sunrise to sunset; his tender passing by us on our way to the harbor. We inquired what luck, and found he had killed ninety birds.

In the afternoon we make our way to Hemlock Thatch, two miles south. Friday morning we try this place, but have little success, getting only three birds. In the afternoon we make our way back to Ungua, where we are to have our last shoot. Birds were plenty here last season, but this fall they are somewhere else. However, we get five sheldrake.

At 8 A. M. we up anchor and start for Freeport. On the way Johnny kills a coot and Doc brings down a sheldrake as he flies broadside to. At 11 we are at anchor and the trip is over. In our opinion if duck shooting continues as indiscriminate as it is now, in a few years there will be no ducks in Great South Bay.

Birds are killed after dark as complacently as though there was no heavy fine for every duck so killed.

Steam yachts get to windward and sail down on flocks of ducks, firing shot after shot into them, never getting any, but nothing will drive ducks out of the bay quicker than such treatment. Perhaps by and by the gun clubs will take a hand, and then we can hope for a stricter enforcement of the law.

After many handshakes and hearty good wishes we separate, hoping that we may all be well and able a year hence to meet and spend another week in the bay after ducks. B. L. L.

THE SHOTS WE REMEMBER.

IRONTON, O., Oct. 5.—It is not the whole aim of a shooter to kill game if he wishes to get the most enjoyment out of the sport. The pleasure is not all in killing game. I find a great deal of solid comfort in viewing the beauties of nature. Yet in the experience of every shooter there are shots that stand out as affording most exquisite pleasure, as every one who has made them knows by the indescribable thrill that followed them. I never will forget the moment that the first wild turkey fell to my gun. A fair wing shot, a friend, and myself, had been looking in vain for three days in a country where they were tolerably plenty. Suddenly we came upon fresh signs. My companion was an old hunter and knew how to hunt them, telling me to take a stand and he would drive them to me in a few minutes. I heard him shoot and, looking around, saw the turkeys flying in every direction, and two coming my way. I went to the left, and throwing the gun to my shoulder I pulled the trigger. He came down, a fine young gobler. A hasty snap-shot at the other was a failure, but the one already down made me hug myself with delight; and I stood until my friend came up, admiring the beauty of his plumage. His first shot killed one. A wild duck, rising a long way off and trying to fly around, was the occasion of a quick shot that brought him to bag; it was 87 long steps to where he lay, and this filled my young heart full of joy and afforded me more real pleasure than did the next shot that killed three in a small pond while they were sitting.

A wary old grouse had for three seasons used about the same place. In vain did I stalk him. He always saw me first and took leave of me, and I "strained my gun" on him. At last one day I caught him at home, came upon him unexpectedly, and was within 25yds. before he knew it. But the efforts he made to get out of there were too funny. He doubled around a small oak full of leaves, and must have been quite surprised when a charge of shot took him right through the bush. I picked him up, and for half an hour did I admire his form and smooth out his feathers.

Another time, while on my way to the pond, a single duck came flying down wind. He must have been going ninety miles an hour; I did not see him until he was within 50yds. of me, but the time it took to cock my gun and kill him was short. He was 100yds. away when I picked him up. I think that was the quickest and best shot of my life. I have sat in the blind and a dozen ducks within 25yds. of me for a half hour and watched them feeding, and the time spent watching them afforded me more pleasure than did the killing of them a few minutes later, although I could not forego the pleasure of taking two of them on the wing with one on the water.

I love my gun and dog, and enjoy my days out in the field and woods, and I see many things to admire; and I have no patience with the man who says a man is a fool who uses the rod and gun, and who counts the time lost that is spent in that way, for I am sure a man is made better in every way by being in contact with nature as it came from the hand of the Creator, and a man who can see nothing in it ought to get his ideas expanded with a boot stretcher. D.

MICHIGAN'S NORTHERN PENINSULA.

LAKE LINDEN, Mich., Nov. 20.—News comes to us from Gogebic county of a fatal accident in the woods. A lumberman named Morrison, in company with another man, were out estimating timber, and being overtaken by darkness, found it necessary to camp out for the night. Without axes or blankets, they found themselves in a very uncomfortable situation, but contrived to gather enough brush with which to construct a rude shelter, and, setting fire to a large dry pine stump, they retired. Shortly after midnight Mr. Morrison was suddenly awakened by the cracking noise caused by the breaking of the tree, and arousing his companion, they ran for a place of safety, but Mr. Morrison, running in the wrong direction, was caught and crushed to the ground, fracturing his skull and killing him instantly. His companion, upon finding him dead, started out for camp to secure assistance, but being an inexperienced woodsman, he lost his way and tramped about the woods all night, finally reaching a logging camp some ten miles distant. After relating his pitiable story and partaking of needed nourishment, he was accompanied by a crew from the camp, who, judging their course by the meagre information given, came upon the smoking remains of the fatal camp-fire and brought the unfortunate man's body to Hemlock, from whence it was shipped to his former home in Green Bay, Wis. The place of the accident was but a mile from Mr. Morrison's camp, and a half hour's walk would have seen them home.

The little station of Sand Switch, Michigan, contains a Swede hunter who claims to have killed a moose last summer. This is the first instance of a moose being found in this section for many years.

Near Chocolay recently, a hunter killed three deer with one shot. His gun contained a charge of buckshot.

Lante.

THE WOODCOCK SUPPLY.

Editor Forest and Stream:

I think I can throw some light on the woodcock question that is troubling so many sportsmen in the East.

The Ohio Legislature in its wisdom amended the game laws last winter and among the many changes wrought was one shortening the open season for woodcock to Nov. 1, and those wary birds learning of the change have all come to this part of Ohio, but they arrived too late to give us much sport.

Everything this fall was propitious for woodcock, a remarkably wet and warm autumn, with excellent cover, made this section a perfect paradise for them. Our country is flat and what small patches of timber land there are left are grown up with a dense undergrowth, affording just the sort of cover sought by the woodcock, and they have taken full advantage of their opportunity. Snipe have been quite plentiful also.

It is a very rare thing to have any fall snipe or woodcock shooting here, as our autumns are generally very dry, and no birds stop here on their southern trip. It was exasperating to have these game birds here in such numbers and not be allowed to shoot them, especially when we know there will not be another opportunity for years. Whitt.

Georgetown, O., Nov. 20.

RIFLES FOR SMALL GAME.

Editor Forest and Stream:

I notice in a late issue that "N. Orleans" was in want of a rifle to use on ducks at 150 to 200yds. Our shooting here is at small game, and a good deal of it is at such distances as he speaks of. I tried a Winchester .38, and while it is a good gun, it was too large. Next I tried a .32 rim-fire Smith & Wesson. It shoots very nicely for squirrel hunting, but did not come up to my idea of a gun for ducks that were shy, woodchucks and foxes. I next ordered a Stevens .32cal., 35grs. powder and a bullet weighing 165grs. The rifle was sighted with Lyman's patent sights, and it just filled the bill. It was the best shooting rifle that I ever owned. What I mean is that I could do closer shooting with it, and the penetration was all any one could desire. I should advise "N. Orleans" to get one of those rifles, and I promise him that he will be well satisfied with it. I have sold the rifle to one who shoots a great deal at the target, besides doing considerable hunting, and he praises the gun very highly. I have been doing a different kind of shooting lately and would like to have "Iron Ramrod" write a little more about the .22cal. cartridge. At present I am shooting rabbits before a hound for my hunting; and I want a rifle to do it with. Now, I would like to know at what distance the little .22 will do the work. Can I kill a rabbit easily at from 50 to 100yds. When they are near me I always shoot at them on the run, but in some places where I hunt I have to take them when they are sitting, and at long distances, too. Sometimes I have to go without getting one because of the distance. I want the rifle for that kind of shooting, also gray squirrels and at the heads of grouse. Would "Iron Ramrod" recommend the .22 "long rifle" (rim-fire) cartridge for such use? If not, then what? I do not take to the shotgun unless I can have wing-shooting, and that is out of the question here. Our laws forbid the use of a dog hunting grouse. H. B. S.

EAST BERKSHIRE, Vt., Nov. 19.

Editor Forest and Stream:

If "N. Orleans" will get a Winchester .22-15-45 mounted with Lyman sights, he will find it just the thing. It is light to carry, makes very light report, the ammunition is not expensive, the whole thing can be bought for little money, and it will hit a duck as far as he can see to take aim. R. S. F.

LACONIA, N. H.

Editor Forest and Stream:

Now as a brother sportsman the rifle which I recommend to "N. Orleans" is the .32-40 Ballard No. 4 perfection rifle, which, I think, would answer his purpose, but if he prefers a magazine gun I would likewise recommend a .32-40 Marlin repeater, which I have used and find to be as good a mid-range repeating rifle as I ever handled. I think that either of the above mentioned sizes would answer his purpose as I have used them in thickly settled country mostly upon crows and hawks, finding them very powerful for small-bore gun.

BROOKLYN, L. I. A CONSTANT READER.

A HUNT ON THE WEST GALLATIN.

A PARTY of four was organized to make the trip and to start on the 17th of August, that being just before "bugling" time for elk, and when their antlers were freest from breaks, thus enabling us to procure a few good specimens without killing very many bulls to select from. Bears were also quite plentiful at that season of the year, although their fur was not so good as later in the fall.

Getting our horses up early on the morning of the 17th our saddles and packs were soon adjusted, guns placed in slings, and we mounted the hurricane deck of our cayuses and bade adieu to civilization for the time. A more happy and expectant party never started on a similar trip. After traveling about twenty miles we went into camp for the night, and while some of the party were arranging camp and attending to the ponies the rest were whipping the West Gallatin for trout; and in the course of half an hour they had quite enough for supper and breakfast. That night, while seated around a blazing camp-fire, every one lived high in anticipation and tried to keep each other's spirits running as high as possible. All were tired after the long jaunt and in good condition to enjoy a long night's rest.

On the morning of the 18th we broke camp early, determined to reach the hunting grounds if possible that day. At noon a hasty lunch was prepared while the ponies rested and ate a little bunch of grass, after which we resumed our journey, shooting an occasional grouse by the trail. Just at sundown and as we were about to go into camp, a large brown bear was sighted about 300yds. from the trail. As it was getting late no time was lost in bagging Mr. Bruin; but as his fur was of little or no value his carcass was left for the other bear to take care of, while we went on and into camp, and after a hasty meal stretched ourselves out for a good night's rest before commencing the hunt, for we were now in a game country and must make the best of our time, which was limited to a very few days.

Aug. 19, while getting up our horses for an early start (for I always hunt on horseback), I saw several coveys of grouse, some of which I shot, taking their heads off; and before getting back to camp I shot a fine buck, thus getting a bag of game before breakfast that would do credit to a full day's hunt in some countries. After breakfast we started out all together, expecting to separate before long. Each man no doubt expected to excel all others in shooting, for there was more shooting than hunting; but we had not gone far when we discovered fresh bear signs, and upon looking around in weeds and brush for a few moments, we discovered a fine black bear feeding with her cubs close by her side. The old bear was soon dispatched, but the young ones ran into the weeds and would not show enough of themselves to give us anything but a snap shot, so two of us turned our attention to "pealing" the old bear, while the other two lay for the cubs; and as the little fellows would show themselves once in a while it proved great sport for the young nimrods who had never killed any bear. They were gathering material for a "bear fight" on paper or in town. We all surrounded the little chaps, closed in on them and soon had them on the string with their mother. A part of their meat was saved and cooked, and finer, sweeter meat could not be asked for by the most fastidious epicure. By the time the three pelts were properly cared for it was time to return to camp.

On the following day, Aug. 20, large bands of elk were seen and four fine bulls were our reward for the morning's hunt. The remainder of the day was taken up in caring for the meat and horns.

Aug. 21, after leaving camp about a mile, all going Indian file, a good-sized grizzly was seen on the side of a mountain some distance away, and the necessary precautions were made to surround his bearship and give each one a chance to have his share of the fun. However, he proved an easy victim and was taken in without any incident very exciting. A porcupine and a few grouse were all we got that day after fleshing the bear skin.

Aug. 22 was the only time in fifteen years as a hunter that your humble servant "took water" from bear. It happened after the following: Three of us were traveling along the brow of a mountain, when we saw three grizzlies feeding on weeds and digging roots about a mile below us. Our plan to kill all three of them was for me to go below them, and for the other two to go above and drive them to me or kill them themselves. After I had reached my station, my young hunters proceeded cautiously down upon the trio of bear, until they were winded and started nearly toward me. In the meantime I had examined my repeater .40-90 (which, by the way, was always broken) and found that I was unable to move the lever, so when the bears came my way I instinctively moved back and gave them plenty of room to pass, firing a parting salute when I was sure they were out of danger of being hit. We were not long going to camp, and I'll promise all my readers that I never will go into the brush after bear again with a repeater of that make.

The next day, Aug. 25, the party got two more elk and three deer. This being quite enough, we gathered up our game and bear skins, which required the remainder of the twelve days to do and get back to town. In the above stated time four of us traveled sixty miles and back, killed five bear (saw fourteen in all), six elk, which produced some fine specimens, four deer, a dozen grouse and twenty-three fine trout. This is not the best hunt and the most game I ever had a hand in, but it was all we could take care of, and every one was highly pleased with the trip. Should any Eastern sportsman come to Montana I can give them the same trip at a very nominal expense. BEAR HUNTER.

BOZEMAN, Montana.

SAVE ADIRONDACK DOES.

Editor Forest and Stream:

You have now struck the key note which I have sounded constantly in the ears of sportsmen and guides during the three seasons I have spent in touring throughout the grand old Adirondack region. It has been my practice—and I have "preached what I practiced"—under no consideration to kill a doe, but preserve them that the supply may not so rapidly decrease. Inquiry among old hunters, both sportsmen and guides, leads me to the conclusion that three does will average five fawns per annum, and nearly one-half of such increase are bucks. One buck will answer for a large number of does. Hence the killing of does is unnecessary and tends greatly to decrease the numbers of this species of game.

In the floating season it would be difficult to determine does from bucks under the jacklight. In the hounding season, as practiced in the Adirondacks, with but few exceptions, the deer are driven into watched lakes and ponds, and there would be no excuse for killing a doe did the law protect, as it certainly ought. The true sports man, who seeks only open daylight shots either in the woods or upon the shores of the lakes or ponds, can almost always determine the sex and reserve his fire for bucks alone, but would merit exemption from penalty should he fire upon a doe whose head was concealed, provided affidavit was made to that state of facts.

By all means let us have protection for the does. While not in favor of and taking no delight in killing a deer before a jacklight or driven by hounds (unless from a stand on a runway) there are those who enjoy those methods, but the number is in the minority to those who prefer the "give the game a chance" style of hunting, and the minority are more favored by the present laws than are the majority. My opinion is that the deer hunting season might reasonably open Aug. 1 (provided that sufficient game wardens could be deputed to prevent the slaughter that otherwise would occur prior to the open season). Permit hounding not to exceed fifteen days, say from Sept. 15 to Oct. 1, and extend the season to Nov. 15, or even to Dec. 1, that the still-hunter may have at least one or two falls of snow, upon which to track the wary game. Comparatively few sportsmen remain or come into the woods after Nov. 1; but there are those who would delight to do so were there a show for still-hunting in that month, and permit to carry out each a deer at a season when it would keep frozen until used. But whatever changes are made, the does should be protected. E. S. W.

GARRETTSVILLE, O.

COLORADO LARGE GAME.—Berthoud, Col., Nov. 12.—Mr. L. E. Franck's article, in FOREST AND STREAM of Nov. 15, gave me "the fever," coming just as it has on the very eve of my departure for the Snowy Range for a chase after the blacktail deer. "Old Grey," as he calls himself (a Mr. Smith, some 73 years of age, but spry as a young buck when we talk of hunting), and I have our mess box and wagon all packed for an early start in the morning. Our destination is the Barnes Camp country, on South Powder River, at the foot of the Snowy Range, some two days' drive. A number of deer and some elk have been killed in there this fall. I will try and save some camp notes for FOREST AND STREAM. Our old friend, Uncle Dick Hubbell, and party, have just returned from a week's hunt in Estes Park, with one fine large buck. They said they saw more deer, but "he guessed they didn't shoot at the right time and not straight enough, or they would have had more than one old buck to show." Duck shooting has been good here this fall, and geese have been more plentiful than for a long time, but the lakes are closing now, and they have about all gone.—A. A. K.

HUTCHINSON, Kas., Nov. 19.—I returned from a two days' hunt on the Arkansas River last Saturday. I never got a shot at a duck or goose, but on the road home I killed a few quail. Will Chamberlin was out one afternoon last week and killed 59 quail over his dog, all flying shots, too.—WILL ALLEN.

ELK HUNTING ETHICS.

Editor Forest and Stream:

My first impulse on reading the villainous screed of a correspondent in your issue of Nov. 15, under the above heading, was to treat it with the silent contempt that its author deserves, but when I reflected that it might come under the notice of some one as ignorant as himself, and in such a case create a false impression, I deemed it best to reply. No reading or thinking sportsman would require a word from me in response to such a cowardly attack.

Your correspondent says I recorded the fact that after shooting a cow and calf elk, which it would be fair to presume would be game enough of that kind at one time for one small hunting party, I had a long chase after and finally "brutally shot" a large bull. I recorded no such fact. In the article referred to I said "we" had killed a cow and calf. I did not deem it necessary to state how many there were of us, and our situation, in order to avoid being accused of "ruthlessly slaughtering" game. Sportsmen in general know me too well to render any such precaution necessary. But for the enlightenment of any of your young readers who, like your correspondent, are ignorant as to my record, I will state that there were seven of us in the party; that we had a team and several pack animals, and that each member of the party was anxious to take home a carcass of elk or other large game for winter meat.

I have been a close student of the ethics of field sports for twenty years, and so far as I have been able to learn it has never been considered "ruthless slaughter" for a hunting party to kill as many elk or other large animals as there were members of the party, if they had the means of getting them out and taking them home, as we had in this case. We could have killed twenty to thirty elk on that trip if we had been disposed to "slaughter," but only killed the few we needed and could take care of.

If this kicker had been an habitual reader of *Harpers' Magazine, Harpers' Weekly*, FOREST AND STREAM, *Outing*, the *American Magazine* and other first-class periodicals, he would have known that I signed my "genuine" name to the article he mentions; that I was not hiding behind a *nom de plume* as he implies (and then hides behind one himself); that for fifteen years my pen had been busy in advocating the passage and enforcement of game laws and in denouncing violators of them; that in many cases I had been within easy shooting range of large bands of buffalo, elk, antelope and deer that I had not shot at at all because I did not need them.

Although I have killed a good deal of game, both large and small, I have never wasted a pound of good meat in my life, and in all these twenty years of hunting, fishing and of writing on field sports, I have never before, to my knowledge, been accused of "ruthlessly slaughtering game." It remained for a man who apparently has just commenced to read of field sports to take up the pen against me and so to expose his ignorance.

G. O. SHIELDS.

A HUNT IN "FOREST AND STREAM."

MY friend Quilp and I, in the long ago, used to indulge our sporting instincts quite extensively, and many a pleasant day did we enjoy at Conesus Lake and on the wooded hills about our native town. We never secured any great quantity of game, but we were of that class of sportsmen who by long experience have learned not to gauge the fun by the weight of the bag; so we invariably had a good time. It was in my early matrimonial days and when Quilp and I had decided on a hunt I would get up at 4:30 A. M., set the coffee going and grub out an humble lunch; then Quilp would drive up and partake with me, and off we would go before the first crack of light.

But my friend got the Western fever and one day he bade me "good-by" and was off for California. Eleven years rolled away, filled with their usual accompaniments of joy and sorrow, and save for an occasional indirect hint I almost lost sight of my old shooting companion. But one day not long ago a bronzed and bearded gentleman entered my store and in a round Pacific slope tone demanded "a quire of paper, and that mighty quick, and mind stranger none of your two-bit stuff but something good." Tremblingly I glanced into the stranger's eyes with the mute appeal "don't shoot," when twinkling from those gleaming orbs I saw "the light of other days," and "Quilp—H." was the double cry, and as we struck hands across the counter the gap of years was bridged and we were boys again. And then we sat down in the office and talked, and talked, and talked, and learned all about one another. He had become a ranchman near Los Angeles, Cal., was prosperous and happy, was home to visit his aged mother and to take her back with him to that sunny land. As we talked old memories came flooding over us, memories of the dead and of the changes time had wrought in men and things since last we met. But Quilp had come for a good long visit; and before many days the scroll of years had been rolled back and we found ourselves discussing our old shooting scrapes with all the gusto of old times, and it was finally decided that we should take a regular old-fashioned hunt just exactly as we used to, without one solitary concomitant left out. I was to arrange for guns and breakfast and Quilp was to furnish the conveyances.

The weather for two days had been incomparable. After a tedious rainstorm, or succession of rainstorms, everything had cleared out beautifully, and November seemed to have given place to May, so mild was the air and so sweet and pure the sunshine. We were in high glee until the night before the day appointed, when unfolding the evening paper we read under the head of "Probabilities," "To-morrow for western New York a slight fall in temperature with rain." But we scoffed at the idea. "Wasn't the moon shining? and besides," we argued, "these weather report fellows never strike it right." So I bade Quilp good-night, went home, set the alarm for five o'clock, laid the kindling in the range, mixed the coffee, got my suspenders changed on to my knickerbockers, took a final look at the weather and turned in. The first whirr of the alarm landed me on the Axminster; and a sleepy peep through the shutters revealing nothing but "thick blackness," I put on my togs, and carefully shutting off all communication between the culinary department and the rest of the house, I went to work, and soon the kettle was steaming and the simple lunch laid out.

Thinking it about time for Quilp to show up, I stepped out on the veranda to listen for his step. I didn't hear it, however, but something worse smote on my ear; it was "The tinkle, tinkle, patter of the rain upon the roof." "The jig's up" I mentally exclaimed as I returned to ruminate on the hard luck overtaking my friend and me after eleven long years of waiting. But just then Quilp came, and after collectively consigning the matter to a dryer clime we sat down to our mutton bone and coffee, and in spite of the accelerating drip outside made a hearty breakfast. Another inspection convinced us that the famous dinner for which we had spoken was not destined to be eaten by us to-day, and any squirrels over in Sparta who might have been troubled by presentiments for this particular day might calm their fears and rest in peace. So getting the last FOREST AND STREAM as a sort of literary substitute for the actual field, we lighted our cigars, and seating ourselves by the kitchen table, proceeded to read, smoke, discuss and chaff by the light of a coal oil lamp. The fire snapped merrily, the cigars were prime, the paper was a most entertaining number, and before we knew it we were enjoying ourselves wonderfully well. We laughed at the account of the "coon" who, with a pumpkin drawn over his poll, dragged the mallards to destruction, then we discussed the article on California deer shooting, and Quilp told some hunting stories of his own experience in California. Then we read the editorial on the subject and decided to save the does, and wondered at the forbearance of the "Two Months a Cowboy" fellow who had to ride the heifer. So we sat until daylight revealed a gray sky and a nasty day, and at about the time some people get up we parted.

We may have that hunt yet, for Quilp has extended his stay and there may be better days coming.

H. W. DELONG.

BETSY FOR SHORT.

THERE is a town down in North Carolina where the weekly paper which means to give all the news finds it necessary to devote a large share of its space to the doings of the rod and gun and coon dog and lantern brigade. It is the Elizabeth, N. C., *Economist*, and here are some specimens of its local leaders and items:

We are pleased to learn that Frank M. Grice, proprietor of the New Albemarle House, of this town, purposes, in addition to his regular trade, to offer special inducements to invalids, sportsmen, and others in search of pleasure or pursuit of business, to visit Elizabeth City, N. C., during the winter and spring.

Elizabeth City is a railroad town of 5,000 sociable, refined and hospitable people, composed of Northern and native settlers, with churches, schools, fire and military companies and places of amusement, fifteen hours from New York city, with eight hours in sleeping cars, and you have Elizabeth City, N. C., sometimes familiarly called Betsy for short. From the middle of October to the middle of June ensuing, we have almost absolute immunity from disease. The roads are excellent and walks and drives and outdoor exercise can be indulged at any time without interruption from the rigors of the climate, while occasional frosts and light snows destroy all malarious germs of disease.

Five miles from town by land or eight by water, abundant health-laden springs of the famed juniper water are found. Fifteen miles from town you reach the head of the great Dismal Swamp, where lumber mills are established and where the virgin forests of resinous juniper timber drive away all chest and kindred complaints and make respiration easy and delightful.

Elizabeth City is admirably situated for the pleasures of sporting at the headwaters of Pasquotank River where it broadens into an estuary, and commands the winter home of all the wildfowl that honk, or whooy or whistle. Eighteen miles away it debouches into Albemarle Sound and reaches a point where the game birds hold their winter carnival.

Twenty-five miles away is found Alligator Bay, where swan and ducks rest in rafts and invite the keen sportsman to come and kill them. Thirty miles away is Currituck Sound, aptly called the "Paradise of Sportsmen," where wildfowl of every name and kind feed upon the wild products of nature and are hunted, harassed and hounded by every device of the eager sportsman.

Later in the season brant cover the waters of Alligator Bay.

Thirty miles away, in all the lower waters of the Albemarle, Croatan and Roanoke Sounds, innumerable wildfowl of every name spread out on the wide waters.

The lovers of more heroic sports can also find within convenient distance from their home at the New Albemarle House the prowling beasts of the forest, "foeman worthy of their steel."

Twenty miles from town, the morasses and jungles and forests of East Lake, Durants Island and the Haul-Over abound in deer, bears, and wild cats, and sometimes a panther, last remnant of his forlorn race, wakes the echoes with his terrific scream of despair or defiance.

Forty miles away is the ocean, grand representative of Omnipotence. Along its shores, where the sand dunes forbid the banns of sound and sea, are found forest fallow deer, and fox, and lesser wild animals that feed upon the acorns of the live oak and divide with the wild turkey the sparse or abundant harvest. These are the sports not too far removed for convenient enjoyment.

Around the town, far and near, are found other fields of sport. In every field and forest near town the shrill and lively whistle of the Bob White enlivens the echoes of the crisp and early morn; "little robin redbreasts" waggle their tails in every swamp and on every rail, squirrels frisk in every treetop, and a short drive four miles away, will introduce you to the hospitable, genial and jovial "Forkers," who are a nest of bear hunters and will give you heroic sport at short notice.

Our waters, as is well known, is the home of the famed shad fish that no one knows in his full flavor unless he visits and eats him at his home. To know him there is worth a trip across the continent.

The head and chief of the anglers in and about Elizabeth City is Gip Sawyer, a deaf mute whose business and support is fishing with hook and line. He comes along almost every day loaded with long strings of perch, black and white, chubs and other game fish. He is familiar with all the haunts and holes of game fish in Pasquotank River, within five miles of the town. He studies and knows the habits of fish and, cut off as he is from communion with man, he seeks the companionship of fish. He is a solitary man and keeps his counsel relating to the haunts and habits of his companions of the deep and shallow waters. We have felt a curiosity to go a fishing with Gip, but we had heard that he was a lone fisherman who preferred the companionship of his own thoughts, and we have never intruded upon him. Once we saw him fishing out in the river near the town and we observed that he had a way of attracting fish to him before he threw out his line, that was novel to us and may not be without benefit to the fishing guild, of which we claim to be a member. When he had selected his place to try his luck he ran his hand in his pockets and took out a handful of corn which he passed to his mouth and ground up in his teeth. He then spurted the ground corn from his mouth into the water and myriads of little minnows came to the surface and darted after the crushed corn. Then in a few moments he threw over his line and the large fish were rapidly taken. We have never seen it tried except by Gip and we give him the credit for it, and we think it an admirable plan. The ground corn attracted the minnows that abound in all waters and then the larger fish that prey upon them quickly came to the feast and Gip preyed upon them. This is the history of Creation. The large fish prey upon the little fish and then come the wars of species.

We regard wild turkey shooting as the most heroic of all the game bird sport in our section. We don't want it generally known, but the best places for turkey shooting in our section are the Cashie and Roanoke River sections of Bertie county, the "Greenfield" and "Five and Twenty Necks" section of Chowan county, and the "Live Oak," section of Currituck county along the banks. They are probably found in the lower section of Pasquotank county.

Fred Zeigler killed 25 squirrels in a morning's sport in Johnson's woods on Wednesday. They say also that wild turkeys roost there. Wild turkey shooting is the sportsman's dessert. It is the LL.D., D.G.L., M.D., D.D, A.M., winged degree of sportsmen. A sportsman who kills an old wild turkey gobbler adds ten years to his own longevity. A man who can call up a flock of scattered wild turkeys with a turkey bone can't have the consumption.

Oh that this balmy, glorious Indian summer could continue all the year round. Men and women in this charming Albemarle country would then round a green old age of a thousand years and men would be in their boyhood at a hundred years. It should be a State holiday and all should live in tent life with a dog and gun and fishing rod, and dance on the brown and russet carpeting of the forest foliage.

John W. Albertson, Jr., was down in the "goose honk" country several days this week on professional, legal business. As he has no wild sporting blood in his veins there is no danger that he will be tempted from business by the abundance of sport in that land of sportsmen.

Who'll join the possum and coon club? A yam potato is the admission fee and a lightwood torch is the monthly assessment. John Brockett is President of the club, Arthur Pritchett is Secretary and the membership is increasing. The place of rendezvous is Fork Swam, and time of meeting midnight.

ARE HIS POINTS WELL TAKEN?

Editor Forest and Stream:

I read in your paper from time to time different reports from sportsmen as to how much game they see and how much they shoot; but I notice in almost every instance interest seems to center in how much they get. Little or nothing is said of fine weather, fine woods, fine views or lovely lakes, but the thing of it is to know how much blood has been shed. No one likes to hunt better than your subscriber, but I must say I enjoy hunting, if weather be fine, more than so much killing. I like to make a few skillful shots and have wary game for targets. I once knew a gunsmith who lived in this section who was a great lover of a gun and was a good shot. He moved West where game was thick. He confessed that he had more enjoyment in hunting the not plentiful but more wary game of the East than he had in getting the backloads of game in the West. Now it seems to me if sportsmen all over the country would hunt for another purpose than making scores, and be satisfied with a few meals of wild game in the autumn, and not expect to furnish all their second cousins with ducks, quail and squirrels for a week and have much of it thrown away, we would have more game and enjoy our outings far more. This emulation among gunners to see which shall tell the biggest story when they get home as to numbers shot, with perhaps much game wasted, is not sportsmanship. Your paper tells of those who used to shoot coots by the hundred! For what? Just so with fishing. A great catch must be had or the trip is a failure. It is never a failure if the weather is fine. It is ridiculous to hear these backload fellows talk about more effective game laws! Frequent outing in the proper season with a moderate return for me. SUBSCRIBER.

WITH THE SQUIRRELS.

Editor Forest and Stream:

I have read "Iron Ramrod's" letters and "Von W.'s" on hunting the gray squirrel. They prefer a small-bore rifle. I have never tried one so will not argue that point, but I agree with "Iron Ramrod" that to successfully hunt the gray requires woodcraft. In the days when I used to hunt them I could not find a companion to suit me. I never chase them as most hunters do, and never could kill them by sitting down and wait for them to come. I have gone into the woods alone and kept on the move and have killed twelve in two hours in fourteen shots with a muzzleloader. I always use No. 5 or 6 shot and a 14-bore gun and 2¼drs. powder, 1oz. shot.

I cannot agree with either "Iron Ramrod" or "Von W." that it takes two to hunt them successfully. I would rather hunt them alone, for I can go through the woods as still as a squirrel. I once killed five out of six from the same tree and in the woods, not open field, as fast as I could load my gun and fire. How much better could two do? I do not like to tell all my experience with the gray, for readers will say "he is a liar." When I say that I have killed seven out of nine before they got away it looks big, but it is so; they were feeding in a hickory tree at the edge of the woods. I had four on the ground before they started to leave the tree, and they were all full grown, no kids. I have proof of that. I always used a muzzleloader, but my day has gone by for hunting and fishing. I have not fired a gun at any game in seven years, but I always have the "fever" when the time comes. No one likes to read the hunting notes more than I do, for I know what can and has been done. GRAY.

NEWARK, N. J.

WATERBURY, Vt., Nov. 16.—I learn there is good duck shooting on the lake near Burlington, and I should think some of the local gunners would write you regarding the luck they are having.—F. E. H.

SALMON IN THE DUNGARVON.

THIS season was not as good a one for salmon in Dungarvon as last year, for although there were more fish in the stream they did not get as far up as they did last year on account of the extreme lowness of water in the early part of the season. The largest catch made in any one day by four rods was eighteen fish, about three-quarters of these were grilse, and there was no time during the season when a light canoe would not run in the Dungarvon, even during the lowest time in summer, and by a light canoe is meant one with but two men in it and nothing else.

The club house is situated at the mouth of Connell Brook, and is reached by a woods portage of twenty-two miles, and over this a man can ride on horseback. The best fishing is in the neighborhood of this house, that is, in four pools below and three above, all within three miles of the house. The bushes have been cleared away around these pools so as to give fishermen a good chance to cast, and besides these pools there are many others above and below. About Oct. 10 the salmon came on the bars of Dungarvon in order to deposit their spawn, remaining there until the 20th or 22d of the same month, and there were a great number of salmon beds on the bars, especially on the headwaters of Dungarvon. The high water did some damage to the salmon beds, but not much to those on the head of the stream, but below a good deal of damage was done by the water, which washed away many of the bars on which the fish had deposited their spawn. The water down in the settlement, below on the Dungarvon, rose 3ft. higher than it had been known to be by the oldest inhabitant.

The trout deposited their spawn about the 20th of September on the bars at the foot of the pools, while salmon spawned on the bars at the head of the pools. The largest salmon caught during the season was about 20lbs., the largest trout 3¼lbs. There are several very good trout lakes within two and a half miles from the club house that have been but little fished, and one day two of the guardians crossed one of these on a raft and caught 12 trout weighing from 1lb. to 2¼lbs.

Moose and caribou tracks are abundant on the shores of the stream, and one moose was seen by the guardian, and also a very large bear which crossed the river. Bear tracks were plenty during the autumn. Partridges were abundant in the vicinity of the club house. The stream was well protected and no trespassers or poachers were found. The above statement was made to me by three of the guardians of this stream who have been on it from June until the 1st of September. Some of them are personally known to me, and I have full confidence in the correctness of their statements. EDWARD JACK.

FREDERICTON, Nov. 6.

FREDERICK E. RANGER.

ON Saturday, November 17, Mr. Frederick E. Ranger died at his home in Glens Falls, N. Y., in the fifty-sixth year of his age. He was well known as an enthusiastic angler throughout the northeastern part of the State, and was a man who was held in high esteem by all who knew him. He was a reader of FOREST AND STREAM from its first issue until he could read no longer, and at one time wrote some interesting sketches for it over the pen-name of "Fritz." In a recent article on the lake trout, Mr. A. N. Cheney speaks of the last fishing trip which Mr. Ranger ever took, in May last, when almost worn out by disease contracted in the army.

Mr. Ranger, or "Judge" as he was called by his familiars because he had been a justice of the peace for years, was born in Glens Falls on August 13, 1833, in what was then known as the Ranger Mansion, and married in 1857. When the war broke out he went with the Twenty-second N. Y. Volunteers, of the famous "Iron Brigade," as a second lieutenant and returned as a captain when the regiment went out of the service, in 1863. He then served as surrogate's clerk with the late Judge Davis, and for four terms, from 1874 to 1886, he has been elected justice of the peace by flattering majorities. As an angler he was one who never took an unfair advantage of a fish by the use of any contrivance for their capture which was not sanctioned by the class of sportsmen who fished for the kinds of game that he did, and he held that it was unworthy of an angler's reputation to take a fish in any manner except such as are laid down by the best authorities on angling. We have personally known him for years and can vouch for him as a gentleman whose high standard of sport would never permit him to do anything to increase his catch which did not commend itself to his own good opinion and was consistent with his ideas of sport and self-respect. His angling life was a strong rebuke to the thoughtless class of younger men, some of whom seem to think that they are demeaned unless they "break all previous records," that we are disposed to dwell on the fact that Mr. Ranger was an expert angler who was never ashamed to admit, with some historical fishermen, that he had toiled and caught nothing.

Mr. Ranger leaves a widow and four children. His only son, William F. Ranger, lives in New York, as does the only married daughter, but his death will be mourned by many outside the family circle who have either been with him on his fishing excursions, or have met him socially.

COLORADO TROUT STREAMS.—Kansas City, Nov. 17.—I read with great pleasure the letters of E. Hough, and note comparison of Rocky Mountain trout fishing with Adirondack and Rangeley Lakes; also in last issue that gentleman's experience and very interesting letter recounting trip in Eagle and Grand River country in Colorado. My own experience is the same, and I can heartily recommend our Eastern friends to take a trip in September to the famous hunting and fishing grounds in Colorado in and among the flat tops on White River, near Trapper's Lake. The sport is far ahead of any Eastern locality.—TILE.

THE MENHADEN RUN OF 1888.

Editor Forest and Stream:

The menhaden run of the season just terminated has been one of large proportions. It has equalled, if not surpassed, those of preceding years. This is true, not only as to the number and extent of the shoals, but also, in a marked degree, as to the broad area over which they have spread. The waters of the Jersey coast, those of Long Island, Narragansett Bay, Buzzard's Bay, No Man's Land, Cape Cod Bay, and *mirabile dictu*, the waters of the Maine coast have been visited by large numbers of these valuable fishes. They have returned to localities from which they have long been absent, and have abounded in augmented numbers in places subject to their yearly visits.

By concert of action their owners' postponed dispatching the steamers for the season's work far beyond the usual time. The trips were begun the latter part of June, and, although the seining season was short, all accounts agree in pronouncing it a very successful one. Large fares and quick trips have ruled.

The best days of the Long Island fisheries never went beyond those of the past season. The ocean in the vicinity of No Man's Land was never known to have been visited by menhaden in such quantities as during the present year. At that island, from June to October, weather permitting, the purse seines were in use, their tripping lines were constantly on the run, and twenty steamers were often loading at one time. After an absence of nine years the menhaden have found their way into Cape Cod Bay. The same is true of the Maine waters, and the oil factories of Booth Bay and Round Pond have put their kettles into operation after nearly a decade of disuse. The oil interests need not be commiserated by reason of the short season. The menhaden steamers have netted their owners half their value in four months. The explanation of the re-appearance of the menhaden in localities from which they have long been absent, and of their abundance, does not seem difficult of determination. The practical matter of fact inquirer will not search for it among theories relating to currents, temperatures, algæ and infusoria, but rather will recur to the circumstance that the menhaden steamers did not, in March last, fit out as usual and intercept, capture, nor disperse the schools on their yearly migration northward or eastward. This fact furnishes the explanation, easy of comprehension, of the conditions existing in 1888.

On their last visit to our shores, pursuing their slow but certain course without artificial molestation, the menhaden filled the indented waters of the coasts of the Middle and New England States and shoaled in countless numbers seaward from the three-mile line. They responded in myriads to the promptings of their natural impulses unharrassed by the pursuit of the oil steamers. It cannot be doubted that this they will ever do, in a greater or lesser degree, when their movements are not trammeled by human agencies.

Have the food fish interests been favorably affected by the delayed operations of the menhaden steamers? This question may be fairly answered in the affirmative. Taking the water area involved as a whole, bluefish, striped bass, squeteague and swordfish have been more numerous than for several seasons. Especially is this true of the latter. These species have kept close company with the menhaden, a prominent source of their food supply. The uninterrupted migration of the menhaden to their native summer haunts has also rendered it possible for the spawning process to be consummated in the shallows and the protected spots of the inlets, creeks and bays. Further, it has brought these fishes to the very doors of those who desire them for use as chum and bait.

These happy occurrences, so readily traceable to the unimpeded run of the menhaden last spring, indicate plainly how much greater good would result in the direction of preserving and increasing the supply of food fishes if the pursuit of the menhaden were subjected to the restriction of a statute of the United States. A general law prohibiting the seining of menhaden, except for bait, within three miles of a shore, would be of lasting benefit to the food fish interests, and productive of results of a magnitude far beyond those that have prevailed the past season. No better plea could be advanced in support of legislation to protect the three-mile limit than the facts named above. It is true, the oilmen have operated within the limit, but their protracted movements have produced an effect, in all respects but magnitude and permanence, like that sure to follow the desired legislation.

The happenings of the season now closed are opportune. The opponents of the restrictive measure have, without intending it, presented its advocates a powerful argument in aid of a solution of the food fish problem.

ARTHUR MARTIN.

WASHINGTON, D. C., Nov. 24.

THE EFFECT OF SAWDUST ON FISH.

A CORRESPONDENT writes from Canada as follows: "Will you please inform me where I can obtain any information as to the effect of sawdust on anadromous fishes? Do you know of any work treating of this matter? What would be the effect if swallowed by fish? Do they not often swallow various indigestable substances without injury? These questions are up with us for consideration, and facts are needed. Anything you can do to aid me in obtaining such will be thankfully received. All the facts I have so far been able to obtain lead me to believe it comparatively harmless; however, I am after more facts if they are obtainable."

We do not find that this subject has been investigated to any extent, but it is generally believed that sawdust kills the trout in the streams below it. The only reference to the injurious properties of sawdust is in a paper read before the American Fishcultural Association by Mr. Fred Mather, entitled "Remarkable Development of Embryo Salmon," and published in the Eleventh Report of the Association, and also in FOREST AND STREAM of April 13, 1882, with illustrations. In this article the writer cites the evil effects of pine troughs which are not thoroughly coated with coal tar, and says:

"The theory of the fishermen is that the sawdust gets into the gills of trout and kills them. This may be true to some extent, but I doubt it for the reason that sand or other material does not appear to injure its gills, and I have taken adult trout below sawmills. I incline to think that the mills are destructive merely to the young, by covering the spawning beds to some extent with sawdust, but more by the absorption of turpentine from the pine, or tannin from the oak, the evil effects of which we know too well."

We would be pleased to have other views on this subject.

CO-OPERATION IN FISHING LAWS.—The Fish Commissions of New Jersey, Pennsylvania and Delaware, are preparing to present to their respective Legislatures a carefully prepared series of laws which will make the fishing seasons and close times in all those States the same. This is a great step in advance, and if New York had been included there would be a prospect of having the black bass law so arranged that it would not be lawful to take a fish in one end of Greenwood Lake at a time when it is unlawful to capture it at the other end, and also of giving protection to the salmon and shad in the Hudson River by making the law the same in both States.

Fishculture.

THE NEW YORK FISHERY COMMISSION.

THE Fishery Commission of New York is about to reorganize and proposes to introduce business methods in this work, which under the old regime was done in a rather loose manner so far as any attempt at system is concerned. To this end the following rules and regulations for the conduct of the practical operations of the Commission are proposed:

1. Regular meetings of the Board of Commissioners are held at its office in the city of New York on the second Tuesday of each month at the hour of ten o'clock, A. M., except when such Tuesday shall occur on a public holiday, in which case the meeting shall be held on the next succeeding day. Extra meetings may be held on the call of the President whenever, in his judgment, they may be necessary. At least two days' notice, personally or by mail, shall be given of each extra meeting, and the particular object of the meeting shall be specified in the notice.

2. The business at each meeting shall be in the following order:

(1) Reading the record of proceedings of the preceding meeting.
(2) The consideration of bids for oyster franchises.
(3) New business connected with oyster franchises.
(4) Unfinished business connected with oyster lands and franchises.
(5) Reports from superintendents, chief game and fish protector and the engineer.
(6) Auditing of abstracts and accounts.
(7) Reports from committees.
(8) Communications in writing from persons not connected with the Commission.
(9) Resolutions.
(10) Unfinished business.

3. Each hatching station of the Commission shall be under the direction of a Commissioner, or Commissioners in charge, to be named by the board, who shall, subject to its order, direct the superintendent in the discharge of his duties. The salaries of the several superintendents shall be fixed by the Board. The number and compensation of the minor employes shall be fixed by the superintendent, subject to the approval of the Commissioner in charge.

4. No expenditure other than for current support shall be made by any superintendent without the approval, previously obtained, of the Commissioner in charge; and no expenditures for new structures exceeding $50 in cost shall be made at any of the hatcheries without the approval, previously obtained, of the Board of Commissioners.

5. Each superintendent shall give bond, with surety, in the sum of $500, subject to the approval of the Board, for the faithful discharge of his duties and the accounting by vouchers, satisfactory to the Comptroller, of all State funds coming to his hands.

6. Payments of salaries, wages and other expenses shall be made at each hatchery on the 15th day of each month, except when such day occurs on Sunday, in which case the next succeeding day shall be pay day.

7. The superintendent may give, on his own responsibility, in the interim between the 1st and 15th of each month, his receipts for executed vouchers for the expenses of the work in his charge, payable when he shall receive returns from his monthly abstract.

8. All abstracts of accounts, or vouchers connected therewith, shall be made in duplicate, and shall be in accordance with the regulations prescribed by the Comptroller. One copy of each voucher shall be included in each abstract. The superintendent shall keep a book in which shall be recorded, in their order, the monthly abstracts. The duplicate abstract shall be forwarded with the original to the clerk.

9. All abstracts shall be made up complete by the third of each month, and shall be first sent, with the vouchers accompanying, to the Commissioner in charge, who shall examine the abstract as to form and substance, and if he find it defective in any respect he shall return it to the superintendent for correction. He shall also examine the vouchers as to the reasonableness of any charges that may be made in them; and if he find that any expenditures have been made without proper reference to economy he shall adopt such means as he shall deem requisite to secure a correction. The abstracts received by any Commissioner in charge shall be promptly examined by such Commissioner, and when approved by him shall be forwarded to the clerk of the Commission to be presented to the Board.

10. The clerk shall prepare blank forms of abstracts to be approved by the Comptroller, which shall be furnished to each hatchery and used by himself in all abstracts of contingent expenses of the Commission which he may have occasion to make up.

11. The clerk shall keep in a book, provided for that purpose, a record of the monthly abstracts as they may be submitted to the Board.

12. Until further orders the following assignments are made, pursuant to rule 3, of this series: Cold Spring Harbor hatchery, Commissioner Blackford; Adirondack hatchery, Commissioner Sherman; Sacandaga hatchery, Commissioner Burden; Fulton Chain hatchery, Commissioner Sherman; Caledonia hatchery, Commissioner Bowman; and to Commissioner Bowman is also assigned the supervision, as far as any general supervision may be necessary, of the spawn gathering on the upper lakes, and the shad hatching on the Hudson River; and to Commissioner Burden is assigned the supervision of all the fishways in the care of the Commission; To Commissioner Joline shall be assigned the supervision of the work of the clerk, as far as his work relates to the consideration and granting of applications for franchises in lands under the waters of the State. This rule shall be printed on cards and posted in a prominent place in each hatchery.

13. No person shall bring into any building, or on the grounds of any hatching station, any intoxicating beverages, and any such beverages found in such place by any superintendent shall be summarily destroyed. Nor shall any employe or other person appear on such grounds in a state of intoxication. No person shall be employed in the service of the Commission who frequents dram shops or other haunts of vice or immorality. No person shall smoke tobacco in any form in the hatching rooms or workshops of any hatchery, nor shall any person eject tobacco spittle upon any of the floors, fixtures or furniture of any such building.

14. An inventory of all public property at each hatching station shall be taken annually on the first day of January, one copy of such inventory shall be retained by the superintendent and a duplicate forwarded to the Commissioner in charge, to be filed in the office of the Commissioners of Fisheries.

15. Each superintendent shall, on or before the fifth of February in each year, report to the Board a statement in tabular form of all applications he shall have received for fish fry for the then current season, together with all papers he shall have touching such applications; and no fry shall be furnished from any hatchery until the Board shall have made a distributive apportionment.

16. Each superintendent shall, between the first and fifteenth of December in each year, report to the Board a detailed account of the operations of the hatchery in his charge for the last year, together with such recommendations touching the conduct of affairs at the station as he shall deem useful. Such a report shall also contain a list of all the employes at the station and a statement of the rate of compensation paid to each.

These rules shall be printed on cards and posted in a prominent place in each hatchery.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 1 to 4.—Fourth Dog Show of the Meriden Poultry Association. Joshua Shute, Secretary, No. 430 Pratt street, Meriden, Conn.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

FIELD TRIALS.

Dec. 3.—First Annual Field Trials of the Southern Field Trial Club, at Amory, Miss. T. M. Brumby, Secretary, Chattanooga, Tenn.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6776**.

THE EASTERN FIELD TRIALS.

Special Report.

THE DERBY.

THE eighth annual Derby of the Eastern Field Trials Club began at High Point, N. C., on Monday, Nov. 19. There were twenty-three starters, a sufficient number to make the competition interesting, without dragging the running to a wearisome length. The quality of the work done, considered as a whole, was inferior to that of the past two years in the same stakes. The judging was exceptionally good, the best dogs coming to the front at the finish. The decisions were well received by all. The judges were Mr. J. Otto Donner, Major J. M. Taylor and Mr. J. R. Henricks. A list of the starters was published last week. Birds are not so plentiful as in some past years, yet there are sufficient to test the finding capacities of the dogs without discouraging them by long, barren effort. On the whole, the Derby was skillfully conducted and finished pleasantly.

SATANELLA AND GLAMORIGAN.

The outlook for good work on Monday morning was anything but promising. The heavy rains had saturated the ground, and there was every prospect of continued wet weather. The morning's work was done in a drizzling rain. The rain ceased at noon, but the weather was cloudy, raw, damp and threatening. The wind was from the northeast. Birds were not moving, and therefore were difficult to find. They did not lie well to the points, consequently it was difficult for the dogs to work on them, and the results were not up to the average standard. The first brace was very slow. The cold, wet grass and ground appeared to be obnoxious to both dogs, and they picked their way gingerly and leisurely, hunting side and side much of the time. Glamorigan, handled by D. E. Rose, apparently had a little more independence, but the exhibitions of it were transient. They were cast off at 9:00 near the schoolhouse near the outskirts of the town, and a long, tiresome heat was begun. Satanella, handled by Height, opened the work by pointing a bevy; Glamorigan pointed close behind, although apparently backing; both were steady. On the scattered birds both performed indifferently, although each pointed and backed staunchly. After this no more birds were found, when they were ordered up at 11:35, to be put down again at 4:00 to conclude the heat. At 4:16 they were again ordered up, one point on a marked bird having been made by Satanella. In all down 2h. 51m.

OLIVER TWIST AND ROI D'OR.

They went off merrily at the word, Oliver Twist handled by Tucker, showing wider range. He did some very nice work on birds, the heat began at 11:40. In heavy weeds in a bottom, Oliver Twist pointed a bevy. A moment afterward Roi D'Or, handled by Avent, pointed about 50yds. from Oliver but no birds were found to his point. Both dogs were steady to wing and shot. Some of the scattered birds

were marked down on the edge of a creek, a difficult place to work. Oliver soon pointed nicely and scored. Returning and crossing the creek, they were worked to find a marked bird. Oliver got a sniff of it, challenged a moment and went on. One of the judges flushed the bird afterward. Next Roi pointed one of the scattered birds and was nicely backed; both were cautioned when the bird rose and remained steady. In following the course of the marked birds, Oliver drew to a point on a bevy close to a plum thicket; Roi was not near to back. On the scattered birds, both drew, located and pointed about 20yds. apart in sedge grass. Oliver showed a little unsteadiness at the rise of the bird, but steadied to order. Each secured a good point shortly afterward; and Oliver backed. In pine woods, Oliver ran into a bevy and flushed it. Roi about 40yds. away, pointed a moment afterward and some birds flushed wild close by. On one of the single birds Oliver pointed well, but sprang in when it flushed: soon afterward he picked up another point. The heat ended at 12:29. Oliver showed superior work on birds although he was not always accurate in his points; their speed was about equal; Roi had the better style in motion; on point there was not much difference in style, both being superior in this respect. Down 49m.

LADY PIEDMONT AND GUY.

After lunch at the Model Farm, at 1:58 they were cast off in the open field. Both dogs made game in some open woods; drifting out of the woods into a small cornfield one hundred yards away, Guy, handled by Height, pointed a bevy in it close to the edge of the woods, and was steady. Lady, handled by Rose, displayed good pointing abilities on a single bird and also was steady. Shortly afterward both pointed, Lady a moment the sooner, and her bird flushed wild; Guy broke in, flushed and made a short chase; soon afterward he again exhibited some unsteadiness on a point. The heat ended in 30m. Lady was speedier, ranged better, had better style and showed superiority in her work on birds.

LINDO AND PETRARCH.

The heat began at 2:37 in weeds in an orchard. In a cornfield Lindo, handled by Tucker, pointed a bevy. On the scattered birds several points were picked up, Lindo showing a superiority in his work. Petrarch, handled by Height, showed the better style on point, while the setter was superior in style in motion. Down 45m.

ORLANDO AND HOPE'S LASS.

They were cast off in an open field at 3:26. Soon afterward Hope's Lass, handled by Rose, chased a rabbit with great resolution. On a sidehill in sedge Lass pointed a bevy and was steady to wing and shot. Orlando, handled by Avent, was some distance away. The dogs were brought together. On one of the scattered birds Orlando pointed on one side of a strip of grass and weeds; Hope's Lass, on the other side of the strip, pointed the same bird, it running between the two dogs. Both were steady to the gun. While looking for the scattered birds Orlando, while going at full speed, brought up suddenly in a stylish point on a bevy near a branch, a very pretty piece of work. Lass backed stylishly and well; both were steady. The birds were followed into a woods close by. Orlando made a point but the birds were running; Lass backed nicely. The bird flushed wild after Orlando had been ordered on. Down 25m. Hope's Lass displayed a keen nose and good judgment. Orlando was superior in pace, range and style and quickness of execution.

FRED AND CECIL.

They were cast off at 4:26 and the running for the day ended when they were ordered up at 4:57. The pointer showed the greater range and speed. No birds were found. Fred was handled by Height; Cecil by Avent. At 8.37 Tuesday morning, they were cast off near the glass house to complete the unfinished heat. The wind blew from the northeast and gradually increased in strength during the day, but was not very high. The weather turned cooler. Birds were found in fair number and the quality of the work was a decided improvement on that of the preceding day. Fred flushed a bevy and stopped to wing; Cecil backed. Fred refused to back Cecil's point on one of the scattered birds and stole the point. Cecil made two or three more points on the single birds, and Fred flushed a bird and stole a point. He showed wider range, but was outworked thoroughly on birds. Down 25m.

MAUDE FOREMAN AND GLAUCUS.

They were cast off at 9:10. The former was handled by J. Lewis, the latter by John White. Maude had the advantage in speed, range and style in motion; she dropped to her points and showed overcautiousness at times. She showed superior abilities on birds, and with experience will gain courage. She has a keen nose and excellent judgment in using it excepting that from overcautiousness she would drop to point on the footscent. The pointer's nose appeared to be ordinary as he got too close on his birds and made some flushes in consequence. Both were steady to shot and wing. Maude won. Down 57m.

JOYCE OF HALL'S ISLAND AND VIC.

The heat began at 10:14. Joyce was handled by C. E. Buckell, Vic by John Welcher. Soon after starting, one of the handlers walked into a bevy in an open weed field. It was followed to some oak woods close by and the heat was decided on the scattered birds. Joyce stopped to a flush. A few yards further she pointed a bird and Vic pointed or backed, it was difficult to determine which, as she was in a position to catch the scent of the birds. Ordered on, both pointed several remaining birds and were steady to wing. From that time to the end of the heat, Vic displayed a superior grade of work, and more of it than the pointer. Vic established a good point on a single bird and Joyce worked in and shared the point. Next Vic made two points, each on a single bird. She located quickly and accurately, carrying a high nose and exhibiting keen scenting powers. Joyce was roading in the meantime in some open sedge. She pointed, roaded and located and scored a point. Vic made a stylish point, Joyce backed for a few moments, broke his back while Welcher was trying to flush, drew in ahead and began roading. About ten or twelve yards ahead Welcher flushed the bird, Joyce having nearly roaded to it. Vic held her point nicely meanwhile. On the sidehill near by Joyce pointed, then drew on. Nothing found to the point. The setter's work on birds was decidedly superior in quality and quantity. She carried a high nose and was accurate and quick in her work. Her style of pointing was excellent. Her range and speed was not so great as that of the pointer; but she worked diligently and with judgment. Joyce won. Down 37m. The pointer's superior range was hardly sufficient to outweigh Vic's positive superiority on birds.

COUNT FAUSTER AND VIC G.

The latter, handled by G. H. Smith, had been suffering from diarrhœa, and was consequently out of condition for good work. The heat began at 10:57. Count was handled by Capt. McMurdo. Both performed indifferently on game, each roading with deliberation. They were steady to shot and wing and backed well. Count had some advantage in range, speed and style on point; but little work was done on birds. Vic pointed a single bird in sedge grass. Count pointed some scattered birds in the cornfield and was lost for several minutes; soon afterward he pointed a single and Vic backed. The heat then ended. Down 48m.

MISS MONARCH AND MILDRED.

The heat began at 11:50. Mildred was handled by Capt. McMurdo, and Miss Monarch by Luke White. Mildred took wider casts, but was disobedient and did not work perfectly to the gun; she did not exercise sufficient care when on birds and flushed from carelessness. Miss Monarch had a very stylish action. Mildred began the work on birds by pointing, roading and drawing carefully about. Two birds flushed wild. She located the bevy and pointed it nicely; Mildred backed; both were steady to wing. While hunting for the scattered birds, Miss pointed but no bird was found. Mildred pointed up wind of a single, turned to locate and flushed. Miss pointed near the same place and several flushed wild close by. Next Miss pointed a bird neatly and was steady to wing and shot. From this stage Mildred's work became poorer, She flushed three times, once near the spectators, and was difficult to handle. She made one point more, and Miss made two; the latter had a very stylish action; Mildred was the superior in range. The heat lasted 22m. Miss Monarch won.

COUNT PIEDMONT AND FELIX M.

At 1:06, after lunch, they were cast off in the open field. Count Piedmont was handled by Capt. McMurdo; Felix by D. E. Rose. Count pointed a bevy and Felix backed; both were steady. They were worked in the woods and open field on the scattered birds. Count showed better nose and performance on them, although the competition was quite close. He ranged a little better that Felix; the latter had better style in running and pointing. Count won. Length of heat, 43m. This ended the first series. Stella had a bye.

First Series.

Satanella beat Glamorigan.
Oliver Twist beat Roi D'Or.
Lady Piedmont beat Guy.
Lindo beat Petrarch.
Orlando beat Hope's Lass.
Cecil beat Fred.
Maude Foreman beat Glaucus.
Joyce of Hall's Island beat Vic.
Count Fauster beat Vic G.
Miss Monarch beat Mildred.
Count Piedmont beat Felix M.
Stella a bye.

Second Series.

SATANELLA AND STELLA.

The heat began at 4:53. Stella was handled by Luke White. Soon after starting it was apparent that Satanella was running in much better form than in her heat in the first series. Her range and speed were improved. Stella false-pointed and was staunchly backed by Satanella. A bevy was soon found and Satanella pointed her birds quicker and more accurately than Stella. The latter was uncertain in backing, although she had slightly the advantage in speed and range. Down 17m.

OLIVER TWIST AND LADY PIEDMONT.

The heat began at 2:15 in the open field. The weather had turned cooler and a brisk breeze was blowing. Oliver in open sedge pointed a bird of a scattered bevy very handsomely; Lady backed staunchly; both were steady to wing and shot. It was a neat, pretty piece of work. Ordered on, Oliver pointed, then drew on, pointing and drawing for about 200yds. Lady lost confidence in his points and refused to back him. Nothing was found. Returning to where Oliver first pointed, Lady pointed, probably on foot scent, as a bird was flushed close by after she had moved on. Next Oliver pointed a bird in sedge grass and sassafras bushes and Lady honored the point. A few yards further on he again pointed, probably on the foot scent, as the bird was flushed 12 or 15yds. from him across wind and it would be impossible to point it so far in such wind. He showed greater execution on birds, had superior style and better range, and won. Down 22m.

ORLANDO AND LINDO.

They were cast off at 2:53. Orlando pointed soon after starting, but no birds were found Next he pointed rabbit. Lindo pointed; Orlando backed; no birds found. Orlando next pointed by a plum thicket; Lindo backed when cautioned; Orlando drew about 50yds. and pointed again, Lindo again stopped when cautioned. Orlando again moved on. Lindo taking a cast further up the hill located and pointed the bevy, Orlando backed; both were steady. While going after the scattered birds Lindo led off in an enthusiastic rabbit chase and was joined by Orlando for a short distance. Lindo wrenched, held possession, turned the rabbit, became unsighted and the chase ended. On the scattered birds Orlando showed greater quickness and precision. Both were steady to shot. They were cast off to find another bevy. On a sidehill in weeds Orlando pointed; Lindo, down wind, backed, standing among the birds. The dogs were then ordered up and Orlando won. Down 52m.

CECIL AND MAUDE FOREMAN.

They were started at 4:00. Cecil pointed a bevy and was nicely backed; when the bevy was flushed, another, or part of the same one, flushed wild about one hundred yards away. The dogs were called in and started off together after the scattered birds, marked on a sidehill in sedge. For about a half hour there was some rattling work. Maude picked up point after point, showing an exquisitely keen nose, but her work was marred by over-cautiousness and dropping on the footscent at times. There were a large number of the scattered birds and plenty of opportunity. Maude made about six points on the single birds and Cecil two or three. They were then cast off to find another bevy. Maude pointed by a branch and was steady to shot and wing when the bevy flushed. On the scattered birds in sedge in pines Cecil showed a higher grade of work. Cecil won. Down 50m. Maude showed excellent capabilities, which were marred by over-cautiousness. Cecil was bolder, went up to his birds with greater confidence and pointed in better style. It was a very close heat nevertheless.

COUNT FAUSTER AND JOYCE OF HALL'S ISLAND.

Wednesday morning was clear and cool. A brisk breeze blew from the northeast. The weather again turned cloudy in the afternoon, and a moderately stiff wind set in. Birds were found in sufficient numbers for the purposes of the trials, although they were not plentiful. The brace was cast off at 8:20 near the school house. Count opened the work by pointing close to a bevy, but up wind of it; Joyce coming on across wind stopped as the bevy flushed; at the same time Count had moved and was roading carefully to locate. Some of the birds were marked down in pine woods. Count caught scent, drew on and flushed a bird, and immediately afterward flushed another. Joyce then stood prettily to a bird and was steady to wing; advancing a few steps, she pointed again; Count came close to her and backed, caught scent, turned his head and pointed; both were steady to shot; a very good piece of work. Count again was first to find a bevy, and he pointed well; Joyce caught scent after she had backed for a moment, drew two or three yards to the left and pointed. Both were steady to shot. The dogs were then ordered up. Count had a decided superiority in pace and range, but was not obedient. Each had good style on point. Count won. Down 38m.

COUNT PIEDMONT AND MISS MONARCH.

At 9:04 they were cast off in sedge and weeds in the open field. Miss flushed two birds near a plum thicket and continued roading to locate. Count went into the thicket and pointed; Miss at the same time pointed in the thicket a few yards away from him. White flushed some birds and shot; both dogs were steady. They began making game in the woods close by and roaded about 100yds. Miss took a short cast ahead, and in returning across wind flushed a bird, the dog going up wind toward it at the same time. Next Count pointed in sedge grass close by a run. Miss drew up and flushed the bird; Count held his point. McMurdo thought he was pointing on the scent of the bird that had flushed and had ordered him on. Both moved and a bird was flushed. Miss sprang at it, but steadied to order. The dogs were sent on to find another bevy. On a stubble field Count drew down wind and dropped on a staunch point. He was held a while for Miss to be brought up to back. After she had established her back McMurdo beat the ground out ahead of his dog but failed to flush. When ordered on Count still held his point. Failing to find, McMurdo ordered his dog on. Miss took the scent and followed it rapidly down wind to a flush on the bevy. The dogs were then ordered up and Count won. Down 40m.

Satanella beat Stella.
Oliver Twist beat Lady Piedmont.
Orlando beat Lindo.
Cecil beat Maude Foreman.
Count Fauster beat Joyce of Hall's Island.
Count Piedmont beat Miss Monarch.

Third Series.

OLIVER TWIST AND SATANELLA.

This was a short heat, lasting 23m. They were cast off at 9:51. Oliver false-pointed and was nicely backed by Satanella. Oliver next drew handsomely to a point on a bevy in short weeds; Satanella, fifty yards behind, backed stylishly. Both were in plain sight, and it formed a very pretty picture. Both were steady to shot and wing. On the scattered birds, Satanella made an uncertain point and Oliver backed; but the pointer failed to locate. Further on in the hollow, Oliver pointed, drew on and located; Satanella backed prettily; three or four birds were flushed to the point. Moving on, both flushed a bird, and Oliver was slightly unsteady to wing. Moving on five or six yards Oliver pointed a bird; the pointer, close behind, pointed or backed, it was difficult to determine which. The heat then ended and Oliver won. The pointer had greatly improved in field form and ran a good race.

ORLANDO AND COUNT FAUSTER.

The heat began in an open field at 10:20. Count pointed a bevy nicely in the open stubble, and held his point staunchly. Orlando, called up to back, either backed or caught scent and pointed. The birds flew a long distance away and were not followed. Some spectators, at that juncture, reported a bevy marked down close by in pine woods. Count was first to it and pointed well; Orlando backed and both were steady to shot. Moved on and Orlando pointed several birds. Count, a moment afterward, going up the sidehill, flushed and took a chase over the hill, disappearing about one hundred yards away. Orlando next pointed; ordered on he flushed the bird and pointed again a few yards further on; Count backed and both were steady to wing. Orlando pointed a bird in the edge of some woods: after it was flushed he advanced a couple of steps and pointed another. The heat then ended. Down 29m. Count's range was equal to that of the setter, and he was a bold, plucky ranger; Orlando had better speed and style. The pointer was disobedient.

CECIL AND COUNT PIEDMONT.

They were cast off at 11:06. They had gone only about one hundred yards when Count pointed a bevy and was nicely backed; both were steady to wing. In pine woods, Count dropped to a flush. Moved on, Cecil located and pointed a single nicely. Count stole the point, then flushed. The heat then ended. Down 12m. There was not much work done in the heat. There was not much chance to compare the range of the two dogs, as most of the work was done in cover. Cecil had better style and speed. Count was not obedient. Cecil won.

Oliver Twist beat Santanella.
Orlando beat Count Fauster.
Cecil beat Count Piedmont.

Fourth Series.

ORLANDO AND OLIVER TWIST.

They were cast off at 11:27 on a large stubble field. Both ranged wide, Orlando the speedier and having more stylish action. He was quicker in his work on birds, going up to them with great boldness and certainty. Orlando stopped to a stylish point on a bevy and Oliver, about seventy-five yards from him, backed. Both dogs were in graceful attitudes in full sight of the spectators and the beautiful scene excited much admiration. They were steady to wing. The quality of work done was nearly alike, Orlando having a slight advantage. Each had shown excellent capabilities on birds, Orlando being quicker and more positive. They pointed quite a number of single birds, and each had scored some false points. The heat ended at 12:41. Down 1h. 14m. The party then went near Col. Holden's place to lunch.

Orlando beat Oliver Twist.
Cecil a bye.

Final for First Place.

ORLANDO AND CECIL.

They were cast off at 2:05 in weeds. Cecil had the bye in the last series. Orlando pointed a bevy. He stood by the edge of a thick run; the birds were on the opposite side, 10 or 15yds. away. Cecil backed or pointed, standing only a yard or two behind Orlando. Both were steady to wing and shot. After crossing the run Cecil flushed a single bird, and the heat ended soon after. Down 32m. Orlando won. He showed superiority in speed and range. Each had good points, Orlando the better.

Ties for Second Place.

CECIL AND OLIVER TWIST.

The latter was selected as the best dog beaten by Orlando. The heat for second prize began at 3:00. Cecil pointed a single bird, one of the birds of the last bevy found in the last heat, and did a neat piece of work. Oliver, about the same time, pointed several birds very nicely by a fence, and was steady to wing and shot. A circle was taken to get the wind of the scattered birds in some pine woods. Cecil flushed a single; Oliver false-pointed. Each scored a point on a single bird. Cecil false-pointed. Both dogs made a point or two on larks, and each made a false point. On a sidehill in weeds Oliver pointed a bevy; Cecil honored the point. Both dogs were showing signs of fatigue. Oliver won the heat and second. Down 45m. Oliver showed better judgment in working his ground, and had better style on point. This finished the running. Cecil was declared winner of third. Lindo and Count Fauster were called up to run for fourth place, but it was agreed to divide.

SUMMARY.

Eastern Field Trials Club's Derby for 1888, for all setter or pointer puppies whelped on or after January 1, 1887. Four purses: 1st prize $400; 2d, $200; 3d, $100 and 4th, $100; and Breeder's Cup, value $100, to breeder of winner of Derby. Forfeit $10, and $20 additional to fill.

First Series.

Satanella beat Glamorigan.
Oliver Twist beat Roi D'Or.
Lady Piedmont beat Guy.
Lindo beat Petrarch.
Orlando beat Hope's Lass.
Cecil beat Fred.
Maude Foreman beat Glaucus.
Joyce of Hall's Island beat Vic.
Count Fauster beat Vic G.
Miss Monarch beat Mildred.
Count Piedmont beat Felix M.
Stella a bye.

Second Series.

Satanella beat Stella.
Oliver Twist beat Lady Piedmont.
Orlando beat Lindo.
Cecil beat Maude Foreman.
Count Fauster beat Joyce of Hall's Island.
Count Piedmont beat Miss Monarch.

Third Series.

Oliver Twist beat Santanella.
Orlando beat Count Fauster.
Cecil beat Count Piedmont.

Fourth Series.

Orlando beat Oliver Twist.
Cecil a bye.

Final for First Place.

Orlando beat Cecil and won first prize.

Final for Second Place.

Oliver Twist beat Cecil and won second prize.
Cecil third.
Lindo and Count Fauster divided fourth.

THE ALL-AGED SETTER STAKE.

Immediately after deciding first place in the Derby, the running in the Setter Stake was begun. There were eighteen starters, which were drawn to run as follows:

NAT GOODWIN (I. N. Cochran, Philadelphia, Pa.), black, white and tan dog, 3½yrs. (Roderigo—Bo Peep),
against
DAVE R. (Dudley & Fisher, Nashville, Tenn.), lemon and white dog, 2yrs. (Gath's Hope—Daisy F.).

CINCINNATUS (J. E. Dager, Toledo, O.), black, white and tan dog, May 21, 1886 (Count Noble—Dido II.),
against
SADDLEBAGS, black, white and tan bitch, June 25, 1885 (Foreman—Belle of Allendale).

JOEY B. (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog, 5yrs. (Roderigo—Lillian),
against
BOB H. (A. J. Crovatt, Brunswick, Ga.), black, white and tan dog, March 31, 1885 (Count Noble—Belle Boyd).

OLLIE S. (Memphis & Avent Kennels, Memphis, Tenn.) black, white and tan bitch, 3yrs. (Paul Gladstone—Lottie),
against
EFFIE HILL (D. M. Barringer, Philadelphia, Pa.), black, white and tan bitch, 3yrs. (Prince Bergundthal—Donna).

ROGER (L. Gardner, Mt. Vernon, N. Y.), black, white and tan dog, Dec. 13, 1885 (Count Noble—Queen Meg),
against
GALATEA (W. Tallman, New York), black, white and tan bitch, 4yrs. (Mack B.—Choice).

TOLEDO BLADE (J. E. Dager, Toledo, O.), black, white and tan dog, May 20, 1886 (Roderigo—Lillian),
against
CASSIO (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog, 4yrs. (Count Noble—Lizzie Hopkins).

DASHING LADY (H. Colquitt, Richmond, Va.), black, white and tan bitch, 4yrs. (Dashing Rover—Trinket),
against
JOE B. (Bayard Thayer, Boston, Mass.), black, white and tan dog, Sept. 25, 1885 (Baron—Nellie).

JAQUES (C. Tucker, Stanton Depot, Tenn.), lemon and white dog, Oct. 28, 1886 (Fred W.—Queen of the South),
against
JACK MODOC (Charlottesville Field Trial Kennels, Charlottesville, Va.), black and white dog, 2yrs. (Buckellew—Ida).

BRANDON (J. O'H. Denny, Ligonier, Pa.), lemon and white dog, 5yrs. (Royal Rock—Nellie),
against
KING LEO (E. F. Thomas, Denver, Col.), black, white and tan dog, 2yrs. (Count Noble—Ruby).

NAT GOODWIN AND DAVE R.

The former, handled by S. C. Bradley, the latter handled by D. E. Rose, were cast off at 10:45 in an open sedge field. Nat pointed in a hollow. Dave coming a few yards ahead, pointed a rabbit which ran close by Nat when it started; the temptation was too great for Nat and he chased it swiftly out of sight and was gone several minutes. Soon after starting again, Nat pointed a single bird and was steady to wing. Going down wind Nat flushed a single, wheeled to the flush and pointed and held his point; Bradley flushed a bird to the point. Nat roaded nicely to a point; Dave coming in ahead, pointed a bird which flushed wild a moment afterward; Nat held his point and Bradley flushed a bird to it. Moved on, Nat false-pointed. In pine woods Nat pointed; Dave at same time pointed about thirty yards ahead; Rose flushed a bird to the point, shot and missed. Soon after being sent on, each made a false point. Next, both pointed about the same time, Nat a few feet ahead; moved on about ten yards ahead and Dave pointed a single bird; both were steady to shot. Next Dave false-pointed and was backed by Nat. Nat's style was better and he was quicker in his work. The range was about equal. Down 45m. Nat won.

CINCINNATUS AND SADDLEBAGS.

T. M. Aldrich handled Saddlebags. C. Tucker handled Cincinnatus. They were cast off at 11:37. At the end of 45m, nothing had been found. The running was suspended and the party went to lunch at the Holden schoolhouse. At 1:30 they were again cast off. Saddlebags pointed a bevy in pine woods, which flushed wild as the judges were approaching. A circuit was taken to get the wind of the birds. Saddlebags pointed a single nicely in the pines; Aldrich made a very difficult shot, winging the bird; Saddlebags retrieved. Cincinnatus was lost for a few minutes and was found pointing a bird in the open, and was steady to shot. He won. He had much the wider range and better style in going.

BOB H. AND JOEY B.

They were cast off at 2:11. The former was handled by Rose, the latter by Avent. The heat lasted one hour and forty-five minutes. In the first hour but little was done in the way of finding birds. In the latter part there was a fine exhibition of work. Joey refused to back, and did not pick his single birds with the accuracy of Bob H., nor did he range so well or with as much judgment. Joey had better style. Near the finish two bevies were marked down in a thicket close together, and point after point was made as fast as it was possible to mark them down. Bob H. showed great accuracy and steadiness to point and back. It was an interesting part of the heat, and was very rapid work. Bob H. deservedly won.

OLLIE S. AND EFFIE HILL.

The former was handled by Avent, the latter by W. W. Titus. After quite a long search without finding, the dogs struck the trail of a bevy, which they roaded with some difficulty down wind. Ollie took a longer cast down than Effie, got near the birds and soon located. Effie backed. Ollie retrieved. On the scattered birds Ollie made three points. In the woods Ollie made one very nicely and was backed by Effie. When the bird was flushed it flew close by Ollie, and she was slightly unsteady, but immediately was steady to order. Ollie had wider range and a more spirited style of going; both were stylish on point. Ollie won. Down 45m.

ROGER AND GALATEA.

They were cast off at 4:50 and ordered up at 5:23, and the running for the day ended. Aldrich handled Roger, Tallman handled Galatea.

THE ALL-AGED POINTER STAKE.

The All-Aged Pointer Stake had seventeen starters. It was begun on Wednesday, Nov. 22. The quality of the work and the quality of the dogs were not of a high grade. As compared with last year, the stake was decidedly inferior. There was not a single high grade dog in the stake. Birds were not plentiful, which contributed in many instances to make parts of the running very tame and occasionally tiresome. The judges were Messrs. H. B. Duryea, J. R. Henricks and A. Merriam.

The judging as a whole gave satisfaction, although there were some murmurs of discontent. It is always much more difficult to judge dogs of inferior or mixed qualities than to judge uniformly good ones. Dexter, the winner, is far from being a brilliant dog, but on the work done he is entitled to the prize. The judges exercised painstaking care and ability in conducting the competition, and they were correct in their decisions. The time limit, which was observed in this stake, the first test in a public stake, developed some unsettled points; for instance, the point was raised privately that if a dog chased a rabbit in a beat and was gone five or ten minutes, the other dog being held up till his return, the time so lost was so much taken out of the competition of forty-five minutes, and that the limit would have to be correspondingly extended. The weight of opinion has settled to the belief that a minimum time limit is desirable, but beyond that there should be no restrictions placed on the judges in this respect. So far as restraining the disposition to scramble is concerned, it has no effect whatever. On the contrary, it in some instances aggravates the evil. When a handler knows that his dog has done nothing, and that possibly he has only five minutes in which to do something creditable, he is very apt to hurry to an unseemly extent. In a very close heat, the very fact that the hindmost dog has only a few minutes in which to gain an advantage, and the foremost dog has only a few moments in which to hold his lead, develops some of the liveliest kind of competition. With modifications to correct these weak features, the time limit will be adopted, that is, it will be adopted so far as a minimum limit is concerned, the remainder being left to the conditions of the judges as heretofore. As to the minimum time opinions differ, but from thirty to forty-five minutes are the times suggested and advocated.

The dogs were drawn to run as follows:

PONTIAC (Charlottesville Field Trial Kennels, Charlottesville, Va.), liver and white dog, 2½yrs. (Priam—Kent's Baby),
against
LASS OF BOW (Westminster Kennel Club, Babylon, N. Y.), liver and white bitch, March 19, 1884 (Graphic—Climax).

FLASH (Charlottesville Field Trial Kennel, Charlottesville, Va.), liver and white dog, 3yrs. (Don Cæsar—Lucky),
against
ROGER WILLIAMS (Col. C. H. Odell, New York), lemon and white dog, Aug. 20, 1886 (Bang Bang—Lalla Rookh).

JOYCE OF HALL'S ISLAND (O. W. Donner, Beaufort, S. C.), liver and white bitch, March 27, 1887 (Lad of Bow—Bloomo),
against
VANDERBILT (E. W. Durkee, New York), liver and white dog, April 26, 1885 (Dean—Nancy).

CONSOLATION (Col. C. H. Odell, New York), lemon and white dog, Jan. 29, 1885 (Bang Bang—Grace),
against
KING OF KENT (Charlottesville Field Trials Kennels, Charlottesville, Va.), liver and white dog, 2½yrs. (Priam—Kent's Baby).

DUKE OF VERNON (L. Gardner, Mount Vernon, N. Y.), liver and white dog, June 1, 1885 (Glendale—Spotless),
against
GO BANG (O. W. Donner, Beaufort, S. C.), liver and white dog, Feb. 16, 1886 (Graphic—Bloomo).

DEXTER (Bayard Thayer, Boston, Mass.), liver and white dog, 2½yrs. (Nip—Tuck),
against
LALLA ROOKH (Col. C. H. Odell, New York), lemon and white bitch, Dec., 1881 (Sensation—White's Grace).

DUKE OF HESSEN (F. R. Hitchcock, N. Y.), liver and white dog, May 9, 1885 (Luck of Hessen—Blarney),
against
LEBANON (Lebanon Kennels, Lebanon, Pa.), lemon and white dog, Nov. 15, 1885 (Tim—Peg).

FLIRT (F. R. Hitchcock, New York), liver and white bitch, May 2, 1885 (Graphic—Ina),
against
GREENFIELD (Dr. H. G. Preston, Brooklyn, N. Y.), liver and white dog, April 1, 1885 (Bang Bang—Bellona).

OSSIAN (P. T. Madison, Indianapolis, Ind.), liver and white dog, May 5, 1886 (Croxteth—Aminé), a bye.

PONTIAC AND LASS OF BOW.

The heat was begun on the outskirts of the town, the course being toward the Glass House. The quality of the work was not of a very high order. Both dogs started slow, but gradually increased their speed and range. A cool northeast wind blew stiffly, which gradually increased to a high wind. Pontiac pointed a bevy in sedge grass; Lass coming up caught scent and pointed the same bevy, she not having caught sight of Pontiac on point. Buckell failed to flush; the dogs were ordered on and began to road; Pontiac, after going a few yards, located and pointed the bevy, and Buckell shot and a bird dropped. It immediately rose, flew toward the spectators, struck the limb of a tree and dropped to the ground. The dog was not required to retrieve it, the conditions being exceptional. The birds went to an oak thicket and were followed. Lass made a very good point and Pontiac backed well. Several birds flushed; the whirr of one bird rising flushed all the others. Both then began roading and pointing. Lass roaded close by one bird which was flushed afterward; she afterward roaded to a flush. She next pointed a bird accurately and in good style; Pontiac honored it with a stand back. Both were steady to shot. At the expiration of the 45m. Pontiac won. Lass was handled by John White. Their range was nearly equal, and there was no material difference in their average speed. The style of each was very good, both on point and when ranging. Pontiac had more boldness and drew to his birds with more precision, although there was not a pronounced difference in their merits. His style was slightly better.

ROGER WILLIAMS AND FLASH.

They were cast off at 9:13 in sedge, Luke White handling the former and C. E. Buckell handling the latter. In a few minutes after starting Roger stood in the open staunchly; Flash backed prettily about 40yds. away. Roger drew on about 30yds. and pointed the bevy. Both were steady to shot, and Roger retrieved cheerfully and tenderly. On the scattered birds Roger scored another point on a single. Afterward he roaded to a point and Flash backed; no birds found; probably he pointed on the foot scent. Moving on, Roger wheeled to a point quickly and was steady to wing. Next Flash roaded carefully and pointed, but failed to find. On dry leaves Flash pointed and was steady to shot. Flash roaded and located; Buckell killed to the point, Flash made a bad retrieve. Moved on. Roger pointed a bevy and flushed a single; Flash scored a point on the scattered birds. The dogs were ordered up at the end of 45 minutes. Roger won. He displayed greater judgment and quickness on his birds and better style on point. There was no material difference in the range.

JOYCE OF HALL'S ISLAND AND VANDERBILT.

They were started at 10:04. C. E. Buckell handled the former, T. M. Aldrich the latter. The heat, as a whole, was not up to the average in merit, although Joyce made a very nice point, wheeling to it quick and snappy, and pointing staunchly. Joyce had the advantage in range, pace and superiority on birds. They were ordered up at the end of the time limit, and Joyce won.

CONSOLATION AND KING OF KENT.

The heat began at 10:55. Kent opened the work in superior style. He was lost for a few moments; when found he was pointing staunchly in some short grass. McMurdo, his handler, beat the ground out carefully before him, but not finding he ordered him on. The dog refused to move; McMurdo then went closer to him and flushed the bevy, which was huddled close to Kent. Consolation backed to order; both were steady to wing and shot; Kent retrieved poorly and pinched his bird. On scattered birds Kent appeared to be stubborn, and could not be sufficiently controlled. Consolation outworked him completely on the scattered birds; he also retrieved nicely. Kent ranged the wider and had a trifle the greater speed. If he had been manageable and proficient in work on single birds he would have won easily, as he showed greater natural capabilities than Consolation. The heat was a very good working one. Luke White handled Consolation. Down 1h. 15m.

GO BANG AND DUKE OF VERNON.

They were started at 12:20. O. W. Donner handled Go Bang; T. M. Aldrich handled Duke of Vernon. In pine woods Go Bang dropped to a point and was nicely backed by Duke; both were steady to shot; Bang retrieved the bird killed by Donner. Duke pointed a single in the pine woods, which flushed wild. Aldrich killed to Duke's point on a bird by the edge of heavy weeds. The bird fell in a very bad place to retrieve. Duke retrieved it tenderly, but his manner of doing it was indifferent. Moving on a short distance Bang pointed a bevy and Duke honored the point with a very stylish back; both were steady to wing. Bang dropped to a point on one of the birds of the scattered bevy in the pine woods, and a bird flushed wild to the point. Duke next made a point, which proved barren. Bang ran carelessly into several birds, having the wind of them, and dropped to wing. Some more work was done on singles. Go Bang showed a higher grade of work on them besides having the better speed and range, although he was unreliable in his backing. He won. Down 45m.

DEXTER AND LALLA ROOKH.

At 1:55, after lunch, they were cast off in the open field. The former was handled by H. Height, the latter by Luke White. A strong wind blew from the northeast. There was a close competition for superiority on birds. Dexter was the better. Each backed and pointed well. Dexter won at the end of 45m.

LEBANON AND DUKE OF HESSEN.

They were started at 2:52. Lebanon pointed a bevy nicely in open sedge grass and was nicely backed. White killed a bird out of the bevy and Lebanon broke shot, and was not a retriever. The birds went to a thicket of pines close by and were followed. Duke pointed; no bird found. Moved on. Lebanon pointed very close to a single bird; when White flushed it, Lebanon broke in and started to chase, Duke going with him; Lebanon stopped to command, Duke went several yards further. Lebanon was now working under a heavy handicap, a break shot, a break in, and inability to retrieve. Duke also impaired his score by a bad break in or wild chase. While it was done under aggravated conditions, the fact remained that he had done it. The judges ordered the dogs up and consulted a moment, then sent them on. On a hill in weeds Lebanon pointed another bevy; Duke backed. Lebanon was steady when cautioned at the flush of the birds. In pine woods, Lebanon pointed a single nicely. Shortly afterward Duke dropped to a point and Lebanon backed; both were steady to wing and shot. Ordered on, Lebanon found and pointed another bevy, and was nicely backed. When White shot Lebanon was steady to order. Duke drew to a point in sedge; Lebanon backed; no birds to the point. Duke was the stronger goer; both ranged well, Duke being the better ranger. Lebanon had better style on his points. As a finding dog he completely outworked Duke, showing an exquisite nose and good judgment, but he was imperfectly broken; he won. Down 45m. Luke White handled Lebanon, C. Tucker handled Duke.

FLIRT AND GREENFIELD.

They were started at 3:46. John White handled Flirt, S. C. Bradley handled Greenfield. Flirt showed a decided superiority in judgement and ability in finding and pointing birds. She retrieved badly; Greenfield retrieved nicely. Flirt had better style in going. There was not much difference in range. Flirt won. Down 45m. Ossian had a bye. The first series result as follows:

Pontiac beat Lass of Bow.
Roger Williams beat Flash.
Joyce of Hall's Island beat Vanderbilt.
Consolation beat King of Kent.
Go Bang beat Duke of Vernon.
Dexter beat Lalla Rookh.
Lebanon beat Duke of Hessen.
Flirt beat Greenfield.
Ossian a bye.

Second Series.

OSSIAN AND PONTIAC.

This brace began the second series at 4:35. Ossian was handled by Rose. He showed more superiority in work on birds, he having a keen nose, judgment and quickness. Both were staunch on point and back, steady to wing and shot. Pontiac retrieved a bird very badly, mouthing it and mutilating it as he fetched. Ossian showed a higher grade of capabilities. At the expiration of the time limit he won and the running for the day ended.

ROGER WILLIAMS AND JOYCE OF HALL'S ISLAND.

Friday morning was cloudy and dismal. A strong wind, which was almost frosty, blew from the north. Ice had formed during the night on still water and fallow ground was frozen sufficiently to hold a horse. The work of the day was unsatisfactory, due in a great degree to beating about without any settled plan and getting on poor grounds much of the time. The first brace was started at 8:30 near the outskirts of the town. The dogs started off with greater dash and range than they displayed in previous heats. Joyce had a slight advantage in range and style; speed was about equal. Roger opened the work by pointing a bevy in sedge, and was steady to shot and wing. In oak woods Joyce made a good point on two or three birds. Although Joyce worked well on her birds, she did not have the certainty and accuracy of Roger, and was inferior to him in finding capabilities. He found and pointed two bevies in the heat and made several neat points on single birds. Mr. F. R. Hitchcock bought Joyce. Roger won at the end of the time limit.

CONSOLATION AND GO BANG.

They were started at 9:25. Consolation surpassed Bang in speed, style, range, judgment in working his ground and ability to locate and point. He had the heat to his advantage from the start, and never was pressed by his competitor. Consolation did a very pretty piece of work in roading a bevy down wind, but he flushed it on oak leaves near the woods, a flush wholly excusable, as it was impossible to point it under the circumstances. He picked up three good points quickly in succession on singles.

DEXTER AND LEBANON.

They were started at 10:15. Lebanon did not run up to the form of his previous heat, and was not easily handled, not being perfectly broken. With respect to natural capabilities he probably surpassed any pointer in the stake. He was handicappped at the start by not being a retriever. Dexter started with two injured feet, but ran pluckily. The heat, as a whole, was rather inferior, although Lebanon did a very superior piece of work in roading a bevy a long ways through pine woods, locating and pointing it. Dexter gained a slight lead on single birds. While Lebanon was roading the bevy Dexter pointed a single bird in heavy sedge and weeds in a hollow by a branch, and scored a retrieve on the bird. Dexter joined Lebanon in the roading to locate, both secured a point and were steady to shot. The find was Lebanon's. On the scattered birds Dexter showed superiority. At the end of 45m. they were ordered up. After consulting a few minutes the dogs were ordered on for a half hour more. A long search was made without finding. Lebanon pointed near a patch of briers; White failed to flush. Sent on, both dogs began roading slowly and pottered. Lebanon pottered off to the left; Dexter, sent in a few yards ahead and to the right pointed the bevy and was steady to wing. The dogs had the wind of the bevy in the last piece of work and should have roaded it quickly and accurately. The judges consulted nearly a half hour and awarded the heat to Dexter, which was a correct decision under the circumstances. The first series had the following results:

Ossian beat Pontiac.
Roger Williams beat Joyce of Hall's Island.
Consolation beat Go Bang.
Dexter beat Lebanon.
Flirt a bye.

Third Series.

OSSIAN AND FLIRT.

Dogs started at 12:10. Flirt showed a keen nose and fine pointing qualities, but was not quite equal in range or judgment. Ossian false-pointed twice in the beginning of the heat. Near the edge of some pine woods Ossian pointed, then drew on and pointed again. Flirt coming up, caught scent and pointed the bevy. At the rise, White shot and killed three. Flirt made a bad retrieve, doing it slowly and pinching the bird. Ossian retrieved nicely. Flirt was well backed to a good point on a single of the scattered birds, which flushed wild. At the end of 45 minutes the dogs were ordered up, and the running was suspended while the party went to lunch at the Model Farm. At 1:50 the heat was resumed. Ossian pointed a single bird in an open field soon after starting, and was steady to shot. The dogs were run an hour and one-half without finding any more birds. Ossian won. The sudden change in the weather had its effects on the habits of the birds, they not moving from cover to their feeding grounds.

DEXTER AND ROGER WILLIAMS.

Some time was lost in getting dogs and handlers together, owing to the aimless manner in which the whole party drifted about through the grounds. Roger pointed in a hollow on short grass and was well backed. White failed to flush. Dexter was held and Roger given an opportunity to locate without competition, which he failed to do. Both dogs then had an opportunity together. Neither appearing to show signs of finding they were ordered back into the woods. Dexter took a cast further down the bottom, found and pointed the bevy; he was steady to shot and retrieved. The scattered birds were followed into the pine woods. Both pointed nicely on separate birds, and were steady to shot. Moved on, and Dexter followed a single and stood to the flush; Roger backed. On a sidehill Dexter pointed and held it while his handler walked up the hill to him; Roger backed. The birds were scattered in pines where there was no cover for them. Dexter pointed two or three nicely and was nicely backed. Roger pointed to a flush, held his point and White flushed another to it. Dexter pointed, drew on and the bird flushed wild. Moved on and Roger scored next on a single bird and was well backed. Roger flushed, stopped to wing and pointed, and another bird flushed wildly to point. Dexter pointed and Roger backed or pointed on the foot-scent as he was across wind a few yards from it. Near the edge of the pines Roger false-pointed. Taken as a whole Roger had the better range and speed, although not greatly superior. On game Dexter showed superiority in accuracy, quickness and precision. He won at the expiration of the time limit and the running for the day ended. Taken as a whole it was rather a dull day. In the third series

Ossian beat Flirt.
Dexter beat Roger Williams.
Consolation a bye.

Fourth Series.

OSSIAN AND CONSOLATION.

The brace was cast off at 8:30 near town. This was the beginning of the fourth series. There were three dogs in it, thus giving Dexter the bye. He was required to run a side heat at the same time as Ossian and Consolation to place him on an equality of conditions for the next heat. Both dogs started off without much spirit, the cool morning apparently not being to their liking. Ossian showed a disposition to potter occasionally and did not range to find bevies. Consolation was first to find and point a bevy in open sedge; Ossian backed nicely; both were steady to shot and wing. The find and report of the gun stimulated Ossian to range and show keener interest in the work. The bevy was followed across some pine woods. Consolation caught scent and was drawing prettily to a point on a single, when Ossian returning from a cast, crossing some yards ahead of him, wheeled to the point; the bird flushed wild a few moments afterward. Soon after moving on Ossian pointed a bird accurately and was handsomely backed by Consolation; Consolation was a little unsteady to shot. Ossian found and pointed the next bevy and was well backed; both were steady. Moved on and Ossian retrieved a bird nicely which Rose killed to his point; Consolation again backed well, but was slightly unsteady to shot. White, in the open, called point, but his dog was out of sight and the bird flushed before the judges could see the work. A bevy was flushed in the open by one of the party and was marked down and followed. Ossian made a false point. Ossian pointed, drew on, located and pointed; Consolation backed at first but refused to back the second point. At this juncture the time limit expired and Ossian won. Consolation was the wider ranger and better in style; and although he was beaten in the heat he showed a higher grade of all-around work than Ossian

Ossian beat Consolation.
Dexter a bye.

Final for First Place.

DEXTER AND OSSIAN.

The heat began at 9:45, and for a final heat for first place was not a very superior exhibition of work; in fact it was very common work. Neither dog showed much range or speed. Dexter was wearing a buckskin shoe, neatly fitted to his foot, yet there was a perceptible hitch in his gait, caused by his injured foot. How much better he would have run had his feet been uninjured is a matter of conjecture; but from his physical structure, style of going, etc., the inference is that he would not have worked much better had his feet been well. He showed an excellent nose and capabilities of pointing birds. His style of going is not graceful and he has no pretensions to bench show form, being coarse and cobby. Both dogs stopped to a point on foot scent; the judges flushed the bevy some yards away. Ossian pointed a single bird; Rose did not go far enough ahead to flush the bird; he ordered his dog on; taking a short circle Ossian returned, pointed it again, then false-pointed. Ossian and Dexter both pointed a bevy in the open, standing about 20yds. apart. As the judges were just coming out of the woods when the point was made, they did not see which dog pointed first. Height killed two birds which were well retrieved by Dexter. On the scattered birds, Dexter made a good point on two of them and Ossian backed. Ossian, moving up in the woods pointed a single bird about 100yds. away; Dexter in the meantime pointed a single. In a fallen treetop a bird had hidden and Dexter pointed it and was backed well by Ossian. The latter was going better than in his last heat but would stop and potter occasionally. Moved on and Dexter pointed a bevy by a branch; the dogs were ordered up and Dexter won. Down 45m.

The running for second place was postponed till Monday. Ossian, the runner up, having run two heats in one day had the privilege of running for second place on the next available day. Rose Williams was selected to run with him.

SUMMARY.

All-Aged Pointer Stake, open to all pointers that have never won a first prize in an All-Aged Stake at any recognized field trial in America. First prize, $300; second, $150; third, $50; and fourth $50. Forfeit $10, and $20 additional to start.

First Series.

Pontiac beat Lass of Bow.
Roger Williams beat Flash.
Joyce of Hall's Island beat Vanderbilt.
Consolation beat King of Kent.
Go Bang beat Duke of Vernon.
Dexter beat Lalla Rookh.
Lebanon beat Duke of Hessen.
Flirt beat Greenfield.
Ossian a bye.

Second Series.

Ossian beat Pontiac.
Roger Williams beat Joyce of Hall's Island.
Consolation beat Go Bang.
Dexter beat Lebanon.
Flirt a bye.

Third Series.

Ossian beat Flirt.
Dexter beat Roger Williams.

Fourth Series.

Ossian beat Consolation.
Dexter a bye.

Final for First Prize.

Dexter beat Ossian and won first prize.

[*Special to Forest and Stream.*]

HIGH POINT, N. C., Nov. 26.—Ties for second place in pointer stake: Roger Williams and Ossian. The heat for second place was begun at 8:37, near the school house. A cool wind blew from the northwest. Ossian pottered some on the footscent of larks. Both made game on a stubble field and roaded and pointed alternately; neither dog located. After drawing the field the dogs were again brought to where they roaded the bevy. Roger roaded carefully across wind and excusably flushed an outlying bird; then pointed the bevy; he retrieved nicely. In pine woods on the scattered birds, Roger false-pointed. Next he pointed a bevy and made three points in succession to Ossian's one, on some scattered birds. Both working together pointed and the bird flushed wild. At the end of the extra thirty minutes Roger won. He had better range, style and more uniform speed. Ossian was awarded third. Consolation and Lebanon divided fourth.

The setter stake was begun at 10:02. Roger beat Galatea, Toledo Blade beat Cassio, Joey B. beat Dashing Lady, Jack Modoc beat Jaquies, King Leo beat Brandon. Memphis and Avent Kennels have sold Orlando to J. Simpkins, New York, and Joey B. to R. P. Carroll, New York.

AMERICAN FIELD TRIAL CLUB ENTRIES.

CINCINNATI, O., Nov. 24.—*Editor Forest and Stream:* Inclosed please find nominations for All-Aged Stake of American Field Trial Club, which closed on Nov. 10, 1888. —C. W. PARIS, Sec'y.

SETTERS.

BOHEMIAN GIRL (W. G. Mellier, Kansas City, Mo.), black, white and tan bitch, May, 1885 (Count Noble—Mollie Belton).

DAVE R. (Dudley & Fisher, Nashville, Tenn.), lemon and white dog, April, 1886 (Gath's Hope—Daisy F.).

BRANDON (John Denny, Ligonier, Pa.), lemon and white dog, April, 1883 (Royal Rock—Lewis's Nellie).

DIMPLE (Fred W. Myles, Memphis, Tenn.), white, black and tan bitch, February, 1887 (Gordon—Blanche).

BOB (Fred W. Myles, Memphis, Tenn.), white and black dog, 1886 (Count Osborne—Bess).

MAY QUEEN (Fred W. Myles, Memphis, Tenn.), white and black bitch, 1888 (Dan J.—Lady May).

KING'S MARK (Chas. W. Barker, Majors, Neb.), blue belton dog, April 12, 1886 (King Noble—Belle Belton).

QUEEN NOBLE (Chas. W. Barker, Majors, Neb.), blue belton bitch, April 12, 1886 (King Noble—Belle Belton).

LOTTIE C. (Chas. W. Barker, Majors, Neb.), light orange and white bitch, Jan. 15, 1887 (King Noble—Queen Vashti).

MAUD (Bert Crane, Chicago, Ill.), black, white and tan bitch, June 24, 1883 (Dog Whip—Harrison's Juno).

LITTLE GIFT (Bert Crane, Chicago, Ill.), black, white and tan bitch (Roderigo—Queen Bess).

NELLIE CAMBRIDGE (Richard Dorman, Cincinnati, O.), black, white and tan bitch, June 18, 1885 (Racket—Daisy Cambridge).

ROWEY B. (Herbert Bevaus, Lamar, Miss.), black, white and tan bitch, December, 1886 (Roderigo—Juno A.).

EFFIE HILL (W. W. Titus, Montpelier, Miss.), black, white and tan bitch (Prince B.—Donna).

TIPTON (Poindexter & Tipton, Mason, Tenn.), black and white dog, December, 1886 (Gath's Mark—Vic).

JOEY B. (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog (Roderigo—Lillian).

CLAUDE (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog (Roderigo—Lillian).

CINCH (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan bitch (Roderigo—Bo Peep).

OLLIE S. (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan bitch (Paul Gladstone—Lottie).

CASSIO (Memphis & Avent Kennels, Memphis, Tenn.), black, white and tan dog (Count Noble—Lizzie Hopkins).

POINTERS.

SACHEM (Mitchell Harrison, Philadelphia, Pa.), black, white and tan dog, 1885 (Beaufort—Zuba).

LORD GRAPHIC (John R. Daniels, Cleveland, O.), liver and white dog, Feb. 8, 1885 (Champion Graphic—Daphne).

CROXTETH FREELAND (J. J. Rooney, Kansas City, Mo.), liver and white dog, March 10, 1886 (Croxteth—Lady Bow).

PONTIAC (Field Trial Kennels, Charlottesville, Va.), liver and white dog, January, 1886 (Milton Bang II.—Climax).

GO BANG (O. W. Donner, Coosaw, S. C.), liver and white dog, March, 1886 (Graphic—Bloomo).

JOYCE OF HALL'S ISLAND (O. W. Donner, Coosaw, S. C.), liver and white bitch, March 24, 1887 (Lad of Bow—Bloomo).

FLIRT (F. R. Hitchcock, New York, N. Y.), liver and white bitch, May 2, 1885 (Graphic—Ina).

DUKE OF HESSEN (F. R. Hitchcock, New York. N. Y.), liver and white dog, May 9, 1885 (Luck of Hessen—Blarney).

LAD OF BOW (Westminster Kennel Club, Babylon, N. Y.), liver and white dog, March 19, 1884 (Graphic—Climax).

LASS OF BOW (Westminster Kennel Club, Babylon, N. Y.), liver and white bitch, March 19, 1884 (Graphic—Climax).

LEBANON (Lebanon Kennels, Lebanon, Pa.), liver and white dog, Nov. 15, 1885 (Tim—Peg).

CONSOLATION (Col. C. H. Odell, New York, N. Y.), lemon and white dog, Jan. 29, 1885 (Bang Bang—Grace III.).

ROGER WILLIAMS (Col. C. H. Odell, New York, N. Y.), lemon and white dog, Aug. 20, 1886 (Bang Bang—Lallah Rookh).

FUN (J. B. Cartwright, Augusta, Ga.), liver and white dog, 1887 (Mainspring—Rosa).

THE SPANIELS.

Editor Forest and Stream:

I think Mr. Watson hit the nail square on the head when he gave Mr. Fellows that little jab about his judging at Philadelphia last year. Fellows had been singing the praises of the "giraffe" spaniel for so long, and yet, as Mr. Watson remarked, when it came to judging, or rather picking them out, at Philadelphia, he slumped right over to the present type, acknowledging thereby the superiority of it, which of course—save in some of the extremes of type—is the proper one.

Surely the cocker of to-day is "eminently well built, graceful and active," and right up to the standard too. Take Obo II., Shina, Doc, Brant, Baby Obo or any of the champion class of dogs, and Jersey, Dolly Obo, Chloe W., Mike, Dandy W., and others, in the open class, and you will find nothing slow among them. The "giraffes" would be given a pretty good race with any one of them. It savors of the old cry of field *versus* bench, when it has been proven over and over again, that a majority of the crack sporting dogs on the bench are thorough-going field dogs as well. Among my lot I have one, an exemplification of the "long and low" (so-called), almost an "extreme;" short straight legs; long silky ear; dark eye and coat like polished ebony; she can not only "knock out" any of "the poet's" dogs on the bench (never been exhibited yet, I am holding her back for just this sort of an occasion), but she can beat any of the "giraffes" for a hundred or a thousand yards run for "marbles or for fun," as Mr. Fellows has occasion to remark once in a while.

The present style is "long and low,"
For Mr. Fellows told us so.
But when he gets mad once in a while,
His brain gets working; he changes his style,
The "long and low" he stops to revile,
And says they are all *à la* "crocodile."
But we listen demurely with a quiet laugh,
For Fellows' dogs are all *à la* "giraffe."
(*A long way after Fellows.*)

STAMFORD. AN ONLOOKER.

DOG TALK.

WE are sure that this note will strike a responsive sentiment in the breast of every lover of the dog: *Editor Forest and Stream:* Recently I had the pleasure of seeing that grand St. Bernard Plinlimmon, but (in my opinion) unless he receive better treatment, within six months he will be a dead dog. Plin is grossly fat and his coat stands out "every way for Sunday." Plin's keeper (a property man connected with the Emmet Company) is not familiar with dogs and Plin is confined most of the time in a hamper. Poor Plin, I am sorry for you. The Hartford *Times* says that Plin's support was the best Emmet had. As Plin was on the stage about 30 seconds your readers can draw their own inference as to the quality of the support. I do not believe Plin has been washed or groomed since his arrival from England. I sincerely hope that Mr. J. K. Emmet will secure some person to look after Plin who knows something about dogs and that Plin may receive treatment due this peer of dogs of his breed.—A. C. COLLINS. Mr. Emmet has declared that he will not show Plinlimmon on the bench in this country. Perhaps some enterprising bench show manager may secure the dog to be shown not for competition.

The November number of the *American Kennel Register* had 110 pedigree records, making the total number now registered 6776. There is a paper on the cocker spaniel by Dr. Boulton (reprinted), an essay on Kennel Management (the first of a series), relating specially to the treatment of distemper, which is useful; and the summary and prize list of the American Coursing Club Meet, Hempstead Coursing Club, Indiana Field Trials, Kansas City Show, Richmond Show, St. Paul Show and the St. Bernard Club's Show (England). The *Register* is maintaining its character, won long ago, for usefulness as a convenient work of records for ready reference. How well the class of owners, whose interests the *Register* was established to second, appreciate it is shown by the large number of entries, that for November being above the average. The next number will close the volume for the year, and all the entries received in season for the December number will have the advantage of being included in the index for the year.

Mr. Emerson Dillon, of No. 10 Market street, Scranton, Pa., has lost his much-prized black and tan toy terrier bitch Topsy. She was sent to the Buffalo show, took first in her class and disappeared. The supposition is that some one forced the door of her cage. The police were notified, but all efforts to find her have proved of no avail. Mr. Dillon describes her thus: "Topsy weighed five pounds or a little under, was very correctly marked: neck, on underside, breast and under part of body and tail almost bare; ears not trimmed, rather long and erect; a trifle of white hair in middle of breast; one quite noticeable scar just at base of right ear; very active and quick and fond of play."

"The first time a fox has ever taken to a tree to escape the hounds occurred here near this place the other day," says a West Chester, Pa., despatch to the New York *Times*. Jefferson Shaner, a well-known Chester Valley hunter, was the man, and the fox was driven forty feet up a tree; and the skin will be stuffed and preserved as the only fox known to have climbed a tree. There is nothing new about this feat of the fox; our columns have contained many records of like instances.

Misery makes strange bedfellows, and the show to be given by the Northern Illinois Poultry and Pet Stock Association will bring together an odd lot worthy of Noah's ark. Dogs will be asked to show themselves along with squirrels, rabbits, jack rabbits, hares, coons, prairie dogs, ferrets, Guinea pigs, white rats, tame fox, monkey, gray wolf, woodchuck, deer, bear, ponies and other Barnum's Museum creatures.

There is some satisfaction in setting out to accomplish an undertaking requiring skill, care and judgment, and in ac-

complishing the end sought. This is what has been done by Dr. M. H. Cryer, of Philadelphia, in his breeding of prize-winning pugs. Dr. Cryer set out with the intention of sweeping the decks, and he went to work to do this not in the easiest way—by buying prize winners ready-made—but by his own breeding. He was looking for the satisfaction of a victory self-won, and a satisfaction which is not to be found in a victory bought. The names of pugs put forward by Dr. Cryer have been familiar to the bench show attendants of 1887 and 1888. They were Champion Max, Doctor, Champion Dude, Imported Othello, Champion Bessie, Daisy and Vesta. The record he made shows that out of sixteen leading shows the above dogs won every first prize offered in open classes except four, and all of the champion prizes they were eligible for except one. In puppies' prizes they won five first out of eight competed for, and three second. Dr. Cryer announces that some of his string are for sale, and we hope that the blood may be widely diffused.

We learn that it is the intention of an ardent admirer of the reds to bring out to this country a string of at least four of the best Irish setters he can find for money on the other side.

PRACTICAL JUDGING.

Editor Forest and Stream:

In my letter of Nov. 15 a printer's error fails to make clear a point I made. In writing of Mr. Wade running down the Crown Prince mastiffs I then said: "At the same time he breeds [not holds] to Orlando." That dog, be it understood, was so bad on his legs he could hardly walk.

My concluding sentence: "Mastiffs are 'fancy' from one end to the other, and about the only dogs I know of that are not are business bull-terriers and greyhounds," may seem altogether too strong, yet if we are to consider adaptability to work and then take up any of the standards and scale of points and consider how many of the 100 points really mean anything in the dog's work, a very small modicum of salt will be needed to make the assertion pass. Let us take the breeds in the usual catalogue order.

Mastiffs.—The work of a mastiff is alleged to be that of a watchdog and protector. Can any one be bold enough to advance the statement that in order to make a mastiff a good watchdog it is necessary that he should have a square muzzle, a massive head, ears of a certain size and hung in a certain manner, that his coat must be of a certain quality and denseness, and his tail of a certain length and carried in a certain manner? Not one of these show essentials renders its possessor any better qualified to bark at the approach of a stranger or to prevent his appropriating property belonging to his master.

St. Bernards.—I must admit my ignorance of any practical use for these dogs as a breed. As the Hospice dogs are admittedly cross-bred animals, it stands to reason that their duties can be learned by any sensible cross-bred dog which is afforded the opportunity they have had.

Newfoundlands.—Requirements, those of a waterdog. Most waterdogs have curly coats, and the size and shape of a dog's head has nothing to do with his swimming powers. In the otterhound standard we are told that the long, pendulous folding ear is necessary to keep water from reaching the interior. Why is it not also necessary in the Newfoundland? I should fancy that a Chesapeake Bay coated dog, or one with an Irish spaniel's jacket, would be infinitely preferable for a waterdog than the heavy flat-coated animal the English people say is a Newfoundland. I admit the grandeur of the dog of to-day, but where does the practical work come in?

Great Danes.—I believe some use could be made of these dogs in the West to hunt wolves. I have heard of at least one successful experiment with one that did possess "nose." If this is the practical side of the breed, then racing lines must be followed, but at present scale points govern. I should like it to be understood that we have nothing in this country that could get anywhere near the front at a good English show.

Deerhounds.—Here we are on the fence. A dog is wanted to pull down a wounded deer, and capable of racing over a rough, broken country. This requires excellent conformation, but the standard calls for so many other things to fill the bill that it is no small matter to draw the line between fancy and form. On form I should have placed Mr. Thayer's third-prize bitch over his second-prize winner at Buffalo, but she had not the "standard" coat in quality or length, and I followed in the steps of my predecessors in placing a bad-shaped deerhound over a good-shaped animal more on the old rough Scotch greyhound order.

Greyhounds.—A dog which first, last and all the time must indicate the highest order of speed. Equality in this respect then gives play for fancy points.

Pointers and Setters.—Where dog shows are yet unknown these are called "bird dogs," and they do their work irrespective of standards. The better shaped the dog is, on speed lines, the more certain is he to travel with greater ease to himself and therefore runs the longer, but speed without the ability to do the particular work required of them is only so much the greater drawback. The fact that so many good field dogs are no use for showing does not prove that show dogs are no use in the field, but that the points on which much stress is laid in shows are many of them non-essentials for practical work.

Spaniels.—I had the task set me at Buffalo of awarding a prize for the best team of working spaniels. I declined to undertake to say in a show ring which were the better working dogs. Mr. John Davidson and Mr. Mason were then harnessed double to the task. Mr. Davidson said the longer-legged dogs were the ones he would take for choice if he were going shooting. I didn't see him when he made this announcement, but I will undertake to say that he put his left hand in the left-hand pocket of his coat, stuck his right into its buttoned-up front, and looked at Mr. Mason as much as to say, "That settles it." Mr. Mason then whispered in a loud tone of voice into Mr. Davidson's right ear, "We must admit that these fellows who drew up the standard knew what kind of a dog they wanted for the work required, and a working dog must therefore be one that comes nearest the standard." There they stuck, and Mr. Tom Aldrich, when he was called into the ring to decide the point, shook his head and said they couldn't prove anything about spaniels by him; he knew, but the momentous secret was too precious to give away. These are the points, and I need say no more.

Collies.—Wanted, a dog to run after sheep and to keep to his work for a long time and in any sort of weather. This calls for a good-shaped dog—not too large or heavy—a dog with good shoulders, good action and freedom, and possessing a weather-resisting coat. The head properties, the ear (size and carriage), mane, frill and carriage of tail are all "fancy." That well-bred collies are not all lunkheads I can demonstrate to any one's satisfaction. Glenlivat, the best dog ever bred in this country, was a natural worker, and was used at the Philadelphia drove yards up to a day or two of his being sent to the Buffalo show last year. Kenilworth, third prize winner at Buffalo last September, is reckoned to be about the best dog now used about the drove yards. In fact, so much does Charley Raftery think of him, that he won't hear of my having him back to my kennels. Juno (Brack—Dora) is a natural worker, and will drive cattle, sheep, poultry or anything else. Glenlivat's puppies, the only litter he had, were all natural workers. I simply say that to show that while good looks and work are not always found together, it is not necessary to divorce them all the time.

Terriers.—These may be lumped together. The working terrier is not a show terrier, but the show terrier may be a workman. Their points are nearly all arbitrary, as I think every one will admit without discussion, and toys need not be touched upon in consideration of practical points.

JAS. WATSON.

PHILADELPHIA, Nov. 20.

Editor Forest and Stream:

I thought I would awaken "Porcupine." He has been so concerned of late with affairs most unworthy of him, that he needed some such sting as a dig at "fancy" to bring him back to verdant pastures. Funny how it is, that although Mr. Watson is the freest from "fancy" in judging any breed that I know anything of, he should perpetrate the absurdity he repeats as to the collie's head, I am full as willing to take it as he states it now, as the way I put it. It is sufficient to prove my case vs. "fancy" to have the statement that a majority of dogs are not "typical" in their maturity. It is a complete admission that true "type" is not the thing wanted, but a fancier's ideal, and it is just this unnatural trick of fancy in putting up a creation of notion as a characteristic of a breed that awakens my wrath at her antics. Harking back, perhaps, I may now reveal that it was at my urgent request that mastiffs were assigned to Mr. Watson at the Buffalo show. Uncle Dick wanted a good judge who wasn't too devoted to "fancy," and I told him that there was only one—Mr. Watson. (Lest Mr. Mason might properly hurl "delicacy" at me, I would explain that I was dead sure that neither Baldur, Elgiva or Cambria could be in shape to stand any chance of winning, and it was nine to one that Emma would not arrive from England in time.)

But to the purpose; Mr. Watson falls into the same error as Mr. Curt Rice (of course Mr. W. couldn't express himself the same way). My repeated breeding to Orlando does not in any way antagonize my radical objections to the dog himself as a specimen. In the first place I bred a bitch to him so strong in his weak points that she minimized the risk of perpetuation of them; but still more, Orlando was an exception among dogs in that he did not perpetuate his faults in his get. Only when he was bred to his own daughter did he beget his beastly straight hocks and preposterous head, while he did give his general substance and volume of skull. I have bred his daughter to his best son, and so far the pups promise as good hocks as their dam, but I must confess I am not delighted with the degree of snub nose they are threatened with. I think breeders most commonly mistake on this point; they are not careful enough to note just what the effect of the stud dog has been in eliminating the defects or increasing the merits of certain bitches. On this ground I claim that no stud dog ever achieved the success that Lord Raglan did when he got Sears' Monarch; he completely swamped the glaring defects of his dam, and got better than himself and the dam combined.

No, no, Mr. Watson; it was not Ilford Caution that I had in mind, but Crown Prince. This dog was bepraised to the skies, while directly contradicting the standard his very judges and commenders themselves set up, and the absurdity of "fancy" was most completely shown in that his horribly straight hocks and very undershot muzzle (directly opposite to the standard) were not held as great objection as his Dudley front, a purely "fancy" point. In fact I had heard his brown markings deplored time and again before I found out he was such a contradiction to the requirements of the standard in hocks and muzzle. Again, no, no, my friend; most mastiffs are big yellow dogs, but they are and always have been short and broad-headed dogs, but I do kick most vigorously when "fancy" condones any amount of bodily or leggy defects on account of extra and unreasonable shortness of muzzle; "short" is not the "shortest possible" by a very long chalk. The longest-faced mastiff you ever saw was "short" in comparison with a greyhound or your pet collie type. There is no reasonable objection to breeding mastiffs even twice as short-faced as the best are now. It is entirely a matter of taste and opinion, but it is the rankest of rot to say that this abnormal shortness atones for glaring bodily defects.

Are all (or even many) mastiffs purely "fancy" animals? Just you wait young man, wait until you live without a house in sight of yours and can go away, leaving nobody but the wife at home, and feel as safe as though you had a policeman on guard. Do you remember how old Gipsey bristled up and growled at you when you undertook to scrape some scurf off Europa with a knife? Well, you will admit that she wasn't "fancy," but I can tell you that Wacouta Persephone, Wacouta Rose (granddaughters of Crown Prince) Ilford Cambria (C. P.'s own daughter) or Winifred, the grand-daughter of Rajah, would have been just as quick to do the same thing. It is so inherent in mastiffs that even the doubly-cursed poison of "fancy" hasn't succeeded in getting it out of their blood. How soon it will is another question.

No, sir! I do not admit that fanciers have made dogs more symmetrical in their appearance. Compare the photos of Colonel or Turk, the "long-faced lurchers," with those of Crown Prince or Orlando, and it is Hyperion to a Satyr. Do you yourself say that the ridiculous animal recently figured in the *Stock-Keeper* as a spaniel is as handsome as the figures of grace, activity and beauty that used to be drawn for spaniels? Where are you going to find your collie that is as handsome as the pictures in Vero Shaw, "Dogs of the British Islands," or "British Dogs?" Doubtless the modern pets are the better "specimens," but not as beautiful by a long shot. Finally, the very judge I have been begging for, and the very principles I have insisted on, are what Mr. Watson sets forth *apropos* of his own Buffalo judging.

W. WADE.

HULTON, Pa., Nov. 17.

"OUR PRIZE DOGS."

Editor Forest and Stream:

A friend whose advice in dog matters I most highly value once said to me, "Read everything that Charles Mason writes." It followed that I must have "Our Prize Dogs," and now that I have it I realize more than ever the value of my friend's advice.

I have never had the pleasure of meeting Mr. Mason, but my admiration for the thorough, undoubted and manly honesty which pervades his writings as well as his extraordinary gifts as a critic is so nearly akin to enthusiasm that I cannot help giving expression to it in these lines. I do not pretend to judge of the value of the book in its entirety, but I have reached my favorable opinion of it by an induction. I turned to my favorite breed of dogs, one almost unknown in America, and found that the four prize winning specimens of 1887, all of which I have seen and studied, were criticised with an accuracy and minuteness that was astonishing. If this may be taken as a sample of what the book is, and if I may estimate *ex pede Herculem*, truly the work is a wonderful monument of industry and ability.

Mr. Mason's method of leading up by details to his verdicts and thereby, if not actually proving them, at least making them as susceptible of proof as is possible in such matters, seems to me to be a great step in the right direction. It will enable thinking people to take more interest in well bred dogs. In this book we have the theoretical standard of points applied to flesh and blood animals, and the often incomprehensible decisions in the ring flooded with light.

I consider the volume to be a mine of golden information to the American dog breeder, and if not actually his *vade mecum*, certainly a *sine qua non*.

W. H. RUSSELL.

DICKINSON CENTRE, Franklin County, N. Y.

CONNECTICUT CLUB.—A regular meeting of the Connecticut State Kennel Club will be held at Atlantic Hotel, Bridgeport, Monday evening, Dec. 3. As we wish to claim dates for our bench show, we should like to have every member attend who possibly can.—DR. JAS. E. HAIR, Sec.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Daisy G. By Mount Waite Kennels, South Framingham, Mass., for black and white cocker spaniel bitch, whelped Dec. 27, 1887, by Jet (Wildair—Bird) out of Beauty (Brag—Daisy C.).

Bob Lee, Monnie, Jolley's Tom and Sue. The dog Thom, in pedigree of these dogs (in Names Claimed, Nov. 15), was incorrectly given as Thorn.

Gordon. By J. D. Sperry, Iowa City, Ia., for all dogs of that blood of his breeding, as a suffix.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Josephine—Snowflight. A. Q. Riddle's (Mt. Sterling, Ky.) greyhound bitch Josephine (Sport— ——) to Rockwood Kennels' Snowflight, Nov. 10.

Allie Hunt—Snowflight. Lee Steadman's (Lexington, Ky.) greyhound bitch Allie Hunt (Custer— ——) to Rockwood Kennels' Snowflight, Nov. 12.

Behu—Mission. Don Piatt's (West Liberty, O.) mastiff bitch Behu to J. M. Harner's Mission (A.K.R. 5912), Nov. 10.

Gypsey—Tom Thumb. Dr. F. A. Smith's (Lehighton, Pa.) pug bitch Gypsey to G. W. Fisher's Tom Thumb (Boggie—Darkey).

Alpine—Merchant Prince. Dr. Geo. W. Sawtelle's (Malden, Mass.) St. Bernard bitch Alpine (Bayard, Jr.—Sappho) to Chas. G. Wheelock's Merchant Prince (champion Merchant Prince—champion Miranda), Nov. 22.

Jet Obo—Black Pete. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Jet Obo (A.K.R. 4810) to J. P. Willey's Black Pete (A.K.R. 3071), May 18.

Lady Madge—Baby Obo. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Lady Madge (A.K.R. 5293) to J. P. Willey's Baby Obo (Obo II.— ——), July 25.

Phyllis—Black Pete. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Phyllis (A.K.R. 5293) to J. P. Willey's Black Pete (A.K.R. 3071), Sept. 18.

Daisy G.—Sancho G. Mount Waite Kennels' (South Framingham, Mass.) cocker spaniel bitch Daisy G. (Jet—Beauty) to their Sancho G. (A.K.R. 6506), Nov. 20.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Fancy Maida. Crystal Springs Kennels' (Duanesburgh, N. Y.) collie bitch Fancy Maida (Logan—Fantilla), Nov. 11, nine (two dogs), by Dr. Cloud (Clyde LIII.—Cloud's Beauty).

Portia II. Jacob M. Harner's (West Liberty, O.) mastiff bitch Portia II. (A.K.R. 5512), Nov. 10, six (two dogs), by his Mission (A.K.R. 5912).

Tra-la-la. Geo. W. Fisher's (Catawissa, Pa.) pug bitch Tra-la-la (champion Young Toby—Tantrums), Oct. 10, five, by champion Max; all since dead.

Fairy II. Fairy Pug Kennels' (Columbus, O.) pug bitch Fairy II. (A.K.R. 6554), Nov. 8, six (four dogs), by A. E. Pitts's Kash (A.K.R. 6632).

Carrie. F. C. Rochester's (Logan, O.) pointer bitch Carrie (Seitner's Lort—champion Lady Croxteth), Nov. 19, ten (seven dogs), by J. D. Haynie's Meteor II. (champion Meteor—Beulah).

Verona. Bryn Mawr Kennels' (Philadelphia, Pa.) pointer bitch Verona (Day's Prince—Vandalia), Nov. 3, six (four dogs), by their Bang (Price's champion Bang—Salter's Luna).

Phyllis. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Phyllis (A.K.R. 5293), Nov. 20, six (three dogs), by J. P. Willey's Black Pete (A.K.R. 3071).

Jet Obo. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Jet Obo (A.K.R. 4810), July 20, nine (four dogs), by J. P. Willey's Black Pete (A.K.R. 3071).

Lady Madge. H. D. Brown's (Waterbury, Vt.) cocker spaniel bitch Lady Madge (A.K.R. 5293), Sept. 20, four (one dog), by J. P. Willey's Baby Obo (Obo II.— ——).

Daisy. F. F. McGuire's (Bangor, Me.) Yorkshire terrier bitch Daisy, Nov. 3, three dogs, by P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

The Gypsey. White, black and tan beagle bitch, whelped March 25, 1887, by champion Cameron's Racket out of Marjory, by Geo. H. Hill, Madeira, O., to F. C. Rochester, Logan, O.

Roscoe (A.K.R. 6529)—Minnie (A.K.R. 6529) whelp. Black, tan and white collie dog, whelped Aug. 30, 1888, by F. C. Smith, Groton, N. Y., to M. C. Howe, same place.

Fleet View Queen. Liver and white pointer bitch, whelped July 24, 1888, by Spot Dash out of Belle Randolph, by Fleet View Pointer Kennels, Lynn, Mass., to J. D. Nichols, same place.

Kitchen Girl. Pug bitch, whelped Aug. 28, 1888, by Douglass II. out of Rose, by Geo. W. Fisher, Catawissa, Pa., to G. W. Wambach, Baltimore, Md.

Little Girl. Pug bitch, whelped Aug. 28, 1888, by Douglass II. out of Rose, by Geo. W. Fisher, Catawissa, Pa., to E. E. Parnell, Spencer, Ia.

Hayseed. Pug dog, whelped Aug. 28, 1888, by Douglass II. out of Rose, by Geo. W. Fisher, Catawissa, Pa., to Al G. Eberhardt, Cincinnati, O.

Zip. Gordon setter dog, age and pedigree not given, by Jos. M. Rowell, 2d, Citra, Fla., to John F. Williams, Lynn, Mass.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

J. B. F., Elizabeth City, N. C.—I have a fine pup. He hunts and stands well, but the day after the hunt he is very lame in his right forefoot; it seems to swell and look larger than his other feet. What treatment would you recommend? Age 18 months, and good size, and splendid appetite. Ans. Get some chloroform liniment and rub it into the affected part morning and evening. It is either rheumatic or the result of strain or sprain.

Rifle and Trap Shooting.

RANGE AND GALLERY.

SAN FRANCISCO, Nov. 18.—The shooting matches at Shell Mound Park yesterday were well attended by the ambitious marksmen of the many rifle clubs of the city. Captain Siebe, the proprietor of the park, had a flock of plump turkeys on the grounds to be competed for. The San Francisco Schuetzen Verein were on hand to compete for the yearly medals. The club is composed of the leading German marksmen, and their friendly rivalry in the contests is always marked by a convivial banquet, which is usually tendered to the winner. The happy man to-day was H. A. Kurlfinke, who has defended his prize in the second class against all comers for the past year, and is now the permanent owner of the trophy. The scores as shown in the following list are very good: San Francisco Schuetzen Verein—First-class medal, William Ehrenfort, 383 rings; second-class medal, H. A. Kurlfinke, 365 rings; third-class medal, F. W. Attiarius, 377 rings; fourth-class medal, L. Bendell, 330 rings. The match pool shot between D. F. Roulter and A. Johnson was won by Johnson, with the unusually heavy score of 87. Swiss Rifle Club of Oakland:

W Marligoni	4 5 5 4 5—23	G Gilardi	4 5 4 5 4—22
P Pellunde	3 5 4 4 5—21	L Gilardi	4 3 4 3 4—19
P O Mouri	4 4 4 4 4—20	G Pelunde	3 5 3 4 4—19
W Marligoni	4 3 5 5 5—22		

Company F, 1st Infantry:

	500yds.	200yds.
H L Pendleton	4545555544—46	5444444454—42
R B Kittridge	4455445335—42	5445444424—38
Loughery	4453444434—39	5444344433—38

Company F, 5th Infantry, monthly medal shooting: Corporal Cobbledick 41, Corporal Wethern 40, Parsons 37, Lieutenant Hayes 38, Cobbledick 37, Morrison 37, Terrill 36, Bangle 35, Short 35, Brewer 30, Hunt 28. The grand turkey and pig shoot, the prizes provided by Captain Siebe, will take place next Sunday.

WELLINGTON, Del., Nov. 24.—The regular weekly shooting at Healdmoor Rifle Range, which was prevented by rain on Monday afternoon, took place this afternoon. The attendance was smaller than usual, but the lack of numbers was made up by steady, unceasing work, which resulted in some fine scores and an enjoyable time. The marksmen were obliged to contend with a tricky 7 to 9 o'clock wind, which blew across the range with variable force during the entire afternoon. The scores are as follows. Standard American target, at 200yds. off-hand:

Continuous Prize Match.

JF McCafferty	10	8	9	7	10	7	9	8	9	6—83
J Fenton	10	6	10	10	7	7	6	6	5	7—74
J Ferguson	7	7	5	8	9	7	8	7	5	6—71
H Simpson	6	8	7	8	7	8	5	7	8	7—71
H Johnson	6	4	10	5	4	7	8	5	7	8—64

Record Practice.

H Simpson	5	7	6	7	9	7	9	5	9	7—71
J Ferguson	4	5	3	4	8	9	8	8	9	10—68
W Floyd (mil)	9	6	6	6	5	3	5	6	6	6—58
H Simpson (mil)	7	3	9	7	3	6	8	4	5	4—56
S M Wood (mil)	3	5	9	8	2	4	4	8	5	0—54

Military Match, 200yds., Creedmoor Target.

Colonel Wood	3	4	5	5	3	4	4	5	4	4—41
I R P Simpson	4	4	3	4	4	4	4	4	4	5—40
Lieutenant Floyd	5	4	4	4	4	3	4	4	4	4—40

Revolver Match, 50yds., Standard American Target.

E J Darlington	5	8	7	8	3	10	10	10	6	7—74
G W Darlington	2	8	7	9	5	10	6	6	5	4—59
W Pratt	4	2	4	2	9	3	6	4	10	5—49
E Darlington	2	3	2	5	6	8	7	4	4	2—43

There will be shooting at Healdmoor Rifle Range, Wilmington, Del., all day Thanksgiving, beginning at 9:30 A. M. In addition to a bullseye match a cash prize match will continue during the day under the following conditions: Standard American target at 200yds., two best scores of five shots to count, with an allowance of two points each score for military rifles. Entrance fee, 50 cents; re-entries unlimited at 25 cents each. Prizes divided as follows: 25, 20, 15, 10 and 5 per cent. of the receipts, no sighting shots allowed for the match, but competitors may have access to the bullseye target at any time.

BOSTON, Nov. 24.—A large number of shooters visited the Walnut Hill range to-day, and the shooting was lively in all the matches. Mr. Fellows' scores with the 22-100 pistol are exceptionally fine. On Thursday (Thanksgiving) the regular matches will be open for rifle and pistol. Following are the best scores:

Fifty Consecutive Shots, 50yds, 22-100 Pistol.

J B Fellows	10	10	10	10	9	8	9	10	8	9—93
	9	8	10	9	7	10	10	10	10	9—92
	9	7	10	9	10	8	10	9	8	9—90
	9	9	6	9	8	8	10	8	10	10—88
	10	10	8	9	9	9	9	10	10	8—93—456

Pistol Match, 50yds.

J B Fellows	10	10	9	10	9	7	9	10	10	10—94
F Carter	10	9	9	6	10	8	10	9	10	9—90
A Stevens	9	9	7	10	9	10	8	10	9	9—90
O T Moore	9	9	9	6	9	8	6	10	8	10—87

Rest Match.

N Washburn	12	11	12	12	9	12	11	11	11	11—112
J Robinson	8	12	10	8	12	11	9	11	11	11—103
A Ballard	9	10	10	11	10	9	9	10	8	9—95
O T Moore	9	9	10	9	11	9	9	9	9	10—94

A Maynard	8	6	7	3	6	7	8	10	4	8—67
S Ham	6	3	7	5	6	5	6	9	7	6—60

WHITE ELEPHANT RIFLE RANGE, 1243 Broadway, New York City.—A very interesting rest match came to a close last Wednesday night after two weeks' shoot at this well-known range, the target used was the Coulin's American silver coin target, on which some very fine work was done. The shooting was for two gold medals and one silver medal. The conditions of the match were, 7 shots to each target, highest aggregate of three targets to count. In order to make the full possible, with which the prizes were won, it is necessary to hit a circle the size of a 5-cent piece, the other rings are the size of a 10-cent, 25-cent, 50-cent and $1 silver American coins. After the regular match was shot it was agreed between Mr. Bert and Mr. Mehlig to shoot for the championship, each putting up his respective medal and $25; the winner to take both medals, championship and the money. The result of the match is given below, possible 105:

E Castel Bert	105	Lieut C C Potter	100
Chas Mehlig	105	D S Jacobus	77
H G Starkweather	105	L R S de Agieda	68
Major D Crocker	104	J L Patterson	66

Result of shooting off tie, 3 targets of 7 shots to each man: Mehlig, first prize, 95, possible 105; Starkweather, second prize, 93; Bert, third prize, 90. Considering that this shooting was done after 1 A. M., it is not bad. Result of the championship match, which was shot the next day, possible 105: E. Castel Bert, 100; Chas. Mehlig, 75. This gave Mr. Bert the championship, money and the first and third medals. The off-hand decimal target match, which will close Dec. 1, thus far seems to be in Mr. Bert's favor for first place with Major Crocker a good second.—G. G.

ST. LOUIS, Mo., Nov. 24.—*Editor Forest and Stream:* At the last shoot of the St. Louis Pistol Club Alexander, Perret and Mohrstadt tied on 84, but on the shoot-off the former gentleman proved himself the winner, making the same score that he made in the regular shoot. Only one more shoot remains of the present tournament, and then the final winner of the handsome gold medal will be made known. Just now Mr. Mohrstadt is higher on the general average, and unless he happens to make a very bad score at the next shoot, and Fodde and Bauer, who are close upon him, happen to make an extra large one, he will undoubtedly finish in the lead. The target used is a 20yds. standard American for pistol practice:

G W Alexander	9	8	10	7	8	9	8	8	10	7—84
L V D Perret	10	8	7	8	10	8	9	10	8	6—84
E C Mohrstadt	8	10	10	8	10	7	5	10	8	8—84
F A Fodde	9	9	6	9	7	8	9	10	8	8—83
O Neuhaus	8	6	10	6	8	7	9	8	10	7—82
W J Lord	9	9	8	5	10	9	8	9	6	6—79
W Bauer	8	8	10	6	9	7	8	6	10	7—79
M Billmeyer	8	8	10	7	7	8	7	5	6	7—73
W H Bonnell	7	7	5	9	5	9	7	9	7	7—72
A E Bengle	9	6	8	6	7	7	10	6	9	4—72
H Griesedieck	5	5	10	6	7	7	10	5	7	10—72
L H Race	6	5	5	6	4	8	7	7	8	9—65
W C Mackwitz	6	0	5	8	9	7	4	7	8	5—59

NEWARK, N. J., Nov. 23.—The match this evening between the Annie Oakley and Lakeside teams at the former club's range resulted in a victory for the Lakeside team by the following scores:

Lakeside.		Annie Oakley.	
B Limpert	105	F Brown	87
B Hearon	83	J Newcome	94
D Mahoney	96	G Kries	96
T McGovern	101	W Connors	105
F Klinger	93	J McCallum	100
P McKane	98	G Hagny	89
E Lewis	101	T Roihake	87
J Hearon	97	E Woprel	87
S Lum	79	E Marfinz	97
W McGovern	111—964	G Hunkile	97—939

A NOVEL SHOOTING PRIZE.—A captain of the 46th Line Regiment of the French army, stationed at Fontainebleau, has imagined a novel manner of encouraging good marksmanship. A soldier having been condemned to four days' prison for a slight breach of discipline, the captain offered to diminish his punishment by half if he could put six bullets in a bullseye. The soldier succeeded, and, encouraged by his success, begged to be allowed to fire again for the remaining two days' imprisonment. Permission was accorded. The soldier made six more bullseyes, and was liberated at once.

WILL GIVE EASTERN SHOTS A TURN.—Beatrice, Neb., Nov. 16.—*Editor Forest and Stream:* I inclose you three diagrams that I roughly drew, showing the work of a light sporting rifle of the Stevens make that I tried the other evening in a gallery here by lamp light at 50ft., the bullseye being a trifle less than the 24in., shooting off-hand as fast as I could load and fire, the result being as you see in the diagram, also being under a very uncertain light. I won the championship at rifle and revolver shoot of Beatrice last summer and have defeated all-comers so far. I hope to some day run across such men as the Bennetts and Ira Paine, which I may have the chance to do if I come East in the spring.—WALTER B. FISKE, Champion Rifle and Revolver Shot of Beatrice.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

WICHITA TOURNAMENT.

WICHITA, Kas., Nov. 17.—*Editor Forest and Stream:* Inclosed find the scores made at our tournament, Nov. 14, 15 and 16. The weather was very disagreeable, which accounts in a measure for the small attendance. Among the visitors we mention J. R. Elliott, of Kansas City, E. A. Bower, of Ellsworth, Kas., E. H. Young and S. W. Forsha, of Hutchinson, A. Flack, of Enterprise, and A. Swiggett of Towanda.

Match No. 1—12 singles; entrance $2:

Staucer	111111111112	Brown	111111111110—11
Bower	011010111101— 8	Swiggett	111011111111—11
Smyth	001111111110	Elliott	011110111001— 8
Flack	011111111111—11	Smyth, Sr	111110311111—10

Staucer first, second divided, Smyth third.

Match No. 2—9 singles and 3 pairs; entrance $2.50:

Swiggett	011111111 10 11 10—12	Staucer	111111111 11 10 11—14
Bower	010111101 10 10 11—10	Brown	011111111 00 00 11—11
Elliott	11110100 10 01 11—10	Stafford	111111001 10 10 11—11
Smyth	111103110 10 10 01— 9	Flack	011111111 11 00 11—11

Staucer first, second and third divided.

Match No. 3—15 targets; entrance $2:

Swiggett	111111111111010—12	Staucer	111111111111111—15
Bower	111011111111010—12	Smyth	011111111111011—13

Stafford	111111111111—12	Williams	110101110011— 8

First divided, third Johnson, Swiggett won second by breaking 24 straight on tie; Staucer won first average, silver cup; Brown and Smyth second and third, $25.

GRASSHOPPER.

TRI-CLUB SHOOT AT CLEVELAND.—Cleveland, O., Nov. 20.—The first of the series of tri-club shoots was held on the West Madison avenue range yesterday afternoon, the West End, the West Rockport and Locksley gun clubs participating. The contest was for an elegant gold badge with an oxidized silver pendant in the shape of a standard target, bearing the word "Standard," indicating the company which donated it. The conditions were 10 men per team, 25 single standard targets at 18yds.

The West End Team.

HUTCHINSON, Kansas, Nov. 19.—The Hutchinson Gun Club held their regular monthly medal shoot last Monday, instead of Friday, their regular day, on account of the delay occasioned by the managers of the Sterling tournament in returning the traps which our boys had loaned them. When we did get our traps back we had to pay the express charges, and one of the traps was broken. Sam Forsha has challenged Mr. Smythe of the Wichita Gun Club, for the Kansas State Medal, but the date has not yet been fixed for the shoot. Following are the scores of the last medal shoot. It will be seen that Miles Taylor was too much for the boys this month, and won the gold medal, though neither he nor Eli Young, who won the silver cup, usually get so very far below 20 on the 25, and Sam Forsha is below the average in this shoot. 15 singles, 5 pairs bluerocks:

Miles Taylor	011101111110100	11 10 11 11 11—19
Eli Young	111100110111010	10 10 10 10 11—16
Sam Forsha	111000101100110	11 10 10 10 11—15
Will Allen	011011011010100	10 11 11 10 10—15
Will Chamberlain	101100101110100	11 11 10 10 10—15
Fred Burslem	111010101001101	10 11 00 10 11—14
Mr Bartlett	101101101110011	10 00 11 00 00—13

Taylor won medal, Young the cup.—SHADY.

BOGARDUS.—Chicago, Ill., Nov. 23.—Capt. A. H. Bogardus and his son Henry are here filling an engagement at Kohl & Middleton's Museum, and giving exhibitions of glass ball shooting and trick shooting with the rifle. The range for the ball shooting is very short, not over 15yds., and the Captain tells me he has to hold mighty close with his little 20-gauge, for the shot do not scatter over a space much larger than the ball itself. The Captain is looking strong and rugged as ever. He says he has not had much game shooting, except that while with the circus on the coast he had some shooting on mountain quail in California, and on blue grouse in Oregon. He thinks the mountain quail not harder to hit than our Bob White, excepting that it flies in a rougher country. He brought back with him two pairs of young mountain quail, which are flourishing nicely now at his home. Henry Bogardus is a tall, strong boy of thirteen. He informs one proudly that he has "been shooting for eight years." He is very handy with the small bore repeaters, and bids fair to take the place of the lamented Eugene Bogardus. He does all the usual stage shots very tidily. The Captain and his son go from here to St. Paul and Minneapolis, and then returning, go to Cincinnati.—E. HOUGH.

WELLINGTON, Mass., Nov. 24.—The contest in the badge and merchandise matches at Wellington to-day were very interesting. The attendance was large, and the number of entries large. The winners in the merchandise match were: First, Schaefer and Bert, 19; second, Moore, Swift, Brown, Scott and Stanton, 18; third, Chase, 16; fourth, Melcher and Perry, 15; fifth, West and C. E. Savage, 14; sixth, Choate, Snow, Grimes, Frank, Webster and Nichols, 13; seventh, Bond, 12; eighth, Edwards, Archibald and Herrick, 11. In the badge contest Scott and Bond led the van with 17, closely followed by Swift, Melcher and Brown with 16. The first prize winners in the sweepstakes were: Six bluerocks, Frank and Moore; 6 pigeons, Swift, Snow and Frank; 6 bluerocks, Stanton and Melcher; 3 pair bluerocks, Melcher, Snow and Frank; 6 pigeons, Nichols, Frank and Stanton; 10 bluerocks, Bert and Schaefer; 10 pigeons, Brown and Stanton; 6 bluerocks, Bond and Field; 6 bluerocks, Bert, Perry, Snow and Edwards; miss and out, Bert; 10 bluerocks, Frank, Scott, Grimes and Edwards; 10 pigeons, Nichols, Swift and Brown. The club will have its annual Thanksgiving shoot from 9 to 1 next Thursday.

MONTREAL, Nov. 21.—There was some good sport at the traps this afternoon on the Thistle Gun Club grounds, St. Laurent. The weather was splendid, the birds were good flyers, and the scores were fair. Mr. R. Scott acted as referee to every one's satisfaction. The shoot was at 10 birds, 21yds. rise, and the following is the score:

W Lumsden	10	F Stewart	7
J Muir	9	A Martin	7
R Boa	9	H King	6
A Boa	9	M Muir	6
Woolmour	8	A Scott	5
W Caughtry	8	A Freedham	3
C Muir	7		

NEWARK (N. J.) TRAP NOTES.—The old Essex County Gun Club Association, which is essentially dead, is about to be replaced in shooting circles by the organization of a new society, possibly under the old name. A temporary organization was effected on Friday evening last. It is intended to change the rules governing the old association and place each club on an equal footing in shooting, thus doing away with one serious objection which was encountered. At the meeting held at Von Lengerke & Detmold's on Friday night four clubs were represented, and resolutions were passed requesting all clubs in the county to have representatives present at the organization meeting, to be held at the same place on Friday evening, Dec. 14.

...The Southside Gun Club shot in a general telegraph tournament on Nov. 21 and in a possible 250 scored as follows, each firing at 25 flying targets: Brientnall 24, Hobart 22, Geoffrey 21, O. Von Lengerke 23, E. R. Bollman 23, Beam 23, Dukes 24, Heritage 24, Yeaman 18, J. Von Lengerke 22; total 224. The members feel confident that this will prove to be the winning score.

THANKSGIVING DAY SHOOTS.—The Wawaset Gun Club, Wilmington, Del., will have a grand gala day on Thanksgiving at clay-pigeons and bluerocks. A cordial invitation is extended to all sportsmen to be present and enjoy the fun. Shooting will begin at 9 A. M. and continue all day.

A trap-shooting carnival will be held on the grounds of the Wayne Gun Club, rear of Midvale Steel Works, Philadelphia, on Thanksgiving Day, Thursday, Nov. 29. Shooting to commence at 8:30 A. M., will continue all day. Prizes consist of turkeys, ducks, chickens and cash sweepstakes. Targets, bluerocks and clay-pigeons. Ammunition on the ground at cost prices. Any friends wishing to join in the contest are cordially invited.

There will be a big shoot at Newark, N. J., at the grounds of the Bloomfield Gun Club, at live birds and flying targets. Members of the Woodside Gun Club and several other Newark organizations will participate.

A number of open sweepstakes at live birds will be shot at Erb's grounds in Newark on Thanksgiving Day.

HEIKES.—Dayton, Ohio, Nov. 22.—Rolla O. Heikes is doing astonishing work in practice for his live-bird match with Al. Bandle that is to come off here Thanksgiving Day, 100 live pigeons each, Hurlingham rules except as to weight and gauge of guns, purse $500. Yesterday Heikes shot at 105 pigeons, killed 103, but 3 dropped outside the bounds. He shot in strings of 25, twice killed 25 straight, once 43 straight, once 39 straight; and in the 105 times that he was at the score he only used his second barrel twelve times.—W. X. Y. Z.

THE NEW YORK SUBURBAN GROUNDS, Claremont, Jersey City, will be open for a tournament Thanksgiving Day. It was erroneously printed week before last that the sweepstakes percentage to be paid to the Association would be 10 per cent. It should have read 5 per cent. Shoots are held every Saturday. It is proposed for the present to permit clubs to use the grounds without charge, prescribing, however, that the targets used shall be purchased on the grounds.

KEYSTONE TOURNAMENT.—Corry, Pa., Nov. 20—*Editor Forest and Stream:* Please insert in your columns the following notice: All those who took part in the individual championship contest of the First Annual Keystone Tournament on Friday, Sept. 22, 1888, will please send us their photograph before the 1st of January, 1889, if possible, and oblige—KEYSTONE MFG. CO.

THE NEW JERSEY athletic CLUB has a trap team in which is good material. They will be heard from.

Canoeing.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. ROGERS, Secretary-Treasurer: GEO. W. HATTON } Peterborough, Can.

Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	W. R. Huntington	E. W. Masten, T. H. Stryker, Rome, N. Y.
Atlantic Div.	W. P. Stephens	L. B. Palmer, F. L. Dunnell, 186 Jeroleomon St., Brooklyn.
Eastern Div.	H. E. Rice, M. D.	Maxton Holmes, H. D. Marsh, Springfield, Mass.
N'thern Div.	Robert Tyson	S. S. Robinson, Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

A. C. A. EXECUTIVE COMMITTEE MEETING.

THE report of the executive committee meeting in our last issue suffered severely at the hands of the printer, the paragraph regarding the term of office by division officers being entirely wrong. The report should read as follows:

"Vice-Com. Stephens then offered the following amendment to Article V., Sec. 2, of the Constitution: To omit all of the last clause after the word 'herein,' and substitute as follows: 'The term of office of all division officers shall begin with the termination of the A. C. A. meet, and end with the termination of the A. C. A. meet of the following year.' The following amendment was suggested by Purser Fraser, and after discussion was accepted by Vice-Com. Stephens, the new amendment being seconded by Vice-Com. Huntington: The term of office of all division officers shall begin with the meeting of the executive committee in October or November, and shall end with the executive committee meeting of the following year. This amendment was approved by the eight members present, and the vote of the other members will be taken by ballot."

All the members present were in favor of the change and voted for it. The resolution concerning special racing appliances was seconded by ex-Com. Rathbun and not by Purser Fraser. We have in preparation a map of Sugar Island, the proposed camp site, which will appear next week.

IANTHE C. C.—This club has enjoyed a very prosperous season, the racing being specially lively, owing to the record system adopted. The last of the record races were not held on Election Day, as there was not sufficient wind to take the canoes over the course. The record for the season is as follows:

	Paddling.	Sailing.	To'l
Atalanta, L. B. Palmer, Ianthe	6	15	21
Bachelor, Barron Fredericks, Ianthe	10	—	10
Essex, D. W. Cox, Essex	—	9	9
Will o' the Wisp, W. D. Anderson, Essex	—	3	3
——, W. Meyers, Bayonne	—	—	2
Falcon, H. S. Turner, Ianthe	2	—	2
Idlemere, J. L. Douglass, Jr., Ianthe	—	1	1
Cyniska, R. Holcart, Ianthe	1	—	1

Handsome silk flags were presented to Mr. Palmer, winner of the sailing record, and to Mr. Fredericks, winner of the paddling record.

THE A. C. A. MEET OF 1888.

EQUIPMENT.

[*Continued from page 855.*]

THE chief point in such an outfit as we considered last week is not only to have all the articles, but to have them ready and close at hand, so that when even a short trip is to be made all will be put aboard as a matter of course, hatches, oilers, aprons, mess chest, bed, tent and canoe stove. Each should have its allotted place in the canoe, and should always be carried there, so that there will be no unpacking of one compartment for something that has been put in another. By having each article made up into a compact package much time is saved in stowing and unloading. Many canoeists have a full outfit such as described, but it is kept in such bad order that it is really too much trouble to get it out to pack it unless for a long trip, so that half the time the most indispensable articles are left ashore. The proper way is to have everything that is at all likely to be needed in the canoe, either for racing, afternoon sailing and paddling, Saturday and Sunday runs, or for long cruises, kept in perfect order and ready to stow at a moment's notice. The anchor, though often useful, is not indispensable in a canoe, the boat being beached or housed rather than left afloat; but at the same time it is sometimes needed, and one can be carried with little trouble below the floor boards, where the weight is an advantage. With it there should be at least 50ft. of strong cable.

All who have camped at an A. C. A. meet will agree that the small and compact cruising outfit that can be carried within the canoe is not what is needed for a permanent camp of ten days or more, but at the same time, with so many cruisers at the meet, it is strange that there is not one full and complete outfit such as is described above. Some men had one thing and some another, but we failed to find a single canoe in which the owner could start out for a comfortable cruise, independent of hotels and farm houses. There was more or less cruising done by many about the lake, either before or after the meet, but those who looked to see one completely equipped cruising canoe were disappointed. It is a fact that the inventive genius of canoeists has of late been turned in the direction of racing rather than cruising, and that in the latter department improvement has to a great extent stopped. It would help to revive it if the clubs as far as possible would go back to the old plan of large or small club messes, and to encourage men to take care of themselves, rather than to depend on a mess shed, as was this year the case. Prizes given for camp kits, etc., do not seem to meet the case, but a general sentiment in favor of cooking in camp will probably show good results next year if the camp be so far from hotels that men are kept in it, and have something else to do than dress up to receive visitors. There is plenty of civilization to be had at home, in fact, a good deal too much of it, and the majority go to camp for a change. For their benefit the form of primitive camping should be retained as far as is consistent with the fact that they are mostly city men, and to a certain extent "tenderfect." As for those who come to camp for anything else than the open air life, the meeting with old friends, the enjoyment of the races and the exchange of ideas on canoeing, there is a wide field of usefulness open to them on the beaches and hotel piazzas of Narragansett Pier and Newport, and their absence cannot fail to be very precious to their friends under canvas beside the St. Lawrence or Lake Champlain.

In the interests of canoeing at large it is certainly most desirable that each of the many useful features of the canoe shall be developed to the fullest extent, and at the same time that canoeists shall be led to follow the sport in all of its branches, as in that way only can the greatest good come. Neither the racing man who does not cruise nor the cruising man who never races is doing all that he should for canoeing. The natural tendency is toward specialization, to the development of fast racing machines, both sailing and paddling, and of roomy but slow cruisers; and all the efforts of the A. C. A., of the clubs and of individuals, should be directed toward the production of the all-round canoe, and the training of the camping, cruising and racing canoeist. Thus far racing has, as a matter of course, claimed the most prominent place, and received the most attention from the clubs and the Association, but there is now every indication of a revival of the interest in cruising and camping, and it is very probable that some good results will be apparent in a year or two.

It is a noticeable fact that five years ago the journals devoted to canoeing published many more illustrations and descriptions of purely camping and cruising appliances than at present, and the question is often asked us why the FOREST AND STREAM does not give more attention to such details. The reason is that it is a very difficult matter to sit down deliberately and devise such cruising gear; most of it is the result of much practical cruising work, which in itself takes time, and it can be had in no other way. It is on the canoeists themselves, the men who have leisure for long cruises and weeks in camp, that we must rely on for such additions to the cruiser's outfit. There are many who could offer valuable contributions to the store of knowledge so highly prized by cruisers, and to them our columns are always open. There is hardly a detail of the camping outfit, whether for the canoe or for a camp at the meet, which is not capable of real improvement, but it must come from the men who are actually cruising and camping.

Concerning the distinction between cruising and racing canoes, the following letter, from a well-known racing man, as well as cruiser, puts very plainly a question that we have heard several times of late:

Editor Forest and Stream:

In your editorial of Sept. 6, upon the recent meet of the A. C. A., you touch upon the subject of racing and cruising canoes, and state that "no one need bring a cruiser to camp to win first prizes." Now let me say this is not written in a spirit of unbridled fault-finding and harsh criticism, but of inquiry; and I want to know wherein Eclipse fails to fill the requirements of a cruiser. If my memory serves me she has a cockpit 6ft. long (I know it gave room enough for a tandem paddling crew), and her racing outfit did not include a deck seat of any kind. She had indeed a centerboard in middle of cockpit, but it was fitted with a removable trunk, and as I have for the past two seasons owned a canoe similarly fitted, I am in a position to assert that the board and trunk can be taken out, and a brass plate put in to close the slot in keel for paddling and cruising or sleeping, all inside of two minutes, thus placing the canoe in the condition of one which never had any board at all. The standing rig with which she was fitted is a device in which I most heartily join you in condemning; but this is not now under discussion, as I understand your article to refer only to hulls. Now my point is this, there were several most excellent models at the meet which showed speed enough to place them in the front rank, with proper rig and handling, and which would at the same time make unexceptionable cruisers if fitted to that end. I believe that any one of these, fitted like Eclipse, with removable trunk board, and a proper apron to protect their long cockpit (the lack of such protection almost lost Eclipse the cup), can be taken to an A. C. A. camp with a good chance of winning. If I am wrong in this belief, or if, in my hasty inspection of Eclipse, I have overlooked an important feature in her, I shall be much indebted if you will set me right before I lay my plans for next year's campaign. V.

In commenting on the canoes at the meet it has been necessary to class them in a general way, and we have put Eclipse in with the racers not because she is in any way open to the charge of being only a racing machine, and not capable of cruising, but because in the condition in which she has been sailed this summer the racing requirements have had precedence over all others. In build and model she is very much superior to some of the racing craft we have criticised, in a general way her arrangements are not unsuited for a cruiser so far as they go, and as to rig, we recognize the propriety of her having the standing rig for racing, and the possibility of fitting a different rig for cruising. At the same time, Eclipse, as she was at the meet, would be a very poor sort of craft to start off on a month's cruise in. She has a long and roomy cockpit, but with no provision for covering any part of it. For the sake of stowage and for comfort in bad weather, as well as mere safety at times, it would be necessary to fit a hatch and sliding bulkhead aft, increasing the stowage room, and one or two hatches and an apron forward. A foot steering gear of some sort is an absolute necessity in cruising, where a certain amount of paddling must be done, no matter how fond of sailing a man may be, and with it must be a seat and back rest of some kind, but Eclipse has none of these. It is true that the board can be removed or replaced in a few minutes, and this is all very well from the correspondent's point of view, his work is on a river where sailing is poor at best, and not good enough to make it worth while to carry sails on a cruise. For his purpose the movable trunk answers very well, it is kept in the boat for sailing about the club waters, no cruising under sail being done, and it is removed and left at home when the canoe is sent on a cruise, thus leaving the well clear for sleeping. In wider waters, however, especially where strong tides and mud are to be found at times, this sort of board will not answer at all for cruising. When on a cruise of a week or more on the Sound, the Hudson, the St. Lawrence or the Lower Delaware, where a greater part of the time is spent in the canoe, it is absolutely necessary to have the well clear and unobstructed for sitting and sleeping, and the fact that the trunk can be removed by going ashore, when no sailing is to be done, is by no means enough.

With the crew on the weatherdeck, in a good breeze, the board is out of the way and does not give any trouble, but this state of affairs does not last all day in cruising, nor would a man care to sit on deck and sail all the time. When he sits inside to paddle for an hour, the board is not in the way; but the longer he is seated in the canoe, and in cruising day after day, he will spend many hours below deck, the worse nuisance the board becomes. He may much prefer to sleep ashore under a shore tent, but there will be many times when a bed in the canoe is dryer and more comfortable, to say nothing of other occasions when a low tide finds him at nightfall with nothing more stable than a mud bank or marsh to land on, and a snug bed on board would look very inviting, with sleeping bag spread, tent snugly stretched, and lantern hung beneath the ridge. With the board further forward, a good foot gear and hatches, and a lowering rig, Eclipse would make a very good cruiser, and in this she differs from the extreme "canoe-hiker," which cannot in any way be used for cruising; but as she is now she must be classed as a racing canoe. Another canoe that goes in the same category is the Fly, a boat of excellent model, a safe, able and comfortable cruiser in all respects save that her well is given up to a big board, there is no foot gear, and the entire build of boat is too light for anything save the most careful handling. In rig and model she is a cruiser, save in the area of sails, but as she really is no one would think of subjecting her to the rough work of a cruise.

There is a very good reason, too, why the chances of a canoe that is really used for general cruising would be small in the races, she would probably be considerably heavier than the racing machines, and at the same time her bottom would not be in anything like the fine condition of the best racing craft. Of course, this latter is a matter that might be remedied by proper preparation at camp, and as for the extra weight we do not know that in all cases that would be a serious hindrance, but still the odds all are very strongly in favor of the boat that is built, fitted and kept exclusively for racing, as against the boat of equally good model which is fitted and used in real cruising. There was one canoe at the meet which we should class as a cruiser, and which at the same time should have done very much better than she did in the races, had she been more thoroughly fitted out and tried before the meet. This is the last Guenn, a very handsome canoe in build and model, with ample room for sleeping and living on board, and in all ways a good open water cruiser. But little would be necessary to change her from a racer to a cruiser. What she would have done in the races had she been in as good racing form as Eclipse or Fly is a matter of conjecture, but it is certain that she is a fast canoe, and also a legitimate cruiser. We would be glad to think that we have spoken prematurely in the sentence quoted by our correspondent, but we do not look to see it proved next year or the year after; in fact the prospects now are that even the moderate boat, like Eclipse, the mean between the racing machine and the fully equipped cruiser, will have to give way to the former in the sailing races.

A SLIDING SEAT FOR CANOES.

Editor Forest and Stream:

Will you permit me, through the medium of the FOREST AND STREAM, to address brother canoeists in America on a point of canoeing? Some time ago it occurred to me that a sliding seat might be worked to advantage in a canoe, particularly decked canoes, I mean, driven by the double-bladed paddle. I could not find many who would countenance the idea at all, and none who could be made enthusiastic over it. However, I had a canoe built in England, fitted with a sliding seat, and sent out to me here, in India; and I have now tried the canoe, and consider that the slide is a success.

The sliding is hard work undoubtedly, at first, but it soon gets easier by practice, and then, there is no obligation to slide, you can, if you like, just sit on the sliding seat, and paddle as if it was not there; or run out the slide and put it forward, under the knees, or stow it away in the hold. The objects I had in view were leg exercise and increased speed; about the leg exercise there is no sort of doubt, and I think that the slide, when properly used, does increase the speed very considerably.

How to use the slide will be apparent enough to every canoeist, immediately he tries; he must get forward on the slide (which may be 15in. long or even more) before dipping his paddle, and then, when he has got hold of the water, he should slide back strong to the back rest; exactly how to run the slide forward and backward and get the hang of the thing, a very little practice will make plain.

I was told that I could not expect the slide to be of any use in a canoe "because the action of paddling is altogether different from that of rowing;" but the skeleton of the thing is identical in both cases, in both the power is obtained in the same way, viz., by the sweep of the blade from bow to stern, though in the rowboat the point of application of the power is fixed, the rowlock; while in the canoe it is, I take it, in some shifting point. In the case of the rowboat, when we slide back—that is use the slide to effect—we slide in the direction in which we are pulling, and in the canoe one (for I don't feel justified in saying we) slides back in the direction in which one is pushing the water, by the combined action of the arms, and this action of the arms is effective, whether the body be at one end of the slide or the other, or moving back in it; and the arms are powerfully assisted in their task by the forcible drive backward (by means of the leg thrust) of the whole body; but this is theory, and though I think true theory, a ton of such is not so persuasive as an ounce of practice. Therefore, as the trial will not cost more than say two dollars or so, I hope some American canoeist may be induced to try a slide and let us know how he finds it answerable.

The straps to the footboard are of course requisite, and the footboard had better be slightly inclined, instead of vertical, as it is commonly made. C. A. G.

INDIA, Oct. 15, 1888.

[We believe that the sliding seat, as used in a rowboat, has never been tried in America on a canoe. The sliding seat mentioned at times in our reports is a thwartship deck seat, used solely for sailing. The fitting of the ordinary sliding seat to a canoe would be a simple matter, and some of our readers may be inclined to try it, and advise us of the result.]

ESSEX CANOE CLUB.

NEWARK, N. J., Nov. 19.—In contemplation the Essex Canoe Club, of Newark, N. J., is negotiating for a site on Newark Bay on which to locate their club house, and from present appearances is in a fair way of accomplishing it.

The present sailing ground on the Passaic River is very unsatisfactory to the active canoeists, as it is very small on account of numerous bridges, and being inclosed with high ground on either side the wind is very puffy and unsteady, making canoeing somewhat of a bore instead of a pleasure, not considering the tide, which runs about six miles an hour.

Newark Bay is one of the best sailing grounds anywhere in this part of the country, having an area of about two miles wide by about six miles long of open water, free from bridges or other obstructions; of course there is some tide to overcome, but as the channel is in the west side of the bay, it leaves a large area of comparatively still water. The location (Greenville) is convenient to Newark, New York, Jersey City, or anywhere on the Central R. R., also by water to the several canoe clubs in and around New York and New Jersey.

The members are in high glee over the proposed change, and will use their utmost endeavors to carry the scheme through and make a success of it. It is the intention of the club to take in as members, owners of small sailing craft, and not confine the class of boats to the canoe alone as heretofore. After we are all settled in our new quarters we propose to have a grand house warming and regatta to let our fellow canoeists know that the heretofore almost unknown Essex C. C. is alive and willing to help the good cause along. Several things of a social character are talked of, and numerous regattas and races are under discussion, among the rest the skipper of the Addie S. has challenged the skipper of the S X to a race in sailing canoes, the distance to be ten miles on a triangle; (this course is laid out in the bay by the Newark Yacht Club). The skipper of the Addie S. has an idea that he can teach the older and more experienced skipper a thing or two in regard to sailing on a large sheet of water; but the proof of the fact is in the sailing of it. He may find that sailing on Newark Bay with a strong wind and rough water is a little more difficult than floating with the tide on a narrow stream. However, the club will be on the move as soon as spring opens, and we hope to see the S X burgee flying at the mast head of more and abler craft than ever before.

The committee in charge of the proposed change are working to get the whole matter in shape to have final action taken at the annual meeting in the early part of January.

ONE OF THE COM

ALICE ENRIGHT VS. CITY OF THE STRAITS.—A match between the Alice Enright, of Toledo, and the City of the Straits, of Detroit, was sailed on Nov. 13 over a course of 15 miles to leeward and return, starting from Turtle Light, off Toledo; the stakes being $250 per side. The wind died out and the race was not finished within the required time, so a second effort was made on the next day, but with no better results, the race finally being postponed indefinitely.

Yachting.

A SUMMER CRUISE ON THE SOUND.

IT was some time during the present age that one of my particular friends, with more money than discretion, conceived the idea that it would be a jolly thing to hire a yacht for a month or so, and sail the ocean blue.

So forthwith he called on me, and as he erroneously thought that I knew not only all about a good boat, but that I could lay my hands on one at a minute's notice, my hitherto peaceful life became a burden to me. After visiting every conceivable place within ten days' ride or sail of New York, and regretting that on account of our awful laws I couldn't get him an English cutter, and sail her under the American flag; I managed to work up all the yacht brokers in the city to such a high state of excitement that I finally found myself sent off by these gentlemen, (I firmly believe simply to get rid of me for a day or so) to inspect ocean going ships, brigs and schooners; and I think if it hadn't been for a sloop of 50ft. or thereabouts that I finally discovered myself I would still be looking for that boat.

After inspecting the sloop several times, my friend concluded to take her if he could make arrangements with her owner, which he succeeded in doing, although the price asked was certainly pretty steep. And, after many delays, at last we found ourselves about ready to start off on a trip down the Sound. Our crew was made up of one sailor man, a cabin boy, steward and a captain. The cabin contingent consisted of four men, my friend Percy, myself and two others; one of whom, as he was very tall and rather silent, we christened "Long Tom" and the other "Gatling," on account of his argumentative turn of mind.

One beautiful morning in September we got under way and proceeded in tow of a tug up the East River and through Hell Gate. When well through the gate we made sail and cast off from the tug. Wind! well there was none of it, but we had the tide in our favor, and drifted along like the traditional phantom ship. This calm at once began to bring out some of the characteristics of our cabin passengers. On Long Tom it at first seemed to have no effect whatever, but after a close inspection I found that it did, brought out a mighty thirst, that seemed to be best quenched by the use of cocktails, and as he seemed to have a faculty for making several different kinds, Tom showed a decided disposition to become a jolly companion, and was soon perched up on the cabin top playing a fiddle for all he was worth. Gatling wanted to hear himself talk of course, and therefore did not seem to relish Tom's fiddle. However, he was soon in a deep argument with our captain as to whether Genesta or Puritan was the faster boat, and on other nautical subjects.

My friend Percy was smoking a pipe and taking care that the boat was floating in the right direction, by occasionally revolving the wheel one way or the other. However, calms do not last forever, and at about 12:30 there came evident signs that we were about to have a breeze. That breeze loafed around a long time before it concluded to become anything like wind, but finally it braced up considerably and the Truant began to heel over to it and go through the water in a way that gave considerable promise that her heels might be very nimble with more weight in the wind. But we were not to have a chance of trying her that day, as the wind remained light but steady. At about 7 P. M. we made Larchmont, and came to anchor near the schooner yacht Clio, which was anchored in the harbor.

After a very jolly and excellent dinner, which proved that we had an A No. 1 steward and cook, Long Tom, Gatling and Percy went ashore to the club house and post letters, G. being a member of the club. They reported a very good time on their return. As I was feeling tired I remained on board, and after smoking my pipe and enjoying a beautiful moonlight evening, I turned in early, and did not wake again till 5 A. M., at which time the crew were hoisting the mainsail preparatory to getting under way. I immediately routed out the cabin passengers in order to get them to turn out and take a salt-water bath, but they all seemed to be exceedingly tired and cross, and none of them would budge; which was afterward explained to me by their saying that they had not returned to the yacht until 2 o'clock. I had to go overboard alone. Soon afterward we got under way and proceeded down the Sound with a leading breeze, bound for New London. After breakfast we set the spinaker, and it did good service for some time. However, the wind had freshened so much by o'clock that we were obliged to take it in.

The Truant seemed to drive along very fast, or the sloop yacht ahead was going very slowly, for we had been overhauling her all day, although she went by Larchmont some time before we started. At about 4 P. M. we overhauled and went by her. Her name was the Avon, of Boston. At about 7 o'clock the weather began to look squally, and we debated whether we should stand on or put for Saybrook, which place we were near. But we decided to let her go on, although the wind had dropped almost to a calm, and it was evident that we were in for a squall. At about 8 o'clock we swung the boats inboard and close reefed the mainsail. At half past the squall struck us, and proved to be very heavy, and it fairly picked the water up and flung it over our decks.

We were running dead before it and were busy reefing the jib, when a cry came from aft, "Get a light, for Heaven's sake show a light! Get a lantern out of the forecastle; hurry men, hurry for your lives;" and a lot of other equally forcible expressions. On looking astern we perceived the lights of a large vessel quite close to and running up on us hand over fist. When we found that she paid no attention to our light we began to think that our last hour had come. By this time we were off the Race and a pretty heavy sea was running. As the vessel came closer we shouted and blew a horn to attract her attention, which we succeeded in doing, but barely in time, for as she luffed a little and as we kept away her mizen boom swung over our cockpit and just cleared our main rigging. She proved to be a large three-masted schooner, and as her crew were busy reefing she had failed to see our light. Had she hit us she would have gone through the Truant as if she had been made of paper, and consequently this article would never have been written. When the schooner came along, her crew did some very tall swearing as if they thought that it was our fault for getting in their way. But as we naturally did everything we could to get out of their way and as they were steering very wild, we thought their remarks totally uncalled for. However in a few seconds the schooner disappeared in the darkness, and then we realized what a close shave we had had. I must say that every one on board kept very cool and behaved splendidly except the steward, who went around swearing as if his day of judgment had arrived, and calling on all the saints in his vocabularly to save him. He let up somewhat, however, when Percy told him to shut up and go below, or he would pitch him overboard. Soon after this the squall went down, and we had a light breeze which carried us into New London Harbor and I do not think that any of us were very sorry to come to an anchor.

The next day we spent in making purchases and visiting friends in the town. In the evening we attended a hop at the Pequot House, and came aboard at a late hour. We had intended to leave for Newport, but as there was no wind all day we had to remain at anchor. However, in the afternoon we had several lady visitors from the shore. Among them Long Tom's mother and sister, who were staying at the hotel, so we got up an impromptu tea, which was served on deck, and was voted a great success by the fair visitors.

The following morning we got under way for Newport, which place we reached at about 4:30 P. M., after a most delightful run.

Here our Long Tom met with quite a painful accident. While tending sheet during a gybe he let the rope run through his hand so rapidly when the boom came over that most of the skin was taken off of the inside of his hand, and when the sheet was taken from him he fainted. As soon as our anchor was down we had to get one of the boats overboard and look up a doctor.

We remained here for about ten days, and two of our cabin passengers bunked ashore with friends who were kind enough to ask us to put up with them.

We had intended to go on as far as Boston, but as business called two of us back to the city, Percy decided to give up this part of the trip and return to New York in the yacht. We gave several sailing parties while here, and enjoyed ourselves hugely. The first day after we started from home Tom's fiddle was continually called upon to give us "The girl I left behind me."

Coming home we ran by New London, and anchored at Saybrook the first night. The next morning we were awakened by a great tramping on deck, and by the anchor chains running out at a lively rate. On going on deck to see what the row was, we found that we had both anchors down and that it was blowing great guns from the northwest. A large barge loaded with wood was coming down on us at a lively pace, and threatened to carry away our bowsprit. But luckily she steered off a little and did no further damage than to scrape off some paint on our starboard side. But we had to let the boat run down very lively and swing in the davits. During the day several large schooners went adrift, and one of them, which collided with our friend the barge, lost bowsprit and foretopmast. A tug in the harbor was kept busy all day towing boats around that threatened to go ashore. The next day was pretty nearly as bad, and what was worse, we were running short of cigars. Gatling left us here, and much to our disgust, carried off about fifteen cigars that he had in a box, but as if to add gall to our feelings, he left the box. This no doubt was unintentional on his part, but still it made us mad, and all of the remaining stumps of cigars, cigarettes and pipe ashes we emptied into that box very religiously, so that when we arrived in New York the box was just about full. We then did it up nicely in brown paper and sent it by express to his Fifth avenue home. But, needless to say, he never acknowledged our present.

We were three days at Saybrook before we got away. We left early on the morning of the fourth day, and all of us were heartily sick of the place. That night we anchored off the *Herald* Station, at Whitestone, and were reported in due form. The next morning we went through the Gate and anchored off Bay Ridge, paid off the crew, and formally handed over the Truant to her owner. We all voted that we had had an awfully jolly trip, and Percy said it paid, which was the main thing that I felt concerned about. That night we had a reunion at Delmonico's, and we walked around with a sailor's swagger and a healthy color on our faces for several days afterward.

TRUANT.

MACDONALD'S COVE.

IT is with no little interest that yachtsmen of the "unsalted seas" have observed the serious intention of their bigger brothers who sail the briny to acquaint themselves with the attractions of the former's cruising grounds. The expedition made last season by Mr. Howard Patterson to secure information of routes, roads, anchorages and courses for sailing in Lake Erie and Lake Ontario and the river St. Lawrence to a wider number of yachtsmen, marks possibly a new era of pleasure and experience for many soft-handed tars. We venture to say that this ground will not prove disappointing. It lacks nothing that arouses and charms the soul of a sailor, unless it is the salt smell of the wind and wave. This is absent. But let the sojourner in these waters remember that the freshness of their air will serve to sweep his brain the clearer and brighter for the saline odor.

From the outlet of the Niagara to the opening of the St. Lawrence, where lie for twenty miles its almost countless islands, and thence down by its wide and varied channel to the sea, is every description of voyaging by sail or paddle or by steam. Let no landlubber trust his unskilled hand to guide his craft over Lake Ontario, thinking his nerve and strength equal to its capacity. There will be found a place for all that the best navigator commands. Its winds are as stout, its seas as treacherous, its calms as deep and its coasts as puzzling as any of the Atlantic. It lacks no element of a complete sailor's school but sea room, and of that there are 8,000 square miles. On its northern shore dwell the Canadians, born of a race of men who have trimmed sail since the birth of navigation. They are brawny, courageous and rich, and will neither take quarter from any deck nor give it. Along the south shore dwell one's own countrymen, no less ambitious, ready and polite than any rival. Many are its bluffs and coves, bays and streams, reefs, shallows and currents. It has fair scenery and fair skies in season, bustling towns and hospitable clubs for entertainment.

Below on the St. Lawrence is a land unique to the denizens of our ordinary civilization. Englishmen, Scotchmen and Irishmen are there, fast rooted in the mother country ways. The French are there, abating perhaps less than any people the thoughts, the habits, the religion and the speech of their blood to the influence of these leveling times. Off the beaten paths of the tourist, away from the great towns, along the shores of this majestic river and back from it, on the rugged hills and in the fruitful valleys and bottom lands of countless streams, there lives a homely but picturesque and intensely religious people who have for a hundred years changed less than any peasantry. Writers of fiction and travel are but now awakening to the existence of this priceless material. The history of this land, replete with great deeds and romantic scenes, an old world's civilization joining hands with a new world's savagery, transpiring in the heart of nature, it seems as if Parkman had forever monopolized. The islands of the St. Lawrence, its rapids, its wild and rocky shores, long levels and broad lakes, its frowning cliffs and dark, deep waters will capture any temperament or imagination with its grandeur and charm. No line of travel equals it for steam yachting. There are hundreds of miles of open river navigation and safe carries by broad and well managed canals. Fish of many kinds, from the salmon to the bullhead, inhabit its waters, and with the oncoming of winter and of spring the gunner's feathered quarry, geese and ducks, pausing in their migratory flights, haunt its wide feeding grounds. It seems as it to them this were their half-way home, where for a few weeks they must linger while nature is getting ready their distant, but acceptable tenements.

Almost without intention has the writer been led, perhaps unnecessarily and no doubt tiresomely, to introduce what follows with a beckoning and encouragement to men on yachting bent, who know no cruises but from Hell Gate to Marblehead and Mount Desert, to find their watery pasturage to the north, where may be seen, if not Brobdingnags and Houyhnhms, yet people not unworthy of observation to an untrammeled mind, countries not without interest to a tourist and waters right pleasant for a sail if they are "too fresh."

To proceed to the original purpose, simply to add another to the countless homely records of innocent farings on land and water in the experience of men who care for life without the door, the same yet never the same to them, and therefore interesting if not absorbing no matter how often told, it was the writer's pleasure one summer afternoon to lift his dunnage bag over the rail of the Cricket and lend a lubberly hand to shape affairs aboard ship for a long tour across the lake, for the wind was flat, and we, slaves of business and of time, perforce must obtain conveyance, if not by lusty winds as becomes seamen, then ignominiously by towboat. Under such a sky of countless stars as hung over us during the hours of the evening, and fanned by the light air of our motion, it seemed ignominious indeed to be hauled over the deep by a puffing steam craft, but so it was. At midnight, in a broad arm of the lake off a sheltering cove—MacDonald's—we slipped our cable and crept softly to our mooring as if, like a belated husband, we would not disturb the deep sleep that rested on our habitation.

MacDonald's Cove is a niche on the northern shore of Prince Edward's Island. Winds may blow high or low and from all points of the compass at the same time if they list, but a bark anchored within its high and wooded banks can snap her tapered ends at them. Here fleets of trading schooners voyaging to the south shore overtaken by storm have many a gray fall day lain snugly by until the wrath of the elements had worn itself out. Collector John Prinyer here represents Her Majesty, and Her Majesty need borrow no trouble but that the dignity, hospitality and good cheer proverbial with Her Majesty's kingdom around the world are royally illustrated in this remote region of her realm. The Collector has the distinction of being reared a country boy in the companionship of the famous Sir John MacDonald, who rules all Canada, despite the Lascoon struggles of the Liberals to put him by the ears. In the two men appear the ever recurring incident of the diverse courses of two lives standing on the threshold hand in hand; one goes to great station, power and worldly honor, the other to quiet ways, dignified, yet remote. Who pronounces which is the happier and better? To judge from an observation of mine host, Premier Sir John must have a quieter conscience and a less harrassing life than is reputed to belong to him if he can match his old school companion for contentment and worth now when the finish of all earthly things is heaving in sight for both of them.

The morning dawned fair and through the long forenoon the Cricket's crew voyaged to and from the shore, dreamed under the flap of the sail and let the world slide generally.

At noon the west wind—friend of the sailor in all waters—blew briskly across the channel and under foresail and jib, staysail and topsail, as if rejoicing in her exercise, the Cricket slides away toward the south. To the west Amherst Island spreads its green shores where thrifty farms are basking in the sun, while now they may; for the spectre of the long and desperate winter—to whose cold and snows they lie absolutely open—must ever haunt their existence. Further south the False Duck Islands and the true stand forth like sentinels above the flood—their rocky shores seeming to bear "beware" upon their fronts even under our favoring skies. Lakeward a steamer bound for Kingston or more distant Montreal trails a line of coal laden barges breathing forth great rolls of smoke that stretch for miles away against the clear blue of the horizon. Beyond a schooner bends slightly her graceful masts and hull as the steady breeze bellies her immaculate sails, moving like some gentle and stately swan. To the west Indian Point lies flat and distant on the water, and ten miles on is the white column of South Bay Point light. Thither we steer, and through the sunny afternoon in long stretches—for the wind has shifted to the southwest—the Cricket reels off the miles without an altered sheet.

Long before sunset we have anchored off the point. Here are the houses of a few fishermen, who draw from the cool and deep waters of the lake a fish that can hardly be surpassed for food. The epicure who dies not having tasted the whitefish of the north ern lakes has "made a failure of it." The whitefish may be matched against any that swims salt water. At nightfall, after loading the icebox with specimens of these finny prizes of many pounds weight, we sail away. At break of day the water seems becalmed. No touch of air so much as ripples the mirrored surface, but aloft in the long head of the topsail the gentle zephyr strikes, moving the null below without a sound along. The mist lies thick upon the water, and as the god of day rises to light the world the vapors stream toward the skies like wraiths reluctant to feel that the night which shelters them has disappeared. Before they take their last farewell they paint with all the colors of the sun the surface of the lake—crimson and green, yellow, blue, violet, with every varying shade brighten and fade and die. At length the day having come serene, the west wind rising to her daily task in steady strength, scatters the dew and mist as if forever, and moving with it we, too, have disappeared. And what of it? Shall we say. Nothing but a memory, hours of content and life.

OSWEGO, N. Y., Nov. 15. G. T. C.

DELAWARE RIVER.—*Editor Forest and Stream:* The little schooner yacht Leona, mentioned in the FOREST AND STREAM of Nov. 1 as bound to Florida, reached Chesapeake City Oct. 29. Stopped at Betterton, where the crew put in a week with their friends and had some fine shooting. Arrived at Annapolis Nov. 9; all well. I will probably not hear from her again until she reaches Norfolk. Capt. Lutes (not Lutz) spent a week with me at the boat house while fitting out for his voyage. We had many boat talks interspersed with chart reading, with which latter he is well supplied. He also has copies of Mr. Kunhardt's famous trip in the Coot, published in the FOREST AND STREAM, which will be of the greatest service to him. The Leona is called a "dandy" by the natives, and her crew "bricks." I will send you a fuller description of the trip after the little ship gets further south. The Cooper's Point Corinthians put in a full week of racing from Nov. 6 to 13, making it the twenty-sixth race of this season. The genial literary editor of the *Evening Call* took a hand in the seven-day races and won two races, one with the Wilkin and one with the Item. Newspaper men don't seem to mind wet jackats in 15-footers, and are up in handling the stick. Three prizes were won by the Corinthians in the combination race of the Quaker City Y. C., viz.: Agnes, fourth class sloops, first prize; H. Clay Funk, Class D, first prize; Item, second prize.—R. G. W.

CYTHERA.—A very improbable story has lately appeared in the daily papers of a letter received by some unknown person from one Jack Fenton, mate of a boat named the Samuel Stone, and detailing how, on a voyage from Savannah, Ga., to Australia, after leaving the former port just prior to the great blizzard, a white yawl-rigged yacht was passed and afterward seen to sink, one sailor only being rescued, in the height of the blizzard, by the bark. As this sailor could not speak English he could not tell the name of his vessel, and later he was transferred to a Norwegian ship and so all trace of him was lost. The whole story is so full of gross improbabilities that the only reasonable conclusion is that some heartless wretch has tried to base a hoax on the tragic loss of the Cythera and her crew.

NEW YACHTS.—Mr. Burgess is busy with the design for a 90ft. schooner for Col. W. H. Forbes, the dimensions being 89ft. 6in. l.w.l., 23ft. 8in. in beam and 9ft. 9in. in draft. The 90ft. class is beyond question the most desirable and popular size of the two-stickers for racing, and the new boat will be a welcome addition. The new yacht will have a centerboard, and will be built of wood, by Lawley. Mr. Burgess has also an order for a new fisherman for Com. J. M. Forbes, who will own a half interest in her. She will be built in the best manner, and be designed and rigged according to modern ideas. At Marblehead Mr. Wm. Eddy will build a cutter 32ft. over all, 26ft. l.w.l., 10ft. beam and 6ft. draft.

WAVES.—A writer in the Liverpool *Mercury*—a captain of the merchant marine—has taken careful observations as to the height of ocean waves in a gale. He made them during a voyage round Cape Horn, and to do it he went up in the main rigging, to get, if possible, the top of the wave coming up into the line of sight from the mast to the horizon at the back. It was a difficult operation, but the captain obtained some good observations, marking the height of the waves on the mast. On measuring the distance from these to the mean draft, he found them to be as follows: 64, 61, 58 and 65ft., respectively, varying in length from 750 to 800ft.

THE OSWEGO, N. Y., Y. C. has elected the following officers: Allen Ames, Commodore; Swits Condé, Vice-Commodore; F. W. Sackett, Captain; W. B. Phelps, Secretary; E. B. Mott, Treasurer; A. J. Judson, Measurer; Dr. J. W. Eddy, Fleet Surgeon; J. T. Mott, J. P. Phelps and J. B. Donnelly, Directors. The club is in a most happy state physically, numerically and financially. Thirty-seven new members during 1888, and after extensive and expensive improvements at the club house, and all bills paid, a handsome balance is in the treasurer's hands. The new commodore is the owner and skipper of the Merle, and his cabinet are all live and experienced officers.

CATBOATS IN NOVEMBER.—The last race of the season about New York was sailed on Nov. 24 between the catboats Playmate and Bon Ton, of the Staten Island Athletic Club yachting annex; the course being from Buoy 17, off Robbin's Reef, around Buoy 16, off Norton's Point, then around Buoy 15, below Fort Tompkins, and home. The stakes were $100 per side. Mr. John W. Edwards sailed the Playmate, and M. G. W. Vredenburg the Bon Ton. Playmate led at the start, but Bon Ton sailed the better course on the return, winning by 10m. 27s.

HARLEM Y. C.—This club has just installed itself in the old Randall mansion, on E. 121st street, and will hold a formal house warming next month.

New Publications.

"WHO'S AFRAID?"—A celebrated photographer while making pictures along the rough coast of New England, set his camera to take the view of a double row of rocks off York Beach, Maine, with the waves dashing over them, when three sunny-faced children appeared on the scene from behind the rocks where they had been hidden from view, running toward the water as though to plunge into the surf and by accident halted directly in front of the camera already set, when a clear mannly voice, from a distance, rang out the warning to the youngest child, "My Darling, don't go near the water!" They turned, each in characteristic pose, and the reply came from the little one, "Who's afraid?" Snap went the rubber on the camera and the sunbeams had fixed for ever a picture, piquant, roguish and withal such a touch of nature as no artist's fancy could ever body forth. By special consent of the parents, who are prominent in New England society, the Chicago & North Western Railway Company have invoked the "Art Preservative," and the picture, duly engraved upon steel by the celebrated engravers, John A. Lowell & Co., Boston, and copyrighted, forms the basis of one of the most beautiful and attractive souvenirs ever offered by a railway company to its patrons. Many copies have been distributed free, but so great is the desire to possess one of these beautiful works of art that even the generous North Western calls a halt. Copies of this picture which is spoken of in art circles as a "modern classic" in connection with a chaste and ornate calendar for 1889, will be sent, postage paid, to any address, in return for 25 cents in stamps or postal note, or for $2 nine copies will be sent, express free, to any point in the United States, by E. P. WILSON, General Passenger Agent, Chicago and North Western Railway, Chicago.

Some time ago a friend of William J. Davis, a young lawyer living in East Newark, presented him with a handsome buck, eighteen months old. Mr. Davis was proud of his new acquisition, and put it to browse on the lawn in front of his house. Monday morning Mr. Davis started from his house with his satchel to go to business. As he passed the deer he greeted him with "Hello, Billy!" The buck lowered his head and made a vicious dash for his owner. Davis prepared to retreat. The deer was on him in an instant and butted him to the ground. Then he gored the ground furiously with his horns until Davis was lifted on his antlers high in the air. Davis caught the antlers with his hands and held on for dear life. All efforts of the buck to shake him off were futile. While the deer was thus amusing himself a letter carrier passing shouted at the buck, and the deer made a dash for him as the lawyer let himself fall to the ground. The postman was butted, too, but with the aid of the hired man the buck was lassoed before he had done any further harm and taken to the barn.

Answers to Correspondents.

☞ No Notice Taken of Anonymous Correspondents.

F. L. K.—See answer to Shells in this number.

If C. R. A., of Lafayette, N. J., will send us his name we will print his note.

C. A. H., New Haven.—Go to Durham's Creek, North Carolina, reached by Old Dominion Line of steamers from Norfolk, Va.

Shells.—To clean your brass shells immerse them in vinegar or a weak solution of oxalic acid. Or use mixture of two parts sulphuric acid, two parts water, one part pulverized biochromate potash, then clean with hot water. It is better to clean only the outside of the shells; the wads will be held more firmly if the inside be not polished.

H. R. W.—According to the law as amended by Chap. 641, 1887 robins may be shot on Long Island and Staten Island from Nov. 1 to Jan. 1.

J. E. A.—For ruffed grouse you may choose pointer or setter after your own predilection. There are strenuous partisans who uphold each breed against the other as the better.

W. A. McQ., Glasgow, Kentucky.—Where can I purchase pictures suitable for anglers' club room? Want something at moderate cost. Give address of dealer in deer antlers, etc. Ans. 1. Currier & Ives, Nassau street, New York. 2. John Wallace, 16 North William street, New York.

Waterloo.—A friend of mine owns the dog and I the bitch; there are in litter eight pups. No arrangement having been made previous to the birth of pups, to how many pups is the owner of the dog entitled? Ans. The customary arrangement is that the owner of the sire shall have the first choice of the pups.

C. E., Cœur d'Alene, Idaho.—I send you by to-day's mail the skin off the head of some animal killed by an Indian near here. Please let me know the local and scientific name of animal through the columns of your valuable paper. There is no one here that knows what it is. Ans. The skin is that of a young female woodland caribou.

P. S. G., Forest Lake, Minn.—Rum, English setter (E. K. C. S. B. 1555), is by Laverack's Dash out of Laverack's Moll III., she by Fred I. out of Belle II. Fred by Rock I. out of Moll II. Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.

A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp. Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

PETERS CARTRIDGES.

No. 550 is loaded with the new No. 0, 554 and 533 in Nos. 1 and 2 Quick Shot Powder, two felt wads cut very large and perfectly lubricated by our own formula; 1¼oz. Tatham's Shot No. 8 and astened by the Peters Patent Indentations.

Proved by their Record to be Unequalled.

The Cartridges have won the largest number of prizes at the tournaments throughout the West, and are very extensively used by professional and most successful amateur sportsmen. Their great velocity enables the shooter to "hold on" to the bird.

ASK YOUR DEALER FOR THEM. PRICE LISTS ON APPLICATION.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

NEW YORK: FOREST AND STREAM PUBLISHING CO., 318 Broadway.
LONDON: DAVIES & CO., 1 Finch Lane, Cornhill.

Their Pathology, Diagnosis and Treatment.

To which is added a complete dictionary of canine "materia medica." New and revised edition. By HUGH DALZIEL.

Gives full descriptions of all the accidents and ailments dog flesh is cursed with, and plain directions and prescriptions for treatment. Cloth, 116 pages. Price 80 cents.

FOREST AND STREAM PUB. CO.,
318 Broadway, New York.

The Forest Waters the Farm;

OR,

The Value of Woodlands as Reservoirs.

BEING THE LES ÉTUDES DE MAITRE PIERRE SUR L'AGRICULTURE ET LES FORETS.

PAR M. ANTONIN ROUSSET.

Translated by
REV. S. W. POWELL.

The introduction reviews the extraordinary movement of torrent taming in France, in preparing public sentiment for which the Studies of Master Peter played a noteworthy part. The book was written as a sort of science primer, setting forth the first principles of the relations existing between woodlands and agriculture. The principles and reasoning are not less applicable to the United States to-day than to France then.

Price in cloth, 75 cts.; paper, 50 cts.

ANSWERS TO CORRESPONDENTS.

POPULAR FORESTRY INSTRUCTION.

THE New York Academy of Science devoted an hour or two the other evening to discussing the condition of the forests of this State; and the reports of their meeting in the daily papers has had the effect of momentarily at least drawing public attention again to this subject.

Less than half a dozen years ago the people of New York were thoroughly aroused upon the importance of the forest question. It was pointed out to them that the Adirondacks were in great part denuded of their timber, that periodical fires followed the woodman's axe, that the Hudson was being silted up, and that in fact a series of conditions had been inaugurated which would sooner or later result, firstly in the destruction of New York as a shipping port, secondly in the destruction of the fertility of the soil to such an extent that there would be nothing to ship. It was urged that we were in fact going to ruin with a full head of steam on; and the collective wisdom of the people decided and gave as their verdict that nothing could save the country but wise legislation involving the enactment of forest laws and the reservation of a State forest area, with a Forest Commission to provide for its proper conservancy.

Nothing could be more commendable than the promptitude with which our legislators at Albany responded to the popular appeal for forest legislation. They drafted a bill admirable in every detail, and displayed a praiseworthy zeal in incorporating every good suggestion in it; they appointed a Forest Commission, whose duty it would be to undertake the economic and scientific administration of the State forests, restock denuded areas, bring the whole under a high system of conservancy, establish chairs of forestry in our universities and colleges, and above all to diffuse among the people at large a mass of popular literature, designed to enlighten them as to the economic importance of properly conserved forests, their far-reaching influence upon the welfare and destiny of nations, the short-sightedness of the policy which would allow them to be sacrificed for a temporary gain, and generally to cultivate so enlightened a popular sentiment upon this important matter as would insure popular support of well-considered legislation.

Well, we have our forest bill and our Forest Commission and establishment, and as far as we can learn they have about as much practical value as the famous edict of the Sultan of Bagdad, which provided that no one should go out after dark without a lantern in his hand, but which made no provision to compel its being lighted. The Forest Commission does not commit itself to any practical measures of forest administration, nor fritter away its hoarded stores of knowledge upon an unappreciative public, and the Legislature benignly relieves it of all responsibility in the matter by withholding the necessary funds. If its lantern is not lighted, it is no less true that the Legislature withholds the necessary oil.

And so the public, believing that this matter has been properly and intelligently disposed of by adequate legislation, goes about its business and thinks no more about it. Meantime the evil is being aggravated from year to year, and the task of reformation growing ever more Herculean; but happily the general public is being slowly enlightened. That popular literature which the Forest Commission was to have evolved out of its accumulated stores of knowledge has failed to appear, but the demand for concise practical information on this important subject in popular style is just as great to-day as ever it was. We need in America some such practical effort as that successful one in France, when by means of cogent reasoning addressed to the masses the intelligence of the people was appealed to and public spirit aroused in favor of wiser forest administration. The history of that movement has already been given in these columns, but now that academies of science are discussing the forest problem, it may not be out of place to recur once more to the lesson afforded by France. There the change of base on this forestry question was due in a large degree to the influence of one book, written specially to accomplish this reform. This was the prize essay, "Les Études de Maitre Pierre sur l'Agriculture et les Forêts"—The Studies of Master Peter about Agriculture and Forests—translated under the title, "The Forest Waters the Farm."

This little work was written for the instruction of the horny-handed sons of toil, the small farmers of France, who offered the most stubborn opposition to the measures of the French Government for the reafforestment of the communal lands. That they should have offered such resistance was only natural, seeing that the very first measure of the Forest Department was necessarily to exclude all sheep and cattle from the selected areas. It was hardly to be expected that they would have sufficient insight to recognize that the effect of converting worn out pasture lands into forest would be to enable them to keep more stock, make more manure and grow more grain. Nevertheless in the little book the teaching, which is conducted on the Socratic method by means of a series of dialogues between the teacher and the peasant farmer, is an appeal to the rude horse sense of the latter, who finally acknowledges himself convinced.

In his impatience of the dictation of one who is not a practical farmer he asserts in the language of his class that "the leaves (of the forest floor) are our only resource to make litter and manure, and it is better to deprive the forests of it than our cultivated fields. Let the woods perish rather than the crops." He cannot at first realize that depriving the forest of its humus is depriving it of the essential conditions of vigorous growth and of its utility as a reservoir whose waters maintain the lower lands perennially moist; but he is gradually brought to the recognition of the teacher's axiom that "a country without wood is a house without a roof."

In this country even the present generation entered upon so vast a woodland inheritance that the question of the exhaustion of our timber supply with its attendant evils has hardly received serious consideration, the State Legislature of New York is simply trifling with the question; its honorary Forestry Commission is a mere toy, serving to divert the attention of the community from the gravity of the interests involved.

We do not intend by these remarks to cast reflections upon the State Legislature; some, at least, of our representatives at Albany who are passively instrumental in allowing the law to become a dead letter for all practical purposes, are animated by the consideration that there is no reasonable security from the prudent appropriation of any moneys that may be voted for forest administration as long as the department shall be controlled and officered by men who, whatever their general attainments, have no professional knowledge to guide them.

And so there is nothing for us but to recur to the subject from time to time, and keep alive the public interest in a problem the attempted solution of which will probably constitute the severest test of the capacity of a republican government to deal with great economic questions, which the Governments of the United States has ever been exposed to.

It is a problem that will never present itself in its true light until we begin to import timber from northern Europe, nor will the problem ever present itself in its true dimensions until, urged by necessity, we shall have determined what available materials can be substituted for wood.

America entering the twentieth century with a population of a hundred millions, and dependent on the Baltic forests for three-fourths of her timber supply is a picture conducive to serious reflection.

THE MARKSMAN'S HOLIDAY.

IF there is a god of marksmanship to whose honor gun powder is burned, a saint of the shooter other than good St. Hubert, surely the American Thanksgiving Day ought to be named in his honor on the calendar of saints. The reports in our rifle and trap columns show that the rattle of the rifle and the shotgun beat a close accompaniment to the tattoo of the all-prevalent gobbler drumstick in marking the celebration of the day. Some of the shooters were within ear shot of the surf beating on the Atlantic shore, while others looked out from their shooting grounds over the broad expanse of the smooth Pacific. Some fired close to the border of the Dominion, others hugged the other edge of the Republic and found good shooting grounds on the shelly shore of the Gulf.

A few of the events which came within the knowledge of the all-pervading reporter are recorded in our pages. Hundreds and hundreds of other pleasant little tests of shooting skill were billed, in which the beautiful November weather was enjoyed, and a fine appetite worked up for the feast connected with the day's proper observance. These may not appear in print, but they were just as much appreciated and enjoyed as the more formal affairs with their medal and prize accompaniments.

The day is growing, as is every other one of the few American holidays, into a date for outdoor events. There is always some form of open-air enjoyment fit for the day. Whether that day be the blazing Fourth of July or in the nipping Christmastide, sun and crisp frost are equally enjoyable if taken in the right way, and for general, all-the-year-through application the trap-shoot and the test of skill before the butts seem to stand unique among sports. November, with its gray skies and moist atmosphere, is perhaps peculiarly fitted for fun with powder-burning devices, and so it comes that the only off day in the November list is crowded with shoots of all manner of magnitude, making in the aggregate a grand outburst of noisy recognition of the civic holiday and one quite at variance with the ideas of its puritanical originators.

SNAP SHOTS.

A SMALL-SIZED rumpus has been raised over the "coursing" of hares on Long Island by fox-terriers, the hares having been taken from a pen, dropped to the ground in sight of the dogs and quickly killed by them. The purpose of this proceeding was presumably to test the speed of the terriers. The Society for the Prevention of Cruelty to Animals interfered and arrested the participants on a charge of cruelty, and a trial in a Long Island court resulted in an acquittal. The qualities of "sport" and "cruelty" are so debatable that much might be said with reason on either side of the question here involved; but most lovers of manly field sports will agree that if in the Long Island fox-terrier hare killing there is not very much of "cruelty" there is even less of "sport."

As a complement of recent notes in the natural history columns of game birds invading the haunts of man, comes a story from Cairo, Ill., saying that on Tuesday, Nov. 13, a large deer swam the Ohio River from East Cairo, Ky., ran up the Ohio levee and broke a large plate glass in the Indiana Central Railroad office. All the operators ran out of the office and the deer was killed. It weighed 200lbs.

THE MISFORTUNES OF PANI PUK'KOATS.

IT was night. Within the lodge all was warm and bright and cheerful. Without, the snow lay deep on the ground, the sky was an intense black, such as we only see in winter, and through this blackness the myriad stars shone or flickered with a brilliance that was wonderful. Some of them, the planets, looked like distant fires, which at one time would die down a little, and then burst into blaze and seem to assume twice their former size; others were clear, steady points of light, and others still smaller, till those in the Wolf's Road resembled a little white dust thinly scattered on the black of the heavens, making it look gray. It was toward the beginning of winter, and over the eastern hills the shining belt of Orion now showed itself as the night wore on. The air was bitter cold, and you felt, if you put your head out of the door, that the snow would creak sharply under your tread were you to step out into it.

The night was still, and not a breath of air lifted the light snow wreaths or shook the smoke shield. Usually in this wind-swept region the gales howl all night through these narrow valleys, groaning among the peaks, and, as they approach, raising their voices till, as the blasts reach you, the sound is a wild scream. Then comes the rattle of the smoke shield, the shrill creaking of the lodge poles, and the deep, drum-like sound, as gust after gust thunders against the side of the lodge and presses the tightly-stretched canvas in between the poles. On such nights the mountains are vocal with dismal sounds, and one might fancy that a horde of witches were holding their revels among the rocks and the trees about them, or that a legion of fiends had been released from hell and exposed on the peaks to the fury of the storm. On this night it was still and the air was voiceless. Not even the soft cooing *Hoo, hoo, hoo-hoo* of the owls was heard, and only once did the petulant call of a lynx sound through the clear atmosphere.

It was pleasant within the lodge. The day had been one of hard exhausting labor; of work beginning before daylight and ending after dark. Now it was over, we were content. And why not? On a small quaking aspen tree near the lodge door hung a load of fat sheep meat that had been brought into camp an hour or two before. We had changed our wet garments, had dined well, were warm, dry and full, and felt stealing over us the delicious languor which follows the hearty meal after a day of vigorous work.

I wish that I could paint for you a picture of our home, so that you might see it as I do now with the eye of memory. I cannot do this, I know, but I will try. Our lodge is an ordinary conical one, such as is commonly used by the Northern Indians, 12ft. in diameter and as many in height. At the top is the smoke hole, through which, looking up through the cloud of gray vapor that rises from the fire in the center, one can see dimly a star or two. The fire burns brightly, and every now and then some one puts on it a stick or two of the finely split aspen wood, partly for the warmth, partly for the light and partly to make a high blaze which will keep up a good draught and carry the smoke well upward. At about the height of a man's head the smoke spreads out and fills the upper part of the lodge, but then no one ever stands up in a lodge. On lines stretched about the lodge poles, five or six feet from the ground, are various articles of wearing apparel, placed there to dry. There are socks and shirts, boots and shoes, trousers and a coat. The walls of the dwelling are brownish black, darkest above, where the smoke has done its work, and shading into paler below, where only dirt and actual wear and tear have stained them. Down on the ground floor you would see, if you had this scene to look back on as I have, to the left of the door our cooking utensils and our sacks of flour, bacon and sugar, then the beds, stretched close to the walls, around nearly to the door again, where is the woodpile and the water bucket. The beds are not very wide and there is abundant space for the fire in the middle of the floor.

This is our home, here we spend our time, laughing at the storms of rain, sleet and snow, which daily burst upon us from the mountains, and lulled to rest by the roar of the warring elements. The sailor in his hammock in a storm at sea rests peacefully and quietly, undisturbed by the fury of the gale; so we, after a hard day's work, hearing nothing of the howling of the storm, the crash of the rock slide or the thunder of the cataract, sleep like tired children on the bosom of our common Mother.

On the bed nearest the door as you enter the lodge sits Jack, the Outlaw, busy with awl, needle and waxed thread, patching his wornout shoes. He whistles merrily "The Son of a Gamboleer," sometimes interrupting himself to mutter objurgations on the Jew who charged him $4 for such a pair of worthless shoes, and then changing off to a droning song, which assures us that

"The days of old were the days of gold,
The days of forty-nine."

Next to him sat Appekunny, crosslegged like a tailor, and busied in putting a patch on that part of his trousers which is most used when one is at church, or in the saddle or at dinner. Yo is the next man, sitting pipe in mouth on his bed and doing nothing, and next to him comes the Small Chief, that ancient Pawnee warrior who has been Yo's companion in so many scenes of happiness and of hardship. Once more the same blanket covers their lean and sinewy forms, and the bald head and the gray now rest again on the same pillow. Next to them, and so across the lodge from Appekunny, is the stalwart form of the Rhymer, who with his moccasined feet stretched out toward the fire, and a dainty cigarette held between his lips, is perhaps composing a poem, but more probably is dropping off to-sleep. And last of all, near the woodpile, his bronzed face bent toward the fire, and his coal-black hair hanging down toward his hands, is Black coming in sight over the Hill, a noted warrior and hunter of the Pegunny.

Years ago, before the white men were so many, he was strong in war. Long journeys he made to strike the Crees, the Crows and the Gros Ventres of the Prairie. Many the horses he stole, the scalps he took, the *coups* he counted. Now all this is changed. Indians have to stay on their reservations, and Brocky, as we call him for short, goes to war no more.

The last scalp he took was in a fight with a Cree war party that made a foray and stole a lot of horses from the Pegunny. The latter followed, overtook them and recovered the horses; and in the running fight that ensued Brocky closely pursued a Cree, who took refuge in a coulée, and shot his pursuer as he came up. The ball struck him in the forehead high up, and passing around the skull lodged under the skin at the back of the head. Brocky killed the Cree, counted *coup* on him and took his scalp. This he afterward sent to me as a present. I have it still. Watch him now as he bends toward the fire, industriously fashioning with his knife a new stem for his pipe. His kindly honest face does not look very ferocious, but he is a brave warrior and a strong hunter.

Yo and the Chief were both of them lame and sore from the exertions of the day, for each of them had packed on his back a heavy load of meat along the rough mountainside, now over smooth, sliding shale, or again over great rocks where the footing was unstable, and steps had to be now long and now short. As they sat there on this night, side by side, the silence was broken by speech from the Chief, who turned to Yo and said, "Old Man, did you mind my laughing at you to-day when you fell and the sheep fell on you? I did not mean to, but you looked so funny when you disappeared in that crack with the sheep on top of you that I couldn't help it. Besides, I felt sure from the character of the remarks you made that you were not much hurt."

"I thought when I plunged into that hole and that sheep came down on top of me that I was broken in two," said Yo, "but I got nothing worse than a few bruises."

"I ought to have killed that other sheep the first shot," continued the Chief. "If I can't do better shooting than that, I shall be like old Pani Puk'koats pretty soon."

"Who is that?" questioned the Rhymer.

"He's a Pawnee Indian," replied the Chief, "Yo knows him right well. I never think of him without laughing at his story of the cow."

"Well now, let us have it at once," said the Rhymer, "I am just in the mood to listen to a good story."

"It was in 1876," said the Chief, "and our scouts who numbered about one hundred had just been mustered out at Sydney. There we received rations to carry us as far as Fort McPherson, where we were to get additional provisions. But on the Platte, near Ogallalla, our horses stampeded and ran off, some of them going sixty miles up the river, beyond Julesburg. It took us two days to gather them, and when we got to North Platte we had nothing to eat. This is only about sixteen miles from McPherson. We camped at the Platte, and the next day went on to the post, where we got food.

"That same day there came to the fort a man named Jim McCann or Jim McKunn—I can't remember his name—anyhow it was Jim Mc something, and with him a sheriff, with a writ to take our whole command back to North Platte because Jim claimed that one of our Indians had killed a cow of his. Frank spoke to Jim, and asked him what he meant by it.

" 'My Indians did not kill your cow,' said he, 'they don't do that sort of thing; but we'll go back with you and let you prove it.'

" 'Well now, Major,' said Jim, 'you know I don't want to take these hundred Indians back to the Platte, and if I did, it ain't likely I could prove the killing by any particular one of them; but I know they killed her. I saw where they'd cooked and eaten part of her and the bones split for marrow, and I know they killed her. But I don't want to take them back. Let them pay for her and that will satisfy me. She was a good milk cow, worth $45 of anybody's money, and the sheriff's fees are $5. Give me $50, and I'll say no more about it.'

" 'No sir,' said Frank, 'I don't believe my Indians ever killed that cow, and I won't have them pay for her. We'll go back with you.'

"Old Pani Puk'koats, with some other Indians, was standing near during this conversation, and he said to Frank, 'What's that man talking about?'

"Frank answered, 'He claims that some of us killed one of his cows, and wants to take us all back to North Platte, so we'll saddle up and go with him.'

" 'We don't want to go back to the Platte,' said Pani Puk'koats. 'We want to go home. We've been out a year now, and we want to go home and see our families. We'd rather pay him for his cow and go on.'

" 'No,' said Frank, 'We'd better go back and prove that none of the boys did it.'

" 'We'd rather pay for it than go back,' said Pani Puk'koats. 'We all want to get home. How much does he want for his old cow? I'll give a horse toward it.'

"Some of the other boys said they'd chip in rather than go back, and so presently the amount was raised, valuing the horse at $30."

"Jim said he did not want the horse, but Frank said that he would give him $30 for it, for it was a good one. So he took the horse and gave Jim the $50, and he went away satisfied."

"The next day we started on down the river, and about the middle of the afternoon old Pani Puk'koats came riding up to Frank and me, and in rather a shame faced and at the same time confidential way he said to Frank: 'Ah-ti-us (Father) I have got something to tell you. It's about that cow,' and then he went on to tell the story.

It seems that when the Indians were paid off at Sydney, Pani Puk'koats saw a little .38-caliber Smith & Wesson rifle that took his fancy, and bought it and some cartridges, and took it along with him.

"When we got to the Platte and camped, some of the boys took the horses over to an island where the grass was good, and staid there watching them. Among those who went with the horses was Pani Puk'koats, and he took his little gun with him. A lot of the boys were sitting together smoking, when one of them picked up this gun and said:

" 'That gun's no good. It's too small. It won't kill anything.'

" 'Won't it?' said Pani Puk'koats as he put his hand in his pocket, pulled out a cartridge, and slipped it into the gun, 'Just put it against your breast and pull it off, and you'll know whether it will kill anything or not.'

"Just as he said this an old cow walked out of the willows about a hundred yards off, and stood there looking at them.

" 'Well,' said the boy who was running down the gun, 'it might kill a man if he held it against his breast, but it wouldn't kill anything far off. It wouldn't kill that cow.'

" 'Yes it would,' said Pani Puk'koats; 'it would kill her dead.'

" 'It wouldn't,' said the other. 'Just you try it. I dare you to.'

" 'No,' said Pani Puk'koats, resolutely; 'I should kill her.'

" 'No, you wouldn't,' said the other boy. 'In the first place you couldn't hit her, and in the second, if you did, the bullet wouldn't go through her skin. I dare you to do it. But you're afraid to. Ha! ha!'

"This was more than Pani Puk'koats could stand. He wouldn't be stumped. As he told it himself to us:

" 'Now, Father, you know I never in all my life hit anything that I fired at, but this time I just threw up my gun to my shoulder and fired, and the old cow tumbled down dead, shot just between the eyes.'

"When they found what they had done the boys were all sorry and scared, but Pani Puk'koats rose to the occasion. He said to them: 'Now we'll drag her out into the river, and stick her head down in the sand and leave her there, and they'll think she drowned.'

"They were preparing to do this when one of the boys said, 'She's pretty fat, and we have not had anything to eat to-day.' They looked at one another, and in about two minutes they had a ham off, and a fire built and were cooking the meat.

" 'I wanted,' said Pani Puk'koats to Frank, 'to cut off a nice fat piece of the meat and carry it over and give to you. Then if you had eaten it you would have been as much to blame as any of us.'

" 'And what do you think I would have said to you if you had brought it?' said Frank.

" 'I knew very well,' was the reply, 'what you would have said. You would have asked me where I got it. That's the reason I did not bring you any.'

"After they had eaten, Pani Puk'koats had to go over to camp, but he told the boys just what to do. That they must take the cow out to a deep hole where the water had swept the sand out, and sink her there, leaving only part of her head out of water. Then they must take all the bones and throw them in the deep water, and sprinkle sand over the fire and blood, and generally must cover up the traces of their crime.

" 'And Ah-ti-us,' said he solemnly, 'that's where I missed it. I ought to have staid there and attended to this myself instead of leaving it to others. After I went away, the boys lay down and went to sleep, and when they woke up it was late and they had to hurry back with the horses, and they just left everything lay there, and of course when the man came out to look for his cow he saw what had happened.' And he heaved a deep sigh.

" 'It's a pretty expensive dinner, Pani Puk'koats,' said I, 'when you have to pay a horse for it.'

" 'Your words are true, Father,' he answered, and then he fell back to his place in the ranks."

"And was he, whatever his name is, such a very bad shot?" asked the Rhymer.

"As bad as could be," replied the Chief. "I think

when he said that he had never hit anything that he shot at, he told the exact truth. He came into camp once with the story of a medicine deer he had seen, a blacktail at which he had fired five times at about thirty steps without making it do anything but jump up in the air. After the fifth shot it shook its head at him and walked slowly off over the hill, and he came to camp greatly impressed, and said that it was his medicine, and that was the reason he could not hit it. But the boys who knew how he shot all laughed at him. He never hit anything."

"Isn't that thoroughly Indian," said Yo, "his not being willing to take a 'dare.' They are just like children, as I have said, I suppose, five thousand times. You ought to have seen," he continued, addressing the Rhymer, "how the Chief turned Pani Puk'koats from a troublesome Indian into a good one. He needed just one lesson."

"Tell us about it."

"When he was first enlisted Pani Puk'koats, who was only a boy, was in Fred Matthews's company, and was constantly making trouble. Why, one time he even tried to fight with Fred, and was generally worthless. The next year the Chief had him transferred to his company to see if he could do anything with him. After the men had had their arms and horses issued to them, they were to be drilled for a few days until they had all got a general idea of their duties, and it was on the occasion of their first drill that Pani Puk'koats learned his lesson.

"The men were drawn up in line, holding their horses by the bridles, and the Chief sat on his horse in front of the line and explained to them that they should count off one, two, three, four; one, two, three, four, and so on, and that when the order 'Prepare to mount' was given, each man who was number four should lead out his horse in front of the line, so as to make room, and then after they were mounted should fall back into his place in the line. Having made this plain to them, he had them count off, and it happened that Pani Puk'koats was a number four. At the order 'Prepare to mount,' all the other men who had counted four led their horses out in front of the line, but Pani Puk'koats retained his place without moving. The Chief said to him:

" 'The number fours will lead out their horses. You are number four and you want to lead your horse out in front of the line as I ordered.'

" 'Oh,' said Pani Puk'koats, 'I can get on my horse very well here.'

"The Chief had a little ordinary Indian quirt in his hand and his spurs on, and when Pani Puk'koats said this, he answered him never a word, but sinking his spurs into his horse he rode right at the Indian. His horse jumped so quickly and the line was so close that Pani Puk'koats had no time nor room to get out of the way. The Chief's horse ran against him, knocked him down and went over him. I do not know whether it stepped on him or not. The Chief then rode round in front of the line and by that time Pani Puk'koats had picked himself up and was again standing by his horse, looking rather foolish and kind o' feeling of himself to see if he was all there, while some of the younger Indians were giggling at him. The Chief then said to him in exactly the same quiet tone he had used before:

" 'The number fours will lead out their horses. You are number four and you want to lead your horse out in front of the line as I ordered.'

"This time Pani Puk'koats said nothing, but led his horse out with a prompt and cheerful step, and from that time on there was never any trouble with him. He was one of the best and most willing Indians in the whole command. Isn't that a fair statement of the occurrence, Chief?"

"That's just about the way it happened, Old Man."

"This fellow must have been a character," said the Rhymer.

"He was, and we had lots of others that made a heap of fun for us. But I guess it's time to turn in."

"Yes, so it is. Don't put any more wood on the fire, Brocky. It's after 8 o'clock."

A little later the lodge was dark, and the only sound heard was the heavy breathing of the sleepers. Yo.

The Sportsman Tourist.

THE MAZEPPA HITCH.

Editor Forest and Stream:

I want to ask you a question, and I hope you'll forgive me if I spin it out pretty long, for it's mighty hard for an old fellow like me who don't handle a pen once a year to express himself so that he will be understood.

I live up here in the mountains and never go into the towns. I haven't any books except an old copy of "Homer's Iliad," written by A. Pope, and the only things I read are FOREST AND STREAM and once in a while a county paper. So you see I don't know anything about books or book learning, and now that I am puzzled I thought I would write to you. Maybe you or some of the men that write for your paper can help me out. I know that some of them know a good deal about the matter that's worrying me.

I came out to this country in 1851, and have been here ever since. I have done most everything here, hunted and scouted for the Government, and fought Indians and prospected and mined. It was a good country until after the war, when the left wing of Price's army moved out here and took it. Now it's too full of people, but I have moved round considerable, and it seems just the same everywhere, so I've built me a cabin up here in Meagher county, and during the winter I trap, and in summer I take out hunting parties and let them kill a little game. Now what I am driving at is this. Last year there came a couple of young fellows out here and stopped with me. They were pilgrims, didn't know anything about the mountains, hadn't ever seen any game. But they were the right sort after all, young, eager and strong, and what was more important, anxious to learn. So I got along right well with them and they killed game enough so that they went off satisfied.

One night one of these young chaps sat up and reeled off a lot of poetry about a man named Mazeppa. I had a horse once by that name that I bought of a webfoot over in Oregon for six beaver skins twenty-three years ago last summer. A pinto he was and a terrible good strong horse, but too big for the mountains and not spry enough. The Piegans stole him from me that same fall.

Now, this man Mazeppa lived somewhere in Europe, and it seems he got into some sort of a fuss with the chief of his band, and the chief punished him by packing him on to a broncho that had never been caught up before, and then turning the horse loose on the prairie. The young fellow that repeated the story when he came to this part of it said:

"They tied me on with many a thong."

The question I want to ask is this. What sort of a hitch did these packers in Europe use?

I have seen Indians pack and Greasers pack, soldiers pack and cowboys pack, and I am a packer myself, but I never heard of any hitch where they used more than one rope to lash with.

I have been throwing the ropes now for about thirty years, and if there is anything more to learn about packing than I already know I want to find it out. Some of the men who write for your paper are good packers I know, for I have read their articles, and some of them must have read a great many books and likely know all about this matter. If they do I wish they would write about it for your paper.

I understood that when they packed Mazeppa, they put him on a naked horse, and I know that I couldn't pack a man on a horse so that he would ride all day if I used more than one rope to lash with. I don't understand it.

MEAGHER COUNTY, Mont., Nov. 15. PACKER.

NOTES ON WESTERN FLORIDA.

V.—CRUISING DOWN THE COAST.

We spent a day with the old Scotchman on the Sopy-Chopy River, going over his farm with him and in the afternoon taking a long stroll through the pine forest. Partridges (quail) were numerous, and we easily killed enough for supper.

The surrounding country is a fine one, and when the railroad communication is more perfect will certainly offer great inducements to settlers. The farm that we visited was very fertile and showed the advantage of careful cultivation. Fruit of all kinds, especially the most magnificent plums, grew abundantly, and judging from the sleek appearance of the herds of cattle the pasturage of the swamps and pine barrens must be most excellent.

The drift down river was accomplished without incident, save for the occasional fouling of our rigging in some tall pine and the vast amount of Italian profanity necessary to extricate us from our position, and we ran through the canal and into the Ockolockone River in about one-third of the time that it took us to make the up trip. By night we had reached the bay and were once more rejoicing in that feeling of freedom that comes to the true sailor when he returns to the sea after a cruise in fresh water.

From Ockolockone Bay we sailed around to the St. Mark's Lighthouse that stands at the mouth of the Waukulla River. The light rises 80ft. above the narrow sandy beach and is completely surrounded by marshes; myriads of mosquitoes and sandflies make life almost unendurable, and at night we were obliged to anchor a mile out at sea in order to have relief from the wretched insects. It is difficult to understand how the keeper of the light manages to survive, and it is but another evidence that the human species is adaptable by nature to life under any climate or condition.

We reached this charming spot about dusk one Saturday evening, and found quite a little navy of sponging schooners riding at anchor in the little bay. The fisheries are only eight or ten miles off the light, and the fleet comes in every Saturday night to be ready on Sunday morning to ascend the river to the little town of St. Marks, where supplies of water and fuel are laid in for the coming week. There were about a dozen crafts, mostly schooners, varying from four to fifteen tons burden. The week's work had been a successful one, and all hands seemed in good spirits to judge from the laughter and shouts that came from every deck. We anchored about 200yds. from a boat owned and manned by some friends of our sailor, Santo; and, having potted more birds than we could gorge that night, we hailed our neighbors to come over and sup with us. The invitation was immediately accepted, and five very dirty and malodorous Dagos squatted around the hatch with us that night. As Santo was the only member of our crowd who spoke Italian, and as our guests did not understand a word of English, it may be imagined that the conversation was somewhat halting, and was principally confined to passing each other the bread and meat mixed with the most frantic gesticulations used to impress the most trivial remarks. Santo, however, kept up a pretty steady chatter. Polite fellows these Italians. Take them from any class and of any occupation and you will invariably find them scrupulous in etiquette. Give a penny to a Neapolitan beggar and he will thank you in such a way as to recompense you the gift, while the merest vagabond in the streets, after he has finished torturing you with his hand organ, will make a bow that a courtier might envy. True, the one may assassinate you, or the other steal your purse the next moment after having wished you God speed; but, even among rascals, a polite one certainly possesses advantages.

Taking it all in all we had a very pleasant supper—at least every one had enough to eat, and that constitutes the acme of a fine meal at sea. Rusticus and I retired rather early, leaving Santo to entertain our guests, which he did by keeping up one steady chatter that exceeded in volume anything that I have ever heard. Whether they were discussing the tariff, Italian politics, or the best way to cure sponges, I could not tell; but after the Dago fashion all talked at once, no one appearing to listen, and all hands made the most extravagant gesticulations. At times I feared that the confab was about to end in a general row; fists would be shaken in each other's faces and voices raised to the highest pitch, when a loud guffaw would show that they were only conversing in their regular tongue. Odd people they are, indeed.

At last, somewhat to our relief, the five rose to depart; each one kissed Santo and Santo kissed each one; then, like good Catholics, they made the sign of the cross, kissed again and rowed back to their own schooner, keeping up the chatter as the distance increased, until they were obliged to shout: and, actually, far into the night, after they had evidently retired, every now and then one would hail Santo from across the water and shout something that he had forgotten, some joke, perhaps, then all would laugh boisterously and lie down again.

The next morning, in company with the sponge fleet, we ascended the Waukulla River. The channel is very tortuous and badly defined, and the entrance in certain winds is dangerous. Banks of "coon oysters" are exposed on all sides to check and confuse the unfamiliar navigator, and the wrecks of several schooners show that great care is necessary in the handling of the tiller. Our fleet passed through in safety, following one another in Indian file. The Waukulla at its mouth is a stream of considerable size, the banks being at least half a mile apart. For the first two miles the surrounding country is one great marsh covered with high grass, and the abode of countless waterfowl. Cormorants and ducks flew over us in long lines or perched upon the stakes used to mark the channel, and we kept firing as fast as we could load. Alligators were extremely abundant and about as fearless as I have ever seen. A great fellow lay in front of an advancing boat and actually came near being run over before he would condescend to move. One that I killed by a shot in the eye, and luckily managed to secure before it sank, measured over seven feet, and it required the united efforts of all our party to hoist him on deck. I took the best of the teeth as trophies and then turned his carcass back into the water, a prey for the buzzards.

Four miles above the mouth of the river, where the banks become higher and palmetto groves dot the hitherto objectless level, is the site of the old town of DeLeon, once a thriving village with a considerable trade and the principal market of the sponge business. A railroad connected it with Tallahassee, giving direct communication with the interior and making of it an important outlet; but it was swept away by a hurricane some twenty years ago, and now nothing remains but the graveyard, whose stones mark the resting place of the town as well as its former inhabitants.

Five and a half miles from the sea the little St. Marks River makes into the Waukulla, and here stand the remains of an old Spanish fort, while the little settlement of St. Marks faces the river of that name a short distance above the junction.

We tied up at the wreck of what had once been a fine wharf in the days when the town had been on the boom, and going ashore proceeded to see the sights of this rather interesting bit of the past.

The railroad that once connected Tallahassee with De Leon passed through St. Marks and over the river on a fine bridge, but the same storm that destroyed De Leon wrecked the terminal miles of the railroad and it was never rebuilt, but operated ever since between St. Marks and Tallahassee. This road still exists and has a schedule time of three trains per week which, judging from what I saw of the roadbed, must be a severe tax upon the capacity of the line. A rather good tale was once told to me by a drummer, who had chanced to travel over this unfrequented road one winter. It seems that the track is at present built of old rails that are mostly the leavings of other roads, and that some of these pieces of iron are ridiculously short; at one place, so this friend of mine avows, an entire rail had been removed from the ties (carried off perhaps by some negro to be used as a sinker for a fishing line), so the train came to a stop while the conductor examined a gap in the track of about a foot. What was to be done? Drummer, the sole passenger, in despair, ten miles from nowhere and a close connection to make at Tallahassee. "Never mind," says the engineer. "All aboard." Up climbs the one passenger, back goes the train for several hundred yards, then all steam is turned on, and with a running start engine, tender and the one coach clear the gap in safety, and the engineer receives the thanks of the wondering commercial traveler.*

Before the war an enormous amount of cotton was annually shipped from St. Marks direct to European ports, and though the town itself never contained over five hundred inhabitants, yet so advantageous a position did it hold at one time that the annual business was enormous. Great warehouses and compresses were erected, and the prosperity of the place was phenomenal; but the same causes that occasioned the fall of Apalachicola were felt here, and now the town has fallen to almost nothing. Two stores and four or five dwellings are all that are left. It is indeed the abomination of desolation, infested with crowds of the dirtiest, blackest, most repulsive of all negroes; that swarm everywhere, lounging around the stores and fighting, swearing and shouting to their heart's content. Many of them are employed on the spongers, and come here to spend their hard-earned wages in buying the gaudy trinkets with which the store keepers catch their fancy. The place must be frightfully unhealthy, as it is but a small patch of dry ground completely surrounded by swamps. "No," said one of the inhabitants, to whom I had put the sanitary question, "St. Marks is perfectly healthy, but they have right smart o' fever over yonder," pointing away off somewhere. But so it always is if you take the word of a native—the fever is never here but always there; and were one to seek a self-acknowledged sickly country, it would be almost as hard to reach as the end of a rainbow.

The fishing in the rivers and on the sea off St. Marks lighthouse is magnificent, and on train days, when the boats come in to ship their catch to Tallahassee, one may see an array of fish that is truly wonderful. On this business, and the small part of the sponge trade that

*The well-known characteristic of drummers prevent me from vouching for this somewhat doubtful story.

comes here, depends the ebbing life of the place, and yearly, as the latter trade grows less, in like ratio does the pulse of the old town beat more feebly.

The St. Marks River is a beautiful little stream, not over fifty yards in width, with a bottom of the hardest lime-rock. Alligators swarm in great numbers; and the country through which it winds its upper course is said to be an excellent game preserve, but we were unable to explore it, leaving that for some trip in the future.

The old fort that stands at the junction of the rivers has a singular history. It is said to have been built by the Spaniards at the same time as the one at St. Augustine, and while it never compared in architecture with the latter, yet the ruins exhibit much similarity of construction. During the late war the Federal troops took advantage of the yet firm old walls which had stood for centuries, and made them a basis of operations, establishing a powder magazine of considerable size. Toward the close of the war a member of one of the negro regiments here stationed happened to be one day suffering from a chill. Conceiving the brilliant idea of using one of the bombshells from the magazine as a foot-warmer, to mitigate the shaking of the ague, he rolled a shell to the camp-fire and sat waiting until it should be warm enough to give him the expected relief. History does not state whether his feet are now sufficiently warm, but certain it is that he and eight of his fellow warriors died in such a manner as to make burial an unnecessary not to say impossible proceeding, while the tremendous explosion that followed on this act of guileless innocence wrecked a greater part of the remaining walls of the fort.

Some years ago a marine hospital was built of the limestone rocks of this twice used fort, but it did not prove a success, and now this building, a massive two-storied structure, stands in ruins on the ground where its stones once beheld such varied and stirring scenes.

We wandered for an hour among these thrice-crumbled walls, a melancholy spot, with bits of masonry here and there peeping out from under a tropical growth of palmettos, and the foundations of great ramparts covered over with wild rose bushes and the blossoming blackberry; but enough of the old walls still stand stoutly as ever amid the surrounding desolation, to attest that an empire, once the greatest in the world, here held an outpost. What tales these old stones could tell were they but endowed with speech! Of how the gallant robbers of Spain, with their nodding plumes and shining armor, here landed and erected this defense, amid all that gorgeous pomp with which new lands were dedicated to the Catholic rule; and of countless combats with the natives of the then unexplored "Land of Flowers." What laughs and jests have been echoed back as over wine cups the stalwart warriors forgot for a time their dangers and sorrows and lived once more. Many a time, perhaps, have the moss-covered stones softened the sounds of sad requiems as some member of the gallant band was laid away far from home and kindred. Then, abandoned for centuries, the old fort lay decaying amid the unbroken solitude of the marshes, given over to the alligator and lizard, and occasionally, perhaps, giving refuge to some piratical rover of the Gulf, till at last it greeted the more soberly attired but not less gallant pioneers of a higher civilization and became a second time the scene of bloodshed, as it formed a combat ground for the contending forces of the great civil war. Now, in a ruined hospital, the same hard, imperishable limestone stands as a monument to the folly of some visionary, who erected a sanitarium here on a spot reeking with miasma.

It is always a very difficult matter to obtain much accurate information from the natives in regard to the past of their country; not that they are taciturn or unsociable, but the general apathy which lies over everything in Florida, seems to have had its effect upon the memories; and their recollections of even comparatively recent events seem to be much clouded; and so it is that, perhaps, this account of St. Marks and its interesting fort is not as full as it should be, gathered as it was from willing but not brilliant historians.

We did not remain over night in St. Marks, but cast off moorings about four o'clock in the afternoon, and in company with some of the fleet that had been our companions on the way up, sailed to our old anchorage off the lighthouse, where we prepared ourselves for the night. While supper was being cobked, Rusticus and I repaid the visit of Santo's friends of the night before, and took our introductory inspection of a sponger. It was not a pleasant experience at first, for the odor from the decaying animal matter was simply terrific; but in a short time our noses became used to it, and we then looked into the *modus operandi* of this out of the way and but little understood industry. A short account of which may not prove uninteresting.

The sponge reef of Florida begins a few miles east of Apalachicola, and hugs the coast to within fifty miles of Cedar Keys; then there is a break of 100 miles, after which it reappears and runs south without interruption to Key West and the Bahama Islands. This reef, a rocky ridge, sometimes of genuine limestone, but generally of coral, begins some six or eight miles from shore and continues out indefinitely; in fact, wherever there is a rocky bottom sponges are said to be found, and the only reason that the fisheries do not extend completely around the Gulf coast is that in places, as off the coast of Texas or Cedar Keys, this rocky bottom begins in water too deep to permit of profitable sponging.

The average depth of water on the St. Marks reef at six miles from land is 16ft. The sponges are in great abundance and of good quality, being much better than those from the coast of Mexico, but rather inferior to the Bahama variety. The supply is practically inexhaustible, as they grow almost as fast as gathered, a sponge requiring only two years to reach maturity.

The vessels used in the business are generally schooners of about eight tons burden. They carry two small boats or dinkies, and are manned by a crew of five. Provisions are generally laid in for six weeks at a time, the usual limit of a cruise. At the reef two men go to each of the dinkies and the work begins. One slowly sculls around by a stern oar, while his companion examines the bed of the sea through a bucket with a glass bottom. This simple contrivance is fastened to the side of the boat low enough down to rest partially in the water, and by placing his head inside the bucket one can see with distinctness objects at a depth of even 30ft. When a desirable sponge is spied it is brought up by an iron hook fastened on the end of a long pole. Herein lies the science of the craft, the knowing how to hook a sponge without tearing it all to pieces. A great deal of knack is requisite and is to be acquired only after long practice; and good hookers are always in much demand. Thus these men work on, day after day, under the tropical sun that burns and browns the skin until one cannot tell a white man from a negro. It is a desperately hard life, more severe than any other I have ever seen, and it requires men of no ordinary constitution to stand up to it. Naturally, then, the spongers, as a race, are an exceedingly muscular set. Four of the crew being thus employed the duty of the fifth is to remain on the schooner and keep up with the dinkies, so that in case of a squall or a broken oar, he will be on hand to render prompt assistance. He also does the cooking, mends ropes, lays out sponges and plays the part of general utility man.

In the evening the fruits of the day's labor are spread out over the deck of the schooner, where they remain for four or five days, until the gelatinous matter that forms the life of the sponge putrefies. As may be imagined, the odor on one of the vessels, when thus freighted, is simply indescribable, but the sailors do not seem to mind it and say that it is rather healthy than otherwise, though I confess that I should prefer a little less health and purer air.

On Saturdays all boats go to land, and the sponges are thrown into what are known as crawls, or cages of logs, built on the shore of some inlet, where the rise and fall of the tide permits the free ingress of fresh water. In these pens the putrefying sponges remain for a week, until the next visit of the schooner to land, by which time the washing of the water has done away with most of the animal substance. The next process is to cleanse the sponge from any grit or dirt that may still cling to it. This is accomplished by beating them with short wooden paddles until all the sand or filth is loosened. A thorough washing in several waters and a short bleaching in the sun complete the first stages of preparation; and having been strung on strings in bunches of twenty, the sponges are now ready for the local market.

The trade in Apalachicola, the principal port, is actively sought after by the merchants, some of whom act as agents for the large houses in the North, and when a sponger comes in with a cargo, sealed bids are sent in by the different buyers for the entire lot. The prices vary with the condition of the market, but an average quotation for a bunch of sponges, each one of which is half the size of a man's head, is about a dollar and a half, though bids often buy for much less.

The cargo being sold, the proceeds are divided in the following manner: First, the expenses for provisions and necessaries are paid; then of the net earnings the owner or owners of the schooner take one-third, and the remainder is equally divided among the crew. Should the owner of the vessel be one of the workers he receives his fifth in addition to the hire of his craft. With average luck a crew will gather about 1,200 sponges a week—they often exceed that figure. The general stay being six weeks, a cargo will consist of some 7,000 sponges or 350 strings. These at $1.50 apiece make the gross earnings amount to $525; deducting $75 for expenses a net surplus of $450 will be left, out of which the boat takes $150 and the sailors receive $60 apiece. It is small pay indeed for such labor. Nothing on earth wears a man out so soon as sponging. The weeks of toil beneath that burning sun, the tremendous exertion required to handle hook or paddle all day without rest, the scurvy-producing food and stuffy water, and the deadly fevers that from their retreats on the swamp-bound coast cast their malign shadows far over the life-giving ocean itself—all these form a combination of hardships unequaled in any other pursuit. Italians are the larger element among these toilers of the deep and are admirably adapted for the work, coming as they do from a semi-tropical land and acclimated by residence in Florida.

After they come from the schooners the sponges are generally bleached by the Apalachicola merchants and trimmed into a round shape. Then, having been sorted according to different degrees of softness, they are packed into bales of 100 each and shipped to the North.

We remained in the vicinity of St. Marks Light for several days, not that it was an especially attractive place or that it afforded unusual shooting facilities, but because it was a good point to watch the interesting processes, from which we gathered much information in regard to the sponge industry. During my stay I managed to get pretty well acquainted with some of the sailors, and on several occasions made short trips with them on their odorous vessels, seeing for myself their methods and gaining an insight into their characters. They are a happy set in spite of the hard life, and seem to be in one continual good humor all the time. How they do chatter away in their Italian patois, and laugh and joke with each other as though they had not a care on earth. They are all the most devout of Roman Catholics, and even their arduous duties do not interfere with the strict observance of the forms of their religion. What a hold Romanism has on its followers. A Catholic of any station of life is always true to his faith through thick and thin and boldly acknowledges his belief before the whole world, not in the half-ashamed way of members of other denominations, but with the assurance of a man who knows what he is about.

ALEX. M. REYNOLDS.

THE CHARMS OF BEAUFORT.

The following notes, written in April, 1888, may not be untimely now, when people are looking toward the South and planning for a stay in a warmer climate.

BEAUFORT, S. C., April 28, 1888.—As I write I can hardly realize that I am within a little over a day's journey from the scenes described in my home letters, received from central New York this day. They describe to me the "falling of snow," "cold wind," "hotbeds snow-covered," and "roads from the country so snow blocked that the farmers find difficulty in reaching town." But I am sitting, clad in thin flannel, in the open air on a piazza, reading, writing and, in turn, dreamily gazing upon the scenery before me. At my front to the southward, for six or seven miles, extends a broad expanse of blue water, its surface broken here and there by the summit grass of marsh islands, for the tide is in. To my right and left, as far as the dense foliage of live and water oak, magnolia and pride of India will permit my view, it is the same; for at this point the Beaufort River, whose general course is north and south, makes a sharp bend to eastward, and the elbow forms a handsome bay, the water reaching to within 16yds. of where I sit.

Across this bay, about two miles away, white mansions peep here and there from the green foliage which skirts the entire bay. At my immediate front are splendid trees, at my left a beautiful garden, luxuriant in its quantity and variety of flowers, among which roses of many kinds and of rare size and fragrance predominate.

The porch of the house at my left—that of Col. Elliott, M.C., is draped with a wreath of climbing roses and honeysuckles, such as are rarely seen. The still life of the flowers is relieved by the constant flitting to and fro of bright scarlet cardinals, bluebirds and woodpeckers and the pets of the parish, the sober-hued mockingbird.

The blue surface of the water is rippled now by little caps of white, and the white sails of the fishing and pleasure boats are beginning to glide rapidly, for the sea breeze has made; and at this nature-favored spot that luxury never fails, the hottest day of summer changes by noon to a most pleasant temperature; miasma is swept away, and failing energies revived by the cooling sea breeze, which makes of afternoon and evening a season of enjoyment; of night one of repose. Coming a dozen miles from the ocean, it has driven through the sturdy branches of the live and water oaks, tossed thousands of magnolia blossoms, ruffled great beds of roses and other flowers and the rich grasses of the points and islands it has passed over, enriching them with its saline particles, and receiving in turn rich freight of their mingled fragrance.

I am listening to sweet music. As I write—with pad in lap, my feet in true American style resting on the rail of the piazza—there came a little inquisitive gray visitor, who, with head jerking from side to side, and long tail up and down, hopped nearer and nearer, until within two yards of my quiescent feet. Evidently he wanted to be sociable, and gave little half notes of welcome, changed suddenly into the music of a being-wound-up Waterbury watch, as another mocker pounced on him and inaugurated a row, ending by their separation, one to a live oak on my left, the other to a Chinaberry on my right, neither two rods away; and there they sit singing, either at each other or at me, for all they are worth. Tame and plentiful as robins North, the mockingbirds are in every tree, and keep the air filled with melody, building their nests in jasmin-covered porches, within hand reach of the families whom they favor.

If any letters descriptive of this most beautiful part of our spring and winter resorts have been published in these columns, I do not remember to have seen them; hence I consider myself fortunate that in spite of the great strength of your new corps of prospectors, gathering rich treasure for the FOREST AND STREAM, it has been left for Piseco to claim and locate this rich mine, a very placer, for in all directions are lying nuggets ready for the pan.

In their seasons the hunters of deer and foxes have rare sport following the hounds, of which there are excellent packs, owned and run by whole-souled fellows, to whom a stranger of the right kind is an honored and favored guest. And very rarely is the deer or fox chase a blank. Fourteen foxes have rewarded the last six runs of Captain Richardson and Colonel Darlington's pack, and frequently Master Reynard is jumped within a mile or two of the city of Beaufort. Foxes are on all the islands, as are rabbits and quail; deer on Hilton Head, Hunting Island, and on the mainland.

In August the summer ducks come, and are followed by many varieties throughout the winter; and there are well-known stands among the reserve waters of the rice fields on the mainland. Partridges (quail) are abundant, and an afternoon's work is considered a poor one that averages less than two dozen to a gun. There are plenty of good dogs, the pointer being the favorite.

Beginning in March, fishing is good until late autumn. First come the whiting and blackfish, found everywhere, and most excellent pan fish; then about the middle of March, staying until the middle of May, the drumfish, ranging from 20 to 90lbs. weight, and of these I have seen the boats return with nearly 200 in one day's fishing. They are caught first and mostly in the deep Broad River, in 20 to 30ft. of water, the bait being prawn, crabs and clams, valuable in the order given. The prawns come and go with the drumfish, and are succeeded by shrimp, which are the best bait for the fish that come and go with them, viz., the striped bass and squeteague (trout). In the fall there is excellent surf fishing for the bass and trout. So in a general way this is for a sportsman a most charming place in which to while away the snow season.

I have been here since the 1st inst. and can but regret that I knew nothing of the place, its delightful climate and many resources much earlier, and that fate thus kept me during stormy March in Aiken. The famed dry air of that place (however grateful to those whose weakened lungs require it) with its load of dust and clay, driven by the keen March winds through every crevice and cranny, with which Southern wooden houses are generally well provided, is anything but pleasant to many, of whom I am one. Air can be too dry. The much vaunted pine groves of Aiken are rapidly yielding to the demand of the wood-burning locomotives; favorite rides or drives through them must be preceded by long pilgrimages over wretched dusty roads, with on either hand embryo cotton or cornfields, whitewashed shanties, pigs and darky young ones for scenery. The streams and ponds are dwindling, the air, already dry enough, becomes too dry. The March winds, although not so robust as before their journey South, are keen, and their thinness gives them entrance.

Aiken has certain great advantages over Beaufort, as first-class hotels and the crowd of pleasure as well as health-seeking clever people who meet there. It is a neutral point, where two great tides of travel meet, as later on at Old Point—the flood from bleak New England to avoid the cold, the ebb from sunny Florida to avoid the increasing heat.

Beaufort has not these attractions; it is not well advertised, few Northern tourists know of it, and its only hotel has not as yet earned a reputation, that does much toward drawing; it is off the direct line of travel, and at this season very few not drawn by business seek it. Later in summer, Southern people from the inland cities and from the malarious plantations on the mainland, come to Beaufort as a watering place.

Beaufort has a very poor and vicarious market, and only those who, like myself, are willing to accept the fish, crabs, oysters and terrapin, and other sea fruit as

substitutes for good beef and mutton, canned tomatoes for fresh, and blackberries for strawberries, would stay there long. Beef there is, and mutton; but to speak my best word for it I can only say that it is not quite so bad as that of South Florida. Luxuries are expensive.

PISECO.

[TO BE CONTINUED.]

Natural History.

DESTRUCTION IN MIGRATION.

IT is now well known to ornithologists that thousands of birds are annually killed by flying against light stations, telegraph wires and other obstructions, but I have never before had opportunity to learn what a great mortality a single storm will bring among our smaller species during their migration. In Chicago, May 11 was a bright clear day, the temperature reaching 64°, but early the following morning a cold wave from the northwest reached us accompanied with a gale of wind, which attained a velocity of thirty-four to thirty-eight miles an hour, continuing with gradually less force till the 13th. As the gale approached the thermometer sank rapidly until it reached 44°, and the following two days touched 35° and 38°.

On the morning after this sudden cold snap I was surprised to see redstarts, black and yellow warblers and black and white creepers hopping about on the window sills and doorsteps of my house, which is situated in a somewhat thickly settled locality. They appeared half stupefied and could almost be taken in the hand. Later in the day I saw several in the heart of the business portion of the city, flying about as if lost and hunting for food.

A few days following all the daily papers had short articles on the subject, one paper stating that "hundreds of small birds had mysteriously fluttered to the earth hereabouts benumbed with cold, many of them dying."

I visited the shops of several taxidermists and found that for some days specimens of redstarts, Canada flycatchers, black, yellow and black-throated blue warblers, Wilson blackcaps, black and white creepers, and other species, had been brought to them to mount, having been picked up dead in gardens and on the streets, in a few instances caught alive in houses, having flown in through the open door or window.

My friend, Mr. G. Frean Morcom, informed me that in Lincoln Park, situated on the north side of the city, he saw for several mornings a large number of warblers of several species searching for food on the ground and in the low bushes.

In the Chicago *Evening Journal* of May 15 I read the following:

"A dispatch from Racine, Wis., dated May 14, says: 'A farmer arrived in this city from North Point, a few miles distant, this morning, having with him a large box completely filled with dead birds of a species unknown in this locality. The birds are of a dozen different varieties, and the farmer states that the ground at North Point is covered for miles with thousands of the dead bodies. The strange birds have a very fine plumage; red and yellow breast with black wings. The supposition is that the birds were driven here by the wind storm Friday night, and, being overcome with the cold, perished. Where they came from is unknown, none of their kind ever having been seen here before.'"

I then addressed a letter to Dr. P. R. Hoy, of Racine, Wis., situated about sixty miles north of Chicago, referring to the above note, and asking if his attention had been called to this unusual devastation of birds, and his reply in detail is most interesting, from which I quote the following:

"Friday, May 11, was a beautiful day. A cold wave, however, reached us at midnight, accompanied with a high wind from the west, which continued unabated until Sunday morning. During this gale the thermometer sank rapidly into the thirties; the lowest recorded was 34°, the highest 42° during the gale. This remarkably cold wind occurred just at the time when the greatest number of small birds were migrating north. It is not necessary to say that nearly all land birds and many waders migrate only during the night, resting and feeding during the day. On Saturday morning the 12th hundreds of birds, mostly warblers, were found on the ground, they not being able to remain on the trees; they were suffering from cold and hunger, and many were caught with hands alone. They entered houses of every description, regardless of noise or confusion. The ignorant many supposed they were blown here from some unknown region, that they were newcomers such as had never been seen here before, when in fact they are always found in numbers at this season during the May migration, but as they remain on trees they were not noticed by them. On Sunday morning, May 12, hundreds of birds were found dead; they were brought to me by the basket full by several persons. I give the name and number of each species so far as I personally saw and inspected them:

Scarlet tanager 8 specimens, golden-crowned thrush 30, ruby-crowned thrush 40, least flycatcher 20, wood pewee 10, redstart 60, Canada fly-catcher 30, Maryland yellowthroat 25, Nashville warbler 30, Wilson's blacklegs 20, black-throated blue warbler 125, black-throated green warbler 75, black and yellow warbler 50, bay-breasted warbler 20, golden-winged warbler 10, Tennessee warbler 8, blackpoll warbler 35, Cape May warbler 6, yellow warbler 15, chestnut-sided warbler 6, yellow redpoll warbler 15, yellow-winged warbler 2, black and white creeper 5.

In addition to these were a few sparrows and swallows and doubtless many other specimens which I did not see. Nearly all were males in perfect plumage, the females not yet having arrived, as in most birds the males precede the females. This disaster, which destroyed so many thousands of these birds, is interesting; nature has been cruel to these beauties, and may such a calamity never again be known."

From several localities along the lake shore I learned that numbers of small birds had been found dead, washed up on the beach, having been overtaken by the storm while migrating across the lake, beaten to the surface and drowned. Yet this is not unusual, and several similar instances have already been recorded.

UNION CLUB, Chicago. RUTHVEN DEANE.

THE WAYS OF SNAKES.

Editor Forest and Stream:

In your last number "Chokebore" states that a Mr. Caswell "came upon a black watersnake in a sunny sand hole," and after killing the snake "found in the sand about a dozen eggs," and hence it is definitely settled that some snakes lay eggs.

I can confirm this statement from personal observation. While hunting for woodcock in a bog meadow a few years ago, I came upon two watersnakes. One moved off very slowly and the other lay tightly coiled over a space about 3 or 4in. in diameter. I approached so near that it finally uncoiled and very slowly and reluctantly moved off, when I found in the grass, elevated a little above the ground, a beautiful soft round nest made of dead grass about 3in. in diameter, filled with eggs, over which the snake had been coiled and hatching. It looked just like a bird's nest, and I at first thought it was a bird's nest into which the snake had crawled. I felt of the nest and eggs and found them warm. The eggs were splashed with reddish spots and were quite large, about the size of those of ruffed grouse. I broke some of the eggs and found that they contained young snakes nearly hatched. My son and another young man were with me and also saw what I have stated. It is therefore certain that the watersnake lays eggs and hatches out her young by the heat of her body, the same as the barnyard fowl.

KINGSTON, N. Y., Nov. 12. J. E. VAN ETTEN.

Editor Forest and Stream:

I am one of those few who have seen the young snake go down the throat of the mother on her giving her young notice of danger. J. O.

HICAGO, Ill.

A GLIMPSE OF DEMERARA.

MR. WADE inquires about Charles Waterton and his works. When a boy Waterton's "Wanderings in South America" was my favorite book. It is full of curious and useful information. His delightful style in narrating his adventures in the equinoctial regions of South America filled me with a longing to go over a part of the same ground. In December, 1870, I was able to gratify my wish, and sailed from Baltimore for Demerara. It was an unlucky journey for me all through. We were ice-bound in the bay for two weeks, and would have abandoned the brigantine had we been able to get away. Several vessels were driven ashore and we had many narrow escapes, as our anchor chains had broken and we were at the mercy of the tide. After a two-days' rain we finally cut our way into an open space of water, and, having a stiff breeze, managed to push through the ice fields into clear water. The sight that we beheld upon our arrival well repaid our arduous voyage.

The monotony of a low, flat country was compensated in our Northern eyes by its luxuriant flora. Flowers everywhere; by the roadside, in the gutters, creeks and rivers; air, earth and water rival each other in bloom, and even the donkey driver urges his slow-going beast with a branch of oleander. Kids, the indispensable property of the poor man here, rub their lean sides against a jessamine hedge, a mother goat nibbles the branches of an almond tree, bananas hang ripe in clusters and orange blossoms scent the air, above wave the plumed heads of the stately palm, and still nearer heaven the cotton tree, which the Indians worship, spreads its broad branches, while the blue sky and hot sun look through. The sun is here at home and seems to have lavished his best on his dwelling, where the scene appears a dream and the languid air recalls the Land of the Lotus Eaters. Such is the country Waterton has written about in his inimitable style.

But I was not destined to follow the footsteps of the famous naturalist; a raging fever cut me down and nearly carried me off. In two weeks I was a skeleton and as weak as a cat. Under the circumstances I decided discretion was the better part of valor. As soon as I could leave my bed I had myself driven to the wharf and took the first vessel for the United States. Twenty-two days later, after an exceedingly rough voyage, in which our compass was broken and rendered useless, we managed to land in New York.

I envy any man the delightful treat in store for him who has never read Waterton. The autobiography of the good old man is charming. Every bird and animal on his beautiful place knew him and came to him without fear.

Mr. Waterton is the author of several books and essays, all of which are well worth reading. His works can be obtained through the New York book importers.

Game Bag and Gun.

A HUNT ON GRAPE CREEK.

NEW YORK, Nov. 16.—*Editor Forest and Stream:* I inclose a copy of a letter from an old subscriber to your paper. Perhaps some of your readers may like to hear of his hunt in Texas. So I send it to you as it is.—N

SAN ANGELO, Texas, Nov. 15.—*My Dear O.:* Your letter of the 1st (with the Wood Notes and Dewey's Camp Tales) was handed to me just as I was climbing up into the canvas-covered wagon that was to be our home for a week's hunt on the plains. So, while Fred drove, I read aloud the story of your wanderings and adventures in Canadian wilds. I could almost imagine myself with you in those big woods and on those clear waters (don't I wish I had been!). I am so glad you kept those notes. I was very much interested in reading them over. I bewail with you the loss of that buck caribou, and rejoice over the capture of that tandem of big trout. Dewey certainly was out of luck. It was an outing, however, and brought its pleasures. It reminds me somewhat of my hunting trip just finished; so I will go right on and tell my little story.

Wednesday, Nov. 7.—A pleasant warm morning, like a day in June, Fred and I started off in a covered wagon with two horses, and pointer dog Fred, a load of blankets, provisions, camp outfit, saddles, etc., bound for the head waters of Grape Creek, and the plains northwest of San Angelo. About five miles out we passed by a slough of the Concho River, and stopped to shoot four mallard ducks, which dog Fred handsomely retrieved. The ducks we sent back to our wives by a passing ranchman. Then on some five miles more to a waterhole, were we lunched. After that, through miles of mosquite, over dry barren plains, whereon flourish the prairie dog and jack rabbit, to Grape Creek, twenty miles from Angelo. It was dark when we got there, so we cooked our supper, some blue quail shot en route, and fried bacon, Fred made biscuits, boiled the coffee, and with sundries, we supped well. Horses tethered and fed, over our pipes we enjoyed the camp-fire, sitting in our flannel shirts, and remarking on the warm evening, when, phew, jip, bang, came down an icy blast from the north, blowing our fire in, scattering cinders all over the prairie, lifting our wagon bodily and starting it rolling toward the equator, and raising havoc with our cooking utensils and camping outfit. Oh, then and there was hurrying to and fro. The norther was on us; and it was a norther. We backed the hack to the wind, fastened down curtains, anchored the wheels, boxed up provisions, etc., on with cardigans and overcoats, spread our blankets in the hack, with cushioned seat for a pillow; and with chattering teeth turned in to try to sleep and get warm. Sleep was out of the question. The wind howled, the hack rocked like a ship in a storm, the dog shivered and moaned; we had him lie on the blankets at our feet to keep us warm. The hack was so narrow we were wedged in like sardines. And so we waited for morning. It was a cold night, and we were left.

Thursday, Nov. 8.—Morning broke with sleet, rain, wind and cold. Everything was covered with ice. Our breakfast was an apology. Then we drove due northwest ten miles in the face of the gale to Phillips's ranch, on the cañons of the Colorado, which we reached at 1:30 P. M., cold, wet and hungry. But a hearty welcome, a good fire and dinner, with a drop of "red eye," fixed us up shortly; and in the afternoon the rain stopped, though it still blew hard and cold, and we hunted the cañons for deer. I didn't get a shot nor see one; but a fine fat doe fell to Fred's rifle, and we were fixed for red meat. We cleaned the deer and toted it on a pole three miles back to the house. My shoulder is lame even now over that tote. That night we slept on a bed.

Friday, Nov. 9.—Cold and windy; saddled our horses and with Phillips, an old hunter and frontiersman, we cavorted over the plains after antelope; but luck and the day were against us. Antelope are no fools, they know when to stay at home; and at sunset we returned to the house, empty-handed, with the exception of five blue quail, which we shot in the sorghum patch near the house. "Seven up" that evening with varied success.

Saturday, Nov. 10.—"A pretty day." Fred and I out at daylight through the cañons after deer. No luck. Back by 10:30 to breakfast, and started with Phillips after antelope. By the aid of my field glass I soon saw four feeding about a mile from us and wanted to stalk them; but Phillips said "Creeping was a fool to driving; come with me, and I'll show you a place where they are bound to go when I drive them, and you can get a sure-enough shot then." So back we went two miles or more to where there was a break in his wire fence on a ridge or divide, and down we squatted in the bush to wait. In about an hour we saw them coming toward us, not four, but fully seventy or eighty, a noble herd. On they came straight for us. Through the glasses I could see their horns and their every movement. Now, my beautiful .40-60, you are going to do yourself proud. And I sighted it in joyful anticipation. But bad luck to it all; something turned them; they swerved from their course, turned to the left, were lost under the hill and passed us 1,000 yards below. Then Phillips coming up, I went with him to follow and turn the antelopes if possible, leaving Fred to hold the runway. We got ahead of them after some three miles' hard riding; but they were wild and saw us, so I took a long shot of at least 800 yards at them and had the satisfaction of seeing one jump up, then fall down on its knees; but soon it picked itself up and followed the herd, which at my shot had turned, and were now making for the runway—and Fred's rifle. On they trotted, filing past his stand, through the gap in the fence. But no shot. What did it mean? Fred had stolen away after my shot, thinking it no further use to wait there, and had gone to find fresh antelope. Hard luck again. How often one has this experience.

It now being late, we separated, Phillips going after Fred, and I off alone to hunt. Just before sunset I heard six shots away off to the left, and hope sprang up that they at least had red meat to bring home. Fred, it seems, had exchanged his rifle with Phillips for a shotgun, when they suddenly came on a heard of 'lopes, some twenty or more. Fred dashed ahead to prevent their turning into the cañon, and charged right among them. They got under his horse's legs and tangled him all up. He shot two with No. 8 shot, crippling them badly, but they got away, and Phillips had four shots at them, long shots on the dead run, and failed to score. Evening, more "seven up" with varied success. Query! Was this the hunter's usual bad luck or bad management? If I had carried out my own plans and stalked the antelope when we first saw them in the morning, we should have found the four we saw to be but the guards of the big herd, and I am positive we could have had a sure good shot at them with a chance, and a good one, at the herd as they loped away. But!!!

Sunday, Nov. 11.—Pleasant but windy. We fooled around the ranch; didn't see any game, but Phillips had a shot at a big gray wolf, which he wounded in the hip. P. jumped up and down laughing and hollering, "I've got him, see him bite himself, he's worth $5 to me; now we'll have some fun." Fred, who was on horseback with his shotgun, started ahead to see "the fun," Phillips following on foot, and I going back to where we had picketed the horses. The wolf, when Fred had gotten to within 20yds. of him, stopped snapping at himself, started to run, then turned full face to Fred. Up goes the shotgun and a load of No. 8 is sent fair at his face. It knocks him over and seems to freshen him up wonderfully, for now he stretches himself out in a mighty effort to reach his home in the rocks and bushes of a big gulch, some quarter of a mile distant. Fred charged after him, yelling like an Indian. For a while it looked like Nip and Tuck, but Nip (the wolf) got there first, and Tuck was left. We hunted those rocks, caves and bushes in vain for him. Moral—He laughs best who laughs last.

Monday, Nov. 12.—Pleasant, but windy, as usual. Bade Phillips and his ranch good-by and started after the antelope in a hack on our winding way home. Up divides, through gulches, and over the broad plains hunted we

vainly; nary 'lope did we see. Finally and sorrowfully the feeling stole upon us that we should have to go back to our family without fresh red meat of the juicy antelope. Well, better luck next time, says Simple Simon, and so said we, as we turned our horses' heads homeward. That night we camped near Grape Creek. Three blue quail and three canvasback ducks paid the penalty of their rashness in getting within range of our twelve-bores. The quail and slices of venison from our one deer served us for supper, with Fred's inevitable biscuits and coffee. I slept in the hack. Fred tried the ground, and woke at midnight with the gentle, cooling and refreshing rain pouring in his face, so he took to the hack, and again I thought of the sardines wedged in a box.

Tuesday, Nov. 13.—Cloudy. Roads in a miserable, muddy, sticky condition. All the horses could do was to walk and pull. On the road we ran across a bevy of blue quail, and got in two shots, but at long range, and failed to score. We had intended to take our noonday lunch at a certain waterhole whereon dwelt the festive duck, but somehow the road got lost, and so we pegged along through the sticky mud until late in the afternoon the court house cupola at San Angelo hove in sight in the dim distance. There in a pasture we found a flock of sickle-bill curlew, wild as hawks, and of them we potted four, in schoolboy fashion. Five o'clock saw us at home again and very ready for something to eat. Two hams of venison still untouched, three ducks, four curlews, a big appetite, sun-browned faces, about an ounce of smoking tobacco, we brought back with us as a reminisence of our hunt on Grape Creek. A trip through a country with lots of game, big and small, but luck and conditions dead against us from start to finish.

My tale is ended; this is a true story of the big hunt I have looked forward to for a year. Sorry I could not record some wonderful shots made by my beautiful pet rifle, or tell of big scores on the quail by my brand new L. C. Smith hammerless. Of my little Stevens I can tell of disgraceful misses at prairie dogs at short range, of five shots at a large hawk on a mosquite bush not fifty yards off, till the hawk at last in sheer pity to me left the field in disgust; and I threw the Stevens on the bottom of the wagon, and almost stamped upon it. My reputation with Fred all gone, and this after I had told him long yarns of the seventy-five ruffed grouse we had killed at our "Camp Point of Pines" in Maine last year, with this same pocket rifle, all shot only through the head, and of my home target practice, making 96 out of a possible 100 at 80yds., etc.—all true bills enough, but the proof of the pudding is the eating thereof.

PETER THE HERMIT.

Sylvan shade and sunny slope,
Leafy coverts grouse concealing;
Pointer, setter, steady lope,
Trailing, stand, their place revealing;
Sportsman panting for the rise,
When and where in part surmise,
Wing of thunder, hail of lead,
Thud! the lordly grouse is dead.

Tangled thicket, alder brake,
Princely woodcock now inviting
Here a tarrying to make
Ere in southern lands delighting.
Hark! the merry spaniel's quest,
Breaking Philohela's rest;
Choicest jewel of the glade,
Slain in sportsman's autumn raid.

JACK and I were college chums; from the same bed we snored a deep antiphonal, and the same board occasionally found one minus his pie while the other reveled in a double portion behind the door; together we crossed the "fool's bridge" and wrestled with logarithms until, with the blessing of *Alma Mater* and millions of assurances, we started out to seek our fortunes. A strong impulse Westward struck him one day, and only an occasional letter told of his wanderings in Western wilds behind a transit under the direction of Uncle Sam. These missives were always redolent of game galore, which aroma I ever breathed with a mental reservation that there was no blood on the bag—"The pen is mighter than the sword."

But this fall we found ourselves hobnobbing over a proposed trip into Essex county, where years ago, ere we were introduced to the family grindstone, we had harried the ruffed grouse and followed the shy timber doodle until his whistle grew faint, and, flapping wearily before our guns, a stray pellet would make it possible for Jack's old pointer to mouth him into a shapeless mass.

The intervening years had dulled neither personal regard nor ardor of the chase, and so the bright morning of Oct. 15 found us at the railroad station in full fig for the field, with corresponding patches on our pants; he with an Irish setter of approved breeding, and I chained to a pointer, whose appetite convinced me he was by Famine out of Wasted Lunch. He came to me a puppy last spring, through Jack's kindness, and as he had been in the hands of a neighboring market shooter, who had put him through his paces and the distemper, I felt ready and willing to manufacture evidence that our game birds are being exterminated.

At the terminus of the Adirondack Railroad we bundled into a buckboard, allowing the dogs to run alongside, and, after a pleasant ride of a few miles over a fair road under a cloudless sky, we drew rein at the hospitable home of Tom Powers, who took us in, and who, with his worthy wife and daughter, made it so pleasant for us that I would we were there yet. "May their shadows never grow less."

The next morning, provided with a guide said to have a tag on every bird in the county, we called the dogs to heel, and entered a piece of woodland not far from our host's house; Jack with Meg on the edge, and I with Pete well in the cover.

And now began some of the finest work on ruffed grouse that I ever saw. The morning sun streamed adown innumerable forest aisles, dissipating the hoar frost which mantled the lofty pines and lay like down upon the carpet of leaves. Pete seemed to know he had a wary quarry to locate, for with a rapid but noiseless trot, head up, he crossed and recrossed in front of me a few times, then halted, raised his head a trifle, took three cat-like steps and was rigid. Away went resolutions to be cool, and away went the grouse 10yds. from the dog's nose; but the gun was thrown where a thunder of wings made the foliage tremble, the trigger yielded, and as the smoke cleared away Pete was cast in the direction of the vanishing bird; but in a moment drew gingerly along, stopped, drew on again and again for 20yds., now one foot raised, now another, until thinking there was a wounded bird running ahead, I stepped hastily forward and nearly put my foot on a dead bird—the one shot at—and certainly "put my foot in it," for at the same instant two more nearly brushed my hat off as they rushed from a thicket of spruce at my left. Bang! bang! woke the echoes, but so rattled was I that a flock of barns would have escaped unscathed. Pocketing the dead grouse, and waiting a moment to let my trigger finger get through twitching, Pete swung out to the right, going a little way up an incline toward some alders. Suddenly he turned, and jumping on the end of a fallen tree trotted along the trunk directly toward me. When within 15ft. of the gnarled roots he stopped and was still, a slight tremor at the end of the stern alone giving assurance that he was not a plaster cast in lemon and white; and there motionless between two roots sat the cock of the woods. Ah, friend, an' had you been there with a "Kodak" to grasp and retain that thrilling picture—"a moment bright then gone forever!"

Quickly raising the gun—What, knave! wouldst bleed the bird upon a bough? Well, not this time, perhaps some other time. Fleet as a shadow he is off for liberty or death, but scarce ten yards along the alder lane ere rings out for him the crack of doom. A limp and lifeless grouse is he as Pete puts his nose under a wing and fairly sneezes with the delicious perfume. Shaking and smoothing the feathers into place, I discover what a magnificent specimen he is, a creamy tinge instead of gray predominating, while the black, iridescent ruff streams out three inches on either side. Thou art a lordly fellow. How many springtimes have thy rounded pinions woke the morning in this glade? How oft the vernal equinox stilled those resonant throbbings—sweet music to thy mates? Not once nor twice, I trow, but five. And now, into the bag you go. Farewell, till I meet thee under cover.

Again and once again the unerring nose revealed the hiding place of our quarry; again and once again

The heated shot
Struck the spot
Where it was not.

Then panting and perspiring with exertion and excitement we went into the open and lay down in the warm sunshine to compose our nerves, our lungs playing to their fullest expansion as we drew in the exhilarating mountain air and watched the fleecy clouds move lazily over a distant mountain top. Occasionally Pete would put in a claim for recognition by laying his paw upon my arm. Well done, old fellow. If my work were as sportsmanlike this bag would tell a weightier tale.

Feeling a slight chilliness we started to join Jack, who was walking slowly along the edge of the woods, Meg ranging just inside. Here was a clear, cold stream, on its bank an ancient log inviting us to lunch, and seconded by our internal economy the motion was carried unanimously.

I sat down, while Jack, glancing around, said, "This little corner looks to be a likely place for woodcock," and calling Meg to the front, in a moment she was pointing staunchly. As Jack walked up, that whistle, so thrilling to a sportsman's ear, was heard an instant, then drowned in the thunder of the gun. At the word Meg retrieved in her happy way, and laid the cock unruffled in his hand.

I believe he would rather grass a woodcock than a wild turkey, and as he held it up by the bill and enjoyed the play of the light upon its velvet head and breast of fading pink, his eyes sparkled and cheeks flushed as a prelude to panegyrics on the unapproachable gaminess of the bird in cover or under cover, and the faultless behavior of his dog. Albeit a side glance of triumph spoke what his lips refused to frame—a good shot, eh? Admitted; but let not good shot, good dog, wait on good appetite, and—where's the guide with the lunch? Probably asleep or warming his pipe at a distant log. However, a prolonged shout finds him, and soon our mouths are "too full for utterance."

Among the pleasant experiences of an outing few are more so than the noontide rest. With utter abandon and freedom from care we regale the inner man, not forgetting the dumb friends who have contributed so largely and cheerfully to our pleasure, the feast sandwiched here and there with plans for the waiting hours and reminiscences of by-gone red-letter days afield. Reclining on the forest leaves the social pipe sends up rings of good fellowship and we grow drowsy under the meridian sun, until a faint throbbing in the air—the drumming of a faraway grouse—arouses us to renew the exciting and laborious sport.

We wonder at the absence of woodcock. Where years before we found them in numbers to afford rare sport, now not a bird can be raised. They have not been shot during the summer, and barring the March blizzard, the season has been favorable. We found a few scattering birds on high ground in the long, narrow alder patches that one meets occasionally on a springy hillside or higher up beside a trickling stream; and these seemed to be summer residents, there having been no autumn flight worthy of the name. It is sad to think that a bird so gifted with every quality prized by the sportsman must so soon join the dodo. The museum and the printed page are his manifest destiny.

Come, Jack, ere that evil day arrives let us cultivate a more intimate acquaintance with the subject of our lamentation.

Before us rose a hill, whose height it made our legs weary to contemplate, but knowing there was a secluded patch of alders far up the side, we began the ascent. Panting we reached the coveted elevation, and throwing ourselves upon the rank ferns drink in the sun-laden ozone and the varied landscape of hill and dale and wooded slope, gorgeous in autumnal robes. Over yonder mountain is a "runway," where oft the hunted deer shakes his antlers in defiance of the deep-mouthed hounds; now over its crest bold and bare, on sleeping wings, soars an immense hawk, each succeeding circle bringing him nearer, until one wider than the rest affords a tempting shot, which evidently reaches but does not disable him.

Facing the cover with the remark, "England expects every man to do his duty," our guide walked up a woodcock and "shot him flying," a feat unusual with these children of the forest. Then over a handsome point Jack and I blazed away four or five times at a low-skimming bird, but finally brought him to bag when he topped the alders in the usual and most approved style. It made no difference to Meg who killed, the game was always carried to her master. After another had been grassed, we rested by the little rill, frequently refreshed by a sip of its cool waters.

As we passed on to some trees of large growth Pete "struck an attitude." Calling Jack up to enjoy the picture, I saw a grouse running ahead, and a trifle to the right of the dog. Hastily throwing up the gun, just as I pressed the trigger I saw his lemon ear along the barrel (he must have drawn on after the bird), but too late. For an instant I felt dizzy, as the report drowned a suppressed whimper, and, as the smoke cleared away, there beside an old stump was the dog; dead? Oh, no! The bird was dead, and Pete was standing him just to your fancy, sir. A shot or two had pierced his ear, from which the blood was trickling, but, excepting Meg, he of all the party was least affected by the narrow escape. In the light of subsequent events, mentioned in this rambling paper, may we not say, "Coming events cast their shadows before?"

Swinging along the hillside, densely covered with maple saplings, Pete jumped over a brush fence, and stirred not except to stretch out and up until he seemed appreciably larger. For an instant

"The beating of my own heart
Was all the sound I heard,"

and then the rush of rapid, but unseen wings added another to the long list of lost opportunities; but the report of my companion's gun, followed by a fluttering on the dead leaves, told a different tale.

Slowly descending, we reached a meadow with here and there clumps of low bushes, from one of which jumped a woodcock and alighted in the open directly in front of us. On the brown sward only a keen eye could distinguish him, so motionless and so like the dead leaves scattered around. A moment's enjoyment of the novel sight and Jack stepped jauntily forward, the cock flushed, he raised the gun and missed in his inimitable style. As a crumb of comfort (!) I sang him a measure of "Johnny get the gun," but shortly afterward, when I distinguished myself in a similar manner, his unseemly mirth voiced to the echo the same sweet song. This bird seemed to bear a charmed life, for, although a day or two later we flushed him again, he invariably escaped, we knew not whither. With our keen-nosed friends we beat the ground thoroughly, but failed to find where he was lying *perdu*.

The sinking sun warned us that day was declining, and our stomachs corroborated Owen Meredith's "Civilized man cannot live without dining," as we thought that even now, perchance, Mrs. Powers was spreading her table for our delectation.

Turning homeward through a thicket Meg jumped upon a little mound—perhaps the long-deserted tenement of a muskrat—and had a fit, or I should say she fitted our ideal of what a dog ought to do in the immediate vicinity of game. There she stood as pretty as a picture until we found places likely to afford a shot, then the guide walked in, and as the grouse flashed by, my gun, too often speechless in such emergencies, spoke with persuasive eloquence and brought down the grouse. Then Meg disputed for its possession until not a feather was left in its rudder and the Pope's nose protruded bald and white as the pontiff's cranium. At another time she located and held a grouse while her master searched for a cock he thought he had shot. After a little I suggested he would better not impose on his dog's good manners, but see what she had and then complete the search. Hanging a handkerchief on a bush to mark the spot, he walked into the thicket and away went the grouse followed by the vindictive staccato of his Webley. No "Johnny get the gun" burdened the breeze this time. A rare good shot was that and worthy the noble bird now in the last throes by yonder boulder. But Meg is on her mettle, emulous of her companion's morning record, for as we sauntered along the border of a broad stream she stands; and Pete, motionless, honors the lady. Up goes a grouse and up goes the gun. Just as she gains cover on the opposite side, the hills re-echo the report and the bird falls riddled in mid-air by the center of the charge.

A dog of good breeding will decline no duty to a loved master. The water was icy cold, but at the word "seek dead, fetch," she hesitated a moment, then plunged in, swam across and retrieved, as usual laying the bird in her master's hand with an air which plainly showed it was a pleasure. Such unselfish devotion were worthy of a soul. Byron would not have braved the Hellespont at such a temperature.

All good days must have an end.

A brisk walk in the gloaming brought us to genial Tom's, where, after the dogs were well fed and well abed, we sat down to a triumph of the art culinary daintily served by his comely daughter.

Stretched upon a lounge or reclining in an easy chair before the blazing fagots, we whiled away the long, pleasant evening listening to our host's recital of thrilling experiences with the "Boys in Blue," where he captured the enemy's colors and won his straps in a bloody charge for the possession of a battery. As he rehearses the wild pleasures of his mountain home, the foray after deer or bear, our ears grow dull and duller until his voice sounds like the murmur of far away waters, and his words die away like the sighing of the wind through the pines. We rouse for a prayer of thanksgiving, and then to the sweet, soft beds, and the deep, dreamless sleep of physical exhaustion and mental vacuity. Ere the morning dawns, while the body sleeps, the brain awakes and revels in well-stocked coverts, affirming our coon hunters' declaration, "There's a heap more fun nights than day times."

After a few days we concluded to take a trip into the Indian River country, and packing our grips bid farewell to our cosy quarters and catch the heavily laden stage on the mountain road, the dogs having to ride afoot, we are so crowded. It is a crisp, pleasant morning, and all goes merrily as we slowly climb or swiftly descend the hills. Away to the right beyond the valley rises a lofty mountain, whose crest is hidden in a cloud of peculiar hue. We remark it, and the driver says laconically: "Snowstorm coming." Meg trots along between the hind wheels, while Pete lopes beside the horses. The storm approaches; shall we reach the "Creek" before it breaks upon us? The driver cracks his whip and speeds down the foot of a hill by a farmhouse. Just as Pete attempts to cross in front of the horses a little cur runs out and arrests his attention, he stops in midroad an instant, the next he is

struck by the horses' feet and we feel the jolt and jar as the ponderous wheels pass over him. With a groan I fall out of the stage and stagger fainting against the fence; Jack is with me in a moment, and we step back to the prostrate form of our dumb friend. No howl, no groan, no whimper of pain. Poor fellow! He is hurt so deep that he knows not he is hurt. Jack has some hope, but something tells me this is the end. "Love never faileth." He raises his head in a momentary rally, moves his paw toward me, his great brown weeping eyes look pleadingly into mine. Poor fellow! I can't help you; but it is easier for you than for me.

Tenderly we carry him into the house, and sitting down watch the labored breathing and the going out of that mysterious light we call life. Strange he cannot move those strong limbs, lately so lithe and fresh. No mark upon his faultless form, but the cruel wheels have done their awful work. He breathes slowly, faintly, then raising his loving eyes to mine in a last lingering gaze, they slowly close on all things earthly, and with a sigh he passed away as gently as a little child falls asleep. "After life's fitful fever he sleeps well."

On a high hill, overlooking the Hudson and the woodlands we loved so well, we laid him deep in his last resting place. I turned aside to be alone. There be those who would not hide a tear. "Some days must be dark and dreary." The storm breaks furiously upon us. Come, Jack, let us homeward. L. A. S.

ST. LOUIS SPORTSMEN.

ST. LOUIS, Mo., Nov. 31.—*Editor Forest and Stream:* Duck shooting in this immediate vicinity during the past week has been very unsatisfactory. Many parties were out short distances but the result was invariably the same—small bags. The result in the cases of those who went long distances was not much better either. Still, they did succeed in making a respectable showing. It is quite evident that the bulk of the webfeet have departed this part of the country for the South. There was one little flurry of them two weeks ago, outside of that there have not been any in this vicinity this fall to speak of. The only kind seen now are the much-despised fish duck; the shooters shoot them because they want something to shoot at, but they are thrown away very soon after they have been shown and credited as ducks.

Snipe have all skipped out for a more congenial clime. The few received in market come from near Galveston, Texas.

The bags of quail up to the present have also been very small, if Mr. J. B. C. Lucas's bag of forty in one day is excepted.

W. T. Gould, W. McCleary, Jack Lee and H. Cordess left last Wednesday for Current River, in the southeast part of this State. They go over the Iron Mountain Railway to Doniphan, where they will be joined by W. F. Maybree and R. C. Barrett. From Doniphan they go by a branch road to Pine. Then the trip to the hunting and fishing grounds will be made by wagon. Fishing is reported only fair down there, but deer are said to be very plentiful, and to them the gentlemen will give most of their attention. Should they meet with any success at all they will remain ten days or more.

Tom H. Burtt left a few days ago for Lebanon, to spend several days in quest of quail. Birds are said to be in good numbers in the vicinity.

Mr. J. B. C. Lucas returned home a few days ago from the interior of Illinois, and reports having had grand shooting on quail. The brush and weeds were very thick, and interfered quite materially with the sport.

Hunt P. Wilson, Dr. J. H. Leslie, Brooks Wipple and Leslie Moffett were down in Mississippi county, this State, enjoying the pleasures of a camp-hunt for the past ten days. They arrived home last Tuesday with one deer, 205 ducks of all kinds, a large number of quail, and a good string of fish, mostly bass and croppies. The deer was the largest seen in this city for many years. He was a five-prong buck and weighed exactly 252lbs. Mr. Wilson had the honor of bagging him. He was standing out in the marsh in a duck blind when he saw the deer emerge from some brush about 45yds. away. Carefully extracting the duck cartridge he put in one loaded with buckshot. In putting the gun to his shoulder it hit a limb, and, as he explained, made a report almost as loud as the firing of a charge. The deer, when he heard this, pricked up his ears and was on the alert for a lurking enemy evidently, but he was too slow, for the next instant Mr. Wilson pulled the trigger of his trusty Betsy and a charge of buckshot struck him fair and square in the left shoulder. The buck was standing partly quartering, and one of the shot hit him in the nose, ranging upward, and lodged in his neck. The shot that no doubt proved the death dealer was the one that hit in the side and ranging upward into the spinal column. At the report of the gun the deer disappeared, and Mr. Wilson for quite a while was considerably in doubt if he had really hit or not. On one of the limbs of a small tree he noticed signs of blood, and pursuing the trail finally was rewarded after a tramp of 200yds. to come up with the deer. The deer was to be seen at Mr. Wilson's place of business in this city, and there was quite a crowd of sportsmen in and out of his place while it was on exhibition. He will have the head set up and keep it as a memento of the trip.

Messrs. W. H. Horner and E. C. Mohrstadt spent a day on quail last Monday in the vicinity of the Meramec River, which is only about twenty miles from this city. They had poor success, owing to the great amount of shooting that the birds have been subjected to out there this season. The birds were very wild, and when flushed they flew so far that it was very difficult to mark them down. The birds were well matured, and those that they were lucky enough to bag were fat.

Mr. George Rawlings, the sporting goods dealer on Eighth and Chestnut streets, will depart Saturday night for Charleston, this State, to be gone a few days after ducks and quil. Late reports from Charleston say ducks are plentiful and good bags are being made by parties down there.

The Dordenne Club, which recently leased a large tract of land in St. Charles county for a game preserve, has let a contract for its club house, to cost in the neighborhood of $6,000. This season the members have been accepting the hospitality of Mr. Gallagher, the owner of the land. When the spring shooting opens and the much sought after canvasback makes its appearance, the club will be installed in its new club house.

Joe Lucas and Dabney Carr are making ready to leave for Point Pleasant, this State, to take more shooting on the webfeet and "Bob Whites." The middle of next week will see them off, and they expect to remain ten days or more enjoying the delights of a camp hunt. Fishing is said to be good and they can have an opportunity of changing off when tired of one or the other.

Chas. Greely, Jack Neville and J. C. Van Blarcome had some good sport on quail at Granby on the Frisco railway a few days ago. The covert was somewhat prolific, but the birds were plentiful, and they brought home a good bag.

Mr. J. B. C. Lucas is to be credited with the largest single bag of ducks made in this vicinity this season. In one day on the grounds of the Quiver Club, in St. Charles county, he counted up 51, mostly mallard and greenwing. The next largest bag was made by Mr. J. B. Morris on the Dordenne preserve and footed up 36, all mallards but two. Both bags were made on the same day, the two clubs' grounds being only a few miles apart.

For the past week quite a good many geese have been passing over this locality on their way to the "sunny south." Very few are bagged and it is thought that they are increasing their numbers yearly. Very seldom are any to be seen in the markets.

Last Wednesday evening saw the departure of Messrs. Sil Edgar, C. F. Mathey and Richard Hopes for Baxter Springs, Kansas, on a hunting trip. From Baxter Springs the gentlemen expect to go south and strike into the Indian Territory; where they are going to put in their time on quail, prairie chicken and deer. The country is not considered at all favorable for ducks, still some little sport is had on them. All of the gentlemen have supplied themselves with repeating Winchesters, and they are well able to handle them too, consequently it will be no surprise to their friends should they return with a number of deer.

W. H. Clopton spent Thanksgiving at the King's Lake preserve, which is fifty-three miles above here in Lincoln county. The shooting was slow and without any special interest. A few years ago these grounds were second to none in this part of the country for duck shooting, but during the past few years only a few make a stop on the lakes and timber slough on the preserve. Mallard shooting in the timber in the vicinity was especially fine during the fall of 1882, and it was quite common to hear of some party bagging from 100 to 200 in a couple of days. But there have not been 500 ducks all told bagged up there this season.

There is a movement on foot among a number of gentlemen in this city for the organization of a club to lease a large tract of land in Lincoln county for a game preserve. The matter has not developed fully as yet, but will undoubtedly be in such shape in a very short time as to make it possible to announce in detail the names of the gentlemen interested, and also just where the land is located.

C. Hemphill went up to Ellsbury, Mo., on Thursday to indulge in a duck shoot. The weather was in every way favorable for the sport. It was cloudy, and had there been any ducks in the country no doubt he would have had some good sport. It was just such a day as duck shooters long for, and what might be called a genuine duck day in every particular. But, alas, the most essential requisite of the sport was missing, and that was the ducks, consequently he returned home with a very light bag.

Fred Huginine shot a few ducks and caught a small string of fish at Kid Lake on Thursday.

The head of the 180lbs. buck which was shot by Fred C. Burgdorfer a short time since, in the Current River country, is now on exhibition at the sporting goods house of Rawlings Bros., corner Eighth and Chestnut streets.

UNSER FRITZ.

BOWLEY'S QUARTER CLUB.

ONE of the finest ducking club houses in the country has recently been completed for the "Bowley's Quarter Ducking Club." This club is composed of twelve gentlemen, who own about 382 acres of land, with over five miles of water front directly on the Chesapeake Bay, extending the whole distance between Middle River and Seneca River, and lying just south of the famous "Carroll Island" property. It has several points and blinds from which there is to be had some of the best duck shooting on the bay. The house stands about two hundred feet from the water front, and is surrounded by fine forest trees. It fronts due east, giving a delightful view of the bay and surrounding country, with a full view of all the shipping to and from Baltimore. The house is ninety-six feet long, by thirty-three feet wide, all built in the most substantial manner, being first sheathed on the frame, which is Georgia pine, with diagonal sheathing of flooring boards, then covered with two thicknesses of felting, then by weather-boarding up to second floor, then to square or fine heavy cornice, with round-end shingles. The entire roof is covered with best quality of tin, and there is a handsome observatory. The first story has double floors, with felting between them, and divided as follows: A large kitchen, 19 by 22 feet; open room or porch, 10 feet wide; dining-room, 19 by 32 feet, with butler's pantry and china closet. At the end is the gunning hall, 19 by 24 feet, in which there are twelve double gun closets. The front or main entrance door leads from this room to an open room or porch, from which you can pass through a beautifully finished arch to the lawn in front. This arch gives to the front of the house a pleasing effect. The next room is the sitting-room or parlor, 19 by 32 feet, from which leads a fine open stairway, of ancient design, to the second story. In each of the three last-mentioned rooms there are large fireplaces, highly ornamented with pressed brick, surmounted by fine mantels. These three rooms can all be thrown into one by large folding doors. The second story is divided into twelve bedrooms, with a hall running through center of the house. Each room is well lighted and ventilated, and can be heated at pleasure.

The house is lighted by gas, and has electric bells in each room. The house was designed by Mr. Addison Hulton, one of the leading architects of Philadelphia, and was built by J. A. Sheridan. The club will probably make this also a summer resort for their families, as the shore for salt water bathing is excellent, and the water is of a very superior quality. The cost of the house and furnishing was about $10,000. The president of the club is Mr. N. E. Janney, of Philadelphia.

REFORM IN NEW BRUNSWICK.

KINGSTON, New Brunswick.—*Editor Forest and Stream:* I often ask myself, have we a game law? Have we any game wardens in this country? We have, in name, and in name only. Although a good law, it is shamefully outraged. As for the wardens, I do not know why they are permitted to hold such a position. We would have good shooting and fishing if the people of this country would only adhere to the law. It is not as though our sports were limited. On the contrary, we have a good variety, and our country is large and free; but they are not satisfied; they go and kill birds long before the season opens. Our close season for partridge ended on Sept. 20, on the 16th two persons with guns (I will not call them sportsmen) started out and killed several partridges. I could not clearly prove the case at the time, or they would have paid dear for their fun. There are similar cases I might mention of people pretending to be sportsmen, who sneak out with their guns and sneak home again with their ill-gottten gains.

The morning the season opened a friend and myself went up river partridge shooting. The place we went to was known to be a good one for birds, but we only killed three after hunting all day. I remarked to a person who resides in the vicinity that it was unusual for coveys of partridges to be broken up so early in the season, and that there must be some cause for it, such as shooting, but he denied it. Some eight days afterward I learned that a person living only a short distance away from the place had killed birds the day before we got there. Several parties stopping at our new hotel boasted openly of how many ducks, snipe, etc., they had killed long before the season opened, and our game warden and his deputy living almost next door to the hotel. Now, when the game law is openly violated like this, and the game warden and his deputy will do nothing to prevent it, what chance is there for those abiding by the law?

It is just the same with our fishing. We have good trout streams, but it is poor satisfaction to fish them: they are all netted, and only the small fish that get through the nets are to be taken. I went with two friends last July to Tweedie's Brook; it is a fine place for trout. With the evening and morning fishing we filled our large baskets, some of the fish weighing 1¼lbs.; but that was nothing like what we should have done. The netters had been ahead of us; the water was very muddy, and at one of the pools we saw the stakes to which the net had been made fast, and a few yards further along the pool we came across the long poles they had used to rout the fish out and drive them into their nets. They sell the fish to parties further down the river who have freezers, and who ship them to the United States. One of the parties owning the freezer boasted of how many 5lb. trout he had that were netted in Tweedie's Brook. Now, is it not too bad that honest sport-loving people should be deprived of sport, and poachers and lawbreakers allowed to go free? SPORTSMAN.

DEER SHOOTING IN NEWFOUNDLAND.

Editor Forest and Stream:

I read with interest a letter from your correspondent at Little Bay Mines. He appears to have had grand sport killing seven or eight caribou in two or three days; and our local papers also tell how Doctor Tobin and his friends from Halifax, N. S., have killed thirty caribou near the Grand Pond. The country around that pond is probably one of the finest natural deer parks in the world. Deer are there in hundreds, aye thousands, or to use the expression of a native, "they are numerous plenty, sir." They will afford legitimate sport for ages if properly protected. They can only be properly protected by sportsmen who should make it a point of honor never to kill so noble an animal for the head and skin alone. Never to leave the carcass to rot. Let the cost be what it may to get the deer out for food, it should be done.

The man who can destroy these fine animals, and let them lie and rot, merely to boast of his powers, is a mere butcher and no sportsman. I apologize to the butcher for using his name. His calling is legitimate. I should have written butcherbird, whose wanton destruction of other birds is an apt illustration of the instincts of these so-called sportsmen.

I have made inquiries, and find that quite a number of deer were left to rot by these gentlemen. As an old sportsman, whose days for deer hunting are almost over, I protest against such misconduct. Our game laws are most liberal, but we shall be obliged to amend them and limit the number of caribou to be killed by each person unless sportsmen mend their way.

So far we are free from skin hunters. Let the trophy hunters keep within reasonable bounds, and waste none of these good creatures of God, and they will receive a hearty welcome to this sportsman's paradise. Grand Pond is about sixty miles long. B.

HARBOR GRACE, Newfoundland.

MASSACHUSETTS NOTES.—New York, Nov. 21.—*Editor Forest and Stream:* I have just returned from two weeks' shoot on the Old Colony R. R., at the towns of Lakeville, Myricks, and Freetown, Mass. Quail were scarce, but ruffed grouse were fairly plenty and lying well to a thoroughbred pointer or setter. I was not very successful myself, being so unfortunate as to break the stock of my fine Sneider hammerless gun before my vacation was half up and being compelled to use one kindly loaned me by Messrs. Davis & Sons, of Freetown, Mass., the manufacturers of the Davis gun, who by the way are turning out fine work and well worthy the attention of sportsmen desiring a good serviceable gun, and not being anxious to pay a fancy price for the same. I was shown through the factory by Mr. N. R. Davis, the senior member of the firm, and witnessed the Davis gun from "start to finish;" and was very much interested in watching the process of building a modern hammerless gun. From what I saw of this gun in the rough and as it approached completion, and seeing its execution on game in the hands of Mr. H. B. Richmond of Lakeville, Mass., the gentlemanly proprietor of the Lakeville Kennels, to whom I am indebted for many civilities extended to a brother sportsman, I can hardly do the gun or its manufacturers justice; suffice it to say that I unhesitatingly placed my $200 Sneider gun in the hands of these gentlemen to be re-stocked, after seeing the fine work they are enabled with their facilities to turn out. The weather during my outing was partially stormy.—BLUE-ROCK.

RIFLES FOR SMALL GAME.

BALTIMORE, Md., Nov. 27.—*Editor Forest and Stream:* Noting the remarks of "N. Orleans" in issue of 8th inst., it appears to me the rifle the gentleman chooses for the purpose mentioned should be the .22cal., chambered for the 10-45 or 15-45 center-fire cartridge. Without he has a fancy for a quick-action repeater of modern make, I think he would find the Maynard rifle, with a special .22-10-45 barrel, to answer his purpose; he may also have this same barrel chambered for the W. C. F. 15-45 shell, which may give better results in windy weather. I should, however, choose the shell made by the manufacturers of that arm, as it will last an indefinite period, and because it is a straight shell (not bottle-necked) and is easily cleaned for reloading. I have a Maynard rifle with a barrel chambered for the .22-3-30, and one for the .38-50, which I bought to take on a trip in the Adirondacks this fall. I have found this little barrel very effective at distances up to and over 50yds.; and if the special .22-10-45 is as accurate at greater distances—which our friend "Iron Ramrod" tells us it is, and he appears to be a fair-minded man—I should not want anything better for duck shooting out of shotgun range. I have been thinking of adding to my outfit this very same barrel for duck shooting, etc. With my little joker I can sit in my back yard and, by resting my elbow on my knee and holding steady, drop English sparrows to my heart's content, missing very few.

To my mind, any caliber greater than .22, for the purpose and at the distance named—150 to 200yds.—is out of the question, without the gentleman expects to shoot the heads of those black ducks; for if he does not his target will be the duck's body, and I am inclined to think that the smaller the caliber and weight of the bullet the better will be the condition of the duck so unfortunate as to be hit.

The effect of a 115-grain bullet—on a duck—propelled by 20grs. of powder, must be appalling. I do not suppose Mr. Louis Bagger found his ducks in very presentable condition after subjecting them to such treatment.

I prefer the single shot to the repeater as giving better results, and because I can see the condition of the inside of the barrel and keep it cleaner. I prefer the Maynard because of its simplicity and convenience, and the possibility of having several barrels to fit the same stock. This may be said of several other rifles also; but none other that I have seen is operated by lever action, which I prefer, and I think is safer with the larger calibers.

W. W. B.

Editor Forest and Stream:

I see by this week's FOREST AND STREAM that "H. B. S." asks if "Iron Ramrod" will write a letter about .22-cal. cartridges, and which cartridge he would recommend for rabbit shooting at distances up to 100yds.; also if I would recommend the .22 long rifle cartridge for this work. My answer is to the latter question no; the trajectory at 50yds. in the 100yds. work is 4½in.—enough to miss a rabbit clean. This cartridge in a good rifle is good for fine target work, but for game shooting use the 10grs., or better still, the 15-45 Winchester cartridge. The trajectory of this cartridge is less than 2in. over the 100yds. range and will cut the rabbit's head anywhere along the line. If "H. B. S." will write to me I will tell him something to his advantage regarding this small-bore work for game shooting. IRON RAMROD.

SOUTH CAROLINA QUAIL.

ROCK HILL, S. C., Nov. 25.—*Editor Forest and Stream:* There's an old "saw" which runs, "If you've got a good thing keep it, keep it;" but I am not selfish, and as I have really found "a good thing," I shall adopt the principle of the "Golden Rule" and "give it away."

I left New York on the 12th inst., stopped a day in Virginia, then came to High Point, North Carolina, where I witnessed the field trials for two days and did some shooting in the vicinity of Charlotte for two days more, where I found game fairly plentiful. I then came to Rock Hill, South Carolina, arriving here on the 18th inst. First day after my arrival it was raining, but during the night it cleared, and my second day was fine, as have been the others. Have had three days of rare sport. I find quail in the greatest abundance and the country most desirable to shoot over, and the people exceedingly hospitable. The first day two of us bagged eighty-three quail, the second seventy-four, and to-day (the third) ninety-seven. The country has been very little shot over, and taken altogether I am more than pleased here. I find a new, modern, good hotel here, a wideawake landlord, and last, but not least, fine kennels for dogs of guests. I am told there are quantities of geese and duck on the Catawba River, within a few miles, and I shall investigate next week and will let you hear further from me. T. C. J.

SHOOTING SQUIRRELS OVER DECOYS.

Editor Forest and Stream:

A very curious incident was related to me by a perfectly reliable gentleman last week, which I will repeat for your readers.

Mr. J. B. Haynes, the narrator, stated that a few days previously he and three others went out for a squirrel hunt on Teal bayou in Tunica county. They found the game more abundant than they had anticipated, and exhausted their ammunition in a few hours. Haynes carried out thirty-six shells and secured twenty-eight squirrels. The party of four bagged 103 squirrels. But the incident alluded to is this: Haynes and one of his companions were walking through the woods, the latter a few yards in advance, when Haynes, who was out of shells, called the attention of his friend to some turkeys which he saw ahead. His friend laid his bunch of dead squirrels at the foot of a hollow tree and went for the turkeys. Haynes remained near the squirrels. A few minutes later four squirrels came down the tree to the pile of dead ones, and made a great demonstration over them, dancing about and chattering loudly. Their capers attracted many other squirrels from neighboring trees, who assembled at the funeral and increased the fuss.

Haynes then beckoned to one of his companions, who, approaching gently, fired, and killed four squirrels at one shot.

What does "Iron Ramrod" think of this kind of squirrel hunting?

I have a bear story to relate, but will reserve it for a future communication, as I am afraid your readers will not be able to swallow both at one dose.

Game in the Mississippi bottom is unusually abundant this season. The lakes are crowded with ducks and geese, and the woods are full of deer, bear, turkeys, squirrels and coons.

Three boys with one dog killed nine coons near Friar's Point one night last week. COAHOMA.

CLARKSDALE, Miss., Nov. 26.

THE KEENE BULLETS.

Editor Forest and Stream:

The past season I have given the Keene bullets a fair trial, killing with them a bear, a caribou, blacktail, whitetail, mule deer, etc. I was using my .45-90 Winchester, a very handy, safe and accurate gun, with which I am well pleased.

Last fall I found the Keene bullets worked well; but a more extended series of experiments has rather shaken my faith in them, that is, I have found that they generally act simply as a solid ball, no worse and no better; they do not seem to open more than once in three times. This fall the proportion with me has been even smaller. I suppose there is not enough powder back of them. Can not some of your correspondents give me, through your columns, their experience with them? As instances, I found one bullet opened all right on a mountain ram, and another on an antelope, but on the bear, caribou and various deer they simply acted as if they had been solid balls. THEODORE ROOSEVELT.

SAGAMORE HILL, Long Island, Nov. 28.

MICHIGAN DEER AND BASS.

OUR location was on the Indian River, sixteen miles from Munising, Mich., a station on the Duluth, South Shore & Atlantic Railway. We were in camp five weeks in September, 1888. There is a hotel at the station, Munising, Mr. Fritz, $1 per day. We were south of Dockwood's camp six miles. It cost us $5 per day for team. Supplies can be obtained, anything you want, at Munising, and boats at the settlements south of the river cheap. Minnows are the best bait. We fished in Bass Lakes and Indian River where it passes through the lakes. We did not have any guides; a gentleman by the name of Pattee directed us to this place. There were eight of us. We had a grand time fishing and hunting. We caught all the fish we wanted, some 400lbs. of pike and bass. Deer were not so plentiful, but we got eleven of them and plenty of pheasants. It is one of the grandest places for recreation that I have ever struck. We had an abundance of lakes and rivers for fishing and some grand scenery. I weighed 142lbs. when I left home, and when I got back my weight had increased to 156lbs., a gain of 14lbs. Some of the party improved more than I did. I feel like a new man. Eleven went from our city and they are all well pleased with the trip. The air and water were grand and pure and we all enjoyed it so well. The time passed away before we were ready to come home. We were all benefited by the trip. I have taken trips south in Arkansas and Mississippi and other places, but they could not compare with this one.

GREENVILLE, O. A. E. BUNGER.

BUCKSHOT LOADING.—Some one in a recent number inquired the better way to load with buckshot, in order to secure best results. I learned a little kink from some Canadians a few years ago, while deer hunting, that may help him. This plan I invariably employ with best of success. It is to use a layer of small shot, say No. 2 or BB, first in the shell, in the center of which place a large buckshot or bullet, then fill with the small shot to the top of bullet, and place another in the center, and so on until the proper amount of shot is in, when wad. The smaller shot prevent the bullets from ricocheting, and they leave the gun on a comparatively true line. With this charge I have killed foxes and deer 75 and 100 steps away; besides, if in a turkey country you are always prepared for one on the wing.—DENTIST.

WATERTOWN, Va., Nov. 29.—We have no shooting of any account here—a few grouse and a rabbit now and then. Foxes are rather numerous, one being killed just outside the village some days since. A few stray ducks are sometimes seen on the river, but I have not seen or heard of one this season.—F. E. A.

THE WIGWAM.—Sanford, Fla., Nov. 27.—The yellow fever in Florida has not prevented an unusually large flight of ducks, and our local sportsmen are in clover. My clerk went on a cruise recently, and killed five turkeys and a quantity of small game in three days, including fourteen rabbits.—C. D. B.

MERIDIAN, Miss., Nov. 18.—Birds in this locality seem to be fairly plenty, though vegetation is so rank it needs a little more short, sharp frosty weather to kill it down; then when the pleasant days come in December we can "up and at 'em."—G. W. S.

A NEW GATEWAY.

By the completion of a new bridge across the Missouri River at Rulo, Nebraska, the Burlington Route has established, for the entire distance over its own track, a new, direct, through line from St. Louis to Kansas City, St. Joseph, Atchison and Denver. Over this line is run "The Burlington's Denver Express"—a solid train with through sleeping cars and coaches from St. Louis to St. Joseph and Denver, and a through sleeping car from St. Louis to Kansas City. The connections made by this train at the Missouri River, at Denver and at junction points en route are such that one can directly reach by it all points in Nebraska, Colorado, and all sections of the West and Southwest, as well as all Pacific coast points. This is in addition to "The Burlington's Number One" well-known solid vestibule train between Chicago and Denver and Cheyenne, with which direct connection is made by C. B. & Q. R. R. train from Peoria, by which one can make the run between Chicago and Denver without being more than one night on the road. For tickets via the Burlington route and for special excursion folder, call on any ticket agent of connecting lines, or address P. S. EUSTIS, Gen'l Pass. and Ticket Agent, C. B. & Q. R. R., Chicago, Ill.—*Adv.*

NEW YORK, Aug. 9, 1888.—*U. S. Cartridge Co., Lowell, Mass.*—Gentlemen: Your new primers gave me the best of satisfaction. I have averaged nearly 80 per cent. of kills both on live birds and targets ever since I began to use them. Yours truly, (Signed) M. M. F. LINDSLEY, Supt. American Wood Powder Co., West Hoboken, N. J.—*Adv.*

Camp-Fire Flickerings.

"That reminds me."

244.

I DESIRE to thank "Country Parson" for the heartiest laugh I have enjoyed for a long time over his "owl hunt" in FOREST AND STREAM of Sept. 20. The scheme was grandly concocted and most amusingly told.

It reminded me of the story of a frog hunt I heard not long since, which has some amusing points, but which, unfortunately, I am unable to embellish as did "Country Parson" his owl hunt. One Joe —— of our place is an indefatigable frog hunter, and becomes as enthusiastic over it as does the most inveterate nimrod, shooting grouse or quail over his finely bred pointer or setter. So infatuated with this sport has he become, and so constantly is he discoursing upon its delights among his friends that he has acquired among them the soubriquet of the "Toad Stabber." Not long since Jim ——, a personal friend of his, happening in a stationery store, found there a paper weight in the form of a large cast iron frog, artistically decorated in his livery of green, and altogether a life-like production, and of unusual size. Jim immediately saw in this batrachian a large-sized joke, and at once exchanged a greenback for the greenback, which he deposited carefully in the canal, where there was about a foot of water. The frog was placed on a small bit of log, and in such an attitude as to appear to be enjoying the first bright sun rays of a beautiful spring morning, but at the same time with one eye open on the *qui vive*, and ready to sub-mud himself on the least suspicion of danger. After placing him Jim took one retrospective glance to see that all was right, and started in hot haste for Joe. Apparently all out of breath he in a rapid and excited manner told Joe of the find, and wanted him to get his gun at once and bag the frog. Joe dropped everything, and started with Jim on a run, but in his excitement he forgot the gun. A mongrel cur followed them. After running a short distance Jim asked, "Where's your gun?" "Confound it! I forgot it; but I'll borrow Smith's." After securing the gun, they cautiously crawled toward the bank of the canal. Meanwhile the cur, thinking he might be of service, rushed ahead, much to the discomfiture of Joe, who feared he might scare the game. "Keep that dog back," he exclaims to Jim in a stage whisper, "keep him back." Jim secures the dog, but after a further stealthy advance he escapes again. Joe with every nerve trembling at the prospect of the game, and indignation at the performance of the cur, again whispers to Jim emphatically, "I tell you keep that dog back or I won't shoot." After some trouble the dog is secured, and the stalking is resumed until the bank of the canal is reached, where peeping over with the utmost care, the serene and mighty frog is seen. Joe shoots, and still the frog remains. "How's that, Joe?" inquires Jim in surprise, "I think you must have shot too high." Joe was unable to explain, but shot again with like results. "He's as dead as a door nail," says he and at once plunges into the mud and water, wades out to him and seizes him with exultation depicted on every feature, until a shout goes up from the many spectators, when his feathers droop, and he sneaks to shore. All that is necessary now to make his feathers resume their pristine position is to suggest to Joe a frog hunt. DENTIST.

ROCHESTER, New York.

245.

I have played a few practical jokes like that described in the "owl hunt" story in a late number. One day I waded out in a small pond and put out two ducks. I saw a friend coming. He made a successful stalk, fired one barrel, then the other. Then I rose up and said, "What in thunder are you filling up my duck with lead for?" His expression was comical to say the least. He had never seen a decoy. I pinned a squirrel to the side of a tree and watched a neighbor's boy shoot at it five times. D.

IRONTON, Ohio.

Sea and River Fishing.

SILKWORM GUT AND LEADERS.

I HAVE read the communication of Messrs. Allcock & Co. in FOREST AND STREAM of Nov. 22, commenting on my letter in same paper of Oct. 25, and I fear that on this occasion only they have gone off at half-cock, for although they state that I am misinformed and mistaken in regard to the subject of my letter, they virtually corroborate what I did say, except in the matter of the chief market for silkworm gut, and in that they do not quote what I wrote.

I said: "London is the chief market to which most, if not all, of the dealers in fishing tackle are obliged to go for their silkworm gut, whether it be Spanish, Indian or Chinese, unless the dealer has a factory in Spain, separate and distinct from the castles in Spain, which some dealers have." The types, however, made two sentences of the extract. My information about the gut market I obtained from England, although I might have been more accurate had I used the words of an American angling writer who says: "We derive our supply (of gut) largely through England, whence this business is controlled, consuming by far the greatest part of the heavier sizes produced."

There can be no doubt about the grade of gut that I said I thought we did not have, for I was careful to state that, "I have particular reference to extraordinarily heavy salmon gut." I quoted the wholesale price in London, $25 to $35 per 100 strands, and the breaking strain, 15 to 18lbs., "to better illustrate what I mean when I say I do not think we get the very best gut." Messrs. Allcock & Co. do not even intimate that we get any of this gut, nor does any one else; but they do say, "If any firm will pay the same price that we can get in London, or elsewhere, for our best grades, they can be sure of being as well served as the London houses are." That is a tacit admission that the best grades do now go to London. I said, "If we do not have the very best salmon gut it is possibly because there is not a demand for it, or because our method of fishing for salmon from a canoe * * * does not require such particularly strong gut as I have designated as very best." Did I make any "mistake" in so writing, or does that dispute that our dealers can have the "very best gut" if they will pay the price paid by the London houses?

If you will permit a little free advertising in your reading columns I will gladly give Messrs. Allcock & Co. as strong a recommendation of some of their leaders that I possess, as that given by Uncle Reub. Wood's Sons; but my leaders are not of the gut that I referred to in FOREST AND STREAM any more than are the leaders sent to Syracuse. I am at a loss to understand how Messrs. Allcock & Co. can even seem to think that I am unfair, although unintentionally so, as they presume, to the dealers in the United States. If I do the dealers of this country an injustice inadvertently, for I would do it in no other way, I'll warrant that the dealers will make it known p. d. q.

GLENS FALLS, N. Y. A. N. CHENEY.

ANGLING CONTESTS IN NEW ZEALAND.

WE have the sixth report of the Otago Anglers' Association, as published in the Otago *Times* of Sept. 28, 1888. There are genuine angling contests held by the Association, in which the weight of the fish taken determine the winners. The report says: "We held five competition last season. The result was just the same as in former seasons. The first contest was the only one that brought out anything like a muster. The last two competitions for the Association's gold medal were very tame affairs, only two or three competing. The total weight of fish caught at the competitions is again much below the average of past seasons. The Association's gold medal was won by Mr. D. Reid, who caught six fish weighing 17lbs. 8oz. Mr. W. Aitken takes the silver medal with three fish, 5lbs. 14oz.; Mr. J. Ogg running him very close with 5lbs. 13oz. * * * * The competitors caught this year at the various competitions a total of 135 fish, weighing 92lbs. 12oz.; last year's totals were 157 fish, weighing 219lbs.; and in 1885-86 season 268 fish, weighing 301lbs. So you will see what a drop there was last year. We will have to make an effort to get up to something like old form again, or we will be classed as only a second-rate fishing club." We infer that the fish named are brown trout, as these are the only fish named in the report of the different rivers. The Acclimatisation Society has stocked the Shag with Loch Leven trout and American brook trout, and these fish have also been placed in the Waipahi, and other streams will be stocked with them this year.

The following is a list of the competitions for the season of 1888–89:

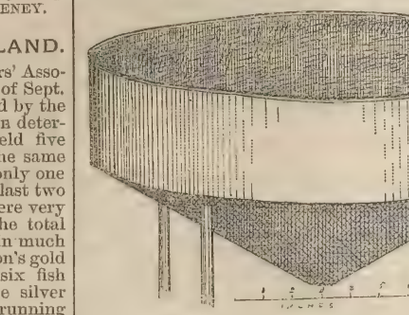
Two competitions for Association's gold medal and silver medal; one competition for handsome gold trophy, value 10 guineas. The Association will give a silver medal as a second prize. One competition for valuable fly-rod; one competition for fly-rod, reel and flies.

Dates of competitions and rivers they are to be fished on: Otago Anglers' gold medal and C. Hale's silver medal, first competition, Shag River only, Oct. 19; second competition, Lee Stream, Wednesday in race week (on or about Feb. 20); the John Anderson Medal Competition, Waipahi River, Nov. 30; Mr. Wilkie's Rod Competition, Shag River, Nov. 9; Junior Competition (competitors of 20 or under only, first, second and third prizes, entrance fee 6d., Leith or Waitai, Nov. 30.

Conditions for all competitions, except John Anderson Medal Competition: Hours, 6 A. M. to 4 P. M.; any legal bait; no competitor to fish on the river set apart for the competition within twenty-four hours of the competition. All competitors fishing on a stream are on no account to pass another competitor without his consent. The position of competitors on a stream to be mutually arranged; any competitor infringing these rules will be disqualified. Entrance fee, 1s. The member who obtains the highest aggregate weight will receive the gold medal; the next highest the silver medal. Note.—All previous winners of the Association's gold medal will have 15 per cent. deducted from their total weight. Condition for John Anderson Medal Competition: Hours, from 7 A. M. to 5 P. M.; any legal bait. Entrance fee, 1s. The ultimate winner will be the competitor who wins the trophy twice. Competitors must forward returns per first post after competition. All entries payable to Geo. M. Marshall, Hon. Sec., 64 Princes street, Dunedin. Annual subscription reduced to 5 shillings.

NEW TROUT LAW IN VERMONT.—Watertown, Vt., Nov. 29.—*Editor Forest and Stream:* Our State Legislature, just adjourned, has taken action that will be hailed with delight by every true sportsman, and welcomed by all interested in protecting fish and game in our State. The game laws are good, as far as they go, but in too many places they are regarded as a dead letter. This has at last been recognized and provisions made for the better enforcement of the existing laws, and they have also given us a new law providing that any person taking, or having in possession, a trout under six inches in length shall be liable to a fine of five dollars for each trout so taken or which may be found in possession. This measure has been greatly needed for some years past, as the practice of putting back any fish taken has been next to unknown, at least in this section, and the trout were rapidly disappearing. If the new law is strictly enforced, as a game warden assures me it will be, great good will follow, as the trout will have some chance to regain their old time numbers. It should be a matter of congratulation both to our sportsmen and to others visiting our State that this long-delayed action has at last been taken. Better late than never.—COACHMAN.

Angling Talks. By George Dawson. Price 50 cents. Fly-Rods and Fly-Tackle. By H. P. Wells. Price $2.50. Fly-Fishing and Fly-Making for Trout. By J. H. Keene. Price $1.50. American Angler's Book. By Thad. Norris. Price $5.50.



A DINING CAR LINE TO THE PACIFIC COAST.—The completion of the all rail line between Portland, Ore., and San Francisco gives the Pacific coast traveler an opportunity to patronize the famous Dining Car and Yellowstone Park Line, the Northern Pacific Railroad. The sportsman traveling in the West, whether a lover of the rod or gun, naturally seeks this road, penetrating as it does the lake park region of Minnesota, and running through the valleys of such trout streams as the Yellowstone, Gallatin, Hell Gate, Clark's Fork, Spokane, Yakima and Green Rivers, for a distance of fully 1,500 miles, as well as lying immediately contiguous to the finest hunting grounds in the United States, viz., The Big Horn, Snowy Belt, Bitter Root, Coeur D'Alene and Cascade Mountains. Information in regard to this region can be obtained by addressing CHARLES S. FEE, General Passenger and Ticket Agent, N.P. R., P. St. Paul, Minn.—*Adv.*

KEOKUK, Iowa, March 12, 1888.—*J. F. Breitenstein, Esq., Keokuk, Ia.:* Dear Sir: The box of U. S. C. Co. paper shells that I received from you last fall I tried, and found them to be all that you claimed, and better than any shell I ever used, not one of them missing fire. Yours truly, (Signed) T. J. LOWRIE.—*Adv.*

Fisciculture.

A SPAWNING FUNNEL.

THE illustration shows the lines of what I use at the Cold Spring Harbor station of the N. Y. Fish Commission for preventing damage to trout eggs when they are being stripped from the fish. It is made of tin and has a three quarter inch hole in the bottom, through which the eggs and milt flow into a pan below. In taking the eggs directly in a pan a trout will often slip from the hand and pound

and scatter the eggs, thereby causing both loss and injury, but we find this device prevents this. The cylinder is sixteen inches in diameter, and the slope of the funnel should not be flatter than shown. At first the hole was made smaller than now, but I found that the eggs which are only one-sixth of an inch in diameter, would not flow through a half-inch hole freely. I find it so useful that I think it worth figuring and describing, for several fishculturists who have seen it call it a good thing. By request I sent one to the U. S. Fish Commission Exhibit at Cincinnati, and one is in the National Museum, among the apparatus used in fishculture. Any tinsmith can make one from the drawing.

FRED MATHER.

COLD SPRING HARBOR, N. Y.

THE NATIONAL FISHERY ASSOCIATION.

THE annual meeting of this association will be held at the United States Hotel, New York city, on Wednesday, Dec. 12, and from some letters which we have received it is evident that the American Fisheries Society is supposed by some to be identical with the one named above. There is a vast difference between the two organizations which may be briefly explained by saying that the American Fisheries Society is largely composed of men interested in fishculture who meet to compare notes and methods, and whose discussions are more or less scientific, and during its deliberations all attempts to introduce resolutions to influence legislation have either been voted down or ignored.

With the other association the case is reversed, and legislation is the only object aimed at, the president of the association, Mr. Fitz J. Babson, having issued a call for the meeting in which partisan politics appears very strongly. In order to illustrate what the association desires to accomplish we print their synopsis of proposed legislation, which is as follows:

"A bill to re-establish the bounty system to the producing fishing industries of the United States.

"A bill to establish a uniform rate of duty on importations of foreign fish.

A bill defining the products of the American fisheries entitled to free entry.

"A bill defining the jurisdiction of the United States over all the waters of the United States, making them the property of the people of the United States for the purpose of commerce, navigation and the fisheries.

"A bill providing for the enlistment of rated able seamen in a naval reserve corps.

"A bill defining the commercial rights of all the citizens of the United States under treaties with foreign nations, denying the right of discrimination against any class of our citizens and enforcing retaliative measures.

"A bill to declare a specific duty on all foreign fats and grease, which under the commercial name of degras is entered as grease at a low ad valorem duty and under the Mills bill is made entirely free.

"A bill to establish a Department of Marine and Fisheries to have the entire charge of the administration of all of the merchant marine, coasting and fishery interests of the United States, its entire navigation, and to be similar in character and authority to departments maintained by every maritime nation in the world."

Some of these measures are no doubt just and necessary, while others are legitimate subjects for debate. The questions are all foreign to the subjects within the scope of this journal, and therefore we are not disposed to criticise them, and only print them in order to more clearly indicate the differences between the two societies, whose names are so similar as to create confusion in the minds of the casual reader.

TERRAPIN CULTURE.

WE have two inquiries for information concerning the culture of the diamond-back terrapin, one writer wishing to know about their habits and the modes of capturing them, and also about the land terrapin found in the South. We will be pleased to have communications on this subject and in meantime will say: There is no article of food which varies in quality, and consequently in price, as the diamond-back terrapin, *Malaccoclemmys palustris*, the "hens" always selling at the best prices. Those measuring six inches in length of lower shell often bring from $18 to $50 per dozen, while little "bulls" of four to five inches will often sell at one dollar per dozen, or not at all. The best are an expensive delicacy and the principal markets are Philadelphia, Baltimore and New York. Probably the best buyer in the latter city is Mr. E. G. Blackford who, while he trusts other men to buy fish for his market, handles every terrapin that he buys and judges it individually.

As for terrapin culture, we incline to believe it to be as impracticable as frog culture, which was recently shown in our columns to be a delusion bred of sensational journalism. The terrapin season begins in October and lasts until May, the first two or three months being the height of it, but many are caught during the summer and penned up until the season opens, thus giving rise to the reports of "terrapin farms." These penned ones never bring the high prices and can be distinguished at a glance by an expert by the scratched appearance of the lower shell and the callosities on the feet. Mr. Benjamin West, of Fulton Market, tried to rear them and feed them in confinement but failed. His place of experiment was on the Shrewsbury River, New Jersey, but he thinks that terrapin may be raised by care and the expenditure of considerable money, but as the terrapin is of slow growth it is possible that ten years might elapse before the first crop was marketed. Mr. West prefers, for his own eating, a "heifer" terrapin, which might be defined as a young female whose plastron measures under six inches, but not less than five and a half, because, as he says they are young, tender and delicate, and he quotes the old sportsman and epicure, Col. Skinner, in support of his preference.

In his experiments Mr. West inclosed a large pond and marsh with a tight board fence thirty inches high, and procured eggs and hatched about five thousand young ones, but they escaped. He thinks they climbed the fence with their claws, which are very sharp in the young, for he tracked one to the fence and found its track on the other side and followed it into his asparagus bed where it had burrowed. Mr. West thinks the young do not go to the water at first but remain in the sand. He believes that if terrapin culture is ever made profitable it will be down in Virginia where hard-crabs are cheap, for if the adults are fed on fish they taste fishy, but if crabs are the food the chelonian is in perfection. He has fed them with cabbage leaves and other vegetation. Our interview with Mr. West gave us the impression expressed above, that perhaps terrapins may be raised, but the food, attendance and natural losses, not to mention thieving crabbers, would leave the balance on the wrong side of the ledger.

We are promised some further information on the subject of "terrapin farming," and if there is such a thing as a system of terrapin culture, that is raising them from the egg to maturity, we will find it out and publish the results. To our correspondent who wants statistics of the catch and the life-history of the marsh or diamond-backed terrapin, we would say, consult the three volumes of "The Fisheries and Fishery Industries," by G. Brown Goode and associates, printed by direction of the U. S. Fish Commission, 1887. These volumes may be obtained through a member of Congress, or can be bought of the Public Printer for a small sum.

FISH DISTRIBUTION IN NEW YORK.—The State Fish Hatcheries, now five in number, are expected this year to turn out a greatly increased supply of trout spawn. The Fish Commissioners ask that all who may desire fry to stock public waters, make application previous to the first of February next, so that they can make allotment in time for an early distribution. Applications may be made to the Commissioners direct, at their office in the Potter Building in New York, or to the superintendents of either of the hatcheries. Blank forms of application will be furnished to all applicants at the New York office. These blanks are to be filled out with necessary information in regard to the number and kind of fry wanted; the location and character of waters to be stocked, &c., &c. The newspapers generally, of the State, are requested to copy this notice as a matter of interest to their readers.—E. P. DOYLE, Clerk N. Y. Com. of Fisheries.

LANDLOCKED SALMON IN MAINE.—Mr. E. M. Stilwell, of the Maine Fishery Commission, reports that 600,000 eggs of the landlocked salmon are now in the hatchery at Sebago Lake and the fry will be planted in the lake next spring. The fish in the lake are very large, some having been taken there that weighed as high as twenty-nine pounds.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 1 to 4.—Fourth Dog Show of the Meriden Poultry Association. Joshua Shute, Secretary, No. 430 Pratt street, Meriden, Conn.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 4 to 7, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 7 to 12.—First Annual Show of the Hudson River Poultry, Dog and Pet Stock Association, at Newburgh, N.Y. J. H. Drevenstedt, Secretary, Washingtonville, N. Y.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Renssalaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Dog Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12, 1889.—First Annual Dog Show of the Mascoutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6776.**

COLLIE CLUB STAKES FOR 1889.

THE Executive Committee of the Collie Club has decided upon the following distribution of the stakes for 1889:

The Futurity and Produce Stakes at New York.

The Collie Sweepstakes and Stud Dog Stakes at Philadelphia.

The Collie Club Trophy, for the best American-bred collie belonging to a member of the club, at Boston.

The President's Cup, for the best collie without regard to breeding, belonging to a member of the club, at Baltimore.

There is every indication of a grand show of collies next season. J. D. SHOTWELL, Sec'y.

THAT MITCHELL LETTER.—*Editor Forest and Stream:* Ere the final disappearance of the man who told us he bought a letter he believed to be stolen, I would like to remind your readers that James L. Anthony, who concocted this transparency, has failed to respond to my challenge to publish the name of the person he says sold the letter, acting as my agent. Shall I tell your readers why? It was because no one would have believed him. I knew it would stop his further letter writing, and now he slinks into the oblivion he deserves, and let us hope we never shall look upon his like again.—JAMES WATSON.

THE EASTERN FIELD TRIALS.

[By a Special Reporter.]

HIGH POINT, N. C., Nov. 29.—There were a number of new-comers at the trials, among whom were: P. Lorillard, Jr., Tuxedo, N.Y.; D. M. Barringer, Philadelphia; O. W. Donner, Coosaw, N. C.; H. A. Cary, New York; R. P. Carroll, Howard county, Md.; T. H. Gibbes, Columbia, S. C.; W. Astor Chanler, New York; E. R. Coleman, Lebanon, Pa.; Nathaniel Simpkins, New York; Whyte Bedford, Horn Lake, Miss.; Major J. M. Taylor, Syracuse, N. Y.; J. S. Tucker, Stanton Depot, Tenn.; Geo. C. Leach and Thiers Leach, High Point, N. C. Mr. G. T. Leach was host at the Bellevue Hotel, and there was a marked and satisfactory improvement in the accommodations. The trials were a success.

At the Eastern Field Trials Club's meeting, the following Board of Governors was elected: B. F. Wilson, J. R. Henricks, J. O'H. Denny, R. B. McCook, F. R. Hitchcock, J. O. Donner, H. Merriman, W. A. Coster, D. C. Bergundthal, J. L. Breese, G. T. Leach, O. W. Donner, I. N. Cochran, P. Lorillard, Jr. President, J. O. Donner; Vice-Presidents, F. R. Hitchcock and J. L. Breese; Secretary and Treasurer, W. A. Coster.

ALL-AGED SETTER STAKE.

The judges were Messrs. J. R. Henricks, H. B. Duryea and J. Otto Donner. Mr. Henricks had to return to Pittsburgh Monday night. Mr. F. R. Hitchcock filled his place during the remainder of the meeting. The judging, on the whole, was very superior throughout. It was done with more uniform accuracy than at any preceding trial. Good dogs were unavoidably left, but on the work done in the different heats the judges were almost uniformly correct. With respect to the time limit, the opinion seems to be common that a minimum time should be adopted, but that there should not be any further restrictions. The weather was unusually favorable. Birds were scarce, and, therefore, the quantity of work done does not rate with that of past years. I reported in last issue the running of the first heats, which resulted as follows: Nat Goodwin beat Dave R. Cincinnatus beat Saddlebags. Bob H. beat Joey B. Ollie S. beat Effie Hill. The heat between

ROGER AND GALATEA

was unfinished and was resumed at 10:02 on Monday, Nov. 26. A start was made a short distance beyond the schoolhouse near town. Roger found and pointed a bevy in the stubble and was well backed. He retrieved tenderly, but not as promptly as he might. On the scattered birds Roger wheeled prettily to a point on a single bird in a thicket, pointing stylishly and was steady to wing. Galatea pointed in sedge grass in pines, Roger backed when cautioned; nothing found to the point. Roger next pointed a bird at the edge of the woods, which flushed wild a moment afterward. In a wet place in heavy cover, where it was very difficult to get a point and errors were excusable, Roger flushed; shortly afterward he pointed a single bird well. Galatea pointed uncertainly; Tallman shot and missed. At the end of the extra half hour Roger won. He had the advantage in speed, range and style.

TOLEDO BLADE AND CASSIO.

They were started off at 10:53. Toledo pointed in sedge and was backed by Cassio. The dogs were then given a start up wind on a bevy marked down in pine woods by the spectators. Toledo pointed and was backed; two or three birds were flushed to the point. Cassio wheeled to a point; Toledo backed, broke his back and resumed it when cautioned by Tucker; a bird flushed down wind from the point. Nearly all the bevy had flushed wild after the first point. The birds were followed. Toledo roaded and pointed but could not locate. In a stubble Cassio dropped to a point, Toledo backed well. Avent could not flush. After the handlers had moved on a bevy was flushed a few yards down wind from where Cassio pointed. The dogs were brought back to work on the scattered birds. They were lost for a few minutes. Both were found pointing a bevy, and both were steady to wing. Moved on, and Toledo dropped to a point just soon enough to save himself from a flush. Next, Toledo pointed a bevy and was steady to shot. He pointed several birds and was steady. Cassio pointed a single in sedge and Toledo backed. This was a long heat, the dogs being down 1h. and 45m. Cassio had the wider range and was lost several times; he had the better style in ranging; on point Toledo had the advantage; he won.

JOE B. AND DASHING LADY.

They were started after lunch at 1:52. Tucker handled Dashing Lady, Height handled Joe B. Soon after starting Lady flushed a bevy on a sidehill in sedge; it flew but a short distance; Joe pointed; Lady flushed a bird; refused to back and stole the point. Height shot and killed; Joe did not retrieve. The wind was blowing steadily and strong and gradually increased in strength toward night. Lady pointed a bevy and was well backed; both dogs were steady to shot. Next Lady flushed and stood to the flush; Joe backed. Lady flushed twice. Joe next pointed a bird and Lady backed, but was slightly unsteady to shot. Next Tucker killed a bird to Lady's point in pines; she retrieved nicely; she next false-pointed. Joe B. won easily. Down 45m.

JACK MODOC AND JAQUES.

Capt. McMurdo handled Jack Modoc, Tucker handled Jaques. They were started at 2:45. Jack Modoc did not have sufficient self-confidence at times. A bevy was flushed by the judges and was followed. Jack Modoc pointed it in sedge grass; Jaques backed. Jack next made two false points while looking for the scattered birds. Each next made a flush. Jack scored a good point. Jaques made a handsome back. Next, in oak woods on a road, Jaques pointed staunchly. The bevy had run straight down wind on the road. McMurdo could not make Jack move from his point. Tucker sent his dog in, which took up the roading down wind to the bevy, and he pointed. Tucker ordered him on and he flushed. After moving on a short distance in the wood a single was flushed to Jaques's point and he retrieved nicely. Jack pointed a bevy in open sedge; Jaques flushed the bevy, coming down wind on it. Jack secured another point and afterward made a false point. Down 1h. 15m. Jack won. He had better range and style in ranging; on point he was quite equal to Jaques. Jack showed excellent finding and pointing capabilities, but they were marred betimes by the want of self-confidence.

KING LEO AND BRANDON.

They were cast off on stubble at 4:04. Brandon made a staunch point on the stubble; Leo coming up, caught sight of him and stiffened instantly into a very stylish back. Nothing was found to the point. In pine woods in sedge Brandon began roading and the bird was accidentally flushed some yards ahead, 50yds. ahead in the sedge Leo was found dropped on a point. Both dogs pointed, moved on and located and pointed a bevy. Both dogs were steady to shot. Brandon pointed a rabbit and Leo backed. Brandon next roaded and pointed a single bird well; he next roaded to a flush. In the point of pines Leo was roading, and Brandon coming down wind flushed the bird, Leo next pointed a bevy. Lewis killed three; Leo retrieved two, Brandon one; both did it well, Leo was slightly unsteady to shot. The birds were followed. Brandon flushed a bird across wind. He made an uncertain point and two birds flushed wild close by. King Leo won. Down 45m. Brandon was handled by Rose; King Leo by Lewis. Their range and speed were about alike. King Leo had the better style. This completed the first series; and the running for the day ended. The running in the first series resulted as follows:

Nat Goodwin beat Dave R.
Cincinnatus beat Saddlebags.
Bob H. beat Joey B.
Ollie S. beat Effie Hill.
Roger beat Galatea.
Toledo Blade beat Cassio.
Joe B. beat Dashing Lady.
Jack Modoc beat Jaques.
King Leo beat Brandon.

Second Series.

NAT GOODWIN AND CINCINNATUS.

Tuesday was bright and pleasant. A gentle wind blew from the west. The dogs were cast off at 8:25 near the glass house. Nat was first to find a bevy, which he located and pointed; Cincinnatus got a point on the same bevy, while Nat drew on to locate. Bradley killed and Nat retrieved indifferently. Cincinnatus broke in, but stopped to command. The scattered birds were followed. Cincinnatus pointed the bevy; he retrieved nicely. In the meantime, Nat pointed an instant before the bird flushed. Nat won. He had better range and style in ranging. Their pace was about equal. Down 45m.

OLLIE S. AND BOB H.

They were started in a stubble field at 9:15. Bob false-pointed and was backed by Ollie. At the edge of the woods Ollie pointed, then roaded into the woods. In the meantime Bob had pointed, Ollie roaded about two hundred yards across wind, located and pointed the bevy. Ollie retrieved well. On the scattered birds Bob pointed and Rose flushed a bird about thirty yards ahead, across wind; Bob was probably pointing on the foot scent. He retrieved tenderly. Moved on. Ollie pointed twice on single birds, flushed once down wind and Bob backed well. Moved on. Ollie false-pointed and was well backed. Next both pointed. Ollie won. Down 45m. Ollie had better range and style in ranging. Both were stylish on point, although Ollie dropped to her points occasionally.

ROGER AND TOLEDO BLADE.

The heat began at 10:03. Roger pointed a bevy in sedge grass in a hollow by a ditch, and Toledo backed. Roger retrieved nicely. Toledo pointed a bevy in the corner of the stubble. Roger drew in close behind him and pointed. Toledo showed no inclination to seek for the dead bird, but retrieved it well when it was found. The scattered birds were followed. Among them both dogs showed very poor work. Whether the birds were holding their scent or the dogs were incapable of pointing them under the changed atmospheric conditions, it is impossible to say. The poor performance could not be ascribed to poor noses, since both had shown better capabilities in other heats and other parts of the heat they were running. They passed near the birds but did not catch scent. The birds flushed one or two at a time as the handlers walked up to them. One was marked down a few rods away. Toledo was worked to get a point, but could not locate it. Returning he puzzled on the scent and pointed close on the bird. The dogs were brought in pines to the scattered birds of the other bevy. Roger false-pointed; next he pointed a single bird and was steady to shot. Sent on, Toledo pointed and a bird flushed wild near him. Roger, while being brought up to back this point, caught scent and turned to one side. He pointed a single bird where Toledo had been and dropped to wing. Toledo next pointed and the bird flushed wild; Roger was again brought up to back, but caught scent before he saw the pointing dog. Sent on, Toledo pointed a bird; Roger stopped in a good back for a moment, then turned his head and appeard to be more interested in catching the scent, but he did not break his back. Moved on and Roger pointed twice very neatly a single bird. The work on the scattered birds of the lost bevy was done in sedge or pines. The judges consulted, the 45m. being up. The dogs were ordered on for half an hour. Roger had shown decided superiority in everything except backing. Range, speed and style in ranging were decidedly in his favor. He next pointed close to a bevy, but just up wind of it in sedge; and Toledo backed. The birds were followed. In pines both were found on point, Toledo a little ahead of Roger; nothing was found. Roger made two more points on single birds. He won. Down 1h. and 45m.

JACK MODOC AND JOE B.

The heat began at 11:58. There was nothing found in the first 45m. Jack false-pointed twice apparently, but it was extremely difficult to determine when he had a true or false point, as he occasionally pointed his birds at long distances. Several points which apparently were false proved to be true; and several others which apparently were false might have been true. At the end of 45m, the heat was suspended while the party went to lunch at the Holden school house. At 1:30 it was resumed. Joe did not retrieve. He ranged wider but showed no special capabilities as a finding dog. Jack excelled in this respect and was only handicapped by his want of self-confidence. Nearly all the work that Joe did was on Jack's finds of bevies. Joe's nose was very inferior in this heat, and his attitudes on point and back had an appearance of despondency. Jack retrieved nicely. At the end of the two half hours Jack had found and pointed two bevies and two single birds; Joe had three points on three single birds. The judges consulted and dogs were again sent on. Jack pointed near a clump of bushes in the open. McMurdo beat out the ground but failed to flush. Jack would not abandon his point. Joe was sent on and crossed twice between Jack and the bevy but did not catch scent. When near to it he pointed in a slovenly manner. The birds were marked down in the open sedge field. Jack pointed one and Joe backed in a listless manner. Both were steady. Moved on about ten feet and Jack pointed; Joe drew in and pointed the same bird, a place where he had no right to be, but he several times stole Jack's work. Moved on and Jack flushed a bird, stiffened to a point and held it staunchly. Joe came in ahead and pointed, and several birds flushed wild. Moved on, Joe flushed a bird while going up wind on it. The scattered birds were followed. Jack, taking a cast about one hundred and fifty yards away, pointed another bevy in the open sedge field. The birds went to an adjoining field. Jack pointed a single bird in heavy weeds, but did not locate it accurately, being across wind from it. McMurdo flushed it. The 30m. were up and Joe was thoroughly beaten. Down 2h. 15m. King Leo had a bye. The second series resulted as follows:

Nat Goodwin beat Cincinnatus.
Ollie S. beat Bob H.
Roger beat Toledo Blade.
Jack Modoc beat Joe B.
King Leo a bye.

Third Series.

KING LEO AND NAT GOODWIN.

The dogs were started at 3:12. Nat was disobedient and his handler had great trouble in keeping him under control. He went to the woods close by three or four times hunting for bevies, and did not heed the whistle or commands. Leo showed superiority on game, backed handsomely, was steady, and won the heat. Nat showed excellent qualities, but his disobedience made it impossible for him to win. Both were stylish. Down 45m.

OLLIE S. AND ROGER.

Wednesday was clear and bright. A warm mild breeze blew from the northwest betimes. The dogs were cast off at 8:30 near the school house. Soon after starting Ollie began roading in sedge in the open field. She crossed a fence into the oak woods and pointed the bevy, and was steady to shot. They were worked on the scattered birds. Ollie flushed one. Roger pointed a single well and Aldrich killed; Roger retrieved nicely. The remaining birds flushed wild. Roger next false-pointed and Ollie backed. Ollie pointed a bird near a bunch of briers. Roger backed but was cautioned when he showed some signs of breaking it. In the open Ollie took a long cast and was lost for a few minutes. She was found making game in the open field adjoining. When brought together the limit had expired. Ollie won. Down 45m. Ollie had better style and range and more uniform speed. The third series resulted as follows:

King Leo beat Nat Goodwin.
Ollie S. beat Roger.
Jack Modoc a bye.

Fourth Series.

JACK MODOC AND KING LEO.

They were cast off at 9:24. On a sidehill, in sedge grass, in a scattered growth of sassafras bushes, both dogs were found on a point. Leo drew on about thirty yards further and pointed the bevy. Lewis crippled a bird and Leo retrieved it nicely. The dogs were ordered on. Jack pointed a single bird in the sedge accurately; he retrieved nicely. Next he pointed a bevy near the edge of the woods and was well backed; McMurdo flushed the bevy behind Jack. Leo dropped to a point on one of the scattered birds in the oak woods just before it flushed wild. At the same time Jack pointed several birds about 100yds. further on in the sedge. The birds were lying very close. McMurdo beat the ground over thoroughly and almost stepped on the bird, which he flushed to the point. Three or four more then flushed wild from the ground which he had beaten. Jack false-pointed and Leo backed. The judges consulted a short time at the end of 45m., and sent the dogs on. Jack soon pointed on the trail of a bevy, roaded it accurately to a plum thicket, displaying a nose of exquisite sensibility. Leo recognized the scent at first but abandoned it. McMurdo beat the ground in the wrong place. Leo a few yards away pointed the same bevy after Jack had been called away from his point. The bevy was followed to pine woods. Jack soon located and pointed a single bird. After the bird flushed he was ordered on, and flushed as he started to obey. The flush was excusable. The remainder of the bevy was lying close about. Leo pointed and Jack backed. There was a little more work done on the bevy, but it was not of any consequence, as it was simply work on birds that had already been found and pointed. Leo flushed a single. Down 1h. and 15m. Jack won. Jack had a pronounced advantage in range and speed. He had a rest of 20m. before the final heat for first. The fourth series was as follows:

Jack Modoc beat King Leo.
Ollie a bye.

Final Heat for First Place.

OLLIE S. AND JACK MODOC.

They were cast off at 11:00. Jack soon found and pointed a bevy. Only part of it flushed from the point. McMurdo sent his dog away, and shortly afterward Ollie pointed the remaining birds of the bevy, and was steady to shot. The birds were followed. Both pointed about the same instant in plum bushes, probably on the footscent, as no bird could be flushed; each pointed on footscent where birds had flushed. They were cast off to find another bevy. Ollie pointed a single in sedge. Avent ordered her on and she flushed. Jack was found on a point in thick weeds in a bottom; Ollie backing. They both roaded along the branch up wind on the back track. Returned and Ollie was sent across the branch, located and pointed the bevy; she was steady to shot. While following the birds Jack false-pointed. Ollie pointed a bird on the dry leaves in the oak woods, and it was flushed several yards ahead of her. Jack was showing some signs of fatigue. The day was quite warm. Down 45m. Ollie won. She had better range and a shade better style in ranging.

Ties for Second Place.

Bob H. and Roger were started at 12 to run a side heat to determine which would compete with the runner-up for second place. Bob H. pointed two birds in heavy weeds and was steady to shot. Roger pointed near a thick run and soon began to draw on the trail of the bevy through the run. Bob coming up on the opposite side, pointed the bevy about 50yds. ahead. The find was Roger's, although Bob secured an independent point on the birds. Bob retrieved tenderly, but was not prompt. The birds went to the oak woods. Bob pointed, but Rose ordered him in another direction, as the handlers had been directed to take a new course. Roger, returning, pointed a single bird where Bob had been making game a few minutes previously. Next Roger pointed a single bird through a fence, and it was flushed on the opposite side to his point. The rest of the birds flushed wild. Bob next made a false-point and Roger refused to back. Down 45m. Bob H. won. Roger's refusal to back probably lost him the heat. He showed a higher grade of all-around work than Bob H., the latter showing a disposition to false-point occasionally. It is a question whether Bob H. is the better dog.

JACK MODOC AND BOB H.

Lunch was served at the Model Farm. Jack Modoc being the runner-up, and having run two heats since morning was free from further running till the following day, if his handler chose to exercise the privilege accorded him under the rules. Capt. McMurdo chose to start at 2:30, thus having a rest of about one hour and one-half. Both dogs ranged wide and hunted diligently. They worked about three-quarters of an hour without finding. Jack pointed in stubble. McMurdo beat the ground out thoroughly ahead of the dog, but the birds had run close by the horses and were seen on the ground. Part of the bevy had gone further out. Jack refused to move from his point, it being a true one. Rose sent Bob on ahead from his back; he took up the roading and pointed the outlying birds. The others were seen on the ground near the horses and were flushed. Rose flushed and killed to Bob's point and Bob retrieved, but did not bring the bird in promptly. The birds made a very short flight into sedge, the afternoon being warm and calm. Bob pointed the marked birds; Jack backed well. A single flushed near Capt. McMurdo and he made a fine shot. Jack retrieved nicely; soon afterward he pointed two birds in the open in fine style. A single bird was marked down in the stubble and the dogs were worked to get a point on it. It was flushed by one of the handlers. At the end of 1h. and 15m. they were ordered up. Jack Modoc deservedly won.

Bob H. was placed third. Roger and King Leo divided fourth.

SUMMARY.

All-Aged Setter Stake, open to all setters that have never won a first prize in an all-aged stake at any recognized field trial in America. First prize $300, second $150, third $50 and fourth $50.

First Series.

Nat Goodwin beat Dave R.
Cincinnatus beat Saddlebags.
Bob H. beat Joey B.
Ollie S. beat Effie Hill.
Roger beat Galatea.
Toledo Blade beat Cassio.
Joe B. beat Dashing Lady.
Jack Modoc beat Jaques.
King Leo beat Brandon.

Second Series.

Nat Goodwin beat Cincinnatus.
Ollie S. beat Bob H.
Roger beat Toledo Blade.
Jack Modoc beat Joe B.
King Leo a bye.

Third Series.

King Leo beat Nat Goodwin.
Ollie S. beat Roger.
Jack Modoc a bye.

Fourth Series.

Jack Modoc beat King Leo.
Ollie S. a bye.

Final for First Place.

Ollie S. beat Jack Modoc and won first prize.

Ties for Second Place.

Bob H. beat Roger.
Jack Modoc beat Bob H. and won second prize.
Bob H. was awarded third.
Roger and King Leo divided fourth.

THE CHAMPION STAKE.

There was a great deal of interest in the Champion Stake, and each dog had keen admirers and supporters. The judges were the same as in the All-Aged Setter Stake. On the whole the quality of the work was excellent. The day was clear and warm. The dogs were drawn to run as follows:

JEAN VAL JEAN (Memphis and Avent Kennels, Memphis, Tenn.), black, white and tan English setter dog, Nov 7, 1886, (Mingo—Twin Maud),

against

BOB GATES (Whyte Bedford, Horn Lake, Miss.), white, black and tan English setter dog, 4½yrs. (Count Rapier—Belle of Hatchie).

OLLIE S. (Memphis and Avent Kennels, Memphis, Tenn.), black, white and tan English setter bitch, 3yrs. (Paul Gladstone—Lottie),

against

BOHEMIAN GIRL (W. G. Mellier, Kansas City, Kas.), black and white English setter bitch (Count Noble—Mollie Belton).

JEAN VAL JEAN AND BOB GATES.

The heat began at 8:27 near the glass house. Jean was handled by Avent; Bob Gates by Tucker. Bob had been purchased by Mr. Jas. L. Breese, Tuxedo, N. Y., before the stake began. One of the handlers walked into a bevy and flushed it. The birds were followed into the woods close by. Jean brought up in a stylish point on a single bird and was steady to wing; Bob was not near to back. A short distance further on, by the edge of the run, Jean brought up in a point on a single. Avent killed and Jean retrieved cheerfully and well. The dogs were then brought together to give them an even start again on the scattered birds. Jean had hardly been cast off when he dropped to a point by the edge of the run; several birds were flushed to the point. On the opposite side of the run Bob pointed, moved on and flushed the bird. In the run shortly afterward he flushed again. Jean pointed on the footscent. Jean next pointed a bevy at the edge of the pine woods, or wheeled to the point just as the bevy flushed. The scattered birds were followed into open sedge. Jean located and pointed a bird and was steady to wing. The dogs were then sent in the oak woods close by. Bob flushed two birds, then pointed a single bird. Turned back into the open. After working about a few minutes, a bevy was seen to rise in the open and go to the woods. Jean was found dropped near where the bevy flushed. He had been gone some time; but whether he dropped on point and the bevy flushed wild or whether he flushed no one knew. The 45 minutes were up and Jean won easily. He was very quick in locating, pointed very stylishly and carried himself with a great deal of dash and spirit His work and manner of work was of a higher grade than that of Bob Gates. He had the advantage in speed, range and style; he also showed greater judgment in hunting his ground.

OLLIE S. AND BOHEMIAN GIRL.

They were started on stubble at 9:21. Bohemian Girl showed a magnificent range and carried herself very stylishly. She was very obedient without being overtrained, and showed a finished education. Ollie also ranged well, but did not have the speed of Bohemian Girl. It was a brace of bitches that even professional trainers rarely see. Bohemian Girl was handled by Titus, Ollie by Avent. Ollie pointed in a hollow in sedge; the Girl, coming in from a cast, backed instantly and stylishly. Avent beat out the ground but failed to flush. Sent on, Bohemian Girl pointed on the foot scent; Ollie took the trail and roaded quickly up the hill to the level ground and pointed; three or four birds were flushed near her and the rest of the bevy flushed wild some distance ahead. The birds were followed into the oak woods. Ollie pointed a single bird in the dry leaves; Avent shot and missed. Moved on and both pointed; as the judge passed to go to the Girl he flushed a single near Ollie. Titus beat out the ground ahead of the Girl, but did not go quite far enough out; the Girl was sent on and she flushed the bird. Ollie pointed after being sent on; the Girl backed well; nothing found. Ollie stopped and pointed just in time to save making a flush. Bohemian Girl coming up, wheeled to a pretty point on two or three birds, and was steady to wing. Bohemian Girl dropped instantly to a point near a thin growth of briers, and was well backed by Ollie. Titus shot and missed. Bohemian Girl made a pretty point on a sidehill, and Ollie, 60yds. away, backed stylishly. Titus killed to the point and Bohemian Girl scored a neat retrieve. They were sent on to find another bevy. In a hollow in woods Ollie pointed a bevy; the Girl was not near to back. Avent shot and killed; he did not work Ollie in the right place to find the bird, hence did not find it. Some one intimated that Ollie would not retrieve. The dogs were sent into the pine woods to work on the scattered birds. Ollie false-pointed and the Girl roaded carefully up wind through some dead pine limbs to a flush. Her nose was evidently "off," as she was not doing as finished work as her admirers had seen her do. Ollie S. won. Down 1h. and 15m. Titus was handicapped in handling by not being familiar with the haunts of the birds.

First Series.

Jean Val Jean beat Bob Gates.
Ollie S. beat Bohemian Girl.

Final Heat for First Place.

JEAN VAL JEAN AND OLLIE S.

After a rest of twenty minutes they were cast off at 11:00. The time of day was bad for finding birds or getting good work on them when found. Jean pointed on a sidehill in weeds; Ollie, further down the hill along the run, came in shortly afterward and pointed independently. Avent failed to flush. Sent on both dogs made game, but did not locate. They were up wind of the birds all the while which were flushed near the judges' horses only a few yards from where Jean first pointed. The birds flew a short distance and lighted in the sedge. Ollie was first to point on them. Avent killed one and Ollie retrieved it, which set at rest all questions as to her retrieving. Sent on, Ollie took but two or three steps when she pointed and Jean backed; a bird was flushed to the point. Jean going up wind flushed a bird. Next Ollie false-pointed. A short distance further, Ollie pointed a bevy staunchly in dead pine limbs; a moment afterward Jean, called in to back going rapidly down wind near Ollie, did not see her; he caught scent when he was almost on the bevy, and dropped instantly to point. At this stage it looked as if Ollie was to be the winner of the Champion Stake. She was doing very steady, neat work and much of it. On the way to the scattered birds Jean pointed a bevy. In the woods Jean pointed a bird nicely and was well backed. Moved on and Jean pointed in the open sedge; several birds were flushed to the point. Both pointed at the same time. Avent flushed a bird of Jean and killed it. Jean retrieved nicely. In the meantime a bird flushed wild ahead of Ollie. Ollie next false-pointed and Jean backed. Moved on, Jean pointed a single bird in the sedge and Ollie backed. Avent beat about and was about to give up trying to flush when the bird rose. Jean won. Down 45m. It was a very closely contested heat. Jean had the better style; there was not much difference in speed and range.

SUMMARY.

Champion Stake.—Open only to winners of all-aged stakes at recognized field trials in America. Forfeit $10, and $15 additional to fill. The club adds $100 to entrance money and a western paper adds a cup, value $100.

First Series.

Jean Val Jean beat Bob Gates.
Ollie S. beat Bohemian Girl.

Final for First Place.

Jean Val Jean beat Ollie S. and won first prize.

THE SOUTHERN FIELD TRIALS.

[Special to Forest and Stream.]

AMORY, Miss., Dec. 3.—The first annual meeting of the Southern Field Trials Club began here to-day with the Derby. Of the 56 nominations there were 21 starters, which were drawn to run as follows:

CAPT. BETHEL (J. M. Foster), black, white and tan English setter dog (Gordon—Blanche),

against

LINDO (S. L. Boggs), black, white and tan English setter dog (Gladstone—Flounce).

YAZOO (Whyte Bedford), black and white English setter dog (Bob Gates—Hustling Hannah),

against

COUNT PIEDMONT (E. Dexter), black, white and tan English setter dog (Count Noble—Belle of Piedmont).

FASHION (J. F. Hart), black, white and tan English setter bitch (Count Noble—Lit).

against

DUKE OF MAINE (H. F. Farnham), liver and white pointer dog (Beppo III.—May F.).

DIMPLE (F. Myles), black, white and tan English setter bitch (Gordon—Blanche),

against

KESWICK'S DAN (J. R. Dougherty), liver and white pointer dog (Osborn Ale—Keswick II.).

TUBEROSE (W. E. Venable), black, white and tan English setter bitch (Count Noble—Lit),

against

BOB'S BOY (C. L. Stewart), black and white English setter dog (Bob Gates—Hustling Hannah).

HOPE'S LASS (J. O'H. Denny), black, white and tan English setter bitch (Gath's Hope—Lady May),

against

OLIVER TWIST (B. F. Wilson), black, white and tan English setter dog (Count Noble—Fannie W.).

MILDRED (E. Dexter), lemon and white English setter bitch (Dashing Rover—Muriel).

against

FELIX M. (G. Knapp), lemon and white English setter dog (Gath's Hope—Daisy F.).

FLORENCE GLADSTONE (J. I. Case, Jr.), black and white English setter bitch (Gladstone—Flounce),

against

SANCHO (J. A. Greenleaf), liver and white pointer dog (Beppo III.—May F.).

BASS (C. E. Michel), liver and white pointer dog (Osborn Ale—Keswick II.),

against

GLAMORIGAN (L. A. Biddle), liver and white pointer dog (Robert le Diable—Tuck).

THE CORSAIR (B. M. Stephenson), black, white and tan English setter dog (Dan Gladstone—Haidee),

against

MILLIE GATES (———), black and white English setter bitch (Bob Gates—Hustling Hannah).

BLOOMO II. (J. L. Anthony), liver and white pointer bitch (Lad of Bow—Bloomo), a bye.

The quality of the work to-day was of an inferior character, although there was an improvement this afternoon. Six heats were finished, the seventh being undecided.

First Series.

Capt. Bethel beat Lindo.
Count Piedmont beat Yazoo.
Duke of Maine beat Fashion.
Dimple beat Keswick's Dan.
Tuberose beat Bob's Boy.
Oliver Twist beat Hope's Lass.
Mildred and Felix M. undecided.
The weather is unpromising, it is cloudy and rain threatens.

[Special to Forest and Stream.]

AMORY, Miss., Dec. 4.—The work to-day was a decided improvement on that of yesterday. The grounds were better and birds more plentiful. The work in two or three heats was of a high order. The weather is warm and pleasant. Quite a large number of prominent sportsmen are present, and a great deal of enthusiasm is manifested. The undecided heat between Mildred and Felix M. was awarded to Felix M. The running to-day was as follows: Florence Gladstone beat Sancho, Glamorigan beat Bass, The Corsair beat Millie Gates, Bloomo II. a bye. In the second series Bloomo II. beat Capt. Bethel, Count Piedmont beat Duke of Maine, Dimple beat Tuberose, Oliver Twist beat Felix M., Florence Gladstone beat Glamorigan, The Corsair a bye. In the third series Count Piedmont beat The Corsair, Dimple beat Bloomo II. This finished the work for the day.

SCENT.—*Editor Forest and Stream:* In reply to "H. B. N.," I drove the same horse each time that champion Johnny tracked me; but it was a stranger to him, and he doesn't see the beast more than three or four times in a year and then only for a few days together. If any one else drove the mare from the house when I was out of sight he never attempted to follow. He did not sleep in the stable nor go about the horses at all.—CLUMBER.

WATERTON.—Boston, Nov. 26.—*Editor Forest and Stream:* I notice in last issue of FOREST AND STREAM Mr. Wade's inquiry in regard to works of Waterton. He will find the essays he mentioned in "Essays on Natural History," by Chas. Waterton, edited, with a life of the author, by Norman Moore, B. A., St. Catherine's College, Cambridge. With portrait and illustrations. London: Frederick Warde & Co. In this work are the caustic articles against Audubon. He also wrote Waterton's "Wanderings."—C. W. C.

SALISBURY'S PEDIGREE.

Recently, in looking through some dog journals, I came across a correspondence initiated in 1886 by Mr. R. A. Craig of St. Paul, Minn., as to a mastiff pedigree that had doubtless, been constructed on your side to fit an imported dog. One item in the bogus pedigree was "Mason's Salisbury," and as I have some knowledge of this dog's breeding, I looked up the whole of the correspondence, thinking that I might perhaps be able to give some information on the subject. Mr. M. B. Wynn settled the question raised by Mr. Craig, and Mr. Wade then asked two questions which were never answered in print, so far as I can see. So on the principle that it is "better late than not at all," I have pleasure in answering them now. The questions were: (1) Is there any evidence that Duchess (the dam of Mason's Salisbury) was by Victor out of Beldam? (2) Is the pedigree of Hanbury's Peeress correctly given in Salisbury's pedigree?

One answer will suffice for both questions, for the whole pedigree is undoubtedly false, having been expressly arranged so as to bring in all the best names of the past, and there never was and never can be a tittle of evidence to support it. The Duchess in question was a bitch kept on chain by Mr. Carr as a yard dog, and he knew nothing whatever of her breeding. She obtained a free service from a neighbor's dog called Monarch, of whose breeding nothing was known, and who also was a yard dog. One of the results of the union was the puppy which Mr. Carr called Leo, and with which he did some winning. Leo was, I think, shown first at Farnworth in 1879, and appears in the catalogue without pedigree, a circumstance not by any means uncommon in those days. But as the youngster soon made his mark, inquiry was made for his pedigree, when Mr. Carr said "he has none." At the same time he gave the details on which this note is based. Afterward Mr. C. H. Mason bought the dog, but Mr. Carr declined to supply a pedigree. The gentleman who at that time looked through mastiffs and some other breeds for the K. C. S. B., knew of these facts, and was much surprised when reading proofs for the coming volume, to find among mastiffs, Salisbury (late Leo), with a pedigree of the very first order. He at once drew attention to this, as a matter that wanted looking into, and added that he had good reason to suppose that the whole thing was false. The entry form was looked up, and was found to be signed, not by the breeder, but by the new owner, and a promise was given that the matter should be looked into further. However, nothing more was done, and the next volume of the Stud Book gave Salisbury a pedigree which made mastiff men sit up and stare. However, it was nobody's business to interfere, and so the record remains.

Editor Forest and Stream:

The above mean, sneakish and unreliable statements concerning the pedigree of the mastiff Salisbury appeared in a Chicago weekly comic of Nov. 24. The writer, "Our Special Commissioner," has office room at 191 Fleet street, London, and is trying to work up a sale for a paper that ceased long ago to have any influence or weight in doggy circles in this country.

The editor's reputation, as faithfully pictured in a controversy I had with him a few years ago, his intense ignorance of everything pertaining to dogs, and the peculiar freaks of his mental faculties made it necessary for the paper to seek succor in another country or die. The editor therefore sailed for England and eventually succeeded in making arrangements with a number of English dog men to tell the Chicago comic's worn out readers something they never had a chance to learn from that crooked organ—dogs. The editor's agent and "Special Commissioner," a mere tyro in dog matters, was also engaged to write what he didn't know about dogs, and the above article, which is one of his early productions, goes to show that with a little more practice and closer intercourse with the Chicago slippery novice, Mr. W. H——, will soon be on an equal footing with his employer, whose unenviable record in connection with stud books, Laverack setter funds, Tom Jerome's Gordon setter, the fishing rod, the taxidermists' birds, etc., etc., is public property.

That busybody, Mr. W. Peep-about Wade, is directly the cause of this controversy, and all because I handed him a piece of paper (familiarly known as "the Pittsburgh Piece of Paper") to give to the person who officiated as judge at Pittsburgh in 1883. Your readers will remember that I was an exhibitor at the show, and that Mr. Wade too quickly jumped at the conclusion that the note contained a request to the person acting as judge to give one of my dogs a prize. When it had been proven that I was judging the dogs outside the ring and sending the numbers to the person (Mr. Jas. Mortimer) who judged, and that the note given to Mr. Wade was nothing more nor less than the decisions in the black and tan terrier class, Mr. Wade took the only course that an honorable man would take. He apologized to me by letter and through the press. It was while Mr. Wade was ransacking England to find something detrimental to my character that he discovered that there was possibly a loophole in Salisbury's pedigree. This, as he told me later, was the only thing he could unearth that might be twisted and cooked to do me an injury.

Mr. Wade was too straightforward a man to attempt jugglery with his supposed discovery. Although he was my sworn enemy, his conduct throughout the investigation proved that he tried to get at one thing—the truth, and that he never allowed his sense of justice to be influenced by hatred. It did not take him long to find out what kind of a man Tom Carr, the former owner of Salisbury, was, and he appeared to arrive at a verdict in a very short time. Compare Mr. Wade's conduct with that of the Chicago editor and you have a vivid view of the wide margin that separates a gentleman from a blackguard. The editor engages this Mr. W. H——, a man who is comparatively unknown in connection with dogs, to concoct such a case as will damage my reputation.

The best laid plans of mice and men sometimes come to grief, and by the time I get through with this case it will be found that there is a lot of dirty linen to be washed.

To commence with "Our Special Commissioner," alias W. H—, alias the Chicago comic's Fleet street agent. He professes to write with the intent of giving information, whereas he actually writes at the bidding of his employer. He also falsifies his statement that his object is to give information by writing for uninformed persons in this country that which any dog man in England would at once detect as unpardonable and unequalled ignorance, or dirty and vicious perversion of the truth. In the first place, no man who knows old Tom Carr would write of him as Mr. Carr. He has never been called Mr. Carr by any man who was well acquainted with him. The statement that "Mr." Carr when asked for a pedigree said "he has none" is a most deliberate falsehood. There is no such person as "Mr." Carr, but there is an old Tom Carr, an individual who at certain times becomes rabid, smashes all (wife and family included) before him with a heavy stick, and is not permitted to leave home without an attendant. Let any American dog man who may happen to be in England, run over to Keighley or Bingley, Yorkshire, and ask about old Tom Carr and he will soon find that "Mr." Carr has the reputation of being the biggest liar in that section of the county. None but a most unreliable writer would ever dare come out with such a bare-faced falsehood as Tom Carr having said that Leo (Salisbury) had no pedigree. Who ever heard of old Tom Carr having a dog or a horse without a pedigree? Nobody. There is all the evidence in the world to show that old Tom Carr described Leo (Salisbury) to every man he met as the "best in t' world and t' best bred un." When anybody praised the dog old Tom immediately put in "O yes, and look at his pedigree." It is quite possible that Salisbury's dam had no pedigree, but the man that said that old Tom Carr ever said so is just as crooked as old Tom Carr himself. "Our Special Commissioner's" statement that "Mr." Carr declined to give me a pedigree with the dog I characterize as another willful and vicious falsehood. Carr gave me a printed pedigree of the dog's sire and assured me in a most positive manner that the dam was bred exactly as I stated when I registered him. "Our Special Commissioner" says that he believes Salisbury was entered without a pedigree at Farnworth, puppy class, 1879. He had better make another guess.

Why did he forget to mention that Carr showed the dog at Leeds, Bingley, Ripon, Cleckheaton, etc. Why did he not, when he was out on an "information" mission, tell us something about the entries at these shows! Does "Our Special Commissioner," alias W. H.—, the Fleet street agent, take the dog men of this country for a set of consummate asses and nincompoops or what? If "Mr." Carr had said that Salisbury had no pedigree would the mastiff men have allowed me to take the dog into the ring and beat them without saying a word? If anybody, except Carr and his family, had known or suspected anything crooked in the pedigree, it would have been gentlemen like Messrs. Exley, Swithenbank, Heinzeman, etc. These mastiff breeders lived within a few miles of Carr's residence, and they knew every mastiff in the neighborhood and all about them. Would Messrs. Exley and Swithenbank, the owners of Bosco II., have sucked their thumbs over that grand young dog's defeat by Salisbury if old Tom Carr had ever as much as hinted that Salisbury had no pedigree? Would these gentlemen be my staunch friends to-day if they suspected me of beating them with a dog whose pedigree I had forged? If old Tom Carr had intimated that the dog's pedigree was not as represented, would a man like Marsden, who handles Mr. Royle's dogs, and knows every dog man in the fancy, have offered me £250 for Salisbury? If "Our Special Commissioner," who is not a dog man and never was, knew that the pedigree was not correct, how was it that the men I have mentioned did not know it, and why did not "Our Special Commissioner" prove himself an honorable lover of dogs by exposing the fraud? Would Messrs. Wynn, Taunton, Exley, Swithenbank, etc., silently submit to have their dogs defeated by a specimen whose pedigree was not straight? If I were capable of descending to such work as forging a pedigree, why did I sell Bosco II. to Mr. Royle for £250 and refuse to let him have Salisbury? Would it be possible for a prominent exhibitor to buy a well known dog that had no pedigree and palm the same off on the English mastiff men as a purely bred dog? There were hundreds of exhibitors whose dogs were beaten by mine, men who would have been only too glad to have had me barred from exhibiting Salisbury and other dogs. Would any person in his common senses have placed himself at the mercy of these men? If the pedigree of Salisbury, as given to me by old Tom Carr and entered in the Stud Book, "made mastiff men sit up and stare," why in the name of any kind of sense that is found outside of a lunatic asylum did they not say something about it? This statement denies itself and convicts the fellow that concocted it. "Our Special Commissioner" says it was nobody's business to interfere. Great Heaven! A prominent exhibitor gives a dog a fictitious pedigree, introduces mongrel blood into a breed of dogs that any genuine dog lover would jealously protect and it is "nobody's business to interfere." What will the crooked comic tell us next? It is every dog owner's business to interfere in such a case, but then "Our Special Commissioner" is not a dog man; but even this would hardly account for such a silly discharge of infantile ignorance.

I have no intention of defending Salisbury's pedigree. It is not only possible, but highly probable that it was crooked on the side of the sire and dam and all their ancestors as well. When I purchased the dog I knew very little of old Tom Carr, and had no reason at that time for doubting his word. I subsequently learned from the Court House that he was a confirmed liar, and a man who resided near to him and knew him well assured me that at times he was a madman as well. I, however, have no intention of allowing the Chicago editor to vilify me, and I shall always expose his unprincipled attacks whether they be hurled by way of Chicago or 191 Fleet street, London. CHAS. H. MASON.

NEW YORK, Dec. 3.

SALISBURY AND HANBURY'S PEERESS.

Editor Forest and Stream:

About two years since, while the famous Corsair bogus pedigree that Mr. Craig ventilated in the *Stock-Keeper* was fresh in mastiff memories (this is the pedigree that the "Official, Sir," admitted), I wrote the *Stock-Keeper*, incidentally asking if there was any evidence that Beldam, given as granddam of Salisbury, was ever bred to Mr. Exley's Victor, and showed that the pedigree given to Hanbury's Peeress in the English Stud Book was incorrect. Recently the English correspondent of an American paper answers both matters in one sweeping reply that the pedigree is fictitious throughout. This puts me in the position of having at some time, in some way, questioned the honesty of a pedigree coming from Mr. Hanbury, and I cannot imagine a piece of presumptuous impertinence I would be less likely to be guilty of than questioning even the correctness of any pedigree furnished by Mr. Hanbury, and as to the honesty of it, I would be writing myself down knave as well as fool to avow a suspicion on that. The mistake in pedigree of Mr. Hanbury's bitch is an evident error, either clerical or typographical. In pedigree of Salisbury it is said, "Lion, by Mr. Hanbury's Prince out of his Peeress, by Governor out of Duchess," making Peeress a daughter of Governor and Duchess, but that is the pedigree of Prince! and the error has been in the omission of Prince after the word Peeress, in other words it should read: "Lion, by Mr. Hanbury's Prince out of his Duchess, Prince, by Governor out of Duchess." Doubtless the correspondent had no intention of imputing anything to Mr. Hanbury, but coupled with the remainder of his comments, it certainly looks like a charge of fraud against Mr. Hanbury.

As to the Beldam-Victor business, my inquiry could have been answered in the affirmative by a quotation from the English Stud Book, as in Anderton's Tiger, E. 2442, it is given "by Exley's Victor ex Heinzeman's Beldam, by Field's King ex Hilda." This is the correct pedigree of Beldam, who was younger sister to old Champion Turk, and often figures in pedigrees under her original name of Hilda II.

It is true that I inquired of Mr. Exley about this matter, and he knew knothing about it, but his not remembering of his friend, fellow townsman and owner of Lion, the sire of Victor, having bred his bitch to Victor, is easily accounted for. In the first place, I did not then know of the stud book entry (having only stumbled on it within the last week), or of Mr. Heinzeman's ownership of the bitch, and further, Mr. Exley probably did not recognize the name Beldam, as he knew the bitch under her original name of Hilda II. Mr. M. B. Wynn owned her at one time, and sold her either to Mr. Heinzeman, John Swithenbank, or somebody else Bradford way.

I do not propose to defend Mr. Mason, it is none of my business, and his hand is able to keep his head, but it may be pertinent to say that the statement of the English correspondent that the dog did not appear with a pedigree until Mr. Mason bought him, and that Mr. Carr always said Leo had no pedigree, is contradicted by the reference in Dalziel's "British Dogs" to "Mr. Carr's Leo by Monarch, who promises to fill the place in northern shows vacated by that grand dog, Colonel." (I quote from memory, but I give the exact sense.) Mr. Heinzeman seems to have been exceedingly particular and minute as to pedigrees, for in the pedigree furnished by him of Delafield Smith's dogs, he gives such minute particulars as that Cautley's Quaker only served one bitch, and his subsequent poisoning by a mange dressing. I always heard Salisbury's pedigree doubted, and although when I investigated it Mr. Mason and I were bitterly hostile, I can say that I never learned that Mr. Mason was suspected of complicity in the matter, but allegations were very plain and unequivocal as to who was responsible for it. Who this was, I do not propose to say. It seems to me incredible that Mr. Mason would forge a pedigree, right under the nose of his fellow townsman, who was such a professor of pedigrees, and who would be certain to pick it up.

I never had any communications with Mr. Mason on this matter, and merely write of it in the way the facts strike any unprejudiced observer. W. WADE.

HULTON, Pa., Nov. 26.

THE ST. BERNARD PRIZES.

Editor Forest and Stream:

In this week's issue of your paper is a list of prizes to be awarded by the St. Bernard Club at the coming spring show. I joined that club among the first and have done all I could to get others to join, and become interested in a club that was (as I understood from prominent officers of the club) to be for the interests of American-bred dogs principally. Such a club was much needed, as our imported dogs so clearly sweep the boards that there is no chance for the home-bred dogs belonging to those breeders who have not the length of purse required to own cracks from across the water. For those who have ambition to breed the best here, and not import them, I am sorry to see that the prizes offered by the club are nearly all to be competed for by the usual cracks that take all the show prizes, specials, and now will reap the benefit of the club prizes also. There is but a small chance for our home-bred dogs, and one of these chances is so qualified that a home-bred dog would stand little if any chance to get a prize from the club. For instance, an American-bred dog or bitch must have won a prize in its class in the show in order to compete for the club prize offered at that show. Now the home-bred dog will have to compete in its class with imported ones, thus perhaps getting a vhc. or hc. This same dog or bitch may be the best home-bred dog in this country, but can't compete for the club prize because it did not win a prize in its class. This is not right, and in most cases there would be no competitors for the cup and it would revert to the club.

All the other prizes will be competed for by imported dogs and bitches in every instance, thus giving the American-bred dogs no chance whatever. Is it consistent for an American club to offer its prizes under such conditions that only imported dogs can compete for them? In what way will the club be of any help to the average American breeder? The few who govern the club and own the cracks will take all the prizes for each year right straight through the circuit, and the home-bred dog will stand just where it has in the past.

A gentleman asked me the other day what advantage it would be to him as a breeder of a few St. Bernards (among them a prize winner last year) to belong to the club. I told him that it would give his home-bred dogs an independent chance to win a prize when he would not have to compete with imported dogs. I believed so then and was honest in my statement, but I find I was wrong, and he may have sent in his fee before I have a chance to inform him of the present policy of the club, which would keep him as well as many others out. I fully appreciate what has been done for the fancy by the importation of such valuable dogs as Duke of Leeds, Merchant Prince, Hector, Ben Lomond, and such dogs should compete for stud dog prizes given by the club, but the other prizes should all be offered to home-bred dogs, then there would be an ambition among breeders to raise something good, and not be obliged to import it. We are too young in the fancy to be able to compete against such fine dogs as we now have from across the water. If the club ignores the home-bred dogs the first year, there will be but little chance for them in the future. If we are to have an American club, let it be for home interests wholly. We need protection. ESSEX.

THAT VEXED SPANIEL QUESTION.

Editor Forest and Stream:

I do not see in what way I have tried to make out that I was "the first to advocate spaniel field trials." Nothing that I have written could be so construed.

With regard to Mr. Fellows's lofty perch, from the eminence of which he appears to think he in his wisdom can look down and smile upon us poor unfortunates, who are not "Fellowses," I have no desire to "shin up." He can stay there and be hanged for all that I care. I have demonstrated that Mr. Fellows's claim to the title of "champion field trial spaniel of America" for Silk was a fraudulent one, and that is enough.

I don't intend setting about the task he has set me, as I am fully agreed with Mr. Fellows that the present prevailing type is not what is called for under the standard, and it is with a view to giving the "crocodiles" a set back and to "showing them up" in the field that I want to see trials introduced. This Mr. Fellows can ascertain by referring to my first letter, written in the summer months. Mr. Fellows's mind is of a decidedly feminine cast. He argues in a circle. Start on one subject with him and he springs a dozen on you, all totally at variance with the point under discussion. I am getting heartily tired of this controversy or rather series of controversies and would be glad to let the matter rest; but I won't shut up until Mr. Fellows does. Oh no! QUESTER.

Editor Forest and Stream:

In reply to "Quester" I would say that he can count me as one strongly in favor of spaniel field trials.

F. H. F. MERCER.

DOG TALK.

PEACE does not brood over pet dog affairs. The war is on. The injunction asked for by the American Pet Dog Club to restrain the Messrs. Henry R. Sules, Crump Ormsby, Thomas J. Daunis, William Goodenough and Mrs. Eugene Clark, from using the title and the incorporate privileges of the American Pet Dog Club, has been denied upon the ground of conflicting allegations and affidavits by Judge Lawrence, Justice of the Supreme Court. The injunction was asked by Mrs. Sarah J. Wheatleigh, and representing Mrs. Dion Boucicault, Mrs. Abbey, Mrs. Frank Leslie, Mrs. John Draper, Mrs. S. C. Baraum, Mrs. J. A. Britton, Mrs. A. V. Fairchild, Mrs. M. A. Rives, Mrs. M. C. Randolph, Mrs. A. Grinnell, Mrs. Baron Blanc, Charles Holmes, George Fisher, Dr. M. H. Cryer, Mrs. J. K. Emmett, Mrs. M. E. Baldwin, Miss Marion Bannister, W. J. Fryer, C. M. Lewis, James Mortimer and Mrs. Landreau, all members of the club. The probabilities are that the petitioners will abandon their contest for the club title and organize under a new name; this would be the sensible thing to do.

Among the passengers on the Etruria, which had such a rough time of it on her last trip over, was Mr. E. M. Oldham, who was on his way to inspect the spaniels in English kennels, and perhaps to buy a winner or two. Mr. Oldham undoubtedly got a good shaking up on the briny, to put him into condition for the Birmingham show.

The managers of the Pacific Coast Kennel Club's show, which is set down for May 22 to 25, have invited Mr. Chas. H. Mason to judge all classes, sporting and non-sporting.

The New Bedford show premium lists will be out about Dec. 15.

ST. PAUL SHOW.—By an oversight in prize list of the St. Paul show, issue of Nov. 1, the awards in the fox-terrier bitch open class were not given. They were: 1st, W. H. B. Medd's Zero; 2d, L. W. Hill's Fly. Very high com., W. H. B. Medd's Raffle. High com., Leonard F. Block's Minnie.

DISTEMPER.

[*From the American Kennel Register.*]

THE evolution of the average American dog fancier is about as follows: Every American as soon as he reaches the period where his income is assured and he can slacken his pace somewhat in the greedy rush after the almighty dollar, looks around for a hobby of some sort or other with which to occupy his time. This period is generally reached about middle life, but if he happens to have his wealth left to him it may be as soon as he reaches his majority. No matter when that period is reached, if he considers that a hobby will give him happiness—a hobby he will have.

The dog fancier usually is a man who, during his boyhood days, has possessed some sort of a nondescript cur that won a soft place in his heart. So when the time comes for looking around for a hobby, if he visits a dog show he there and then makes up his mind that the breeding of fine dogs is the sort of relaxation from business that will best suit him. So he cautiously (for contrary to popular opinion, Americans are cautious, although it does not take them as long to fully make up their minds as other nationalities) invests in a bitch of the breed he admires, has her served by a prize-winning dog, and awaits the appearance of future champions. As a general thing such an investment brings forth good results. He rears a litter, sends the choicest of them to the shows, where they meet with more or less success. Thus encouraged he builds kennels at his country seat, employs a kennelman and becomes an authority (?) on the breed. For a time all goes well, but sooner or later (generally sooner) distemper appears and kills off all his young and promising stock, and he is discouraged. If he is plucky he sticks to his hobby, but in the majority of instances he gets disheartened, sells off his dogs, usually at an immense sacrifice, and starts some other hobby that promises better results.

Now, all this is caused by that dread disease distemper, and my object now is to give my brother fanciers my experience in treating this disease, and I trust that by following my advice they will be as successful in combating this disease as I have been.

In the first place, distemper is a zymotic or self-limited disease. It must run its course, and is as impossible to abate as small-pox or measles.

When I fully make up my mind that a dog has distemper, by the combined symptoms of nasal discharge and rapid emaciation, I at once isolate the victim from his companions, putting him in clean, dry and cool (not cold) quarters. Then I give 4grs. (the dose for a setter) of anti-febrin every four hours for two days, at the end of which time, in my experience, the fever is abated. I have used anti-pyrine, but it has not been so successful as anti-febrin. I then give 10grs. (dose for a setter of sacharated pepsin after every meal the dog eats, and by this treatment entirely do away with the intestinal troubles that create diarrhœa, which in nine cases out of ten is the cause of death in most cases of distemper. If dog is very weak and refuses food, I force two or three raw eggs (with the pepsin afterward) per day down his throat; and if stimulants seem to be needed, I give an ounce every three hours of some good extra dry champagne like Mumm's or Yellow Label Cliquot.

In connection with this treatment I use pure pine-tree tar, applied daily by a small paddle, across the nostrils, so that the dog will lick it off with his tongue. The mucus that accumulates on the nose I wash off with a soft sponge, dipped in a saturated solution of copperas. All the water the dog drinks contains eight grains of anti-febrin to the pint.

As to the diet I depend almost entirely on scraped raw lean meat. The dog will generally eat this readily, and it is the most easily digested of foods. After the crisis of the disease is passed, and the dog is on the mend, I give a dessertspoonful (dose for a setter) of codliver oil twice a day.

The reason for the efficacy of the above treatment is as follows: The early stage of distemper is always accompanied by a high fever, and anti-febrin, in my experience, reduces the temperature in dogs as no other known drug will. Then the system is left in such a weak state that the power of digestion is destroyed and the pepsin performs the duty, almost immediately stopping the diarrhœa.

S REICNAF.

We can vouch for the efficacy of these remedies, so far as we have had opportunity to apply them, which was in the case of a six-weeks-old puppy, which contracted a sudden cold. Its eyes were completely closed, its nose hot and dry, and the symptoms indicated a probable attack of pneumonia. Anti-febrin was given four times the first day, a small pinch between the finger and thumb. On the morning of the third day there were no fever symptoms and the appetite was good. Then ensued diarrhœa. With its three principal meals on the fourth day pinches of pepsin were administered with the result that the passages seen the following morning were normal. After that the treatment consisted in endeavoring to open the swollen eyelids sufficiently to allow a little of the atropia preparation recommended in "Ashmont's" work to reach the eye. On the evening of the seventh day (the present day of writing) the puppy was able to open the eyelids far enough to allow about a third of the eye to be seen. A thin film covered the eye, which will doubtless disappear under the atropia treatment. The main point is that the puppy, under the anti-febrin and pepsin treatment, never lost its strength, and the indications are that they will prove invaluable remedies in distemper cases. —ED. A.K.R.

VULPINE RELATIONS PLEASANT.—The fox hunters of Leominster have had the second meet of the season. One pleasant day, last week, the hunters shook hands as they left the Center, and vowed they would never return home or eat another meal around the family board until a red rover with a white tip on the tail had been captured. The company went in squads of five to various parts of the town. Twelve hounds, whose scent was excellent and whose long ears brushed the frosted grass were cut loose at 7 A. M. Their cry was soon heard and made the sportsmen's hearts beat quick, as it was a strong indication that reynard had started from his favorite haunts and would soon take to the hills. The first party saw a fox start from the woods at 9 A. M. The dogs were at full cry about half a mile behind the fox. One man had located himself on top of a large rock at the head of a great pasture where foxes are wont to cross. The fox made straight for him, and when within six rods the hunter emptied both barrels at him. In two seconds the fox was at the lower end of the pasture, where he caught two mice, devoured them for his breakfast, then listened for the approaching dogs, left for parts unknown and was not seen again during the day. The second party started a fox at 10:30 A. M. He was seen some 20 times at various points on hills and in dense woods. He was an old fox and knew the Leominster sportsmen full well. He was a little shy of the dogs, but seemed inclined to make friends with the men and walked around like a drum major on a muster field. He viewed with a foxy eye each man's gun, evidently reading the make and admiring the finish of the weapon. He paused at the words "Leominster steel," "Damascus," "Smith's $100 grade," etc. While he was satisfying his curiosity as to the great improvements made in firearms since the first time he was shot at, when he was a little fox half-grown, 31 shells were fired at him. He seemed to enjoy seeing the shot plow along the ground a few yards in front of him and then at the rear. He seemed perfectly indifferent about accidents and it is declared on good authority that this particular fox holds a life insurance policy in the Fitchburg Mutual Aid Insurance Company. He made good his escape, having gained much valuable information as to fine

arms, without taking much risk of his life. The third party started a fox at noon. This party had taken their 11 o'clock refreshments and things looked large. One man declared he had never seen such a fox since he was born. He stood, according to his statements, six feet high and had a bushy tail nine feet long. He ran making every angle known to a professor of mathematics. They fired around a ten acre lot belonging to Joe Collins and occasionally a stray shot got into the air. Gun barrels became hot and men became very angry, and the six-foot-tall fox kept right on going as though he was run by perpetual motion. The last shot was fired and the hunters all declared that the firing had called 72 foxes into that ten acre lot before they left. The next day Collins found in his pasture the following resolutions: Whereas, we, the foxes inhabiting the northern part of Leominster in the county of Worcester, have this day passed a most enjoyable time with the Leominster hunters, therefore *Resolved*, that we invite them again to our domain. *Resolved*, that we have no ill-feeling whatever against the Leominster sportsmen, but hail them as men harmless and well-disposed toward us, and for the chicken bones and bottled cider left on our dominion, we return our hearty thanks. (Signed) HEN(RY) REYNARD, Chairman of Committee on Resolutions.—*Fitchburg (Mass.) Sentinel, Nov. 26.*

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Ben Harrison. By Warner & Hamilton, Canaan Four Corners, N. Y., for sable and white collie dog, whelped July 13, 1888, by champion Clipper (A.K.R. 2529) out of Nellie McGregor (A.K.R. 6030).

Robert Tell. By L. M. Richards, Worcester, Mass., for liver and white pointer dog, whelped May 22, 1888, by William Tell (Prince —Bell II.) out of Daisy A. (champion Pete, Jr.—Daisy).

Ben Harrison. By Warner & Hamilton, Canaan Four Corners, N. Y., for dark fawn pug dog, whelped Aug. 7, 1888, by champion Cricket (A.K.R. 3230) out of Trinket (Dandy—Pansy Blossom, A. K.R. 5458).

New Haven General. By F. F. Dole, New Haven, Conn., for black and tan terrier dog, whelped Nov. 27, 1887, by Halifax General out of Lady Little.

Dinksey and Dauntless. By F. F. Dole, New Haven, Conn., for white bull-terrier dog and bitch, whelped June 29, 1888, by champion Jubilee (Bendigo—Kit) out of Modjeska (champion Dutch, Jr.—Young Venom).

Gent. By F. F. Dole, New Haven, Conn., for white bull-terrier dog, whelped Aug. 22, 1888, by Sensation (Bulrush—Fancy II.) out of Bertha (champion Dutch, Jr.—Young Venom).

Newton Abbot Laddie Chief. By Wilson F. Morse, Kent's Hill, Me., for black cocker spaniel dog, whelped May 10, 1888, by Newton Abbot Laddie (A.K.R. 5686) out of Roxie (champion Obo, A.K.R. 432—Jet B., A.K.R. 1200).

Dora Deane. By L. Gardner, Mt. Vernon, N. Y., for white, black and tan English setter bitch, whelped May 6, 1888, by Count Paris (Count Noble—champion Dido II.) out of Nellie Cambridge (Racket—Daisy Cambridge).

Glen Mills English Beagle Kennels. By T. W. Hemphill, Glen Mills, Pa.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Rose—Tony Weller. E. Stein's (West Philadelphia, Pa.) beagle bitch Rose to Oakview Kennels' Tony Weller (Kino—Fly), Nov. 20.

Colina—Scot's Jack. Theo. J. Hook's (Rome, N. Y.) collie bitch Colina (Kilmarnock Bruce—Lady of the Lake) to Miss Jennie Cackett's Scot's Jack (Dublin Scot—Effie Dean), Nov. 10.

Vixen M.—Lieutenant-Colonel. A. H. Fuller's (Paleuville, N. Y.) mastiff bitch Vixen M. (champion Ilford Caution—Bruna) to F. A. Boutelle's Lieutenant-Colonel (A.K.R. 4166), Nov. 19.

Narka Noble Gladstone. White, black and tan English setter bitch, whelped June 13, 1887 (Noble Dan—Lucretia Gladstone), owned by Dr. L. M. Thompson, Mahanoy City, Pa., Nov. 30, from distemper.

KENNEL MANAGEMENT.

☞ **No Notice Taken of Anonymous Correspondents.**

W. H. C., Indianapolis.—I have a pointer pup seven months old, which has been troubled with a skin disease. I have washed him for several weeks regularly, and also greased him with lard; he is very clean now, but his hair is coming out in great quantities and I can not see any new hairs starting. He is a valuable dog and would like to know what I can do for him, as cold weather is coming on and he will have no hair on his back to keep him warm. Ans.—Give 5 drops of Fowler's solution of arsenic in the food once daily. If skin is red or scaly, use zinc oxide ointment.

E. K., Germantown.—I have a small Skye terrier bitch, 2 years old, weight 8lbs. For the last month her appetite has failed her; had to be coaxed to eat; she would refuse meat both cooked and raw; for the last ten days has been peevish and crying; at night would lie and pant; before was very playful. I gave her two days ago two doses of spirits of nitre, which had no good effect. To-day while coming down the stairs she took a fit and fell the whole length, about six steps, and lay in the fit about ten minutes; did not froth at the mouth; has since been very quiet, lying on the sofa, taking no notice of anything, something very strange for her to do. I do not think it's worms. Ans. It looks like a case of worms. You had better treat for them. Feed only milk for a day. Then give full dose of castor oil, tablespoon; follow this in three hours with 30grs. of powdered areca nut made into a large pill.

Rifle and Trap Shooting.

RANGE AND GALLERY.

BOSTON, Nov. 29.—There was a very large attendance of riflemen at Walnut Hill to-day, the militia being particularly well represented. The weather conditions, barring the rain, were good, a light wind from 12 o'clock prevailing. The scores:

WORCESTER, Mass., Nov. 29.—There was a large attendance at the Broad Meadow Range to-day, where the Worcester Rifle Association held its annual Thanksgiving all-day shoot for turkeys and special prizes. The weather was excellent for good shooting, as the scores will show. A. C. White, in particular, exceeding all previous records by making a run of eight consecutive bullseyes in shooting for turkeys in three sores. The club also tried a new scheme, offering a special prize for the best bullseye shot. In this contest M. R. Morgan proved the victor with a shot that drove the tack, making a perfect bullseye. Steadman Clark was second, C. L. Macomber third and James Early fourth. Five turkeys were to be had for the shooting, and the first five names in the scores printed below were the prize winners.

200yds., Off-hand, Military Rifle.

A C White	5455445555—47	C L Macomber	5455433444—41
M R Morgan	4455454445—41	H N Pepper	3334444345—37
Maj Shumway	4544445544—43	S Clark, s r	4344445444—33
James Early	4444454444—41		

200yds., Off-hand Decimal, Sporting Rifle.

A C White	8 9 7 10 7 9 10 8 8 8—84
A L Thomas	8 10 7 9 8 8 6 7 7 10—80
A Brown	10 5 9 4 8 8 8 8 8 10 8—78

CHESTER, Pa., Nov. 29.—There were several shooting contests in this city to-day. The members of Co. B in the morning shot for the Sparks gold badge, which was won by Lieut. Samuel A. Price, who won it by a point after shooting off with Private Corson. The latter received a silver prize, awarded by Lieutenant T. E. Clyde. The contest took place at Ship Creek Woods, the distance being 100yds. The score follows:

Lt Clyde	44444—20	Stroud	33337—16
Lt Price	44445—21	Vernon	32233—15
McDevitt	04433—14	Lane	43434—18
Henkel	54443—20	McKenna	44332—15
J. Feeley	32043—12	Pedlow	24342—17
Price	24243—15	Reaney	23324—14
Sharp	23422—13	Gilken	40242—15
Greenwood	42444—18	Peters	00334—10
Feeley	33004—10	Ruby	44233—16
Griffith	23330—11	Sawyer	23320—10
Corson	44454—21		

A team from Co. B also shot a team from Wilde Post, No. 25, G. A. R., and won by the following score:

Company B.		Wilde Post.	
Lt Clyde	44454—21	Taylor	04444—16
Lt Price	44444—20	Tongue	43444—19
Henkel	44445—21	Thompson	44344—19
Corson	34445—20	Brown	33432—16
McDevitt	45554—23	Scott	22343—14
Pedlow	33334—15	Tinch	24443—17
Lane	34533—18—139	Cullingsworth	33344—19—120

A shooting match also took place between teams representing the Young Men's Republican Club and Wilde Post, which resulted in the defeat of the soldiers by the following score:

Young Repubs—H. C. Seth, 2; A. F. Everson, 10; J. Marion, 8; W. Adcock, 14; R. Bell, 8; R. A. Hargraves, 6; C. Cain, 5; C. Ilg, 6; B. Wheeler, 10; Giles, 12.

Wilde Post—J. Taylor 17; J. Newsome, 6; D. Dransfield, 2; W. H. Martin, 5; S. Pilger, 0; C. Thompson, 10; J. Genther, 5; S. Crouther, 4; J. Tongue, 13; A. Brown, 8.

NEW BEDFORD, Mass., Nov. 29.—The New Bedford City Guards had rifle shooting at 200yds. to-day for the company medal and the Dunham medal for third class marksmen. Besides the medals there were 40 prizes valued at 50 cents to $7 each offered by members and friends of the company. Forty-seven members participated, and the following are the winning scores in a possible 50:

Corp Baudoin	43	Pvt Dundam	35
Pvt Bindley	43	Sergt Dahill	35
Sergt Pope	42	Pvt Monerief	34
Corp McBay	42	Pvt Winter	34
Lieut Perry	42	Pvt McAuliff	34
Pvt Gibbs	41	Pvt W S Young	33
Pvt Pope	41	Pvt Goggin	33
Pvt C. D. Russell	40	Pvt Hadfield	33
Pvt Jennings	40	Pvt Baylor	32
Pvt Duffy	38	Pvt Remington	32
Capt Sanders	38	Pvt Faunce	32
Pvt Croacher	37	Pvt Peters	31
Pvt W K Russell	37	Corp Taber	31
Sergt Devon	36	Pvt Parker	30
Pvt Loomis	36	Pvt Pailer	29
Pvt Soule	33	Pvt Meany	28
Lieut Morgan	36	Pvt Pease	28
Pvt Rice	36	Musician Mackay	27
Sergt Swan	35	Pvt Sisson	25
Sergt Howland	35	Pvt Allen	24

There were five prizes for honory members; only four competed. Taey made the following score:

C A Gray	37	Col S C Hart	14
Mayor Rotch	33	H W Taylor	8

Corp Baudoin takes the company medal, which has been worn the past year by Pvt. Gibbs; Pvt. Hadfield takes the third class marksman's medal, which was held last year by Pvt. Parker.

PATERSON, N. J., Nov. 29.—This morning there was a big crowd of soldier boys at the Totowa butts to witness the yearly contest for the Battalion "ice-pitcher." Altogether the weather was anything but pleasant for a holiday, it was excellent for target shooting. Company C's team made the highest score, and are therefore the happy possessors of the handsome trophy for another twelve months. Following is the score:

Company C.			
Capt Decker	20	Pvt Schmidt	17
Lieut Van Emburgh	14	Pvt Van Walraven	18
Lieut Parker	19	Pvt Claypool	9
Pvt Dietrich	22	Pvt Nolan	16
Pvt Lord	18	Pvt Vanan	20—173
Company B.			
Lieut Reynolds	20	Pvt Sharpley	18
Sergt Scanlon	16	Pvt Radcliff	16
Pvt Conners	17	Pvt Smith	11
Pvt Twist	16	Pvt Wilson	14
Pvt Woods	13	Pvt Ransom	22—168
Company A.			
Color Sergt Chinn	17	Pvt Morgan	9
Corp Williamson	19	Pvt Terse	18
Corp Dumphy	13	Pvt Lodigonni	17
Corp Junket	15	Pvt Allen	17
Corp Jackson	16	Pvt Brooks	12—153

After the contest for the trophy was over Privates Deitrich and Ranson shot for the Major's badge. The score was: Ranson 18, Deitrich 20. The promptness with which the scorers in the pits did their work was phenomenal. Imagine sitting on a chip of wood in a cistern half full of water, with one hand pasting up holes every time the lid drops, and with the other manipulating a 10ft. pancake turner, you can form a slight idea what these energetic soldiers had to contend with. There was not even a life preserver handy in case of accident.

LYNN, Mass., Nov. 29.—The annual prize match and practice shoot, under the auspices of the Salem Independent Rifle Association, took place at the Association Range to-day, the winners being as follows:

Prize Match.			
G A Lawrence	7 10 6 8 7 8 8 8 6 7		
	6 8 6 10 8 7 9 8 9 7		—153
W G Hussey	9 8 9 7 7 8 9 7 7 7		
	8 9 6 7 7 10 8 5 5 8		—151
W E Smith	8 6 5 5 10 5 6 10 8 6		
	9 5 5 7 6 8 6 7 8 3		4—147
D W Bruce	7 6 7 7 8 7 9 5 5 6		
	4 10 5 5 10 8 5 6 5 10		4—145
P F Packard	5 5 6 10 6 7 7 5 3 8		
	5 5 6 7 5 8 3 8 7 5		4—135

PITTSBURGH, Pa., Nov. 29.—The Allegheny Rifle Club, a new organization, numbering 20 members, held a turkey shoot at their new range back of Keating's, on the Perrysville road, to-day. They have a neat club house, new grounds, targets, etc. The prize turkey, weighing 24lbs. dressed, was won by James Carson. The lucky contestants and the number of fowls captured by them were as follows, James Carson 2, C. H. Porter 2, William Porter, J. E. Granger, C. Hodgdon, R. Pogue, E. Pogue and D. Stoner 1 each. The range was 200yds. Wednesday is the regular shooting day of the organization.

The turkey shoot of the Pittsburgh Rifle Club at Whitehall today was a great success. There were 16 contestants and only one shot was allowed in each contest, and 33 turkeys were shot for with the following result, the distance being 40 rods: J. A. Huggins 7, M. Wallace 5, James Hamilton 4, James Hixon 4, B. Huggins 4, Charles Hamilton 4, John Haffman 4, D. McGregor 2, J. O. Smith 1, Geo. Williams 1.

MARION, N. J., Nov. 29.—The Marion Rifle Club held its closing shoot of the season to-day on their range here. The attendance was good, and some excellent shooting resulted. The gold medal for the best scores at the 50) and 200yd. ranges was won by Mr. L. P. Hansen. The annual holiday shoot followed, the 200yds. range alone being used. The first event was three shots. There were seven prizes, all turkeys, ranging in weight from 18lbs. down to 10. The result was as follows: John Rebham 70, Wm. Weber 68, J. Diehl 67, A. Braun 66, J. Autenreith 66, L. P. Hansen 64, H. Hoersch 60. Three events for gold medals followed, each contestant having nine shots. The names and scores of the winners are given: H. Hoersch 199, J. Autenreith 193, J. Rebham 191.

HOBOKEN, N. J., Nov. 27.—The Our Own Rifle Club, of Newark N. J., came to Hoboken this evening and shot the first of a series of friendly matches with the strong Miller Rifle Club of this place. The Our Owns won by the following score: Our Own—Dietz 244, Freisenehner 237, Lunte 233, Bauter 237, Krauss 233, Weeks 235, Coppersmith 215, Snellen 243, Bills 231, Watts 234, total, 2,339. Millers—Miller 233, Fitzsimmons 228, Schlicht 236, Brand 239, Oberhauer 223, Wagner 237, Julson 235, Vogel 244, Meyns 237, Hofele 241, total 2,353. The match was shot on the 25-ring Zettler target, the possible being 2,500. The return match was arranged for Our Own range, 136 Springfield avenue, Newark, Wednesday evening, Dec. 5.

BOSTON, Dec. 1.—Riflemen at Walnut Hill had a tough time getting good records to-day, the wind blowing strong from 9 o'clock. The victory medal match for 1888 will close Dec. 29, and it is probable the State militia match will close at the same time. The score:

	Rest Match.

HARTFORD, Conn., Nov. 29.—Following is the score of the Broad Brook rifle team to-day, at 200yds. off-hand on standard American target:

Capt Thos Hall	5	7	7	9	7	3	7	6	4	5—69
A Hirsch	9	7	7	4	8	10	4	7	7	7—70
H Sherman	8	9	7	4	3	10	8	7	7	5—68
S J Derby	7	6	4	8	10	5	4	8	5	5—62
Frank Strunz	8	5	2	4	3	6	6	9	6	5—54
Wm O'Brien	10	4	4	3	5	7	7	9	4	7—60
Albert Hess	10	3	8	4	4	9	3	4	5	6—56
Elwin Myers	9	2	4	3	10	9	5	4	6	3—55
L Allen	7	6	7	9	8	6	8	6	4	3—64
Wm Adams	7	4	7	5	6	6	7	3	10	6—60

NEW BEDFORD, Mass., Nov. 29.—The committee on prizes for the annual Thanksgiving shoot of the City Guards was very successful this year, and no less than 40 were offered, besides 5 for honorary members. It was a good day for shooting, with little wind and no dazzle in the air, and the leading scores made by 47 members of the company, between 8 and 2 o'clock, as follows:

Corp Baudoin	4444554544—43	Pvt Gibbs	5444444444—41
Pvt Bradley	5445545443—43	Pvt P	4445535544—41
Sergt Pope	4445454444—42	Pvt C D'O Russell	4435445443—40
Corp McKay	4545454444—42	Pvt Jennings	5433355435—40
Lieut Perry	3445444455—42		

Pvt. 38, Capt. Sanders 38, Pvt. Croacher 37, Pvt. W. K. Russell 37, Sergt. Devoll 36, Pvt. Loomis 36, Pvt. Soule 36, Lieut. Morgan 36, Pvt. Rice 36, Sergt. Swain 35, Sergt. Howland 35, Pvt. Dunham 35, Sergt. Dahill 35, Pvt. Moncrief 34, Pvt. Winter 34, Pvt. McAuliff 34, Pvt. W. S. Young 33, Pvt. Goggin 33, Pvt. Hadfield 33, Pvt. Baylor 32, Pvt. Remington 32, Pvt. Fauce 32, Pvt. Peters 31, Corp. Taper 31, Pvt. Parker 30.

Only four honorary members competed:

Charles A Gray	4444435234—37	Samuel C Hart	0003324002—14
Morgan Rotch	2444434245—33	Henry W Taylor	2000023300—7

Corp. E. E. Baudoin will hold the company medal the coming year. Private Joseph L. Gibbs surrenders it to him. The Dunham medal for third-class marksmen is transferred from Private David L. Parker to Private Hadfield.

TAUNTON, Mass., Nov. 29.—The Thanksgiving shoot of Company F, G. A. King, captain, resulted as follows at 200yds.:

Second Class Marksmen.

Sergt Geo E Davis	3544454—29	Pvt Wm H Parker	3333440—17
Corp J E Tyndall	4233454—25	Pvt Thos J Alger	0450332—14
Capt G A King	3442253—23		

Third Class Marksmen.

Pvt Frank C Lincoln	3443344—25	Sergt W M Thayer	0243443—20
Pvt Geo F Morse	2443322—21	Lieut E W Lincoln	3033033—15

Unqualified Marksmen.

Pvt Chas E Eddy	4344344—26	Pvt George Freen	3333443—23
Pvt Maurice Tracey	3244443—24		

T. S. Sheilds 23, W. E. Doane 22, F. C. Howard 22, B. E. Dary 17, Corp. F. P. Wilcox 15, G. W. Elliott 15, E. J. Lee 12, W. E. Story 10. The prizes were given by the company, not by tradesmen as has been done several times before.

ST. LOUIS, Mo., Nov. 31.—*Editor Forest and Stream:* Last Wednesday's shoot of the St. Louis Pistol Club was the last of its six tournaments. It was the first time the club had held and used the standard American target, which has proven perfectly satisfactory to the club members. At first the target was not much liked, because the counts were altogether different from the one the members had been accustomed to, and the distance was increased from 12yds. to 20yds. The increased distance made the holding more difficult; consequently the shots were not placed as close to the center as when they were using the old target. Toward the latter part of the shoot this trouble began to disappear. The targets made prove this beyond a doubt. Another shoot at the paper target will certainly show a marked improvement in the scores. Mr. G. W. Alexander made the top score at the last shoot, and he will retain possession of the medal until next Wednesday night, when it will be turned over by him to Mr. E. C. Mohrstadt, as the final winner, by virtue of his having the highest general average for the whole shoot. He has shot eleven times in as many weeks, and his average is 814_{11}. F. A. Fodde comes next, having contested in every shoot of the tournament, and finished with an average of 80^{8}_{13}. Then following closely upon Fodde is W. Bauer, whose average is 80^{4}_{12}. The following are the scores made at the last shoot at a standard American target, distance 20yds.:

G W Alexander	10	9	8	10	6	10	8	8	7	9—85
F A Fodde	7	7	9	7	10	9	10	9	9	9—83
S V D Perret	9	8	6	10	8	6	6	7	10	8—80
W Bauer	8	8	7	7	9	7	10	9	7	7—79
A E Bengel	10	9	7	8	8	5	7	9	8	5—76
M C Billmeyer	8	8	8	10	6	4	5	10	8	8—75
H Griessdieck	6	10	6	6	5	5	8	9	10	10—75
W J Lard	6	8	5	7	10	8	7	7	9	8—75
W H Hettel	7	7	8	7	8	7	8	7	7	9—74
L H Race	8	10	6	7	8	5	6	6	5	6—70
O Neuhaus	6	7	8	8	6	10	7	5	6	6—69
W C Mackwitz	5	5	7	7	6	6	7	7	6	8—64
M Summerfield	0	6	4	5	7	6	7	7	10	7—59

Another shoot will be inaugurated at the same distance and same target shortly, but it is proposed to make it a handicap for various prizes and a medal for the high man on the straight general average. With a handicap such prizes may be looked for as was proven by the two which the club held just previous to the last shoot. The men who were compelled to shoot from the scratch never were in sight for any of the prizes, except in the first handicap shoot, when there were prizes enough for every member who had established an average by reason of having shot the requisite number of times to comply with the conditions of the contest. In all the club's tournaments there is always a proviso that a member must contest in a certain number of shoots before he can claim an average.—UNSER FRITZ.

CREEDMOOR, Nov. 29.—The annual Thanksgiving shooting match of the Second Gatling Battery, N. G. S. N. Y., was as usual a success. The first match, at distances of 200 and 300yds. with Remington carbine, Driver G. R. Kelly made a high score, scoring 46 points out of a possible 70. C. E. Morse was second, with 44 points, and J. M. Goodsell third, with 42 points to his credit. The champion match was for a medal valued at $800, to be won yearly at distances of 100, 200 and 300yds., was also won by Kelly, who made 59 points. W. B. Love was second, with 54 points, and S. D. Coborn third, also with 54. Kelly will have to furnish a bond of $100 for the safety of the medal. In the honorary members' match ex-Captain A. H. Baker was first, with 29 points out of a possible 35, at a distance of 200yds., and C. J. Doran second, with 25 points. E. C. Webb won first prize in the revolver match at 30yds. distance, scoring 30 points out of a possible 60. S. D. Coborn was second, with 24, and H. J. Jordan third. H. B. Sherwood won the leather medal, it being his misfortune to make the lowest score. Twenty-two members of Company D, 14th Regiment, of Brooklyn, also shot for prizes. Dinner was served at the Creedmoor Hotel by Captain A. D. Limberger. The Overton Medal, presented to the Fourteenth by Colonel Overton to be shot for yearly until won three times by a member, was won by A. L. Klein. Other prizes consisting of silverware were won by Sergeant Tugman, Corporal Lennon, Captain Nutt, Captain A. D. Limberger and Lieutenant Castell. Seventeen prizes were awarded.

CONLIN'S GALLERY, New York.—An elegant gold medal will be awarded to the shooter making the highest aggregate of three scores on the expert shot target, off-hand, with rifle, at the French range, commencing Dec. 6 and ending Dec. 31, 1888.—J. S. CONLIN.

BALTIMORE, Nov. 29.—Company F, Fifth Maryland Reg'ment Capt. J. Frank Supplee commanding, spent a pleasant time at the Relay in target shooting. The range was 100yds., highest possible score 25. Two prizes were contended for, a gold and silver medal, Private G. W. Byrd and private W. Kemp West each made 21 points, and in shooting off the tie Mr. Byrd won the first prize, Mr. West receiving the second. The men showed a marked improvement in marksmanship over last year, the average score being over 18 points. Seven members of Company B, under command of Lieut. H. T. Daily accompanied Company F, and indulged in the shooting. The highest score of the day, 23 points, was made by private Rawlings, of this company. The following are the scores made by members of Company F; Capt. Supplee 19, Sergt. O'Connor 5, Sergt. Coulyn 10, Sergt. Turner 13, Sergt. Guard 14, Sergt. Hynds 9, Corp. Criswell 19, Corp. Adams 20, Corp. Norfleet 20, private Benford 19, private Burnett 8, private Byrd 21, private Burroughs 13, private Chamberlaine 19, private Clark 16, private Gehrman 15, private Glocker 14, private Hause 18, private Putsche 3, private Putts 16, private Price 10, private Welb 16, private West 21, private Steinbach 11, private Haines 18. The records made by the men in Company B, were: Lieut. Daly 11, Sergt. Chenoweth 17, Corp. Thomas 19, Corporal Luke 21, Captain Foster 20, private Rawlings 23, Fales 15, Mitchell 6. A team match between members of the two companies was shot, and Company B won by a score of 95 to 92.

NEWARK, N. J.—Bernard Walther, of the Zettler Rifle Club of New York, and Chas. E. Gentsch, of the Newark Shooting Society, are matched to shoot 100 shots on the standard American target at 200yds., on Thursday, Dec. 6. The match will take place at the Newark Shooting Park, and will begin at 1 o'clock P. M. The loser will pay for a supper for the party. Sergt. T. J. Dolan, the crack all-around marksman of the Twelfth Regiment of New York, will challenge the winner of the 100 shot match, the contest to take place at the same place on the succeeding Thursday.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NEW YORK SUBURBAN.

THE Suburban Association opened their grounds on Thursday last for another tournament, which, while it did not succeed in drawing a large number of shooters, still resulted in a good time for those who deserted the family turkey and mince pie, or waited to partake of them on their return. The latter was rendered unnecessary, however, as the association restaurateur did his handsomest to provide as good a Thanksgiving dinner as any one could wish, and this a few of the contestants were able to partake of at no cost to themselves, by reason of their skill in the dinner match. This and the walking match were the events of the day and were the cause of considerable good-natured banter. Below are the scores:

Event No. 1 at 10 singles, $1 entrance, three moneys:

Hobart	1100110111— 7	Douglas	1111110110—8
Brientnall	1111111111—10	E H Luhnsen	1111100100—6
McCrary	1011010000— 4	Clark	1011101000—5
Shoen	0000100100— 2	Richards	1011011111—8
Beam	0110111111— 8		

First money, $4.50, won by Brientnall with straight score. Ties on 8 div., second, $2.70; third, $1.80, won by Hobart.

Event No. 2, 15 singles, $1 entrance, three moneys:

Frientnall	101111111011110—12	Shotmeyer	111011111111101—13
Hobart	111111111111011—14	Richards	111110311110001—10
Beam	110100100111101 9		

Hobart won first, $2.50; Shotmeyer second, $1.50 and Brientnall third, $1.

Event No. 3, at 10 single and 5 pairs; team match for the dinners not to exceed 75 cents each; no entrance fee; teams of 8 men: each man paying for the birds he uses:

Capt Richards	1001110100	00 00 10 10 10— 8
Brientnall	1011110100	10 11 11 10 10—13
Hobart	1111011111	00 10 01 11 11—15
Ellis	1111111011	11 10 00 11 00—14
Morton	1001010001	01 10 11 01 00— 9
Shotmeyer	1111110111	10 10 11 11 11—17
Borland	0000010011	00 00 00 00 00— 3
Collins	1011110101	11 11 10 01 11—15—94
Capt Schmitt	1010111111	10 01 10 10 11—14
Beam	1111011011	10 00 10 10 11—13
Seehusen	0111111010	00 11 00 00 10—10
Shoeff	0100110110	10 11 00 10 11—11
Melchor	0000110011	00 10 10 11 00— 8
Dr Gill	0010011011	00 01 10 00 01— 8
Purinton	1010111001	10 01 00 11 11—12
E D Miller	1110111111	11 01 11 11 10—17—93

This match was very exciting as it neared completion, and Capt. Richards's team won by the narrow margin of one bird. Mine host Bowers had provided such a bountiful Thanksgiving spread that even the losers found some satisfaction in its demolition.

Event No. 4, at 9 single rises, open to all, use of both barrels, traps to be screened, 3 traps and at different angles unknown to the shooter. The shooter to turn the indicator and shoot at 3 targets before leaving the score, entrance $1, 3 moneys:

E D Miller	011111111—8	Hughes	101111001—6
Brientnall	111111111—9	Hobart	110111111—8
Apgar	111111110—8	Schmitt	001100000—2
Beam	111111010—7	Purinton	111111111—9
Collins	010111010—5	Shortmeyer	010111101—6

Ties on 9 divided $5; ties on 8 divided $3.30; Beam won third, $2.20.

Event No. 5, at 10 single rises, $1 entrance, 3 moneys:

Miller	1111111111—10	Hobart	1111111111—10
Brientnall	1111111111—10	Schmitt	1010110110— 6
Elliott	1011010111— 7	McQuillan	1000001001— 3
Shortmeyer	1101111111— 9	Purinton	1101110010— 6
Collins	1111001111— 8	Hughes	1000111010— 5

Ties on 10 divided $5.49; Ties on 9 divided 3.30; Collins won third, $2.20.

Event No. 6, Walking Match Sweepstakes, open to all, at 6 single rises; each shooter to march alone from end to end and back, along the line of six traps, turning and firing at the targets as they may be sprung from any trap as he passes along; the gun to be carried upon the shoulder, the muzzle well elevated. The reference shall call pull, when one of the three traps nearest the shooter shall be immediately sprung; both barrels allowed; 50 cents entrance, four moneys:

Miller	000111—3	Hepner	000000—0
Ellis	101011—4	Wellis	001210—3
Richards	011021—4	Collins	121112—6
Morton	101000—2	Purinton	210021—4
McMartin	110001—3	Hobart	022010—3
McQuillan	101011—4	Elliott	000000—0
Nixon	100200—1	Shortmeyer	011111—5
Seehusen	012021—4	Schmitt	200301—3
Clark	201100—3	Apgar	011111—5

Collins killed straight and won $3.60. Shortmeyer and Apgar divided second, $2.70. Ties on 4 shot off, miss and out, and Richards won third, $1.80. Ties on three shot off and fourth won by Hobart, 90c. This style of shooting seemed to bother the contestants, the best of them seeming to be troubled by the element of uncertainty in the birds' flight. The frequent misses by the best shots caused much amusement. Matches of this kind will undoubtedly find a place in future programmes.

Extra sweep No. 1, at 10 single rises; 50 cents entrance, three moneys:

Brientnall	1111010111— 8	Beam	1101110110— 7
Hobart	1111111111—10	Douglass	1010110100— 5
Richard	0101001101— 5	Shortmeyer	1110101101— 7
Clark	1000101111— 6		

Hobart won first, $1.66; Brientnall second $1; and ties on 7 divided 66 cents.

Extra sweep No. 2, at 10 single rises; 50 cents entrance, three moneys:

Brientnall	1111111101— 9	Douglass	1000010011— 4
Hobart	1110111110— 8	Schmitt	0110001001— 4
Beam	1011111111— 9	Richard	0111111111— 9
Shortmeyer	1111111111—10	Seehusen	1001101011— 6

Ties on 9 divided $3.80; Hobart with 8 won 1.14, and Seehusen won third, 95 cents.

Extra sweep No. 3, at 10 single rises, $1 entrance, four moneys:

Miller	1111111111—10	Elliott	0100000001— 2
Hobert	0111111111— 9	McMosler	1110101100— 6
Brientnall	1011111110— 8	Hodgkins	0100001w.
Collins	0111111111— 9	Shortmeyer	1111111110— 9
Purinton	1110111001— 7	Apgar	1111101111— 9
Ellis	0101011011— 7	Beam	1010011111— 7
Hepner	0000000000— 0	Hughes	1100100000— 3
Clare	1010000000— 2	Penny	0000010000—99
Nixon	0111010004	Richards	1011011006—5

Miller, with the only straight score, won first, $6.84; ties on 9 div., $5.12; third won by Brientnall, $3.42; fourth money, $1.70, div. by the ties on 7.

Extra sweep No. 4, at 9 single rises, $1 entrance, three moneys:

Hobart	111111011—8	Schmitt	011100111—6
Miller	111001111—7	Ellis	110010101—5
Shortmeyer	111101111—8	Purinton	110110111—7
McQuillan	011100110—5	Willis	000111010—5
Apgar	011111110—7	Collins	110111110—7

Ties on 8 div. $4.75; ties on 7 shot off and $2.85 div. by Apgar and Purinton, third money, $1.90, won by Schmitt.

Extra sweep No. 4, at 10 single rises, $1 entrance, three moneys:

Miller	1111111011—9	Apgar	1111111010—8
Hobart	1111110101—8	Schmitt	0100011111—8
Ellis	1110000011—5	Shortmeyer	1110001111—7
Purinton	0100100011—4	McQuillan	1101101010—6
Collins	1111111111—8		

Miller won first, $4.27; ties on 8 div. $2.53; and Shortmeyer won third, $1.71.

N. J. A. C. GUN CLUB.—The New Jersey Athletic Club is to day one of the strongest athletic clubs outside of New York City In point of strength it numbers over 500 members, while in men skilled in athletics in all its branches, the club can proudly point to the names enrolled upon its books and show the world individuals and teams—from their champion (of all amateurs) base-ball team down to their lacrosse team; and from individual cyclers to runners, jumpers and rowers, that have and will continue to bid defiance to the world. Now, recently, the advisibility of inaugurating the pastime of shooting from the trap as a branch of the club's sport was broached, and the following committee was duly appointed with full power: Messrs. T. J. Parker, A. C. Wilmerding and E. E. Bigoney. Upon receipt of its appointment the committee went immediately to work, and as a result several matches have been shot, and an interest exhibited by members in this new branch of the club's sport far in excess of the committees' expectations. On Christmas Day a series of shoots will be held, when a team of five will be selected to be known as the N. J. A. C. Gun Club team, to do battle with any worthy foe representing any organized gun club who will meet them. Communications bearing on this subject may be addressed to any of the committee at Bergen Point. The New Jersey boys are still young at it, and mayhap their scores will not bear too close a scruting, but they hope to "get there" by and by. Inanimate targets are the only things used by them. Following are the scores for the champion medal; 20 bluerocks; 3 screened traps; 16yds. rise; 1 barrel; 5 matches. First prize, a handsome gold medal; second, a silver match safe:

First match: R. Sunderman 17, C. Kissam 9, Robert Paret 13, B. Kissam 10, G. S. Virden 10, S. L. Davis 10, H. Meigs 9, E. Bailey 4, Jno. Paret 4, W. Voorhees 5, W. Paret 8, E. L. Vredenburgh 14, R. Waterbury 13, A. C. Wilmerding 12. First won by R. Sunderman, second won by E. L. Vredenburgh.

Second match: R. Sunderman 14, G. S. Virden 17, S. L. Davis 10, E. L. Vredenburgh 14, B. Kissam 7, H. Cook 10, E. Bailey 6, H. Meigs 6, A. C. Wilmerding 16, R. Paret 16. First won by G. S. Virden, A. C. Wilmerding and Robt. Paret tie for second, shoot off won by Wilmerding.

Third match: C. Davis 11, E. Bigerson 10, H. Meigs 7, E. O. Schuyler 6, G. S. Virden 11, R. Paret 9, W. Voorhees 13, L. Davis 11, A. C. Wilmerding 12, E. L. Vredenburgh 11, R. Sunderman 16, B. Kissam 13, H. Cook 10. First won by R. Sunderman, second place won on shoot off by Voorhees.

Fourth match: B. Kissam 15, R. Sunderman 11, E. L. Vredenburgh 9, A. C. Wilmerding 13, L. Davis 7, W. Voorhees 12, Robt. Paret 13, G. S. Virden 13, H. Cook 12. First won by Kissam, Paret won on shoot off for second place.

Fifth match: E. L. Vredenburgh 12, H. Cook 11, W. Voorhees 14, B. Kissam 14, A. C. Wilmerding 9, R. Sunderman 15, G. S. Virden 16, R. Paret 5, T. J. Parker 4. First won by G. S. Virden, second by R. Sunderman.

Final shoot-off for first place, miss and out:

R Sunderman	1010—2	G S Virden	.1011—3

Second place:

E L Vredenburgh	11111111— 8	R Paret	.10
A C Wilmerding	.11111111110—10	R Sunderman	.1111111111—11
W Voorhees	.11110		

Virden wins the medal, Sunderman the silver match safe.

BLAUVELTVILLE, N. Y., Nov. 30.—The regular holiday matches of the Spring Hill Gun were shot on Thanksgiving Day, Nov. 29, and resulted as per the inclosed scores. The attendance was fair, but the members' shooting was not quite up to the standard, which was caused by the weather, the day being very dark and gloomy. Match at 10 bluerocks, National Gun Association rules, C. M. Hathaway and C. A. Kittle 20 yds., others 18yds., club medals:

Dr C C Allen	0101111011—7	James Bogart	0310011011—5
V J Rusch	0100001010—3	T S Hammond	0111111111—9
A D Kittle	0111101100—6	C A Kittle	0000110110—4
C J Bogart	0101110000—4	L F La Roche	0100010101—4
C M Hathaway	0101011111 –7		

Shoot off for second, Allen 4, Hathaway 3. First, T. S. Hammond, gold medal; second, Dr. C. C. Allen, silver medal.

Match at 3 doubles bluerocks, 15yds. rise, sweepstakes:

Dr C C Allen	10 11 11—5	James Bogart	10 01 00—3
V J Rusch	01 01 00—2	T S Hammond	10 10 01 00—2
A D Kittle	01 11 00—3	C A Kittle	11 11 11—6
C J Bogart	11 00 00—2	L F La Roche	10 00 10—2
C M Hathaway	11 01 11—5		

Ties divided.

Match at 7 balls, straightaway, 18yds. rise, sweepstakes:

Dr C C Allen	1001111—5	James Bogart	1011000—3
V J Rusch	0001110—3	A A Lux	0010000—1
A D Kittle	1001000—2	T S Hammond	0101110—4
C J Bogart	1111001—5	C A Kittle	0111010—4
C M Hathaway	1100110—4	L F La Roche	1110111—6

Ties for second at 3: Allen 2, Bogart 4. For third at 3: Hathaway 2, Hammond 3, Kittle 1.

Match at bluerocks, miss and out, 18yds. rise, sweepstakes: Dr. Allen 4, A. D. Kittle 0, C. J. Bogart 2, C. M. Hathaway 1, James Bogart 1, T. S. Hammond 2, C. A. Kittle 0, L. F. La Roche 2. Shoot off for second, miss and out: Bogart 0, Hammond 101, Roche 100. Third div.

Match at 5 bluerocks, from 5 traps, 18yds. rise, sweepstakes:

Dr. Allen	10110—3	James Bogart	10100—2
A D Kittle	00100—2	T S Hammond	00011—2
C G Bogart	00110—2	C A Kittle	10011—3
C M Hathaway	11011—4		

Ties for second at 3: Allen 2, Kittle 2, and Allen 3, Kittle 2. For third at 3: Kittle 3, Hammond 3, J. Bogart 2, C. J. Bogart 2. Second tie at 3: Kittle 3, Hammond 2.

CARTERET GUN CLUB, Nov. 29.—Several sweepstake pigeon-shooting matches were contested this afternoon on the grounds of the Carteret Gun Club at Bergen Point. A fine lot of fast-flying bluerocks were sprung for the marksmen. The wind was light, and few birds were carried beyond the boundary lines. The setter Phil and Pointer Del retrieved the dead birds. The conditions and results of the events were as follows: 10 birds each, 30yds. rise, 50yds. boundary, $10 a side. Mr. Gladbrook killed 10 and missed none, and Mr. Dolen did the same. In shooting off the tie Mr. Dolen won. He killed 4 out of 5, to 3 out of 5 killed by Mr. Gladbrook. Five birds each, 30yds, rise, 50yds. boundary, $25 a side. Mr. Dolen killed 4 and Mr. Gladbrook 5. Five birds each, 30yds. rise, 50yds. boundary, $25 entrance fee. Each of the four contestants, Mr. Gladbrook, Mr. Fulton, Mr. Dolen and Mr. Kent, killed 5. The tie was shot off, and Mr. Gladbrook won by again killing 5 straight. His competitors each killed 4 out of 5. Twenty-five birds each, handicap rise, 50yds. boundary, $50 a side. Mr. Gilchrist killed 21 and Mr. Gladbrook 23. Twenty-five birds each, handicap rise, 50yds. boundary, $25 a side. Mr. Gladbrook killed 22 and Mr. Gilchrist 21.

MONTREAL, Nov. 27.—The Dominion Gun Club team were to-night entertained to a game supper by the genial vice-president of the club. After discussing the good things that were set before them, Dr. Barnes rose, and in a few well chosen words, presented on behalf of the winning team to their captain, C. H. Wallace, the handsome silver cup won on May 24 at the Ottawa tournament, presented by the mayor and aldermen of that city. In replying the captain referred to the success of this the youngest club in the city, and thanked in glowing terms the team for their unexpected presentation. In conclusion Mr. Wallace intimated his intention of donating a silver cup for club competition at an early date, and that he intended it should be a handicap match, the handicaps being so arranged that the new shots will be placed on an equal footing with their more experienced confreres. After a very pleasant evening had been spent the party broke up.

BOSTON, Nov. 28.—The usual number of shotgun enthusiasts reported for duty at Walnut Hill to-day and found the weather conditions all that could be desired. The event of the meeting was the 13th competition in the gold coin match, in which the score ran fairly high. The summary follows:

Gold Coin Match, 10 clays and 10 standards:

	Clays.	Standards.
Knowles	1111101111—9	1111111111—10—19
Snow	1111011111—9	1110111011— 8—17
Stanton	1101111111—9	0110110111— 7—16
Perham	1111011111—9	0111110011— 7—16
Chase	1011111101—7	1101101111— 8—15
Crown	1011011001—7	1111011011— 8—15
Choate	0111101101—7	0010111111— 7—14
Swift	0111111111—9	0010111100— 5—14
Archibald	1011100111—7	1100111001— 7—14
Nichols	1010111111—8	1101101001— 6—14
Nelson	1111001100—6	0001011010— 4—10
Burt	0000000100—1	0001011111— 6— 7

First, 6 Keystones—Choate 6. Second, 5 clays—Nichols 5. Third, 6 standards—Swift 6. Fourth, 5 clays—Crown and Swift 5. Fifth, 5 clays—Perham and Stanton 5. Sixth, 6 Macombers—Perham 6. Seventh, 6 standards—Chase and Knowles 6. Eighth, 5 clays—Chase, Choate and Swift 5. Ninth, 6 standards—Perham, Stanton and Archibald 6. Tenth, 5 clays—Choate and Snow 5. Eleventh, 10 clays—Knowles, Perham, Stanton and Swift 9. Twelfth, 10 standards—Knowles 10. Thirteenth, 5 pair clays—Choate 6. Fourteenth, 3 pairs Keystone targets—Perham 5. Fifteenth, 5 clays—Crown and Perham 5. Sixteenth, 6 standards—Archibald, Curtis and Knowles 5. Seventeenth, 6 standards—Knowles, Snow and Swift 5. Eighteenth, 6 clays—Snow 6. Nineteenth, 6 clays—Archibald, Crown, Perham and Swift 5. Twentieth, 6 standards—Crown 6. Twenty-first, miss and out—Knowles and Stanton.

The next shotgun competition at Walnut Hill will be held on Wednesday, Dec. 12, when, in addition to the gold coin match and minor events, will be contested the seventh competition for the Climax diamond badge.

MONTREAL, Nov. 24.—Though a little cold the weather was beautiful for any outdoor sport, but just now sport is at a standstill here. The principal event on the cards was the second open competition for the Greener gun shoot, which brought out most of the crack shots. The competition, however, was again won by C. Aubin with a score of 16 out of a possible 20, which made a tie with Mr. Cameron, who was beaten handily in the shoot-off. On the whole the shooting was fairly good, but certainly not up to the average of other open shoots held here of late. The following were the totals of the scores made by the competitors; 20 Peoria blackbirds from 5 traps, 18yds. rise, National rules:

B Fox	11000110010010011100— 9
W Ferguson	11101001110001101111—13
N Parker	11100100011101010111—12
R James	01110011100111110010—13
C Aubin	11111110010111111101—16
E C Alberts	11110100000010101100— 9
W Lumsden	11111001111111101101—16
J Paton	10001001000000011011— 6
J Jones	00011101000011111101—11
M Brault	00011110100111111101—13

Ties: W. Ferguson 2, C. Aubin 4, W. Lumsden 0, M. Brault 3. C. Aubin first, Brault second. Parker and James tied for third place. Winner of first match, C. Aubin; winner of second match, C. Aubin. Referee, Mr. R. Lucas, Lachine Gun Club. Scorer, Mr. Oliver.

In the sweep which followed some good shooting was done, James getting a straight string of 12, closely followed by Jones, with 11. These scores include the ties. Lumsden, Jones and James tieing for first place with 5 straight, and on the shoot-off James was bound to get first and did, Ferguson and Parker taking respectively second and third places. A sweep of 5 birds was shot, resulting as follows:

Parisian	11101—4	Williams	11101—4
Taylor	10110—3	Aubin	00111—3
Parker	10110—3	Lumsden	11111—5
Redmond	01011—3	Jones	11111—5
Albert	11100—3	James	11111—5
Ferguson	11011—4	Norman	01110—2
Alexander	01000—1	Cameron, No 2	10001—2

The club gun is to be competed for on Saturday, Dec. 1. Messrs. Mack and Lockhart have each won it once, but the handicapping has been well done and it is any one's gun yet. The schedule for the open gun for the month of December is as follows, Dec. 8 and 22, and for the club guns, Dec. 1, 15 and 29. None of these matches are subject to postponement on account of weather, but will be shot rain, snow or shine, at 2 P. M. on the scheduled dates.

TORONTO, Nov. 24.—At McDowall & Co.'s shooting grounds this afternoon a series of sweepstakes were shot at Peoria blackbirds. The shooting was not up to the average on account of the strong wind which prevailed, as the scores will show. The following are the scores. First sweep, 10 birds:

T Wooten	1110101010—6	D Clarke	1010000100—4
M Bestey	1000110101—5	J Tracey	0000110101—4
E Ramsay	1001010001—4		

Second sweep, 5 birds:

Ellis	11111—5	Tracey	01101—3
Wooten	11011—4	Clarke	10011—3
Bestey	01101—3	Patterson	10001—2

Third sweep, 5 birds:

Harrison	10110—3	Clarke	10010—2
McDowall	01011—3	Holder	00001—1
Tracey	00101—2		

The members of the Owl Gun Club also held a handicap shoot at sparrows, each member shooting at 12 birds, which resulted as follows:

W McDowal (18yds.)	7	T Chambers (16)	4
J Townson (21)	7	J R Humphreys (21)	4
R McKay, Jr (18)	6	F Peterson (18)	2
H Elliott (24)	6	C Harrison (18)	2
H Clay (18)	6		

Ties shot off at 6 birds: W. McDowall 4, J. Townson 3, R. McKay, Jr., 4, A. Elliott 1.

GUELPH, Ontario, Nov. 29.—The annual pigeon match between sportsmen of the City and County came off this afternoon at Sleeman's brewery, 10 men a side, 10 birds each. The day was not very good for the purpose and a shower of snow interfered considerably, so that the scores were not up to the mark. The City won by 5 birds, but the County men console themselves by the fact that this is only the second match they have lost with the town in twenty years. It was for a supper. The captains were George Sleeman for the County and Mr. W. D. Shattuck for the City. The scores are as follows:

City.		County.	
W D Shattuck	1101011011—7	L Sleeman	0101111011—7
J Brown	1001111101—7	E Thompson	0001111010—5
E O'Connor	0111111001—7	L Singular	0111110111—8
J Smith	0001101010—4	G Atkinson	0000001111—4
Tim Halliday	0110110111—7	B Brown	1101101111—8
H L Walker	0001000110—3	G Thompson	0110110000—4
M Green	1111111010—8	C Blyth	1011010010—6
J Johnston	1111111110—9	J Duffield	1110100010—4
J Hogan	0000110011—4	A Irwin	1001111100—6
H Richardson	1010000010—2—60	W Lingwood	0010011000—3—55

AUBURN, N. Y., Nov. 24.—Onondaga's sportsmen won the match at 25 birds, 18yds. rise, 3 traps, 12-gauge guns allowed the handicap, on the grounds of the Auburn Gun Club this afternoon. The score was 198 to 187. The visitors were dined at Stokes and supped at the Avery, returning to Syracuse on the 7:17 train. The Auburn gunners attribute their defeat to the absence of two of their regular team. The score follows:

Auburn.	
Tuttle	0101011111111111010111111—21
Howland	1111111111111111111111111—25
Stewart	1111101110111111111111111—23
Wheaton	0110101101111110101000110—15
Brigden	1110111011111111111111111—22
Farree	1101110011011010110110001—18
Kerr	0100101011111111011111100—18
Sanderson	0060101011010101010111100—11
Carr	1011010011110111111111111—20
F Steele	1101110300101011100110101—14—187
Onondagas.	
McMurchy	1111111111011111010110111—22
Spangler	0110110111111111111111111—22
Mosher	1111101101101011111101110—19
W Steele	0111101111111111110110111—21
E Hudson, Jr	1011010111111111111011001—19
Strange	0011001111011230111111111—20
Le Fever	0101101101111100011111111—18
E Hudson	1110110111111111111110111—22
Luther	1111111111011111111111101—23
Blakely	0101010100001011011011100—12—198

McMurchy and Mosher of the Onondagas took advantage of the handicap for 12-gauge guns, shooting at 16yds.

PITTSBURGH, Pa., Nov. 29.—On the high bluff just back of Oakland the Squirrel Hill Gun Club to-day held its Thanksgiving tournament. A better location for trap shooting could not be found in the vicinity of the two cities. The hill is, in fact, a promontory that occupies the space between the junction of two runs. The little club house occupies one side of the hill and faces to the south. Just in front of it were the traps. The shooting commenced at 11 o'clock. The light was good and the contestants shot briskly and with hearty good will. A number of the friends of the club were present, but not in such numbers as to unpleasantly crowd the place. The bluerock matches were sharply contested, but the real fun of the day was the live bird shoot. 400 English sparrows had been provided for the sport. The birds did not trap well. Cigar boxes were utilized for traps, and for the most part the sparrows were brought down before they were twenty feet away. The bird that as soon as released made a dart for liberty usually succeeded in getting there, and, dipping and diving, disappeared over the brow of the bluff. The birds were for the most part too tame for lively sport. They would usually when released hop about for a moment before they took wing and were brought down before they were high enough to put into effect their dipping mode of flight. The matches were all sweepstakes.

Another who was present commences on the shoot and birds, saying: "The day was not favorable by any means for live-bird shooting, the light being very poor and the birds good hard flyers. The men using hard choked trap guns suffered in these matches, but in spite of the bad light and other drawbacks, the scores were quite creditable, for the birds—English sparrows—are a new target to Pittsburghers. The opening shoot at them has already made them quite a favorite."

In the opening match at 9 bluerocks, $2 entrance, there were 12 entries. McCrickart and Davidson broke 8 birds each and divided first money; Snyder and Givens broke 7 each and divided second money, and Clark won third with 6 birds.

The second match was at 6 bluerocks, entrance $1.50, 12 entries. Snyder, McCrickart and Penn divided first money, each breaking 6 birds; Davidson, McKnight, Givens and Reagan tied for second with 5 birds, Davidson winning the shoot off; Clark took third money, breaking 4 birds.

The third contest was at 12 bluerocks, $2.50 entrance, 10 entries. Corry captured first money with a clean sweep of 12; Snyder and Davidson divided second money, each breaking 11 birds; Clark tied with Givens on 9 for third, but beat him in the shoot off.

In the fourth match, at 6 bluerocks, $1.50 entrance, there were 12 entries. Snyder and Corry divided first money, each breaking 6 straight; McKnight, Givens and Penn divided second money with 5 each; McCrickart took third with 4.

The first sparrow shoot was at 10 birds and there were 17 entries. The score was as follows:

McKnight	1101110110—7	Richardson	0000011010—3
Snyder	1110010000—4	Turner	1011111100—7
McCrickart	0101010101—5	Singer	1010011010—5
Given	0100011100—4	Kennedy	0101101101—6
Martin	1000001010—3	Hill	0000000101—2
Penn	1111011110—8	Krueger	1110000001—4
Davidson	0000101001—3	S Shaner	1100110000—4
Clark	0111001011—6	Reagan	1011101111—8
Schmertz	1000000001—2		

Penn beat Reagan in the shoot-off for first money, Turner won second, Clark third, and McCrickart fourth, after shooting off their ties.

The second sparrow match was at 10 birds, and there were 15 entries. The score was:

McKnight	1001110010—5	Hanna	0000000w. —0
Snyder	0000101w. —2	Krueger	0111101110—7
McCrickart	0001010001—3	Richardson	0000101010—3
Givens	1011001011—6	Turner	1101001000—4
Penn	0100111000—4	Hill	1000001w. —4
Davidson	0111010w. —4	Singer	0001101w. —3
Reagan	1010000001—3	S Shaner	0100011w. —2
Caughey	0100000011—3		

Krueger won first money, Givens second, Penn and Turner divided third, and Reagan took fourth. Capt. Elmer Shaner, of the Herron Hill Gun Club, was referee in the first, and Capt. McKnight, of the Squirrel Hill Club, in the second sparrow shoot. The rise was 18yds. for 10-gauge and 16yds. for 12-gauge guns.

WALNUT HILL, Nov. 28.—Owing to the fact that to-morrow will be Thanksgiving Day, when shoots will be held by nearly all neighboring clubs, hardly the usual number of shotgun enthusiasts reported for duty at the range to-day. Those who could afford to give two days for recreation, and did come, were amply compensated, as the day has been extremely fine, and one greatly to be enjoyed by all lovers of outdoor sports. The principal event of the meeting was the thirteenth competition in the Gold Coin match, in which the scores were fairly good. The summary follows: Gold Coin match, 10 clay pigeons from 5 traps, and 10 Standard targets from 3 traps:

	Clays.	Standards.
Knowles	1111101111—9	1111111111—10—19
Snow	1111011111—9	1111011011— 8—17
Stanton	1101111111—9	0110110111— 7—16
Perham	1111011111—9	0111110011— 7—16
Chase	1001111101—7	1101101111— 8—15
Crown	1011011101—7	1111011011— 8—15
Choate	0111101101—7	0101111111— 7—14
Swift	0111111111—9	0010111100— 5—14
Archibald	1011100111—7	1100111001— 7—14
Nichols	1010111111—8	1101101001— 6—14
Nelson	1111001100—6	0001011010— 4—10
Burt	0000000100—1	0001011111— 6— 7

The next shotgun competition at Walnut Hill will be held on Wednesday, Dec. 12, when in addition to the gold coin match and minor events, will be contested the seventh competition for the Climax diamond badge.

BANDLE AND HEIKES.—Dayton, O., Nov. 30.—*Editor Forest and Stream:* The 100 live-bird match, Hurlingham rules, except as to weight and gauge of guns, between Al Bandle and Rolla O. Heikes for a purse of $500 and divided gate was shot here yesterday and finished this morning in the presence of an audience of 2,500. Weather was raw and cloudy, and betting was decidedly in favor of Heikes and that the winner would not kill over 90 birds. Geo. Wells, of Covington, Ky., was referee and your correspondent was score keeper.

Bandle	1111111111101111101111—18 1111111111111011011—18 1111110101111111111—18 1110101111111111111—19 1111111111011111101—18—91

Bandle's greatest run was 24, and his chief trouble was with right outgoing birds, though he also lost in blue tailers. Whetstone saved two wounded birds by good retrieving.

Heikes	1111111111111111111—20 1111111111111111111—20 0101011111111111111—18 0101101111100111111—15 1110111010101101110—14—87

Heikes's 40 straight kills at the start gave promise of a champion score, but for some unaccountable reason he let down after his 60th bird and did not recover during the match. He failed most on incoming birds, though his 65d, 66th, 72d and 73d were blues and browns, straightaways.

Sweepstakes at 5 live birds each; $3 entrance:

Bandle	10111—4	Ackerman	01111—4
Heikes	11111—5	Pratchett	11111—5
Cole	11100—3	Rike	00111—3
Murphy	11101—4	Webb	11110—4
Cain	01111—4		

All moneys div.

5 live birds each; $2 entrance:

Bandle	11111—5	Spring	11101—4
Webb	11111—5	Ackerman	11011—4
Heikes	11111—5	Murphy	11010—3
Cole	11011—4	Cain	10110—3
Pratchett	11101—4	Stockert	11000—2

Bandle and Heikes div. first; Ackerman and Pratchett div. second; Murphy and Cain div. third.

A match was shot between Keenan and Slover of this city, 100 keystones each, $5 a side:

Keenan	1111111111101111111111111011101111111111101111111 1111111111111111111111111111111111111111111111111—25
Slover	1111101111101111111111111111111111111101101111111 1111011111011111111111111111111111111111111111111—90

OTTAWA, Nov. 24.—The St. Hubert's Gun Club have again started their trap shooting. They complain that this season game was very scarce and encroachments had been made on their preserves at Buckingham marshes. The club, as a result of the visit of Mr. Leach, of the Dominion Cartridge Company, have appointed E. Lemieux, R. W. Stevens, A. W. Throop and W. McMahon as their representatives to the Dominion Gun Association. It is certain that the establishment of such an association would be an immense advantage in the struggle to preserve game, and it is an established fact that should the game laws not be enforced in the next few years there will be no game left to shoot. To-day the principal scores made in a 15-bird sweep were: A. Throop 11, Geo. White 10, and P. Trudeau 9.

PORTLAND, Me. Nov. 29.—The annual Thanksgiving Day shoot by the Portland Gun Club this morning was an interesting occasion. There was a large attendance, despite the bad weather and the erroneous report that the morning shoot was for members only. The first event was shooting at 25 targets from three screened traps at unknown angles. Following is the score:

Farrell 12, Thornton 14, E. G. Peterson 10, Eaton 12, William Todd 15, Charles Jordan 20. Jordan first, Todd second, Thornton third. The next event was a club shoot, at 10 targets, on sides. Capt. B. J. Willard headed one side and Mr. John Randall the other side. Randall's side winning by one shot. The following is the score by sides:

Capt. Willard's Side.		Mr. Randall's Side.	
Capt Willard	0109110011—5	J Randall	1111110111—9
Nearposs	1010100111—6	George H Pierce	0011000011—4
W F Todd	0001110010—5	Peterson	1000100111—5
Thornton	0010030060—1	C F Jordan	1111101110—8
Jones	0111000011—5	Stonham	1000000010—2
Farrell	1100111011—7	J N Martin	1010001010—4
Frank Merrill	0110010111—6—35	Merrill	1000010110—4—36

The next event was a shooting at 5 targets, with the following result: Capt. B. J. Willard 4, J. N. Martin 4, Merrill 2, Farrell 3, J Randall 4, George Pierce 2, Jones 2, Nearposs 4, Todd 2, Thornton 2, F. Merrill 2, Smith 2, C. F. Jordan 3. J. N. Martin first, Farrell second, Pierce third. The next event was shooting at 6 pair of doubles, traps being sprung together, and two targets being in the air at the same time. The following is the score:

Merrill	00 00 10 00 01 10—3	Martin	10 00 10 01 10 11—6
B J Willard	00 10 00 10 10 10—4	Pierce	11 11 10 01 01 11—9
Randall	10 01 00 01 10 00—4	Farrell	00 10 00 10 01 11—5
Nearposs	10 00 01 00 01 10—4	Jordan	00 11 01 11 11 11—9

Jordan and Pierce first, Martin second, Farrell third.

PITTSBURGH, Pa., Nov. 29.—The Glenwood Gun Club held its first shoot at the grounds at Hazelwood to-day, and a good-sized crowd was on hand for the sport, which consisted of bluerocks and live-bird shooting. The first contest was at ten bluerocks, the entries being confined to the younger members of the club, and resulted as follows: Cal Munson 2, John Low 6, O'Donnell 10, T. McClure 3, R. Hiney 5, Jack Munson 5. O'Donnell's work was remarkably fine, and his clean score easily won him the prize—a handsome hunting knife. The second match was participated in by the more experienced members, and was at ten bluerocks, the score being as follows:

John Downs	1110110100—6	James Evans	1010001011—5
George Benette	1011101001—6	Q A McClure	1111111101—9

The prizes were hunting knives and cases. McClure took the first and Downs defeated Benette in the shoot-off for second, breaking 7 birds to the latter's six. The first live-bird shoot was a sweepstakes at 5 pigeons: Benette 2, Major 3, McClure 4, Lowrey 2, Evans 5, Downs 3, Critchlow 5, Burt 4. Evans took first money, McClure and Burt divided second, and Major, Downs and Critchlow divided third. In the second live-bird match, which was a sweepstake at 5 pigeons, McClure and Downs each killed 4 and divided first money. Evans and Major killed 3 apiece and divided second money. Burt, Critchlow and Lowry killed 2 each and divided third money. A turkey shoot followed at which Evans won three, Boll two, and McClure and Fish each one. Evans's score was a good one, 26 out of a possible 30.

HUTCHINSON GUN CLUB.—Hutchinson, Kas., Nov. 25.—Appended find score of our last shoot: Match No. 1, 6 singles, 2 pairs bluerocks:

Allen	01101 00 01—4	Young	01111 10 11—8
Taylor	11111 10 11—9	Burslem	01011 11 10—6

Match No. 2, same conditions:

Young	10111 11 11—9	Allen	10116 10 10—6
Burslem	11110 10 10—7	Bartlett	00011 10 01—5
Taylor	11001 10 11—7		

Club Match, 15 singles and 5 pairs:

Burslem	01111110111011	10 11 11 10 11—29	
Young	11101111111111	10 10 10 10 11—20	
Taylor	10111110101111	10 10 10 10 10—17	
Allen	01010100011100	10 01 10 10 11—12	
Bartlett	00010100010010	10 00 11 10 00— 8	
Wiener	00100010	Withdrawn	
Forshaw	11111000111	Withdrawn.	

Match No. 4, 6 singles, 2 pairs:

Young	11110	11 11—8	Bartlett 10111 10 11—8
Burslem	11111	11 00—8	Foshaw 00101 11 11—8
Allen	00001	11 11—6	SHADY.

CLEVELAND, O., Nov. 30.—The Cleveland Gun Club held its regular badge shoot yesterday on the club grounds near Blue Rock Springs. The attendance was unusually large and the sport excellent. The conditions were 15 single standards at 18yds. rise, from 5 traps, and 5 pairs at 16yds. Eleven members took part, and the contest for both badges was sharp. The highest score was made by Upson, and four members followed him, scoring 20 broken targets. The results of the shoot are as follows:

F H Wall	11001111011111	11 10 11 10 10—18
L O Jones	11101101111111	10 11 10 10 10—18
J E Jones	11101110101111	11 10 21 11 11—20
O Green	01111111111001	11 10 11 11 01—20
C F Wheal	11110111111110	11 11 10 10 01—20
D A Upson	11110111111011	10 11 11 10 11—21
C A Calhoun	11111010111011	00 00 11 00 01—17
I Sherman	10101013110|010	11 11 10 11 11—16
M Silsby	11111011101101	11 10 11 11 10—20
Marback	11011111101011	10 11 11 10 10—19
W Tamblyn	01111101010111	10 11 01 11 11—19

The first badge was won by D. A. Upson, who broke 21 targets. J. E. Jones and M. Silsby tied on twenties for the second medal, and in the shoot-off Silsby, breaking five straight to Jones's two. The other contestants who secured twenty were not eligible to compete for the second badge.—HAMMER GUN.

LONG BRANCH, N. J., Nov. 29.—Elkwood Park, Monmouth Park's rival, was "opened" this afternoon. A fine attendance was on hand. The shooting match was the feature of the day, as young Philip Daly, Jr., very skillfully "bested" Miss Annie Oakley. At 1:15 Miss Oakley was first to the plate. She was to shoot at 50 birds and Daly at 55. The birds were bluerocks and proved to be strong flyers. Miss Oakley missed 8 birds; Daly missed 7 birds, and so won by a single bird. This is the score:

Miss Oakley	1111111101111111011111110110111111111100—42
Daly	1101111011010111111111011111111111111111—43

The prize was a heavy gold badge. The judges were J. Van Dyke, of New York, and Wm. D. Campbell, of Long Branch. At the conclusion of the match Mr. Philip Daly, Sr., shot at 8 pigeons and downed 7 of them. A match for $250 a side at 75 birds, 25yds. rise and 25yds. boundary, on Christmas Day, at Elkwood Park, will be shot between Miss Annie Oakley and Philip Daly, Jr.

SARATOGA, N. Y., Nov. 29.—Seven members of the gun club celebrated Thanksgiving by holding an extra meeting on their new grounds to-day. There were three events. The first was a team match between Messrs. Ramsdill, Gibbs and White, against Messrs. Bockes, Levengston and Dyer, the former team winning by 7 birds. The score at 50 birds, use of one barrel, was:

Team No. 1.

Bockes	1001011001101110110111011001001101101101—30
Dyer	1100100011000100000100000100101011111101101001—20
Levengston	0110100111110111011010111111101010001111111111—37—87

Team No. 2.

Gibbs	1001111101101110110111011001010101001101110111111—35
White	1001011101000111001011010011000001100101010000100—22
Ramsdill	1110101010111111011101111111101010111111001101—37—94

Second event, 25 birds, same conditions:

Team No. 1.

Bockes	1111111111011111100011100—19
Levengston	1001111111110111011011101—19
Meehan	1100111C011100110110101010—15—53

Team No. 2.

Ramsdill	1101001110111110010111010—17
Gibbs	1011010110111100110011011—16
White	1110110101111100111000110—16—49

Third event, 5 pairs doubles, three entries:

Levengston	11 11 11 10 11—9	Ramsdill	10 00 10 00 10—3
Ramsdill	10 10 11 10 11—7		

Shooting was then discontinued in favor of the national bird. The day was not favorable to high scores, as the light was very poor, owing to the rain. Some idea of the amount of shooting done by the club can be had from the fact that during the present season over a ton of shot and several hundred pounds of powder have been used. The next meeting will be on Tuesday, Dec. 4.

DUNELLEN PICTURES.—Some weeks ago in our report of the Dunellen tournament, we printed a photograph of Charlie Smith, J. E. Miller and Tom Keller as they appeared on the grounds, which has been a source of amusement to their many acquaintances. Some of these photos, and another in which Seymour G. Smith, with his grandfather's hat, appears, they have had struck off in cabinet size for the benefit of their generous Western friends. A copy of each has been sent to us, which after being properly framed will be hung in a prominant place for the edification of our visitors.

LAKEWOOD, O., Nov. 29.—The members of the Locksley Gun Club held a special shoot to-day. The day was very disagreeable, being rainy the greater part of the day, and the club ground was muddy, but despite the disagreeability of the weather a large crowd of spectators were present. Match and sweepstake shooting was going on the greater part of the forenoon. In the afternoon the shoot was for the club badge, in which three members scored the same number. The ties were shot off for the badge, resulting in favor of J. H. Byer, who will wear the same until beaten by some other member of the club. The conditions were 20 standard targets at 16yds. rise. The scores follow:

C Mailo...01111101101101110010—14	Beckley...10010001011010101111—12
A Jinks...11111000011010110111—14	Andrews...10110110111111101111—15
J H Byer.11111110001111111111—17	Hochkiss.10101101101010010001—11
E Pease...11110011111111111111—17	*Johnson..10111010001111100110—12
Tegardine.10011111011111111111—17	C Harris..01110101110110101111—14
E Henley.00101101010011111111—13	

*Visitor. A. Jenks, referee.

WALLINGFORD, Pa., Nov. 29.—The hills of Wallingford resounded with the sharp crack of the shotgun to-day. Fifty of the crack amateur shots of Pennsylvania and New Jersey accepted the invitation of the Wallingford Gun Club to spend Thanksgiving Day on their grounds, twelve miles out on the Central Division of the Philadelphia, Wilmington & Baltimore Railroad. Shooting began at 9 o'clock and lasted until dark. Twenty-nine marksmen entered for the main shoot, the prize for which was a solid silver salad bowl. There was great rivalry between the members of the four clubs represented, the Cinnaminson and Riverton Gun Clubs, of New Jersey; the Maple Run, of Media, and the Wallingford. The Cinnaminson Club had the largest representation, thirteen of its members participating in the shoot, and one of them, W. M. Thomas, carried off the prize. The shooting was at bluerocks, clay-pigeons, and the marksmen were handicapped according to the bore of their guns. Tom Allen, a crack shot of Media, was a strong favorite at the start, but his score was beaten by fourteen of the contestants. Allen was anxious to shoot at 50 live birds with any of the marksmen present, but not one of them would accept his challenge. The full score of the match was as follows:

W M Thomas	22	L Carner	16
R W Downing, Sr	18	J M Baker	16
R W Downing, Jr	18	E H Hall	16
W C Downing	18	F T Downing	16
J L Thomas	17	J Hollingsworth	16
L A Flanagan	17	H Ingram	16
I W Kemble	17	W Tynax	16
J J Eastman	17	F Baker	16
H C Marshall	17	L K Lodge	16
Joel Hollingsworth	17	J M Rogers	15
W D Thomas	17	A Mattis	15
John Sanderson	17	George Heap	15
Henry Gemrig	17	W R Ellison	15
Tom Allen	16	J C Roop	14
A Dorrance	16		

At the conclusion of the match a number of sweepstakes were shot off, and W. C. Downing gave an exhibition of fancy shooting. He broke six out of seven glass balls, standing with his back to them and wheeling when they were thrown, and hit a coin thrown in the air three times in succession.

CHESTER, Pa., Nov. 29.—The McClure Gun Club had a shoot to-day at live and clay birds. Live birds, 21yds. rise, 80yds. boundary, use of both barrels:

William Paul	1101101111101111—12	S Hollywood	1011001011110 1—10
Wm H Hall	1000111111111111—12	J Paul	1011011111110000—10
F W Harrison	1111100110110111—12	Jos Wood	1111100901011111— 9
D B McClure	1110101101011111—12	Jas Hollywood	1010010110101011— 9

Clay-birds, for the live bird badge:

John Paul	1111111111—10	F W Harrison	1011111001— 7
William Paul	1111111101— 9	James Hollywood	1101010101— 6
Joseph Wood	0111101111— 8	Sam Hollywood	1001101011— 6
D McClure	1111011110— 8	W H Hall	0001100100— 3

BALTIMORE, Nov. 21.—A number of the shotgun marksmen were present to-day at the Arlington Driving Park to see the match between William H. Graham, of England, and Mr. Frederick Kell, of Baltimore. The match was for $50 a side, Bingham rules, the birds to be released from any of five ground traps. Both barrels of the guns were used. Kell stood 30yds. from the traps, and Graham, who shot with one hand, stood 28yds.; the former to use a 10 and the latter a 12-gauge. Twenty-five birds were released for each shooter, and as each killed 20 of them, and darkness prevented a renewal of the match, the contest was declared a draw. Kell killed his fifteen birds and lost his sixteenth, nineteenth, twenty-second and twenty-fourth bird. He used his second barrel thirteen times. Graham missed his first, fourth, eighteenth and twenty-second birds, and used the second barrel seven times. When he went to the score to shoot his twenty-second bird he forgot to load his gun and the bird was scored lost. Kell used a heavy 10 gun that would make a less powerful man weary to handle, even with less loads than he had in his shells. Graham used a light twelve gun. Before he ordered the bird released he would throw the gun to his shoulder and point it, using both hands; then he would recover his gun and order the trapper to pull. Then, dropping his left hand to his side he would raise his gun, and, taking a quick aim, shoot. His score shows the result. Mr. Kell had the worst luck in birds, though but few of them were what are known as "drivers." The fourteenth bird at which Graham shot was mortally wounded and flew into the cornice of the judges' stand and fell back dead. One of Kell's birds fell but a few yards outside the 80yds. boundary. Both scored as lost. Mr. Graham's wife and children were interesting lookers-on at the shooting. After the match another Baltimore shooter challenged the English champion to shoot him a match, same conditions, same grounds, Nov. 29. On the same date Kell will shoot the champion to secure a settlement of their undecided match. Mr. John Williar refereed the shooting. The scorer was Mr. T. W. Knox.

WELLINGTON, Mass., Dec. 1.—The first shoot at Wellington in the December matches was largely attended at the range to-day. In the shoot for turkeys, Frank, Scott, Snow and Bert captured some fine birds. In the merchandise matches the eight prizes were won as follows: First, Frank and Bond, 18; second, Grimes and Swift, 17; third, Chase and Schaefer, 16; fourth, Bert, Choate, Scott, Snow, Field and Nichols, 15; fifth, Moore and Herrick, 14; sixth, Melcher, Shumway and Stone, 13; seventh, Stanton, 12; eighth, Webster, Savage and West, 11. In the badge match Scott won with 19. First prize winners in the other events were as follows: Six bluerocks, Snow and Shumway; 6 pigeons, Scott; 6 bluerocks, Bert; 6 bluerocks, Schafer; 6 pigeons, Swift; 10 pigeons, Frank, Herrick and Swift; 10 bluerocks, Stanton; 3 pairs bluerocks, Bert; 7 bluerocks, Frank; 3 pairs bluerocks, Choate; 10 bluerocks, Scott; 10 pigeons, Scott; 6 bluerocks, Shumway, Bert, Scott, Moore and Chase; 6 bluerocks, straightaway, Stanton, Melcher and Snow.

PROVIDENCE, R. I., Nov. 29.—The sixth annual Thanksgiving shoot of the Narragansett Gun Club was held on their grounds at the old Washington Trotting Park on Broad street to-day and was favored with a good attendance, including many out of town marksmen. The shooting, which began at 10 A. M., continued until nearly 5 o'clock in the evening, consisted of 21 events as follows, the leaders being: 1, 7 bluerocks, E. S. Luther; 2, 7 bluerocks, E. C. Griffith; 3, 3 pairs bluerocks, Sowden; 4, 7 bluerocks, L. H. Houghton; 5, 7 clay-pigeons, Luther and Griffith; 6, 4 pairs birds, L. H. Houghton; 7, 7 clay-pigeons, E. C. Griffiths; 8, 7 bluerocks, C. M. Sheldon and E. S. Luther; 9, 7 bluerocks, E. C. Griffith; 10, 7 clay-pigeons, E. C. Griffith; 11, 7 bluerocks, E. W. Tinker; 12, 7 clay-pigeons, E. S. Luther; 13, 7 bluerocks, L. H. Houghton; 14, 4 pairs double birds, E. S. Luther; 15, 7 bluerocks, Potter and Luther; 16, 7 clay-pigeons, Houghton and Griffith; 17, 10 bluerocks, straightaway, Houghton; 18, 5 bluerocks, A. Wilkinson; 19, 5 bluerocks, E. C. Griffiths. There will be a meeting of the club Thursday afternoon, Dec. 6, when the shooting will be open to the public.

READING, Mass., Nov. 29.—The Reading Gun Club held a well attended shoot on their grounds at Reading to-day when the following events were contested: Five clays, E. Eames first, Killam second; 5 Peorias, Collins first, E. Eames and Loring second, Willis and Davis third; 3 pair clays, E. Eames first, Killam and Channell second; Peorias, miss and out, E. Eames and J. Weston; 5 bluerocks, G. Eames first, Brooks and Tuttle second, Willis and Channell third; 5 clays, G. Eames and Brooks first, Collins and Tuttle second; 5 clays, Bancroft first, Killam and Davies second; 5 clays, Killam first, Tuttle second; 25 Peorias, for $10 gold piece, donated by Mr. H. E. Cox for best score, won by C. A. Loring on score of 19 birds; 10 Peorias, Consolation match, keg of Dead Shot powder, donated by Mr. E. B. Drake, won by P. S. Killam, 12 out of 15 birds; 15 clays, All-Comers' match, first prize, $3, won by W. H. Willis, 13 out of 15, second prize, $2, won by P. S. Killam, 12 out of 15.

MOORE'S, Pa., Nov. 29.—The following scores were made at 12 birds at a shoot here to-day: E. Bramble 11, J. L. Price 10, S. Wood 10, D. G. Yates 10, S. Harper 9, J. Gardner 9, E. Ward 7, Dr. R. H. Nones 7, W. Teague 6, B. Rearden 6, H. B. Nones 5, H. Crowder 5.

WILMINGTON, Del., Nov. 29.—The Wawaset Gun Club held an all-day shooting contest at their grounds. The contest in the morning was at clay-pigeons, each man shooting at 5 birds. Appended are the scores: First round—R. Miller 5, C. M. Buckmaster 4, P. Ambold 3, H. Buckmaster 4, Second round—R. Miller 5, P. Ambold 3, L. Fox 4, W. H. Hartlove 5, J. Ewing 4, C. Buckmaster 4, J. Callahan 4, A. H. Stout 3. Third round—P. Ambold 6, C. Buckmaster 4, L. Fox 4, J. Ewing 4, R. Miller 5, G. Shank 3, G. Miller 3. Fourth round—P. Ambold 4, R. Miller 5, G. Shank 4, J. Weldin 4, G. Miller 4, C. Buckmaster 3, M. B. Hill 4, H. Buckmaster 5. Fifth round—L. Fox 4, J. Ewing 4, C. M. Buckmaster 3, W. H. Hartlove 3, R. Miller 5, A. H. Stout 3, H. Buckmaster 5, P. Ambold 4, J. Callahan 3, J. D. Underwood 3.

In the afternoon it was shooting at bluerock targets, each man shooting at six targets. First round—C. Buckmaster 5, G. Miller 6, R. Miller 6, T. Weldin 4, C. Melchior 5, G. Shank 4, H. Buckmaster 4, J. Ewing 6. Second round—R. Miller 6, P. Ambold 6, H. Buckmaster 5, L. Fox 6, W. H. Hartlove 4, C. Buckmaster 6, J. Callahan 5, J. Ewing 5, W. B. Hill 4, J. Underwood 5, A. H. Stout 4, C. Pyle 6. Third round—J. Ewing 5, C. Buckmaster 6, R. Miller 5, T. Weldin 4, H. Buckmaster 5. Fourth round—P. Ambold 4, C. Buckmaster 6, R. Miller 4, E. Melchior 5, G. Miller 5, H. Buckmaster 5, T. Weldin 4, J. Cloud 5, G. Shank 5.

NEWARK, N. J., Nov. 29.—The East Side Gun Club held an all-day shoot on its new grounds adjoining Fischer's woods today. Excellent shooting was done at live birds and flying targets. The first shoot of the day was at flying targets for members only. Each person shot at 15 targets with the following result: Henry Langstaff 15, H. Koegel and F. Perment 13, F. Hilfers 12, J. Schilling, H. Reinhardt and C. Weeks 11, C. Walter and P. Ulrick 10, C. Laubenstein 9, P. Schork and H. Heinrich 8, C. Fahrer 6. The second was a club shoot at 5 birds each. Heinrich, Schorck, Hassinger and Reinhardt killed 5 straight, Walter, Langstaff and Laubenstein 4 each, Hilfers, Koegel, Schilling and Richard 3 each, C. Fahrer 2. Next came a match between Heinrich and Hilfers at 5 birds each, The former scored 5 and the latter 4. Koegel and Hilfers next shot a match at 5 birds each, Koegel killing 4 and Hilfers 3. Heinrich and Koegel then shot a match at 3 birds each, Heinrich killing 3 and Koegel 2. A number of sweepstakes were shot at both live birds and flying targets. Out of 11 live Hilfers killed 10 and Koegel and Goehring 9 each, H. Heinrich 6 out of 6. At flying targets, 5 bluerocks, each, P. Schork scored 5, Koegel and Schilling 4 each, Weeks 3, Perment and Hilfers 2. A match shot at 10 flying targets each between Perment and Weeks resulted in both men scoring 6. In the shoot-off Perment scored 5 straight and Weeks 4. The club has forty regular members and 10 honorary. The officers are: Chas. Walter, President; Chas. Laubenstein, Vice-President; Henry Reinhardt, Secretary; Philip Schork Treasurer.

PHILADEPHIA, Nov. 29.—The North End Gun Club had an enjoyable time at their club grounds to-day. Sweepstakes and shooting for turkeys and chickens were the order of the day.

First Sweepstake, $1 entrance, 11 entries; class shooting, at 6 bluerocks; 50, 20 and 30 per cent: Wm. H. Pack 4, Jas. Wolstencroft 5, John Crouther 6, Wm. M. Pack 6, Sam'l Richards 4, Wm. H. Wolstencroft 6, Geo. Elmer 4, Henry Jacobs 2, G. L. Garsed 3, Howard Ridge 6, R. C. Monnico 6, Crouther, W. M. Pack, W. Wolstencroft and Ridge divided first money, J. Wolstencroft second, W. C. Pack and Monnico divided third. Refeece, Isaac Wolstencroft; judges, Harry Carter, Joseph Dauser.

Second shoot, for turkeys and chickens, at 12 bluerocks and 13 clay-pigeons. 14 entries: Wm. H. Pack 15, Jas. Wolstencroft 22, John Crouther 22, Wm. M. Pack 24, Samuel Richards 15, Wm. H. Wolstencroft 23, Geo. E. Pack 17, Harry Carter 10, G. L. Garsed 19, R. C. Monnico 20, H. Ridge 17, D. H. Argousy 13, A. L. Lumb 19, Henry Jacobs 15. Ties were shot off, resulting as follows: W. M. Pack first, W. H. Wolstencroft second, J. Wolstencroft third, R. C. Monnico fourth, A. L. Lumb fifth. Judges—John Levis, Jos. Dauser. Referee, Thos. Roork.

LONG BRANCH, N. J., Nov. 29.—The third meeting of the Long Branch City Gun Club took place this morning. Eleven members participated. Despite his handicap of 6yds., Maps won after a close struggle. Fifteen rounds were shot at the usual distance, at both bluerocks and clay-pigeons. Maps having won two matches out of three, seems destined to capture the medal, the winner of the first three matches being entitled to it. The score stood: Maps 12, W. Seaman 11, A. Seaman 9, Cubberley 8, Wilson 8, Van Dyke 7, Tabor 5, Northam 5, Chasey 5, Bennett 2, Green 0.

WELLINGTON, Mass., Nov. 29.—The hills around Medford and Malden vibrated with echoes of the shotguns as they blazed forth incessantly from 9 A. M. to 1 P. M. to-day. The attendance was exceedingly large, and the contest for turkeys close. The following succeeded in capturing turkeys: Snow (2), Somes, Chase, Steele, Choat, Tribble, Dickey, Shumway, Bert, Bond, Green, Lowe and Moore. The winners in the other events were: Six bluerocks, Dickey; six pigeons, Choate and Schaefer; six pigeons, Snow and Dickey; six bluerocks, Shumway; six pigeons, Choate and Schaefer; six bluerocks, Chase and Somes; six pigeons, Green, Perry, Choate and Shumway; three pair bluerocks, Shumway; three pair bluerocks, Bert, Choate and Shumway; six bluerocks, Nye, six pigeons, Bert; six bluerocks, Somes and Steele; six pigeons, Snow; three pair bluerocks, Bert; six bluerocks, Choate, Somes and Perry; six pigeons, Somes, Nichols and Melcher; three pair pigeons, Perry and Budd.

BALTIMORE, Nov. 29.—At the Arlington Driving Park an all-day shoot was held, and Mr. Wm. Graham, the English wing shot, shot with Mr. H. Capron, 25 live birds each, Graham to use one hand at 28yds. rise and Capron 30yds., the latter to use a 10 and the former a 12-gauge gun. Each killed 24 birds. In the shoot-off Graham killed 11 and Capron 8, Graham's score being 35 out of 36, a remarkable score. Mr. E. C. Hall was referee to the match, which was for $50. The judges were E. V. Cordall and Jack Williar. Scorer, T. W. Knox. In a match between Mr. Graham and Fred Kell a shoot-off was necessary, and Kell won the match by a score of 5 to 4. Capron won a match for $10 from Wm. H. Linthicum. In a pool shoot at the Keystone targets between Messrs. Painter, Catterton, Wroten, Cullen, Franklin and Buckler, the last two divided the money. J. Williar won from H. Ducker by a score of 7 to 6, each man using a 10-gauge gun. J. Williar won a match from Wm. Linthicum, H. Catterton, J. Franklin, S. Hortner and H. Ducker.

ST. LOUIS, Mo., Dec. 1.—Thursday was anything but a favorable day for trap shooting. It was cold and raw and a light drizzling rain was falling in the morning. The Indian Lake Gun Club of East St. Louis had issued programmes for a trap-shoot for turkeys and about a dozen enthusiasts showed up to smash targets. There were three dozen large, fat gobblers on the grounds and all were disbursed in the sweeps with the exception of one dozen even. Nearly every one present went home happy and the possessor of one of the turkeys as an evidence of his expertness with a shotgun. The St. Louis Gun Club had sent out notices to its members to assemble at Compton Avenue Park and indulge in some sport at live birds and inanimate targets, but this was called off on account of the unfavorable condition of the weather.

PITTSBURGH.—The team of ten belonging to the Herron Hill Gun Club, Pittsburgh, did some excellent shooting recently in their trials for the diamond trophy. The team's average for 25 bluerocks each was 21$^{1}/_{10}$, the highest ever made on the grounds for such men. The individual scores are: George Snyder, 25; Elmer E. Shaner, 24; G. E. Painter, 24; A. C. Kruger, 23; George Cochran, 22; Charles Richardson, 31; Q. A. McClure, 21; Samuel Shaner, 21; J. Winkler, 20; H. Penn, 16.

A PAINFUL ACCIDENT.—Plainfield, N. J., Nov. 30.—R. F. M. Chase, of New York, living at "Edgewood," while trap shooting Thanksgiving morning with some friends, met with a peculiar accident. Failing to push his cartridge clean into the breech while loading the gun, the cartridge exploded when the stock was pushed back into place and a piece of shell entered Mr. Chase's right eye, entirely destroying the sight. He was taken to New York immediately, where Dr. Herman Knapp removed the organ.

FLATBUSH, L. I., Nov. 29.—The annual shooting match of the Flatbush Gun Club took place to-day at the grounds, corner of Vernon and Flatbush avenues. An immense gathering witnessed the sports and cheered the victors. The following gentlemen captured the prizes in the five events: First match, Henry Balger; second, David Rumph; third, George Hegeman; fourth, William Alston; fifth, Robert Heywood. The gun club have erected a small cottage on the grounds where they will practice weekly for the spring shooting.

BURLINGTON ROUTE DAILY EXCURSIONS TO THE PACIFIC COAST, COLORADO, WYOMING AND UTAH.

Railroad ticket agents of the Eastern, Middle and Western States will sell, on any date, via the Burlington Route from Chicago, Peoria or St. Louis, round trip tickets at low rates to San Francisco, Los Angeles, San Diego, Portland, Tacoma, Seattle, Vancouver or Victoria; also to Denver, Cheyenne, Colorado Springs or Pueblo. For a special folder giving full particulars of these excursions, call on your local ticket agent, or address P. S. Eustis, Gen'l Pass. and Ticket Ag't, C. B. & Q. R. R., Chicago, Ill. —*Adv.*

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio.
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887–88.

Commodore: H. C. ROGERS..... } Peterborough, Can.
Secretary-Treasurer: GEO. W. HATTON }

Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.. W. R. Huntington.	E. W. Masten.....	T. H. Stryker, Rome, N. Y.
Atlantic Div. W. P. Stephens.....	L. B. Palmer.....	F. L. Dunnell, 186 Jerolemon St., Brooklyn.
Eastern Div.. H. E. Rice, M. D....	Maxton Holmes.....	H. D. Marsh, Springfield, Mass.
N'thern Div.. Robert Tyson.....	S. S. Robinson.....	Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Sec'y-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application by addressing the Purser.

LEAKY CANOES—CRUISING OUTFIT.

Editor Forest and Stream:

Having struck on a little wrinkle, and used it very successfully in my canoe during the past summer, I thought by sending it to you it might help out some amateur who has had trouble with a leaky boat. It has been my experience that all boats are liable to leak, especially if they are built with a centerboard. I also have found a great deal of trouble in making my dry stowage compartment one in anything but name. My canoe is built with two boards. When it went into the water for the first time last spring both trunks were leaking and the forward bulkhead. I originally used a Radix board, and the slot I could not keep from leaking. I plugged, painted, leaded and caulked it, but to no effect. The leak was not much, perhaps a pint in a day would represent the amount of water that would get in. I then tried bicycle cement, but found that was a little too brittle, and, in fact, would grow more so as the water came in contact with it.

After a good deal of research and experimenting I struck on the following formula: Burgundy pitch 3 parts, gutta-percha (in sheets) ¾ parts, pumice (powdered) 1½ parts. The preparation is quite simple, it being only necessary to heat the pumice and gutta-percha quite hot, and then add the pitch, and cook until it is a thick, viscous mass. Apply hot, as you would white lead, and then pass a hot iron over it, which will smooth it. It is not near as heavy as white lead, and will stand a great deal more; water does not affect it visibly; still, probably, it does to a certain extent. It is elastic enough not to crack or break, and it will make a bulkhead or centerboard trunk absolutely water-tight, and keep it so. I think it is well worth a trial in a leaky boat.

Perhaps some of your cruising readers will be interested in a description of my canoe and outfit. I think I see some of them laugh when they read what my outfit is. I know all the friends that helped carry it to the canoe did last summer. In fact I was surprised myself when I saw all the things lying on the shore ready to be packed in a 16×30 canoe. I started to pack them in, and confess I felt disheartened when I saw how many there were left after the canoe was apparently full. I pulled everything out and commenced over. A lady who was there to see me off asked "where I intended to put all those things?" I didn't quite know myself, but answered "that I had a place for everything and lots of room to spare." Well, first of all my stove went under the footboards; next the lantern way up in the bow; then came blanket, mattress (a cork one, which I intend to discard next year), extra clothing, etc. In the stern came tripod, dry plates, fishing tackle (which I'll never carry again) and tent. Partly under the deck and hatch were two large provision boxes well filled. A can of mushrooms, of which I anticipated a great deal, had a place; and I think I had better tell the sequel to that now. One noon when we made camp (it was just below Mehoopany, on the rocks) I decided to try my "champignons blancs." I was a little undecided as to how they ought to be cooked. I remember, however, seeing them fried, so out came the frying pan and into it went the mushrooms. The fire was poor, would not give out anything but smoke. The pan was on the fire, and gradually heated until the mushrooms began to sizzle. I tried them every few minutes with a fork, but they seemed tough. In fact, the more I cooked them the tougher they got. When they were brown I took them off the fire and passed them around. They each tasted one and then said they guessed they did not care for mushrooms that noon. I ate about half of them and then accidentally (?) knocked the frying-pan off the stove and spilt them. Mushrooms are never spoken of now but what a sly smile goes around the circle, though there is never a word said.

Before I made my cruise I had some canvas bags made to go along the side of the boat under the deck, to keep small things in. I found them very handy, too. I kept soap, towels, fish lines, trolling spoons, knife and fork, etc., in these, that always would have been lost if I had put them anywhere else. Just under the bow deck was a long rubber coat and detective camera. That is all I had, at least that is all I can think of. We were gone two weeks, and what a glorious time we had. It would be tedious to listen to a long account of it, so will only give a few incidents of the trip. One word of advice I want to give those anticipating a cruise on the Susquehanna. Don't stop at the "Forest Castle" brewery, just above Pittston. There is quite a swift water below there a short distance and a bad place to get through. I have been told that people going down the river have stopped at the brewery and then stopped again just below the swift water and wrung out their clothes and fished up part of their outfit from the bottom of the river.

One little thing more I am going to tell you which happened to the writer. It was getting very dark one evening, and we had not yet made camp. The river was hemmed in by high mountains, which gave it a sombre look. My companions were far ahead of me, and I could hardly see them. In a moment I saw I was just above a swift rapid full of dangerous rocks. By that time it was so dark I could hardly see a boat's length ahead. Suddenly all became dark. Now don't stop reading and throw down your paper in disgust. I am not going to give you the "Indian Cave" story. I confess I was frightened. I had lost my paddle in the excitement and was vainly endeavoring to paddle with my seat. I shouted: "Boys! boys!" No answer save the echo of my own voice. "Boys! Boys!" "Boys, I say!" When suddenly I felt a hand on my arm and heard, "Dud, wake up—have you got the nightmare?" It was my first night home after my trip.

BINGHAMTON, N. Y., Nov. 24. DUDLEY F. GREENE.

OAKLAND C. C.—The quarterly Mayrisch badge race, sailed Sept. 7, resulted as follows: First, Frolic; second, Gypsy; third, Dart; fourth, Mystic. Frolic is a new canoe imported by the vice-commodore, 16×37½, Pecowsic model, from Joyner & Co., and is making it very warm for the fleet. There is no lack of enthusiasm, Frolic's advent has set all the cracks thinking how to go a little closer to the wind, and the fact of there being no laying up season on the Pacific coast keeps the ball rolling. A regatta on Thanksgiving Day promises to be largely attended.

A. C. A. MEMBERSHIP.—Eastern Division: Frank E. Passmore, Lynn, Mass. Central Division: Sidney B. Perkins and Henry H. Perkins, Rochester, N. Y.

THE AMERICAN CANOE ASSOCIATION.

SECOND only in importance to the annual camp of the American Canoe Association is the meeting of the executive committee in November, as it is then that the new commodore and secretary-treasurer take office, the accounts for the year are balanced, and, most important of all to the average member, the location of the meet for the succeeding year is decided on, together with the date. The meeting itself is always held on a Saturday, and during its session, though there is no lack of lengthy discussion and animated argument, a great deal of business is disposed of in a comparatively short time; and that without any of the participants being too much fatigued by mental labors or the cares of office to be present at the dinner which always follows in the evening, the hosts being the canoeists of the city wherein the meeting is held.

The present meeting, the first ever held within the Northern Division, was no exception to its predecessors, either in the successful arrangement of the business of the Association, or in the fun and jollity of the reunion which followed. Our report of the business of the meeting, published two weeks since, was necessarily quite brief, but we supplement it this week with the accompanying *menu* of the dinner, as well as with a more complete report of the business transacted. It is hardly necessary to speak of the kindness and hospitality of the hosts of the occasion, the members of the Toronto C. C., as so many from the States have had a taste of Canadian hospitality, either at the meet at Stony Lake in '83 or on other occasions, but every effort was made to entertain the visitors during their stay in Toronto. The handsome club house of the Toronto C. C., in which the meeting was held, was decorated with flags and trophies from many camps and meets. The dinner card, the work of Mr. Kelly, a talented young member of the T. C. C., will be appreciated by the many canoeists who were absent. The dinner, presided over by Com. Kerr, of the T. C. C., was marked by more and better speeches than usual, as well as by an amount of congregational singing, which promises well for the entertainments about the campfires of Sugar Island. The most amusing of the many songs was the following, written for the occasion by the jolly vice-commodore of the Northern Division, and sung by him in proposing the toast,

"*The Retiring Officers.*"

Good comrades all, come bear a hand, I call on every mate
To cheer those worthy gentlemen whose names I will relate.
Gibson, the sailor-man, stands first, as head of our estate,
He's just that kind of sailor-man who's mighty hard to "bate."
Sing on, old grampus, heave ahead, we'll let 'em have it straight.

The man who holds the cash comes next, they call him Freddy Mix;
Those smart Division pursers cannot play him any tricks,
For if they did, you bet your boots, he'd get them in a fix.
The men of the Regatta Board, they always act like bricks,
Although they're bothered by that chump, the man that always kicks.

(*Now for the Divisions.*)

"Hello Central" first we call, in telephonic style;
"Our Commodore," the boys respond, "is a man who's free from guile,
"Our 'Rear' and our Committeeman are present all the while,
"And the Purser's time is occupied in adding to his pile;
"When members come to pay their dues, you should remark his smile."

The next Division is composed of wise men from the East;
We're sorry not to see more men of wisdom at this feast—
For Barney, Rice, and Davidson, and Shedd, are not the least
Of all the gallant ones by whom our numbers are increased.
We hope it may be many years before they are deceased.

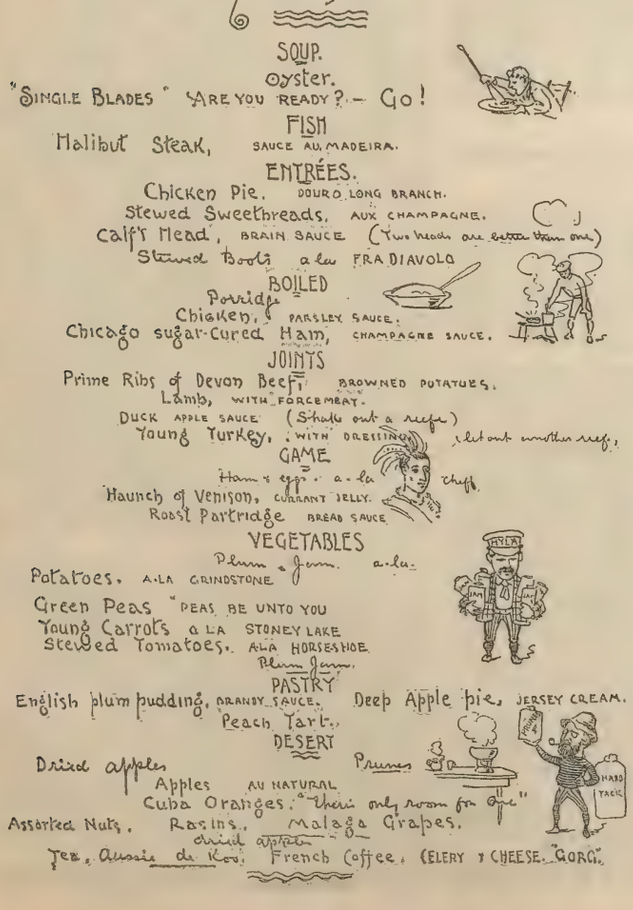
McGachen's presence is enough our dignity to raise,
MacKendrick, our Rear-Commodore, has helped in many ways,
And Graham, the Committeeman, deserves a word of praise,
While Purser Sam, he is the man, whom everybody pays,
Let's drink to the Executive that never misses stays.

Down where the wild Atlantic's vast resounding billows foam,
The infant of this family lives in its seagirt home;
But though of tender years, we see they're not afraid to roam.
Brave Stanton's name shall thunder down the ages in this "pome."
As long as whirls this earthly ball beneath the azure dome.

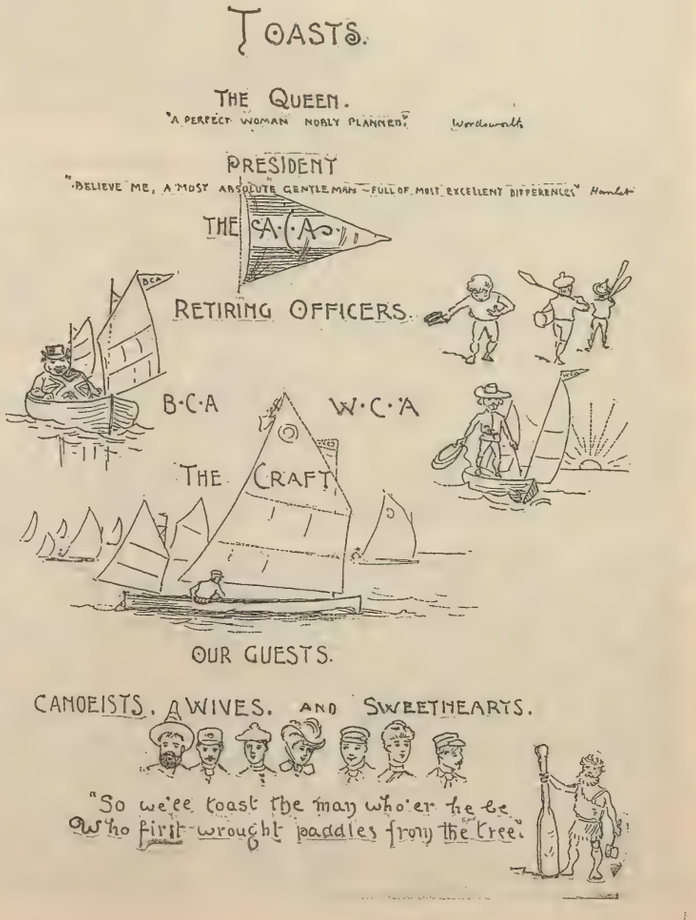
Then drink to the Executive, canoeists great and small,
For wisely their official craft they've steered thro' every squall
In '88, both soon and late, they came at duty's call,
We drink the Retiring Officers. Stand by, canoeists all.

With the present meeting ends the eighth year of the American Canoe Association, and it is interesting to look back at the many changes that time has wrought. The first commodore, Mr. Alden, is now in Rome as American Consul, whence he lately wrote proposing for honorary membership an Italian gentleman who, as he puts it, "owns the only canoe in Italy; at least the only Christian canoe, an Everson Shadow." Judge Longworth, the second commodore, has not been seen at the meets for some years and, though still a canoeist, devotes much of his time to yachting. Mr. Edwards is still working just as hard for the A. C. A. as he did before such an organization was anything more than a scheme, in which he and a few other enthusiasts were interested by Mr. Bishop in 1879. Mr. Nickerson is still seen at the meets and is just as popular as when he was elected commodore in 1883, while no one would care to go to an A. C. A. meet at which Gen. Oliver would not be present. Mr. Rathbun was present at the executive committee meeting and promises to be at the next meet, now that it is near home; while Mr. Wilkin can always be counted on to come early and stay until the last. Though no longer racing Mr. Gibson has won a place in the councils of the Association that will keep him in active service of some kind for a long time, as it is to him perhaps more than to any other individual member that the new constitution and many changes for the better are due. The father of the Association, Mr. N. H. Bishop, is still living in a beautiful nook on the mountain side at Lake George, whence he can overlook the battle ground of so many canoe races.

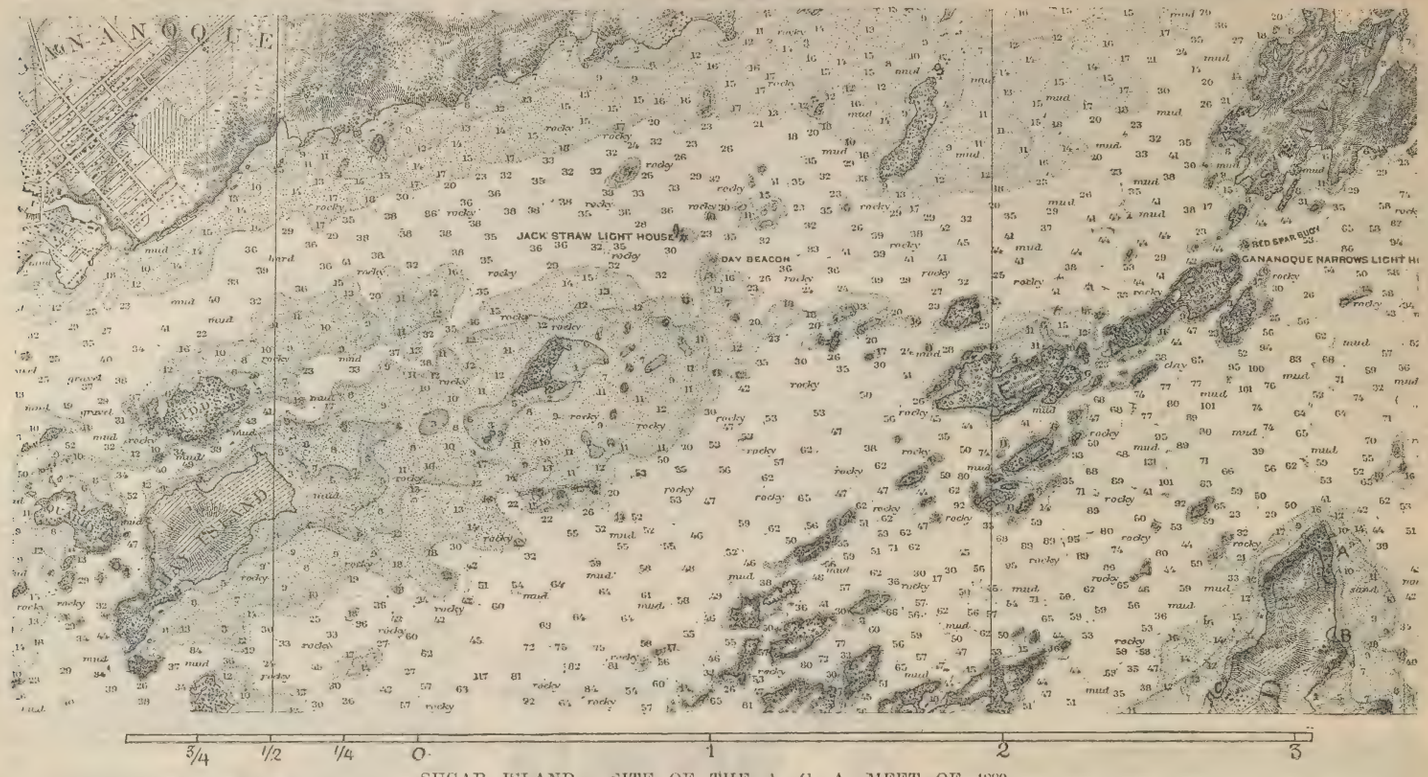
Of the nine meets already held, four have been at Lake George and three on the St. Lawrence, and now for the fourth time the A. C. A. goes back to the latter location, certainly one of the finest in America for such a camp. This time, as in 1883, the meet will be in Canadian waters, having come in due rotation to the Northern Division, but at the same time it is almost within call of the old spot that is so dear to many of the older members. Many changes have of course taken place in the personnel of the Association; while the total number of members from 1880 up to date is very nearly 1,400, many have naturally dropped out, the present membership being about 800, but fortunately death has made very few inroads on the ranks, and nearly all of the older and best known members manage to report from time to time at a meet or an annual meeting. No. 1 on the roll, a gentleman who has never taken part at a meet, has lately taken a new interest in the sport, has joined a prominent club, and promises to be at the next meet. The financial condition of the Association up to date is shown in the following report of the Sec.-Treas., presented at the annual meeting:



A. C. A. BALANCE SHEET—OCTOBER, 1887, TO NOVEMBER, 1888.



Cr.		
Balance received from W. M. Carter		$55.72
Received from purser Central Division		177.45
purser Atlantic Division		78.81
purser Eastern Division		60.60
purser Northern Division		55.40
sale of lumber left in camp		72.00
camp dues		149.00
advertisements in Year Book		345.00
C. A. Neidé, dues, 1883		1.00
Guy Baker, dues, 1888		1.00
		$996.98
Dr.		
Stamps	$12.81	
Stationery and printing	8.50	
A. C. A. sign at dock	2.50	
Telegram	.50	
Incidentals—		
Express on box from W. M. Carter	1.10	
Year Books	1.70	
box to Lake George and return	2.50	
Camp expenses, A. C. A. meet—		
100lbs. copperas	3.50	
Carrying mail	1.50	
Boards, labor and rowboat two weeks	12.65	
Wooden pail	.30	
D. S. Sanford for half of dock	75.00	
Com. Gibson, incidental expenses, 1888	45.80	
Regatta committee, incidental expenses, 1888	125.44	
E. R. Bertine, rent of large tent	20.00	
M. G. Stoneman, rent of A. C. A. and Sec.'s tents	28.50	
S. Hemmenway, A. C. A. burgee	15.00	
S. R. Stoddard for maps in Year Book	65.00	
J. C. Rankin, Jr., printing Year Book, etc	421.53	
Expenses of secretary	60.00	$912.53
Balance in treasury		$84.45



While the balance is but small it is a little more than last year, and the prospect is that in the future the receipts will be increased materially. The chief items are in connection with the Year Book, which this year cost the Association about $100 above the receipts the book being very much superior to anything previously attempted, and with a fine map of Lake George included. For the first time the plan of publishing advertisements in the book was tried, the result being that a handsomer book was produced at a smaller cost than usual, and for next year an offer has been made to print and mail the book free of cost to the Association for the privilege of the advertisements. This offer, being accepted will remove one serious item of expense, and not only the Year Book but the camp programme will be provided for free of cost. The plan of a camp fee of $1.00, tried for the first time this year, has also worked very well, the revenue from it being $150; while, as a result of the greatly increased local interest in the Association and the meets which has followed the carrying out of the Division scheme, the attendance at the A. C. A. meet promises to be greatly increased in a year or two.

How large the A.C.A. meet is likely to become, and how large a meet is desirable, are hard questions to answer, but we may safely assume that with good management a territory as large as the Northern or Atlantic Divisions should in a few years give an active membership of 400 canoeists. With the Division meets well worked up, the average attendance at each should be not less than 125, as the distance from any point in the Division cannot be very great; and in the year when the Division meet is merged in the A.C.A. meet this attendance should run up to at least 200 from the Division. Besides this the average attendance from each of the other Divisions should be at least 10 per cent, or 40 each, making a total of over 300 actual members besides ladies and guests, at the Association meet. This would make quite as large a camp as would be desirable, while the income from it would be more than enough to cover all running expenses of the meet, as these would be increased very slightly if any for a camp of twice the present size. The wharf, general tent, and prizes are the same in either case, while at present an edition of 1200 books is printed, so that even if the membership and attendance at the meet were both doubled the running expenses of the Association would be but little, if any, greater. For the present at least the expenses of the Division meets will be less than of an Association meet, and will be amply provided for from the 70 per cent of the receipts retained by each Division. As far as we can judge then, the prospects are that with added experience and good management the expenses of the Association should be diminished, rather than increased; while on the other hand, the membership which is certain to follow a vigorous and pushing policy in each Division, with its influence on the attendance at the A. C. A. meet, is sure to add largely to the receipts, both in the form of the initiation fees, annual dues, and camp fee. To be sure, the expense is not now very great, $1 for initiation, $1 per year dues, and $1 from each member present at an Association meet, no camp fees being charged for the Division meet. At the same time, the more this expense can be reduced the better; and further, the more it can

SUGAR ISLAND. SITE OF THE A. C. A. MEET OF 1889.

A, Camp of 1884-85-86, Grindstone Island, Main Camp. *B*, Squaw Point. *C*, Delaney's Farmhouse. *E*, Sugar Island. *F*, Proposed Ladies' Camp.

be put into a form like the camp dues, paid only when a member attends a meet, rather than the annual dues, which many have paid for years though too far away to attend a meet, the better it will be. We are in favor then of a policy by which each Division will be induced to increase its membership by the addition of every desirable canoeist within its borders, and at the same time of such an economical administration of affairs as shall provide for reasonable expenditures in the way of prizes and facilities for the proper conduct of the races and camp; and when these are provided for, if a "dangerous surplus" be left, that the dues be decreased first by the abolishment of the initial fee, and then by a reduction of the annual dues to every club which shall join the A. C. A. in a body, paying a lump sum to the Division purser in place of $1 to be collected from each individual member. This plan, to which we have alluded before, is too radical to be undertaken in haste, and the details are as yet in a very crude shape, but the main points of it are that there is a very large proportion of club members that are not in the A. C. A., and who can only be brought in through a scheme which will induce their clubs to join as compact bodies. A careful canvas of the question will show that with such an increase of membership as would follow from a number of clubs joining in this way, the receipts would be so large, with no great increase of expenses, that a reduction of dues even below the present low figure would be possible.

Two amendments to the constitution were proposed and adopted by those present at the meeting; the first fixing a uniform date at which all Division officers should take office, the second changing the date of appointment of Division regatta committees. The former point was an omission at the time the new constitution was drawn up, the matter not being thoroughly considered, so that the officers who were elected at a Division meet took office at once. In practice the plan was objectionable, because the new purser came in, and the books were transferred to him, at the very time when he is most occupied with new applications, just preceding the A. C. A. meet; and further, he was hardly settled in office before he was obliged to prepare his annual report. In the same way the new vice-commodore took command of the Division just preceding the A. C. A. meet, and so was not fully familiar with his duties at the time he went to the meet. Under the new amendment the terms of all officers end in the dull season in the fall, with the Executive Committee meeting, so that the new officers have ample time to become familiar with their duties before the season's work, both for the division and A. C. A. meet, begins. The second change was made because it has proved impossible in practice to appoint men at the end of one season to the regatta committee, with any certainty that they will be able to attend to their duties properly nearly a year later. As now arranged each vice-commodore may select his regatta committee late in January, by which time he can tell who will be able to serve.

Two very important subjects were discussed this year for the first time by the executive committee, the question of limiting racing canoes and that of order in camp. While all the officers present were outspoken in favor of some action in behalf of the legitimate cruising canoe as opposed to the racing machine, after a long discussion no practicable method of restricting the machines was proposed. A limit of sail area and a rule prohibiting standing rigs and seats wider than the canoe were discussed, but it was not deemed best to recommend the adoption of either. It was decided to take no action at present, but to leave it to another year to say whether some of the evils would not either correct themselves or become so much greater that more stringent rules would be welcomed by all, and in the meantime to trust to the judgment of the regatta committee to provide some races for canoes that are in every respect cruisers. The following resolution was finally introduced by Mr. Andrews and seconded by ex-Commodore Rathbun, "Resolved, That the executive committee of the American Canoe Association deprecates most strongly the introduction of special racing appliances that are incompatible with the requirements of cruising, and recommends to the regatta committee that the programme of the races shall be so arranged as to encourage as far as possible the legitimate cruising canoe." At its fall meeting a short time since the Royal C. C. considered the same question, but we have not yet had a report of the action taken.

The question of order in camp is one that is each year of more importance as new men come in. Of course a wide latitude must be allowed in such a camp as far as mere conventionalities are concerned, but at the same time it is most essential that anything approaching drunkenness or open disorder must be promptly suppressed. At one of the Grindstone camps some trouble was caused by two canoeists, total strangers, from a distant point, who drank more than was good for them, and were finally invited by the officers to continue their cruise at once and to stop no longer in camp. In 1887 there was a little trouble of the same nature, and again in the last camp. In every case it was due to but one or two persons, strangers who had lately joined the A. C. A. From early morning until midnight the camp is full of noise, song and frolic, that is part of the sport, and all expect and enjoy it. The trouble begins after the camp has quieted down for the night and when nearly every one is desirous of a quiet rest. It is within the power of one or two noisy men, whether sober or not does not matter to their victims, to keep the whole camp awake, as has been more than once the case. It is asking too much of the Commodore and his aids that they shall be up all night playing police, and it has been proposed that the executive committee shall be in session every morning, to hear complaints and investigate any charges of disorder. A single meeting of the committee served to stop all trouble this year, and it is pretty certain that if it be generally understood that all such disorder will be promptly dealt with, there will be no ground of complaint. The matter was suggested this year by Ex-Com. Gibson, and after being discussed at the meeting the following resolution was passed: Resolved, "That in view of the necessity of preserving order and quiet in camp during the night, the hour of 'taps' shall be changed from 10 to 11:30 P. M.; after which hour quiet must be maintained." The old rule, of quiet after 10 P. M., was broken as a matter of course by all, from the officers down, but the new limit, 11:30 P. M., is far more practicable.

In regard to a site the feeling was strongly in favor of Sugar Island, which was selected unanimously. It is a beautiful little island about half a mile long and a quarter of a mile wide, located, as shown on the accompanying chart, within a mile of the old camp ground of 1884, '85 and '86. It is 2¾ miles from Gananoque, 6 miles from Clayton, and a little over 1 mile from the farmhouse on Grindstone Island, where many took their meals at the old camps. The shape of the island is shown in the chart, irregular, with several little bays, and a wide peninsula on the south side, on which it has been proposed to locate the ladies' camp. The ground in the center is quite high, and in no place, we understand, is it boggy or swampy. A good location can be had for a wharf, and an offer has been made already to build the wharf, do what underbrushing is necessary, and to run a small steamer as a ferry boat, for the privilege of running the camp store. Lumber can be had cheaply from Gananoque, and if the excellent plan as that originated by the site committee this year be followed, the floats and stages can be built without cost to the Association.

The two successful Division meets held in '87 and '88 in the Northern Division have helped canoeing greatly in Canada, and there is now much enthusiasm over the coming meet, and every indication of a very satisfactory attendance. The Central Division will not hold a Division meet of its own this year, but will lend all its efforts to the general meet on Sugar Island. The Eastern Division is likely to hold a local meet early in the year, as usual, and then to turn out in good numbers at the A. C. A. meet. The Atlantic Division is now arranging for a large Division meet in July, about a month prior to the A. C. A. meet, but it also expects to send a large delegation to the A. C. A. meet. Thus there is every prospect of a larger meet than ever before in the coming August, and also that at the end of the year the Association will be in a most prosperous condition, both in numbers and in finances, and with added experience to guide it toward a still more extended sphere of usefulness.

THROUGH BULL'S FALLS TO HARPER'S FERRY

LEAVES FROM THE LOG OF THE FRANKIE.

THE river flowed deep and smooth for several miles—a noble, majestic stream a quarter of a mile wide or thereabouts—till we reached the vicinity of Bull's Falls, noted as the worst place on the river, and but two or three miles from Harper's Ferry and the Potomac. We landed at the old stone wharf known as Shenandoah City, and walked down the railroad track to reconnoitre. Just below the broad, still flow ends in a wide, shallow, reefy rapid, the distinction between the rapid and the deep water above being so marked—so much of the reefs being above water—that at low water it looks more like the beach of a lake than the continuation of a river. At the present stage, however, the water covered the entire expanse and fell away down the slope in a white, foamy sheet.

We followed it for half a mile or thereabouts, the boat channel being plainly apparent—a perfectly clear, swift, narrow little road of water, close to the railroad embankment, along the inner side—till we came to the falls. And the falls! They were no more like the falls I have frequently seen from the car windows than a breeze is like a cyclone. The great boulder-strewn ledge, over and among which the water falls almost perpendicularly, was a continuous deep, heavy cataract, the rocks all covered, and over the two great boulders close to the railroad, so familiar to passers by, between which at low water most of the river finds its way over the ledge, the water now rushed in colossal billows, while the whole breadth of the river below the ledge was churned into a white mass of heaving, tumbling, seething, foam-crested breakers; and the spectacle was awe-inspiring. The boat channel passes the end of the falls next to the railroad, in a short canal cut through the rock, and ordinarily affords a safe, easy passage around the falls, but the water now rushed through this narrow little gap with immense power; two great furrows of water like those thrown from the bows of a large, rapidly-moving steamer, only much larger, extending diagonally in parallel lines across it from top to bottom, while below it was joined by the great mass of waters over the ledge, and the quarter of a mile of huge rollers that followed menaced certain destruction to our small craft, even if they succeeded in living through the chute, while all around us and far away below us the mountains closed in on either side, shouldering the river right and left, as it fought savagely for the passage it had cut down deep into their very foundations. A continuous series of great rocky reefs or girders reached across the gorge from one colossal wall to the other, over which the river rushed and foamed on its way down the steeply sloping defile as though, having cut deep down below the floor of the valley, it was tripping and falling over the very foundation sills of the mountains, while far away the imposing Maryland Heights shut squarely across the vista, as though finally opposing a successful barrier to the river, which, joining the Potomac at its base, the two, united, with a supreme effort rend their way through the mighty barrier, whose time-scarred flanks dip down into the water on either side.

The houses, shops and ruined Government buildings of Harper's Ferry were visible at the very end of the long down-hill vista, three miles away. We followed on down the railroad (which here descends at the rate of 90ft. to the mile) for a mile, and found the noted mountain gorge filled from side to side with the turbulent, heaving, rushing flood, and the outlook was very dubious indeed.

"Well, what do you think?" said George, as we returned and stood on the edge of the canal gazing ruefully at the thunderous cataract and the raging torrent pouring through the narrow channel.

"Well, I think the best way to get in is to go back to Halltown, just opposite where we left the canoe, and getting a couple of those section hands I noticed there working on the track as we came down, to carry the boats over to the station there, and we'll walk in."

"O, pshaw! I hate to abandon the cruise in sight of Harper's Ferry after coming this far and passing through all we have been through to get there."

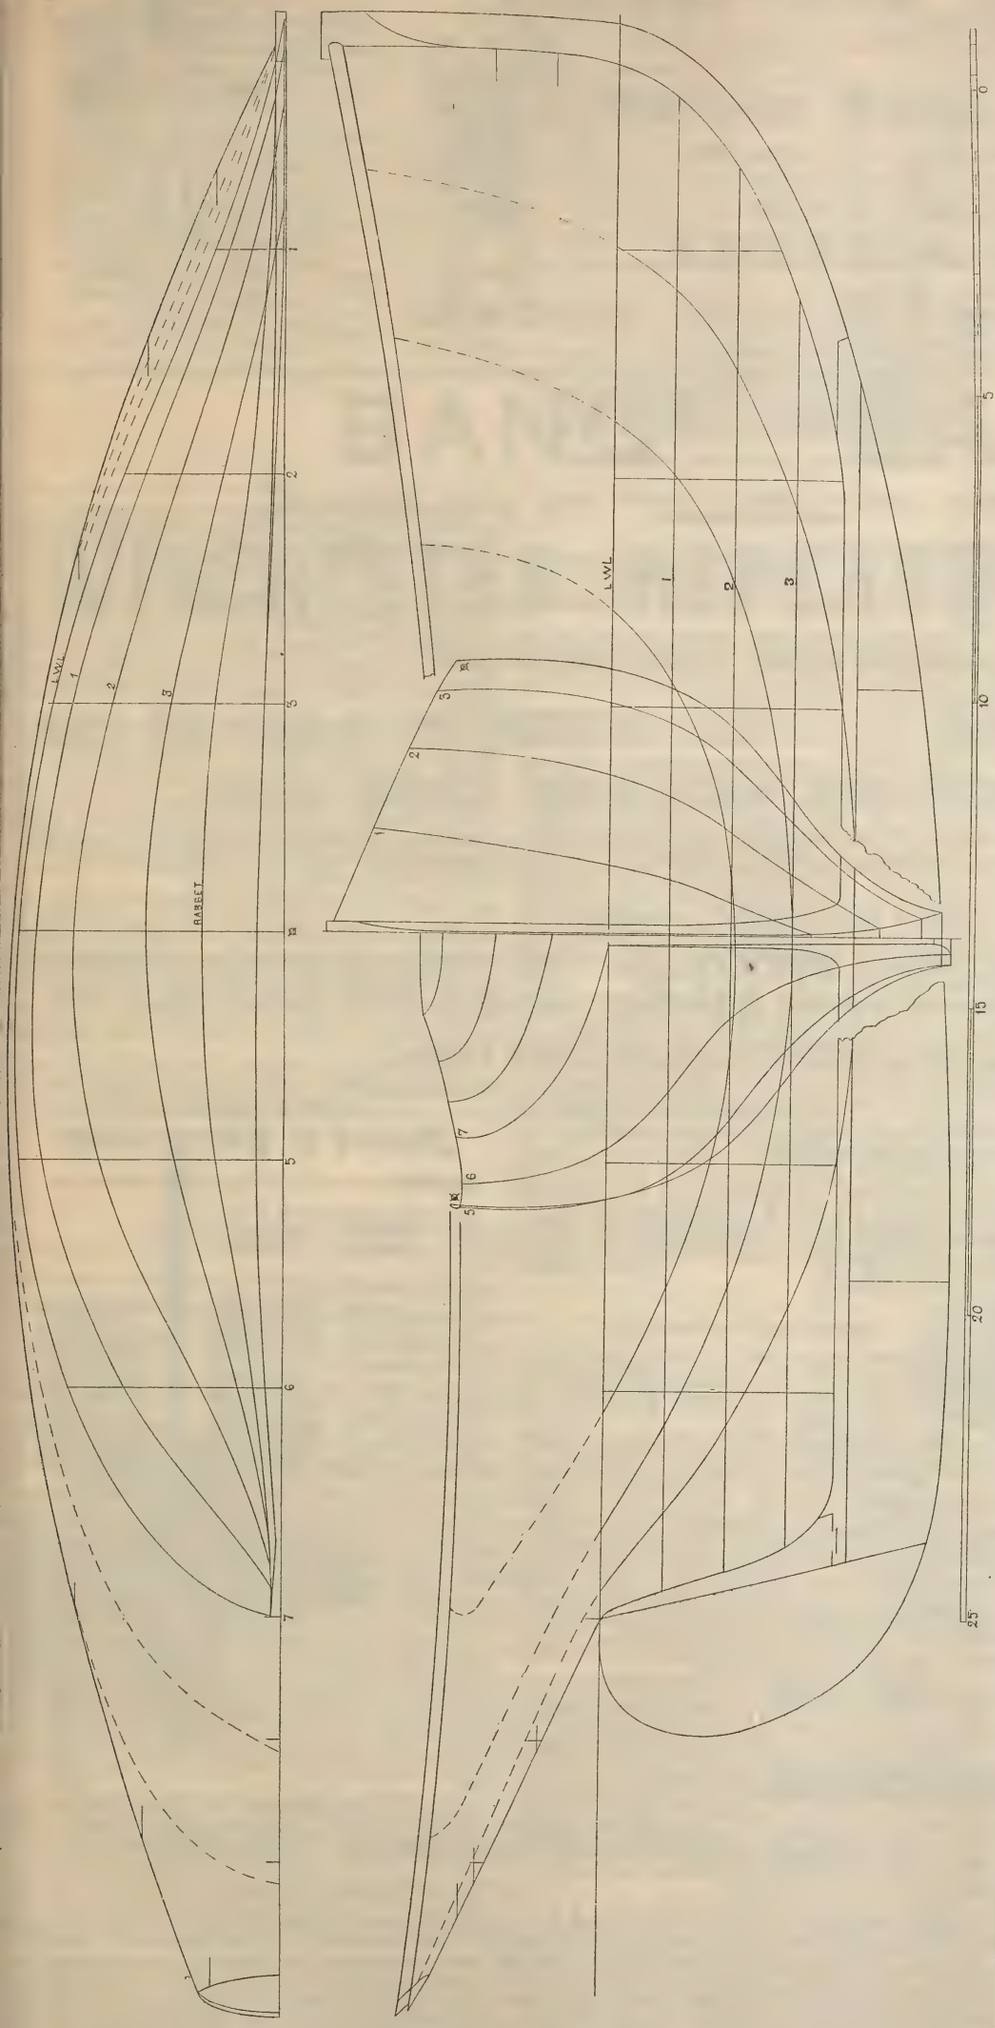
"So do I, but I hate to get wet, too, and probably lose a canoe or two with an outfit, to say nothing of the personal risk, which will assuredly be the case if we tackle this canal and these rollers."

"Can't we make it, don't you think?"

"I am afraid not; in fact I am so sure of it that I have no desire to try it. Those huge swells in the canal will swamp us as soon as we attempt it."

"Clear across there below the falls and for a long way down the water is comparatively smooth. Now, if we could only get over into that we would be all right."

"Yes, if we were there, but the getting there is the thing. I'll tell you what we'll do. I still think the safe, sensible plan is to take no chances and abandon the cruise right here and walk in, for there's more rough water ahead; we are not out of the woods by any means when we pass these falls. See how the gorge falls away below us! There's bound to be bad water with such a fall, and besides all these reefs are below us. We didn't go far enough when we were down there; we ought to have taken a look around that bend and below those islands; but I hate to be beaten so near the end of the cruise as badly as you do. If the river was not so high the canal would push us around this place easily, but it can't be passed now and that's all there is of it. You notice the river is smooth above the falls and below the rapids? Well, we'll drop down the boat channel through the rapid, and when we reach the lower point of that island above there we'll cross over to the other side, and the chances are that we'll find some place to slip by like we did at Watson's Falls. We'll take the chances anyhow."



We accordingly returned to the canoes, re-embarked and dropped cautiously down the chute, through the rapids, until we reached the landmark agreed upon, when we turned our bows up stream and drove the boats across the river as rapidly as possible, for we were perilously near the falls. We landed on the rocks close to the shore, and lifted and slid the boats over the ledge forming the falls now, a very narrow, deep, swift, crooked little channel, which we were fortunate enough to find, evidently a dry gully at low water, down which, after a very difficult job getting aboard the canoes at all—owing to the fierce rush of the torrent—we shot like arrows, one at a time. Midway down, in spite of every effort, I ran square upon a huge rock in midstream; the bow of the boat glanced off, and she struck broadside on with a crash that I felt sure had smashed in the entire side. I averted a capsize by my usual tactics, of instantly jumping out on to the rock, while George shot by me like an arrow and was lost to sight around a sharp bend to the left. I examined my canoe to see if there was enough of her left to carry me out of my predicament, for, as before mentioned, the rock on which I struck was in midstream; and to my surprise and pleasure I found she was entirely uninjured, so I pushed her off the rock, hauled her carefully alongside, stepped quickly in (a delicate operation in such a torrent) and was whirled swiftly away. I shot around the cane and found George entangled in the bushes at the end of the chute on the left side, and in an instant more found myself entangled in the bushes on the right, or down-stream side. As the current set squarely through the bushes on my side, I had no resource but to get out up to my waist in the water and work the boat clear. I was soon clear and back in the canoe, and in a few minutes more we found ourselves out in the river again, in the smooth water below the falls, and for a mile or more we had a comparatively smooth run.

We passed the collection of clumpy, bushy islands clustered in the bend of the river, and stopped appalled at the sight that burst upon our astonished vision. For a mile or two ahead the gorge was filled with a horrible mass of tumbling, roaring, writhing, leaping, foaming white water, the uplifted crests of the great waves splashing high in the air in every direction, while far ahead, but dimly seen through the gathering twilight, standing calm and dignified above the horrible commotion below it, was the bridge across the Shenandoah, immediately above its junction with the Potomac, a beacon to indicate our haven.

It was impossible to return, and there seemed no outlet for us, but straight ahead; so in we plowed, I in the lead and George following close to the right bank. The power of the water, its velocity and the magnitude of the huge rollers were something frightful and far surpassed anything we had experienced before. As the dangers thickened I kept perfectly cool and steady and managed my boat with all the skill and power I possessed, but she was like a straw in the resistless overwhelming torrent.

I turned to see how George was faring; as I looked, half the hull of his boat was visible out of the water, which poured from her decks in sheets and dripped glistening from her glossy black sides. An instant later she plunged down again till all I could see was his head and shoulders among the angry-crested waves, roaring around him to engulf him.

A dozen times at least I gave myself up for capsized and prepared to jump out and swim for life, but each time regained my

THE CAT YAWL "EMPRESS."

equilibrium and was still safe. Once I was carried bodily sidewise down a huge fall, over a reef some five or six feet deep, with an enormous roller coming up at the foot; but the Frankie with a buoyancy undreamed of carried me through safely.

Just ahead rose a huge rock against which the waters reared themselves like a wall, and then fell over with a thunderous roar into the lee below. With the strength of a struggle between life and death I succeeded in backing clear of it, and shooting by it on the right hand.

As I hung poised a moment before passing it George came shooting by me, straight down upon it, ran square up on its lofty crest, hung suspended upon its verge an instant, grasped his gunwales with both hands, dropped his paddle, gave me one helpless glance, then toppled over, bow first into the depths below, and was lost to sight. I only had time to take a fleeting, backward glimpse of him, as I was whirled resistlessly on, below the rock, and to my surprise and delight he was riding right side up on the lee of the rock, still grasping his gunwales, with his boat full of water, his silk pennant still flying from its staff in the back end of the cockpit as it had been throughout the entire cruise.

It was but a couple of boat-lengths to shore, so I shouted to him to paddle himself ashore with a hatch, and was whirled away, perfectly powerless to help him around a massive point of stone, jutting out from the face of the mountain, and lost sight of him. I found a little piece of smooth water on the lee of the point, and a few yards below, the stern of a skiff, projecting from among the rocks denoted a landing of some sort, or at least a foothold along the face of the perpendicular cliff we had been skirting for a long distance, so I hung close to the lee and paddled carefully back up under the point to try and find George. I picked up his floating hatch, then his foot-rest, and, at these signs of wreckage, my heart rose in my mouth, and my spirits went down, down, as I feared what had happened to him. Carefully peering around the point I was greatly relieved to see him seated on a projecting rock at the foot of the cliff, with his boat half ashore, dipping the water out of her.

He soon appeared, picking his way cautiously along the base of the cliff, leading his canoe, and when he reached the point where I was I shouted to him to wait a minute (conversation being impossible a boat's length away on account of the mighty roar of the torrent), so I dropped down to the skiff previously mentioned, where I found a rude, single-bladed paddle, with which I returned to him, and in five minutes we were standing on the rocks holding a council of war.

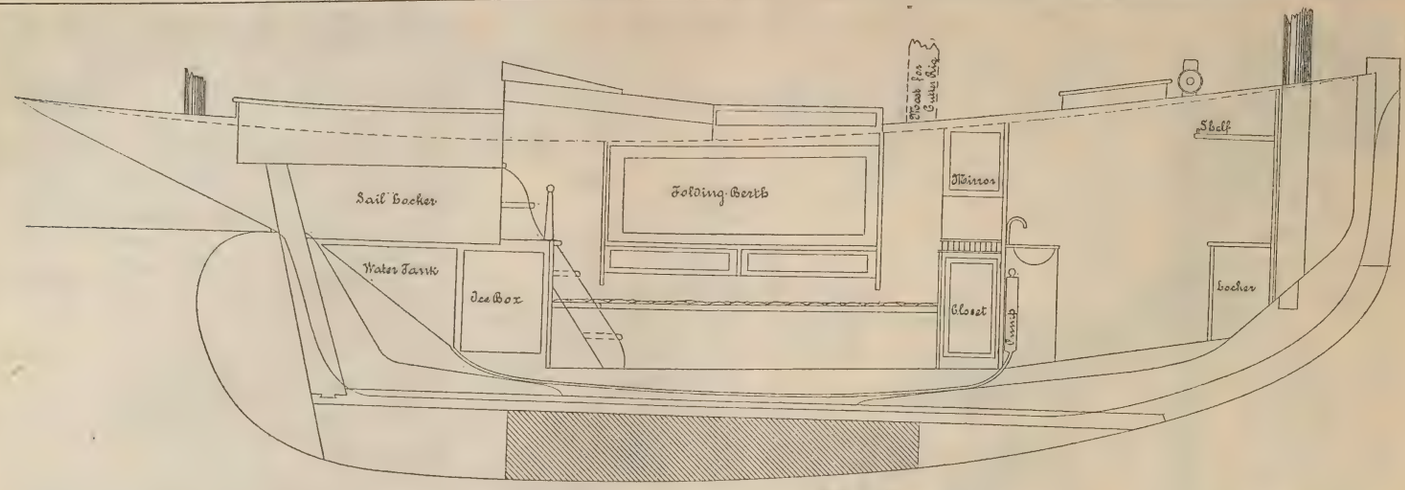
Our position was not inviting. We stood on a small level platform of rocks; behind us rose Loudoun Heights towering 1,000ft. and more to the summit of the Blue Ridge almost perpendicular; in front of us the roaring, raging river; above us the rapids we had come through; between us half a mile of still worse rapids.

Directly in front of us the water was comparatively smooth though exceedingly swift—a sort of resting place between the rapids above and those below. A stone dam, a relic of the Government works, began a few yards out in the river from us, extending clear across to the other shore, where it curved down stream and ran for a long distance parallel with the bank, serving for both dam and race. On looking over the situation we saw several ways out. One was to paddle across the river to the other side where lay the town and the railroads, our destination, a difficult, exceedingly hazardous undertaking at best, in view of the swift current and the dam and rapid below, and one simply impossibly for George to perform with the apology for a paddle I gave him. Another was to continue to run the rapid, also hazardous and for George impossible. Another was to lead the boats along the shore, a very difficult and tedious job, in view of the cliffs, rocks and bushes. Another was to go into camp where we were, as it was growing dusk, and the place offered really good facilities for camping, plenty of driftwood and a nice spring being at hand and trust to the morning to get us out of our scrape.

We were about to accept the latter alternative, and had begun to unpack the canoes preparatory to drawing them upon the rock for the night, when one of these mountaineers, a "poor white" who are always found living in such wild inaccessible places as we were now in, in wretched, patched up, pieced up hovels that would bring discredit upon the celebrated precincts of Shantytown, appeared on the scene. After consultation with him during which he suggested, and tried leading the boats down, a plan which I promptly vetoed on seeing how clumsily and unskillfully he handled the Frankie, a bargain was struck in which he agreed to carry the canoes, assisted by his boys, down the rough path along the shore, below the rapids, and while he was gone for the boys, I prepared a hasty supper of bacon, eggs and coffee, which we disposed of while they were carrying the canoes; and in due time we found ourselves in camp, half a mile further down the river, below the worst of the rapids and in position to easily reach the town in the morning.

F. R. WEBB.

Yachting.



THE CAT YAWL EMPRESS.

ONE of the most practical and serviceable rigs for singlehand sailing is the "main or mizen," or as it is usually called in America, the "cat yawl" rig, the same that is generally used on canoes. Though common enough on small craft in England, it is comparatively a novelty here, its introduction about five years ago being due to Mr. N. G. Herreshoff, of Bristol, R. I., at least he was the first to test the rig thoroughly and put it into working shape. In England the two sails are usually lugs, but in this country the ordinary boom and gaff is retained, the boom being shortened, but the details of rigging being the same as in the ordinary catboat. In 1883 Mr. Herreshoff built for his own use the cat yawl Consuelo, now owned by Mr. Lorillard, of Newport, a keel boat 32ft. over all, 28ft. 6in. l.w.l., 8ft. 8in. beam and 5ft. 9in. draft, with all her ballast in a lead keel. Though fitted with partners for cutter rig she was tried with a large mast in the bows and a small one on the counter, the sails both being boom and gaff. Under this rig she handled admirably, as the many yachtsmen who have seen her picking her way through a dense fleet of yachts in Newport Harbor can testify, and the change to cutter rig was never made. Mr. Herreshoff used her a great deal for singlehand cruising about Bristol and Newport, sailing her alone, but taking his wife and family with him, the boat being very roomy and well arranged below. In the same year the Romp, a centerboard boat 29ft. over all, 27ft. 6in. l.w.l., 11ft. 4in. beam and 3ft. draft, was built by the Herreshoffs for Mr. Geo. A. Thayer, her cruising ground being about the western end of Long Island Sound, where by her trim appearance and excellent performance she has attracted general attention. In 1887, after selling Consuelo, Mr. Herreshoff designed and built a similar craft, the Clara, a keel boat 35ft. over all, 29ft. 5in. l.w.l., 9ft. 10in. beam and 5ft. 5in. draft. The chief peculiarity of this boat is that her sails are battened as in a canoe and of the Chinese shape. She has been used a good deal about Newport and Narragansett Bay and has proved a success—like her predecessors.

Though the ordinary cat rig is very common on craft of 30ft. and even larger, especially in working boats, it is a very poor rig for singlehand sailing and cruising in rough water or in any but the lightest summer weather, the single sail being heavy to hoist, difficult to reef or shake out, and too large to be readily trimmed on all occasions by one man. The sloop and cutter rigs are both open to the objections of many lines and of a jib, with bowsprit and all the accompanying head gear, a serious disadvantage in many cases when working in crowded harbors or narrow waters, unless well manned. The cat yawl is a medium between the two, possessing the advantages of simplicity, little gear, quickness in handling, and sails small enough to be trimmed and hoisted by one man; while at the same time the bowsprit and jib are dispensed with. Whether the rig is quite as speedy for a racing craft as the plain catrig, or on the other hand the sloop or cutter rig, is perhaps an open question, but on anything but the most extreme racing craft, the difference in speed is so slight as to be immaterial.

The yacht whose lines are given herewith, the cat yawl Empress, was designed by her former owner, Mr. Geo. A Ballard, of Fall River, Mass, for singlehand work, partly in the rough water that is so often found within a very short distance of Newport Harbor. She was built by Reed Bros., of Fall River, in 1887, and after being used for two seasons was sold to her present owner, Mr. Hugh Boyd of Brooklyn, N, Y., a member of the Atlantic Y. C. She was designed for a cruising boat, to be easily handled by a crew of one, and at the same time to give ample accommodation for a larger number. Her dimensions are as follows:

Length, over all	33ft.
L.W.L.	26ft.
Beam, extreme	9ft.
L.W.L.	8ft. 7in.
Draft extreme	5ft. 3in.
Least freeboard	2ft. 4in.
Ballast inside, lead, long tons	2.00
keel, iron	3.52
Mainmast, from stem	2ft. 6in.
deck to truck	34ft.

INTERIOR OF CAT YAWL "EMPRESS."

Main boom	24ft. 6in.
Main gaff	19ft.
Hoist of mainsail	21ft.
Leach	35ft.
Mizenmast, from stem	28ft.
deck to truck	30ft.
Mizen boom	19ft.
Mizen gaff	8ft. 9in.
Hoist of mizen	12ft.
Leach	17ft. 8in.

The cabin is very roomy, with 6ft. headroom and a floor 3ft. wide. It has a locker on each side, as shown, with a sideboard at the fore end with closet above. Back of the locker is a folding berth that can be dropped at night, making a very comfortable bed, while by day it is entirely concealed, the bottom forming the side of the cabin. The companion and skylight are in one, the latter fitted with plate glass. The forecastle has a washstand with faucet and pump, the latter connecting with a large water tank in the run by means of a pipe beneath the floor. There is room for a man in the forecastle. The ice box is beneath the steps, and is large enough to contain a four days' supply. The space beneath the cockpit is used for sails and spare stuff. The yacht is fitted, as shown, with step and partners for cutter rig; while double frames were put in to take the chainplates, and the bitts were fitted for the heel of a bowsprit, so that the change could readily be made at any time. The frames are all of bent oak, spaced 12in., the planking of selected yellow pine in single lengths. All the deck fittings are of mahogany, and the yacht is very neatly finished throughout. Her two sails are of the ordinary boom and gaff pattern. Though out in some very bad weather she has never been compelled to reef them, and her former owner reports her as being very dry and easy in a sea, good to windward, and very easy to handle. A sprit topsail is sometimes carried over the mainsail. The outside ballast is of iron, 8,000lbs., secured with five 2in. iron bolts through forged iron floor knees. The inside ballast consists of 4,500lbs. of lead.

The Empress represents a very serviceable type of yacht for cruising along the Atlantic coast and on the Lakes, being about as large as the average Corinthian will care to handle, and yet, at the same time, giving accommodations for four men in the cabin if desired. The draft is moderate and the rig is both convenient and effective; while with an iron keel the yacht may be built and equipped at a moderate cost. As to the great feature for a family boat, safety, she is free from all danger of capsizing, while her form is such as to make a very strong hull with a minimum of material compared with the ordinary centerboard craft.

THE AMERICA'S CUP.

THERE is absolutely no news, either in the British papers or from private parties, of any proposed challenge for next year. The *Field* of Nov. 22 disposes of the Jameson rumor as follows, and at the same time sits down rather heavily on the New York Y. C.:

"The cock-and-bull story telegraphed from America that Mr. Jameson, owner of the Irex, is secretly building a cutter somewhere in the United Kingdom to compete for the America Cup, has, of course, no foundation in fact. Indeed, the only fact in connection with the story is that it is a fact, if such a cutter is building, that Mr. Jameson knows nothing about it. The rumors about an Australian craft being built appear to have been propigated more for the purpose of puffing than anything; but we should not be surprised if the New York Yacht Club encouraged a challenge from that remote part of the world, because if an Australian won the cup there would be an end of it forever, so far as the New York Club is concerned, which would be a tremendous relief to the club. Similarly, if the cup went to Australia, it is not likely that any Englishman would go after it now the fashion has set in of specially building yachts to defend it. It would be all very well if a club relied on existing yachts, as the New York Yacht Club did in 1870-1, for the Cambria and Livonia contests; but now that it has been made plain that the cup can be defended with absolute certainty by building a yacht specially for the purpose, it is not likely that any future holder will leave it to chance. By the way, this certainty rather suggests that there never will be a future holder of the cup, and that it will never go to Australia, or anywhere else outside New York."

Such remarks as the above are really cruel and heartless on the part of the *Field*. No doubt the New York Y. C. means well, even though its ideas of sport and fair play may be just a little muddled. Much as the club has grumbled over the expense and trouble of defending the Cup, it would be like drawing an eye tooth to lose it now. As the matter stands now, considering the new deed of gift and the manner in which it was adopted in the face of a *bona fide* challenge, British yachtsmen can very well afford for some time to come to lie quiet and watch Australia, Canada, New Zealand or any other ambitious aspirant have a try for the Cup; or in default of that, to watch the effect on the holders of the undisturbed possession of the trophy under conditions universally condemned as unfair.

STEAM LAUNCHES FOR SHOAL WATERS.

IN answer to inquiries from a correspondent, Mr. Arthur Lovejoy, author of the cruise "From Okeechobee to the Gulf," in the FOREST AND STREAM of Oct 11-18, writes as follows:

Editor Forest and Stream:

If "Pacific" would address me at my home I should be pleased to correspond with him and offer any suggestions my long experience in boating might suggest; if "Pacific" will write me what he wants a steamer for, salt or fresh water, depth of water he wishes to run in, etc., I could help him. Above everything, for side or stern wheel, get a Kriebel engine; it is *par excellence* the engine of engines for a small yacht or launch. Get a Scotch marine boiler if for wood, but if for coal get an upright 125 to 150 brass tin, tube steel boiler. For water less than 20in. in depth get a side-wheeler; over 20in. a three-blade propeller is best. The Dot was 33ft. over all in length, about 8ft. beam, drew 3ft. of water, was copper bottomed, had brass rudder, brass propeller, brass shaft. She had a 5 horse engine, cylinder was 5x7, high and low pressure, 3lin. boiler, 125 brass tubes 1in. diameter, had cabin over all, wheel in forward cabin, engine in after cabin, large windows swing on hinges all round the cabins. The Dot cost, when new, $3,000. She cost me about $2,000. One thing more, she had a copper condenser running from midships aft round her stern. If "Pacific" wanted to run in fresh water he would not need a condenser; if in salt he would. I had a five-barrel fresh water iron tank up under the bows. Success to any one getting up a small steamer for sport, for there is plenty of comfort and many good times in such a craft.

ATLANTA, Ga. ARTHUR LOVEJOY.

SINGLEHANDERS.

Editor Forest and Stream:

Considering the keen and widespread interest taken in all that appertains to yachts and yachting, it appears strange that the boating readers of your paper do not more frequently communicate through its columns the results of their experiences, and tell of the novelties or experiments which may have come under their notice.

The suggestion made in FOREST AND STREAM of Oct. 4, that the owners of small sailing craft about New York and the west end of Long Island Sound should unite to form a single-handed club, is a most excellent one, which should not be allowed to rest merely as a suggestion; for there are very many boat owners who would no doubt be happy to join such an association.

At the present time I am building for my own use a wee single-hander, a description of which may interest your readers, and which when finished will be a candidate for admission to the proposed singlehand club.

My little craft is designed to afford the greatest amount of space and comfort for cruising that can be obtained within the smallest dimensions. Her length is 15½ft. over all; beam, 4½ft.; depth of hull at stem, 20in.; depth of hull amidships, 16in.; freeboard at lowest point, 12in. She has a keel in which will be run 150lbs. of lead, and under the cabin floor will be stowed a like amount of ballast to trim ship. With this allowance of dead weight she will be uncapsizable, as her stability will be due more to her form than to what I must still insist on calling the unscientific use of unlimited lead. Her draft of water is to be 18in., the greatest depth being two-thirds of her length from the stem at waterline. She will have a graceful counter stern, and carry 150sq. ft. of canvas, all in one sail, as my desire is to obtain good speed with safety and handiness. Her sail will be hoisted with but one halliard, which leads aft to the cockpit, as indeed will all the running rigging, even including her cable; so that anchor can be weighed, sail hoisted or lowered, and reefing done without leaving the cockpit.

The dimensions of her cabin are 6ft. in length by 3ft. in width, and her little cockpit is 3x3ft. The sides of the cabin are 12in. in height above the deck at after end and 6in. high forward. The top, or roof, of the cabin is hinged at forward end so that it can be raised to any height desired in an instant and closed again just as quickly, like the lid of a box, thus giving ample height inside when anchored, and a low house when under way. One novel feature of this portable cabin top is that its form and construction are such that in case of the water being too shoal to land with the yacht herself the cabin top can be taken entirely off in a moment, turned bottom side up and used as a yawl boat to go ashore in. It will easily carry two persons, and is perfectly water tight. This notion is not patented. Allow me to hereby present it to my fellow single-hander brothers. In the main deck forward of cabin is a hatch 12x12in. All timbers are mahogany and all joiner work inside is finished neatly in varnished woods. The cabin is fitted with one berth 20in. wide by 6ft. in length, but there is room enough to make up an extra bunk if the skipper wants company. As will be seen this is a very small cabin yacht, but she will be a good sea boat, and is open for a friendly match with any other keel or cutter yacht within 10 cubic feet of her dimensions in any weather. THOMAS CLAPHAM.

ROSLYN, L. I., Nov. 24.

NINETY OR FORTY FEET.

IT would appear from the following remarks in the *Field* that the British yachtsman has become cognizant of the state of affairs here, and is not a little amused thereby. What we predicted a year ago in commenting on the new deed of gift has come to pass, and the 90ft. class has fallen into a very unpromising condition. The *Field* says:

"It was thought last May that there was going to be a great revival of yacht racing in America, and the boom went forth that henceforth the racing of 90ft. sloops was to be the common pastime of American yachtsmen; but the dream was never realized, and, to keep yacht racing alive at all, it is now recommended that attention should be concentrated on the 40ft class. This seems very small beer after the Puritan, Mayflower and Volunteer; but it will most likely have to be submitted to. We on this side of the Atlantic have had many years' experience of the excitement of racing 100-tonners, and we always refer to it as the grandest of all sailing; but we are afraid American yacht owners come and go too frequently to get well into the sport. We have hitherto had enough men on this side of the Atlantic to stick to the sport to keep it alive, and if occasionally a man had only a transient but perhaps brilliant career with a racing yacht, his coming and going had very little effect on the sport generally. Whether we shall continue to preserve the old stock is perhaps open to doubt, but, at any rate, we think next season will show that we shall not have to put up with 40-footers just yet."

As we have pointed out before, the large singlestickers were an accident, though a very lucky one in the great help they have given to American yachting. It would be a grand thing if the class could be maintained, and if such contests as those of '86 and '87 on the New York cruise could be a permanant feature of the season's yachting. It has been fully proved, however, that there is neither the money nor the love of sport as yet in America to insure the permanence of such a class, and that the efforts to force its retention simply result in diverting the much-needed support from the 70ft. and other classes. While we should rejoice as much as any one over such a prosperous condition of American yachting as would insure a fleet of half a dozen craft like Mayflower or Volunteer in each of the season's races, we cannot shut our eyes to the fact that such a thing is clearly impossible, and in practice it would be much to be thankful for if there was even a tainty of a dozen good races to be sailed about the coast next year by a fleet of eight or ten 40-footers.

Sentiment is all very well, but the great need in American yachting is a little hard, practical common sense. It is not a question of what is wanted, but of what can be had, and the clubs just now must take the best boats at hand, be they only 40-footers, and get what sport they can from them. If they can stir up the 70-footers out of their present semi-torpid condition, so much the better; if they can revive the defunct 53ft. class they will be doing a good work, but it may be that as a last will resort they be glad to fall back on the 40-footers, rather than to witness such a miserable burlesque of yacht racing as the past season has been.

As for the other side of the Atlantic, it is hard to say how they are any better off than we. The sailing of Yarana, which is about the only event of the season, is a very poor substitute for the old days of the "100-tonners," or even the battles of the 80-tonners and flying forties of a later date. Unless some decided improvement takes place by spring it may be that they, as well as we on this side, will be only too glad to watch a series of really good matches, though the contestants should be nothing more than the despised 40-footers.

SEAWANHAKA CORINTHIAN Y. C.—The following programme of entertainments for the winter has just been announced: Dec. 8, amateur music; Jan. 26, annual club dinner; Feb. 9, lecture by Ensign Edward Everett Hayden, U. S. N. of the Hydrographic Office, on "West Indian Hurricanes;" Feb. 23, lecture by Lieut. Sidney A. Staunton, U. S. N., of the Office of Naval Intelligence, on "Winds and the Law of Storms;" March 23, lecture by Lieut. George L. Dyer, U. S. N., of the Hydrographic Office, on "Ocean Currents;' April 6, amateur music. Notices relating to the classes in navigation have already been sent to the members. It is also proposed to establish a class for practical instruction in rigging and marline-spike work. Practical talks on this subject, sail making and other kindred topics, will take place as opportunity permits. An evening will also be devoted to an exhibition, by means of the polyopticon, of pictures illustrative of nautical subjects.

EUREKA.—The experimental vessel Eureka was launched for the second time at Poillons' new yard on Nov. 29. The vessel was built in the summer of 1885 at Poillons' yard, and was launched on Nov. 25 of that year. As her machinery failed to work as expected the experiment was abandoned for a time, but new machinery has lately been fitted, and a second trial will be made. The propelling force is derived from a vapor generated by the combustion of the fuel in a cylinder, with one end open to the water. One of these cylinders is placed on each side of the keel, with an opening through the bottom of the boat, and by changing the direction of the mouth of the opening it is expected that the boat can be driven ahead or astern at will. A second trial of the machinery will soon be made.

A NEW STEEL SCHOONER.—Mr. Piepgras will shortly commence work on a steel schooner of about 65ft. l.w.l. for an Eastern yachtsman, the design being made by Mr. Burgess. She will be a centerboard craft of moderate draft, and is intended for cruising

MACDONALD'S COVE.—The author of the article in our last issue writes to correct two small errors. Instead of Prince Edward's Island the reading should be Prince Edward County. Amherst Island lies to the east, and not to the west, as stated.

REPUBLIC.—This schooner has been sold by C. H. Watrous to T. H. Hall, of the Atlantic and New Haven clubs, owner of the keel sloop Nirvana. Mr. Hall will start on a cruise to Bermuda in January.

WONA.—In our description of the Wona, Nov. 22, we gave Lawley & Son as the builders. This was an error, as the yacht was built at Gloucester, Mass., by Messrs. Higgins & Gifford.

Answers to Correspondents.

☞ **No Notice Taken of Anonymous Correspondents.**

J. R. P.—See answer to J. T. B.

W. E. B.—Write to T. Donoghue, La Salle, Ill.

C. A. L., Hinesburg, Vt.—The gun is made by L. C. Smith, Syracuse, N. Y.

C. E. P., Minneapolis, Minn.—You should consult a physician about the sprained shoulder.

J. T. B., Northboro, Ia.—Fur dealers are Wm. Macnaughton's Sons, 168 South Fifth avenue, New York.

SCOTLAND.—If you will write to Mr. Edward Jack, Fredericton, N. B., he will furnish the information you desire, and you may rely on its correctness.

H. H. P., Long Branch.—We have known of a number of parties who have gone to Durham Creek, and we understand that the shooting has been good there.

KAHKAHLIN, New York.—What is the proper name of the prairie chicken? Of what species of grouse is this bird? Ans. The scientific name of the pinnated grouse or prairie chicken, as adopted by the American Ornithological Union, is *Tympanuchus americanus*. The ruffed grouse is the *Bonasa umbellus*.

C. H.—I have an Irish setter dog, well bred (from field trial winners), which has never been broken; he is now two years old. I made arrangements this fall to have him trained; the trainer claims he has no nose, that he will walk right over a bird and pay no attention to it. Now, he has a good nose for food; he will scent meat a long distance, and when he was one year old he would retrieve a dead quail by scent, finding it when I hid it. This I taught him myself, and then he was lost for some time. Is it possible for a dog to have a sensitive nose for some things and not for birds? Ans. The dog undoubtedly has not the pointing instinct. It may develop, but the chances are it will not.

S., Montreal.—In shooting for a prize at twenty inanimate targets, A, who is handicapped three birds, ties for first place with B, who is handicapped four birds. In shooting off the tie, A wants to shoot the usual way, miss and out, or at five birds each. B objects; says that they should shoot at twenty birds each, with the same handicaps as in the original match. A claims that in shooting off ties that they should shoot at the same number of birds. Which is right? Ans. There is no rule; it is a matter to be agreed on; the conditions of shooting off ties should have been predetermined before the match; it is not usual to shoot at the entire number again, here 20, but to shoot miss and out, or at series of 3 each.

C. M., New York.—Can you tell me if there is any delay or annoyance at the Canada side for any one going on a hunting trip from this city to the Dominion? That is, if I take a box with guns in it, and trunk with clothes and cartridges in that, am I subjected to search of one or both by customs or other officers? I have been deterred from going by fear of too much trouble en route? Ans. Your trunk will be subject to examination, but you will have no annoyance if you explain that you are going on a hunting excursion, and provide yourself with proper credentials. If the officers are not assured of your good faith they may exact a bond for the return of the dutiable articles. Also see the American officers, so that there may be no trouble when you come back.

HURLINGHAM.—At a live bird match, where the bounds were not staked off owing to there being a railroad on one side and a creek on the other, both contestants agreed to measure this distance if a bird was thought out of bounds. A had shot at his full number of birds, and B had one more to shoot at; the score was 14 each. B killed his last bird and it dropped dead 82yds. from the score. The referee declared it a lost bird, on the ground that the boundary line starts from the score. B claims the last bird and match, on the grounds that the boundary according to Hurlingham rules is 80yds. on all sides of the trap. The match was at 25yds. rise, 80yds. boundary and Hurlingham rules, and is left to you to decide. Ans. The distance is to be measured from the center trap; the bird should have been counted as killed, and the match given to B.

CANOE HANDLING.

By C. B. VAUX ("DOT.")

A complete manual for the management of a canoe. The author begins at the very beginning, describes and explains the rudiments in the simplest and plainest way possible. Everything is made intelligible for beginners; and besides this A B C teaching there are so many hints and wrinkles that the oldest canoeist afloat will find pleasure and profit in the study of these. The book is complete and concise—no useless duffle between its covers. The subjects treated are the choice of a canoe, paddling, sailing, care of the canoe, recipes and rules. The text is further elucidated by numerous practical drawings, and the beauty of the book is enhanced by the many ornamental vignettes. Pages 168; uniform with "Canoe Building." Price, postpaid, $1.00.

FOREST AND STREAM PUBLISHING COMPANY,
318 Broadway, New York.

Book Publishing.

Possessing peculiar facilities for publishing new books on field sports, adventure, travel, and open air life, the Forest and Stream Publishing Company begs to invite the attention of authors to its book department. Correspondence solicited and estimates furnished.

From No. 318 Broadway will be sent out weekly in the year 1889 a paper filled in all its departments with reading matter acceptable to those who find pleasure in the pursuit of field sports. The popularity of these pastimes was never greater than it is to-day; numbers of men who find rational relaxation in the field were never larger; the hold these recreations have on the public has never been firmer than now. It is a pleasure to add that in this measure of public esteem the FOREST AND STREAM shares to the full.

Mr. Henry MacDonald, whose descriptions of "Early Days on the Missouri" were so well received last summer, will supplement them with further

Sketches of Frontier Life.

Pertaining to the same field will be a paper by Mr. J. W. Schultz describing the ancient importance of the

Fort Benton Fur Market.

The same writer will furnish a continuation of his valuable Blackfoot studies, among the titles of which may be named "A War Party" and "The Origin of the Medicine Pipe."

Rich treasure from this inexhaustible field of

Indian Folk Lore and Life

will be laid before our readers by the veteran "Yo," whose Pawnee legend of

The Dun Horse

will be followed by others in a like happy vein; and from the same pen will come a rarely interesting—because vivid and racy—account of

The Summer Hunt of the Pawnees,

in the old buffalo days. There will be sketches by the author of "Sam Lovel's Camps," distinguished for the same inimitable character studies of the Danvis folk, the close insight into nature, and delicious vignettes of word-painting. Under the title,

A Breath from the Maine Woods,

will be described the angling experiences of a Boston party at Moosehead, by "W. A. B.," whose sketches of a fisherman's life in Maine have been received with so much favor.

The pages devoted to the delightful subject of Natural History will not be less full and interesting for the coming year than in the past. Among the special papers for which we have arranged are a continuation of the series of illustrated articles on

North American Mammals,

by Dr. R. W. Shufeldt. These will include articles, more or less extended and very fully illustrated by drawings by the author, on the Bats, the Insectivora and the Carnivora

There will be published during the year extended illustrated articles on the life and habits of some of the large game animals of North America, in which will be brought together all that is known of these creatures, now so rapidly disappearing from off the face of the land. The first of these will be the production of Mr. John Fannin and Geo. Bird Grinnell, and will deal with the rare and little known

White Goat.

A subject which interests sportsmen and naturalists alike is the

Domestication of Game.

We have arranged for a series of articles on this subject, which will, it is believed, be of remarkable interest to every thoughtful reader. The series is expected to contain accounts of the habits in captivity of deer, elk, antelope, mountain sheep, white goats, buffalo, wolves, bears, panthers and other North American *ferœ naturæ*.

There will be papers on birds by well-known ornithologists, on reptiles by Miss Catherine C. Hopley, two of whose articles, to be published shortly, will be on the

Hibernation of Reptiles and on Snakes' Weapons

Articles on many of the lower forms of life, together with notes and news on natural history subjects from all quarters of the continent will make up an amount of matter for the year that is to come which will be sufficiently varied and attractive to delight all who take an interest in natural history. The investigations and explorations of a naturalist in the Northwest will be described by Edward Howe Forbush in a series entitled

Five Days a Savage.

In the misadventures of Father Christian le Clerc, a seventeenth century missionary, Mr. Edward Jack has found material for an interesting paper,

Lost in the Forests of Acadia.

The descriptive papers of travel will not be confined to North America. Our East Indian contributor, "Shikaree," will give the readers of FOREST AND STREAM some more of his delightful accounts of

Hunting in the Himalayas,

and from another pen we shall have equally entertaining narratives of

Shooting on Mount Olympus,

and other localities in the Far East. A leading feature of our

Shooting and Fishing Columns

will be our special correspondence from the West, keeping the readers of this journal fully abreast of the events of the times in Western game fields and fishing waters. The accounts of big-game shooting will be frequent, and in these respects the FOREST AND STREAM will maintain its long-established popularity.

The Trap Reports of 1889

will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps* and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable. An important piece of work undertaken by this journal is an investigation of the methods employed in different towns and cities of the country to dispose of the surplus and vagrant stock of dogs. The results of this inquiry will be given in early issues; and it is hoped that some practical benefit may be gained in the general adoption of humane and reasonable methods of reducing the canine surplus.

Notice to Sportsmen and Warning to Infringers.

Having purchased the patents, business and good will of the American Clay Bird Co., we beg leave to advise the trade and sportsmen generally, that the American Clay Bird will not be manufactured any longer. Parties owning American Clay Bird Traps can have in exchange for them the latest improved Blue Rock Trap, on the payment of a difference of $2.50 each. Correspondence from all parties who have been using the American Clay Bird Trap is respectively solicited.

Being now the sole owners of all valid patents covering the pivoted carrier, we hereby give notice that all parties infringing the same, will be promptly prosecuted to the full extent of the law.

The Blue Rock Pigeon and Trap have been greatly improved and will enter the field in 1889 in better shape than ever.

THE CLEVELAND TARGET CO.

"Forest and Stream" Fables.

BY AWAHSOOSE.

1. The Puppies Who Didn't Know It Was Loaded.
2. The Wise and Foolish Pike.
3. The Fox and His Guests.
4. The Foolish Fish.
5. The Robin and the Pewee.
6. The Unlucky Bass.
7. The Shrike and the Hawk.

A series of seven fables in prose and to every one a picture. All of them have pith and point best appreciated by anglers and sportsmen, but not a one of them is without a moral for the wise and foolish of the world in general. Price 10 cents. For sale by all newsdealers.

SCREW PLATES, TAPS, DIES ETC., FOR gunsmiths and amateurs. Send for illustrated catalogue to S. W. CARD & CO., Mansfield, Mass.

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Audubon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

LIST OF BIRDS REPRESENTED:

Black Vulture and Head of Deer	$12 00	Chimney Swift	$4 00

The Champion Mastiff

WACOUTA NAP.

Winner of the following prizes: 1st, Buffalo; 2d, Newark; 2d, Providence; 1st and special, Pittsburgh; 1st and special, Detroit; 1st, special and head of winning kennel, St. Paul; champion and head of winning kennel, Milwaukee—all in 1887.

To those who wish to breed mastiffs of size, weight, power and activity, free from the faults due to so much intense inbreeding—dogs that exactly meet the requirements of the mastiff standard, Wacouta Nap is especially commended; for no dog in America promises as well to eliminate the faults in the blood of bitches of deeply inbred strains as this one.

DUCK SHOOTING IN THE WEST.

ALTHOUGH the duck shooting reports from the West are so discouraging, and the gunners generally appear to believe that the season is over, we still hear that the late ducks and geese are lingering in certain localities in Minnesota and in Wisconsin. The weather, except for one or two storms, has been unusually mild for the season of the year, and there is still much open water which the birds occupy.

The apparent entire failure of birds in the middle West this autumn naturally fills the gunners of that section with alarm, and they are looking about to discover the reason for the scarcity of birds. There appears to be a wide difference of opinion on this subject, but this is not because there is any lack of causes to which the absence of the birds may be attributed, but rather because these causes are so many that it is difficult to settle upon the precise one which has brought about the failure of the shooting season.

The birds seem to have been absent from many of their favorite stopping places, or, if they made their appearance, it was only for a day or two, and then they took their departure, going no one knows whither. Even the preserves, where the shooting over large tracts of marsh is limited to the few members of the clubs, seem to have failed to attract the ducks, and only where the birds have been baited, and so those gathered together in one circumscribed spot, which would otherwise have been scattered out over a wide extent of territory, has there been any satisfactory shooting.

The birds have been growing fewer in numbers year after year, and some of the reasons are obvious enough. Now the country in the middle West, and in many parts of the far West, is so thickly settled up that the ancient nesting places of the wildfowl are no longer open to them. Where formerly ducks and geese were hatched by thousands, now no young birds are reared, and so there are in the early autumn no local fowl, and such places have to depend on the uncertainties of the migration. Localities once famous as duck shooting resorts are now deserted by the migrating fowl, and the men who used to visit them must seek out new shooting grounds already occupied by their proportion of gunners. This added force makes the shooting less for each individual. The birds are shot at seasons when they should not be disturbed, when they are on their way to their breeding grounds, and the number of birds hatched each year is reduced by the destruction of females which are almost ready to lay their eggs. More than to anything else, however, the decrease of birds is due to the great growth of shooting in the United States, and to the fact that the shotgun is part and parcel of the equipment of almost every man and boy who lives in the country. It is vain to complain of this state of things. We cannot logically grumble at it until we are prepared to put in practice the only possible remedy for it, by ourselves laying aside our shotguns and entering on a crusade to bring about a total abolition of shooting for a term of years. If a man complains that too many shotguns are used, the obvious reply is that his own should be laid aside.

Along the Atlantic coast where at the best of times the duck shooting is poor enough, the birds have been about as numerous as usual. During the past week, fowl have been flying in unusual numbers in the Great South Bay on Long Island, and the shooting is reported to have been good. Up to December 1 there had been no birds at all, however.

Though the fowl shooting in the middle West has entirely failed, it is not to be supposed that the birds have all disappeared forever. There will yet be good shooting seasons on the marshes of Illinois, Iowa and Indiana, and many a day of glorious sport will be had with the mallards, the redheads and the bluebills, where other glorious days have been had in the past. But as time goes on the bad seasons will come more often and the good ones more seldom, until the bags such as not long ago we used to make will be known no more. Good game laws, their strict enforcement, preserving large tracts of country, and above all, moderation in sport, may do much to put off the evil day; and it should be the effort of every thoughtful sportsman to do what he can to delay its coming.

RIFLE PRACTICE IN SCHOOLS.

IN the recent report of Secretary Endicott, of the War Department, is a paragraph which has provoked more than ordinary attention. He embodies the regular returns which come from the ordnance officers and from the Adjutant-General, narrating what is doing or attempted to be done in small-arms work, and what the militia of the several States have been at in the way of improvement. In this the Secretary follows the beaten track, but he sees a new field which he thinks might with profit be cultivated.

His suggestion is that the schools, colleges and academies, to which under the present laws officers of the army are detailed to act as instructors, shall have a certain allowance of ball cartridges made yearly, so that actual target practice may be indulged in and the technical skill of the professional instructor utilized to the fullest extent.

There are now nearly fifty colleges and other institutions of learning in the country to which under authority the Secretary has detailed officers of the regular army or consented to their employment by the college authorities. Generally these men of arms are employed as tacticians, or as drill masters. They teach the lads correct carriage in walk and bearing and act very much as a professor of deportment and dancing might in a girls' seminary. Not unfrequently the young men are given an inkling of the art of war, and, being in uniform, the scholars are on a sort of perpetual parade, put on their good behavior and get some idea of that fundamental fact of a good soldier, and a good citizen as well, that obedience to properly constituted authority can not be too promptly nor too willingly given.

The officers detailed from an army body where there is a surplusage of officers as compared with men, are doing a good work. They are well thought of by the institutions enjoying their presence and would not be spared. The suggestion of the Secretary is to extend their work; to introduce a feature which will at once enlist the attention of the young men and afford them a novel sport, but will do more, for it will turn out as graduates not only men of elegant bearing, but men who when occasion demands it may shoulder a musket and use it, too. This is what it may do in the far future, but the report hints at a more immediate result. It is proposed to so arrange this system of butt practice that one college may shoot against another, and soon the Secretary thinks there will be sharp contests exciting public attention and interest, just as football matches do now.

Perhaps it is too much to expect a rush of spectators at a rifle match, where a dull target is peppered with well sent balls, but it is not too much to hope that year after year college teams may be organized, records made, competitions held and the old essential necessity for good scoring, a sound body with a clear eye and a steady hand, all guided by a trained judgment, once more impressed upon these young team men.

This is but one channel of extension for the athleticism which is now so popular in the college world. It is not a form of sport liable to run riot. It will certainly lead to nothing out of the way on the part of its devotees, and that it may be carried on with safety the fifteen year record of Creedmoor without an accident abundantly proves.

With its agents at each of their schools, the War Department ought to be able to present in a very short time and in a clear fashion a mass of information on this topic. We think the suggestion a good one, a perfectly feasible one, and the new administration in the War Office cannot do better than give it a fair, full and prompt trial.

THE HEMPSTEAD RABBIT KILLERS.

THE Hempstead Coursing Club has again been killing hares with fox terriers, and the agents of the Society for the Prevention of Cruelty to Animals have again arrested the participants, and declare that they will arrest every member of the club every time they attempt to kill hares in this fashion. The method pursued at Hempstead is to take the hares from a pen, drop them to the ground and slip the terriers at them. The dogs catch and kill the hares in very quick time, less than a minute elapsing between the dropping of the hare to the ground by the attendant and its death in the jaws of the dog.

It is quite clear that to argue upon the degree of cruelty involved in this opens a wide discussion. If we are to designate the cruelty in this case as the infliction of physical pain, it may be urged, and very truly too, that the suffering is extremely trifling in comparison with that caused by many other methods of killing wild animals, the legitimacy of which modes of killing is generally conceded by healthy-minded persons. But if the consideration of cruelty be left out, or even if it be granted that the practice is not cruel, there is yet in it that which makes it revolting to lovers of fair play and manly field sports. The Hempstead style of hare killing is most certainly opposed to public sentiment, and finds no approval even among those who thoroughly believe in field sports. This is because it violates the first principle of sport, inasmuch as it gives no "law" to the game. There is absolutely no chance for the game to get away, its death is sure; the only uncertainty about the affair is as to which of the dogs will do the killing in the shortest time, but the killing itself is a thing of certainty. This is that part of it all which is out of harmony with the accepted ethics of field sport.

If the victim had any chance for its life, if there were even the remotest possibility of its getting away, the "sport" (save the mark) would lose much of its brutality. What decent man would go gunning after rabbits, if attendants had been hired to go out in advance to tie the bunnies to stakes so that they could not elude the pursuit? To come to a nearer parallel, who would shoot pigeons from a trap, if the birds were tied with a string so that they could not get away if repeatedly missed? Any mode of killing game, which first puts that game into a condition of utter helplessness and makes its destruction "a dead sure thing," violates the first principles of legitimate sport, and no one with any manliness or the least spark of instinct for fair play would demean himself by taking part in it.

The participants in this Long Island rabbit-killing engage in it because they think it to be English, and they feel they must ape English customs. It is yet to be shown that such proceedings are countenanced by any decent classes of British sportsmen. Rat-baiting and cock-fighting are also practiced in England, but they are under the ban of the law and public sentiment; and it would be a very poor excuse for the arrested participants in a Long Island rat-pit "meet" to plead that their "sport" was "English."

The Sportsman Tourist.

NOTES ON WESTERN FLORIDA.

VI.—CRUISING DOWN THE COAST.

[Continued from page 384.]

THE nights at this season were wonderfully clear and beautiful, the sky being perfect in its transparency, while the stars shone with a brilliancy seldom seen in northern latitudes. With what real affection one regards the celestial bodies when at sea and separated by long distances from home and kindred. One comes to looking upon those distant worlds and suns as old landmarks and companions, and the thought that the same constellations shine alike on yourself and distant friends does much to annihilate space, and causes one to feel in foreign lands not quite so utterly alone. What tales we spun by the starlight as pipes were filled and filled again, until at last, one by one, we would drop off to sleep, and silence would brood over that most silent of all things—a sleeping vessel.

During the last night that we spent beneath the kindly rays of St. Mark's Lighthouse a heavy storm sprang up; and we were all awakened at midnight by the shrieking of the wind through our rigging. Black clouds had, like a pall, thrown their sombre folds over the hitherto clear heavens, and our presence became necessary on deck to look after the tossing vessel. The gale for a time blew with great violence, and the sea rising added to our discomfiture. The lightning was very vivid and the thunder about as terrific as I had ever heard. After every terrifying clap the *Santa Marias* of poor Santo would sound like an echo, as he prayed to saint or Virgin for protection.

We passed a most wretched night, tossed about and drenched again and again as the huge waves would occasionally wash over our decks. Once the anchor began to drag, and we were obliged to drop another overboard in order to hold our position. Toward the morning, however, the element became quieter, and before daybreak all was once more serene, save for a nasty running sea; the sun rose in an unclouded sky, and by 8 o'clock we were once more bowling along before a stiff western breeze. It is a lazy, lounging life that one leads on board ship when the wind is favorable, with nothing to do but lie around and look at the sky or the sails. We used to stretch out full length on top of the little cabin just under the main boom, and, sheltered from the sun by the sails, pass the bright hours in dreaming and dozing. I never could read at sea; the author, be he novelist or sage, is always forgotten in the vast monotony of the heaving billows, and my eyes will leave the page, be the tale never so thrilling, to seek the simple but endless beauties of Nature's grandest work.

The Rock Islands are two little lone rocky keys that lie five miles off the coast at a distance of some thirty miles from the mouth of the Waukulla River; they are uninhabited bits of rock of an aggregate area of not over twenty acres. A sparse growth of palmettos has collected on the summit of each, and from a short distance they are rather picturesque, reminding one somewhat of the atols of the South seas.

We anchored that night some three miles off these islets and proceeded to make ourselves as comfortable as a somewhat heavy sea would permit; everything was made snug for the night and then we all sat around the hatch, little heeding the occasional flying of spray, and sang or told yarns to our heart's content. The conversation drifted during the evening to the subject of storms; and I asked Santo the reason of his unusual fear of lightning, deeming it strange that that tough and hardy seaman should so fear a fate that no action of ours can either aid or avert. He gave us an account of a catastrophe, after which we could well understand the dread that he felt. It seems that he and four others while returning one fall from the sponge reef were overtaken by a thunder shower when in sight of Apalachicola, and one of the relentless bolts struck the mainmast, completely wrecking the vessel and killing two of the unfortunate men, while Santo himself was stunned for some hours from the force of the shock.

That night we were indeed rocked in the cradle of the deep, though the weather was perfect and the stars shining with accustomed brilliancy. I love to go to sleep watching these myriad worlds strewn in such profusion over the boundless vault of Heaven. After a hard day's work one can get such a feeling of rest; all care and trouble and fatigue are forgotton in the grandeur of the sight; and this earth seems humbly to take her place among the millions of greater sisters. The skies always seem nearer when thus viewed, and one sinks off into unconsciousness with his eyes fixed on those ever wakeful sentries, and his thoughts centered on things infinite. You cynical reader! I fancy that I can hear you laugh at what you take to be the "gush" of a first experience of camp life; you, who have, perhaps, passed through all the vicissitudes of a campaign in the Adirondacks or Catskill, often two or even three miles from a house, and who have returned to town brown and blasé, a thorough woodsman after a month in the wilds. But although a greater part of my life has been spent in the wilderness, I have yet to see the time when nature was not fascinating or when some new beauty could not be discovered in the handicraft of the Creator. Men there are who have no appreciation of the glories of the natural world, but few are they indeed; for in the roughest and most depraved of the human race will be found an innate love of nature. Even the Indian, who, notwithstanding Cooper, is the most matter-of-fact creature on earth, has in him a fondness for nature that supplies the place of a more intricate system of theology. Nature is the savage's only religion, and in civilized man it is but less, though fanatics and bigots would cry against it as the adversary of the Bible, as if the harmony of the two were not imperceptible to them alone.

Early the next morning we sailed toward the islands, which lay about three miles to the north of us, but the water shoaled so rapidly in the last mile that we were obliged to lay to about half a mile away. One has to be very careful in navigating these waters, where shallows are so frequent and the bottom is composed of adamantine rock, whose slightest touch is destruction to a vessel. So we had to row the rest of the way in the dinky, through water not over 3ft. deep and as clear as crystal. Playing near the islands in this shallow water were quite a number of porpoises. This is a favorite resort with them, and they are often killed here, but we were unable to get within rifle range that morning, as the great beasts were very shy and at our approach gave tremendous snorts and made for deeper water, leaving broad trails of foam in their wakes.

We spent a couple of hours on the island. They are composed entirely of lime rock, which the ever active sea has worn and pounded into a thousand curious and fantastic shapes; shells, sponges and bits of coral strew the edges of the rock (there are no beaches), and of these we gathered some rather handsome specimens. I came very near being struck by a stinger ray as I reached into a pool to secure a conch shell, the sharp sting just missing my hand as I instinctively withdrew it from the water. These torpedo-shaped fish are very plentiful in the Gulf; and their sting is greatly dreaded by the sailors, for it produces a most violent inflammation that has, in certain instances, terminated fatally. The remains of some crawls that were formerly used by the spongers are about the only vestige of man that is found on these lone islands, but we felt quite like castaways as we wandered over the tiny rocks, completely surrounded by the ocean. Why is it that a small island possesses for most people such a charm? There is a certain fascination for every one, I think, in the fact of being completely for the time cut off from the rest of the world and in being able at a single glance to scan all of one's domains. Cormorants were very abundant and we enjoyed some rifle practice at them, as they were too wary to permit of an approach close enough for work with a shotgun. We managed to pot several, which at Santo's suggestion we had cooked the following day, but though they had twelve hours' soaking in brine and a very long boil afterward, the treatment was not sufficient to eliminate the very fishy taste, and they were voted a failure by all save Santo, who seemed to enjoy his dish very much.

The water in the neighborhood of the island is wonderfully clear, and we can see the bottom at 10 or 12ft. with perfect distinctness. Long grass everywhere covers like a carpet the bed of the sea, over which the sunbeams in their descent through the crystal flood dance and sparkle like diamonds. Occasional branches of snowy coral reach out like limbs of submarine trees, fish dart about like living meteors, while starfish and the thousand creeping things of the sea make a picture of wonderful beauty, and give one a glimpse of that wonderful range of life which everywhere exists beneath the waves, a creation a thousand times more prolific than that that we have on land, and of whose beauties we can but see the barest surface.

Santo related a rather curious incident that happened near the island some years previously. He and a party of his fishermen were returning from the reef to their crawls, when one of the crew, who was standing by the jib, fell overboard, and though the water was but 8ft. deep and as clear as crystal, no trace of the unfortunate man was ever seen again. This is all the more extraordinary when it is considered that the bottom is here of apparently solid rock, over which the grass grows scarcely rank enough to conceal a human body. I confess that my powers of credulity were somewhat put to the test, but I was forced into a partial belief of the circumstance, sworn to, as it was, by several witnesses.

Our run back from the islands was uneventful, a strong breeze was on our quarter and the Geline fairly flew along with a "huge bone in her teeth," now rising high into the air, then plunging with the swoop of an eagle deep into the trough of the seas. How near a thing it is to flying, to stand on the prow of a bounding schooner, before a strong wind, as with wet sheet and flowing sea she speeds on her course; and no wonder is it to me that, nothwithstanding all drawbacks, once let a man lead a sea-faring life and he will pursue no other; there is a freedom, a pleasure, to be had in the mere fact of existence, while breathing the untainted air that blows across a thousand miles of tossing billows.

We saw several very large green turtles during the day; they are found all over the Gulf, but the finest specimens come from the neighborhood of Cedar Keys, from which place they are shipped in large quantities all over the country to appear on the tables of the *bon vivants*.

The afternoon of the second day after we left Rock Island found us snugly anchored in a pretty little bay in the east end of Dog Island. Here we spent several days hunting over and exploring that barren sandbar. It is, indeed, a desolate spot, worse even than St. George's; and nothing breaks the monotony of the endless perspective of tall pines and dazzling white sand. The few ponds in the interior are literally alive with alligators, while the beach and the occasional marshes afford excellent snipe and plover shooting. We made some good bags while there, or rather we could have done so had there been any occasion for it; but it seemed a pity to slaughter when we had no use for our victims. Even as it was we killed an average of fifty birds per day during our stay, and this to only two guns. Shearwaters were very abundant; they are a curious bird. The unnatural scissor-shape of the beak gives them an awkward appearance when at rest, though as they skim the surface of the waves with the lower mandible cleaving the water like the prow of a ship, their motion is the perfection of grace. Desperate fighters are they when wounded, striking out with their bills in a most fierce and dangerous manner.

We lived rather well during our cruise. Oyster beds were very abundant, and as we had a pair of tongs on board, we did not want for a steady supply of that most sought after bivalve. Santo used to spear quite a number of soft-shell crabs every morning as they basked in the shallow water, and these, with the snipe and other waterfowl that fell to our guns, made meals that almost any gourmand might have envied. One dish most characteristic of the country, however, was the palmetto cabbage, which we obtained by cutting down a palmetto tree and shucking off the outside bark until only the inner pith remained. This heart of the tree, when boiled, makes a very nourishing and pleasant food, greatly resembling real cabbage.

We used to sleep on board our vessel to escape from mosquitoes and other insects, and at night the alligators on shore would keep up a most outrageous din with their bull-like bellowing. This would generally begin about ten o'clock. First one old patriarch would start it up from his pool and then would come an answering snort from another, then a chorus from everywhere, while a running accompaniment of the croaking of frogs and squeaking of night herons added to the pandemonium. This uproar would continue all night, but it reached us from over half a mile of water and did not greatly disturb our slumbers.

The last night of our stay in this charming spot was truly grand. The moon was full—a tropical moon—and as I spread my blankets on the deck, I would not have exchanged my bed for the couch of a king. Moonlight on the sea has been the theme of many a poem, beautiful and otherwise; the one a tribute to its grandeur, the other a desecration and sacrilege. But I know of nothing that comes so near being a natural poem as a full moon at sea. Each thread of moonlight bears unspoken cadences to the dark waters, which reflect from their depths beauties rhyming with the stanzas of the skies; and as one gazes at the great heavens and on the silvery swelling, which rises and falls like the bosom of a sleeping maiden, a feeling of peace comes, I think, to every one. All is so quiet, so restful, that it seems as though it must last forever. One forgets the toils of the day just past, the worries of the morrow; aye, of life, and lives, like the lotus eater, in the peace and calm of the moment. A small vessel is so sympathetic with the sea and enters so into its varying moods, not like those great hulks of 5,000 tons, whose souls have been beaten out of them by the throbs of their iron steam-driven hearts, and though immovable to the influences of the waters in their gentler moods, own only the terrific force of angry ocean. I do not wonder at the universal love of sailors for the crafts that bear them over the seas, their companions in danger, their shelter in times more quiet, and faithful aids in earning their daily bread—inanimate friends, truly, but still dear to the nautical heart. Who ever heard of an "old salt" calling a vessel *it*? Always *she*.

At last one morning, after the several square miles of Dog Island had been pretty thoroughly explored, we hoisted sail and headed for Apalachicola. The wind was favorable during the morning, and 3 o'clock found us just off Cat Point, about six miles from town. Here the wind failed and a tedious calm set in. The water was like oil, and save for an occasional school of flying fish or the agitation caused by the long, dark fin of a shark, nothing disturbed the perfect picture of still life on the sea. But overhead the fish hawks were out in full force, sailing in graceful circles a hundred feet above us, or with clasped wings dropping like arrows from the dizzy height into the waters beneath, to emerge an instant later from the spray-riven depths with their finny prey tightly clasped in their iron talons.

It was very aggravating to have to drift helplessly within sight of our destination and yet to be unable to make any progress; but that is one of the vicissitudes of yachting and we made the best of it, sitting under the protecting shade of the lifeless sails and whistling for Boreas. About an hour before sundown a squall sprang up, which fortunately was from the right direction, and drove us rapidly on our way, so that by dark we luffed to, a quarter of a mile from town, and just opposite the orange-colored flag that designated the quarantine station. A little boat pushed off from the dock and a few moments later we were boarded by the health officer, whose mode of inquiry was as brief and thorough as it was taciturn: "Where from?" We told him. "How many men?" He was also enlightened on this subject. "Any sickness?" No. "Fifty cents." He pocketed the fee, shifted the cigar he was smoking from one corner of his mouth to the other, and fastening his rowboat to our stern was towed ashore without further comment or inquiry.

Our arrival caused some commotion in the sleepy old town, and every one wanted to know where we had been, and to our surprise we were asked if we had found any treasure! Upon investigation it was found to be the general impression that we had set out for the purpose of recovering some of the gold that is reported to have been concealed by pirates at various points along the coast.

Treasure hunting is quite an industry in certain portions of the country; there are men who have spent their lives in this hopeless task and who still, with the same spirit of the "forty-niners" of California, continue to hunt and hope. It seems to possess a great fascination, this prodding for the wealth buried by those romantic scoundrels of a hundred years ago: of course no one ever finds anything, but then each one thinks that he has discovered the proper clue at last, and your treasure hunter lives in an atmosphere of excitement that is at least akin to pleasure. There can be but little doubt that there is buried treasure on the coast of Florida, but to search for it upon the absurd clues advanced by many men is the height of foolishness, as accident is the only medium by which these spirited treasures will ever be brought to light.

A. M. Reynolds.

[TO BE CONTINUED.]

NOTHING NEW UNDER THE SUN.

Editor Forest and Stream:

In a copy of Forest and Stream, issued during the early part of the present year, reference was made to "The Cabinet of Natural History, and American Rural Sports," the first volume of which was published by J. & T. Doughty, Philadelphia, 1830, and the writer of the article informed us that the second volume of this interesting and now perhaps rare magazine, formerly in his possession, was destroyed in the "great Chicago fire." It is my good fortune to have copies of both the first and second volumes, each in a good state of preservation, but whether the life of the periodical ended with the second volume, which was published in 1832, is more than I can say.

It appears that the same questions which agitate the minds of the sportsmen of the present generation, presented themselves to those of that early date, as we find that the men of that day were not only interested in attempting the domestication of the ruffed grouse, to which our friend "Jay Beebe" has given so much attention of late, but a spirited controversy appears to have been carried on (and in a most courteous manner, to their credit be it said) in regard to the merits of "holding on or ahead."

In an article copied from "Lempriere's Natural History" the fact of snakes swallowing their young is alluded to in the following words, under the head of "Poisonous Serpents": "The rattlesnake is divided into five species, each differing in their external character, size and malignancy, of which the *Crotalus horridus* is by far the largest and most formidable. They are like the viper, viviparous, that is, they produce their young alive and completely

formed, generally about twelve in number; and like that animal also they receive them into their mouth when alarmed or threatened with danger."

Fifty years ago, judging from a series of articles entitled "Instructions to Young Sportsmen," the proportions of powder and shot used in loading shotguns varied materially from those of the present day, as appears from a paragraph on page 70, Vol. II., which reads: "Beware of an error, too often followed by most beginners, and that is of overloading your gun. This is a mistake which many split on, and one-half of the wounding, or missing the game altogether, may be justly attributed to it. If you have a gun of ¼cal., 1dr. of powder and ½oz. shot is sufficient."

The "Natural History of the Basse," by "Piscator," informs us that "Their astonishing bounds from the water when hooked is well known to all anglers, and their desperate struggles to escape requires the utmost skill of the disciple of 'honest Izaak' to secure his finny prey. It cannot be said of the Basse, however, that it is as active as some of its genus in Asia, where a species of perch are said to climb trees, and repose in the water collected in the hollow of the palm leaf, where it joins the trunk of the tree. But it is a fact to be attested by many an 'honest angler' that Basse will spring four or five feet out of water when hooked, and jump over seines like a flock of sheep over a fence, to the mortification of the disappointed fisherman."

In general appearance these volumes would do credit to the publications of to-day. The print is good, the colored plates excellent, and the title pages fine specimens of the engraver's art, while the subject matter is entertaining and instructive, and well worthy of perusal by those who count among their happiest days those devoted to forest, field or stream. CHETKO.

ANOTHER GLIMPSE AT DEMERARA.

THE interesting account I read in the last issue of your paper of your correspondent's adventures (or rather misadventures) in Demerara, S. A., reminded me of a trip I made to that part of the world during the winter of 1873. I left New York in the staunch and able brig Daylight of about 300 tons in the same month (December) that he left Baltimore, but this fact of our both leaving home about the same time seems to be about the only thing we have in common, as my trip was a very lucky and delightful one all through. Our brig made the run to the northern limit of the trades without having to shorten sail, except once for half a gale of wind that lasted but a few hours. This was the only time we took the royals off of her during the run out—something quite unusual for a winter passage to the West Indies.

Nineteen days from the time we left New York, after meeting the usual streaks of calms and light airs after leaving the trade winds, we found ourselves early one morning off the mouth of the Demerara River. Here we took a pilot, who brought us to an anchor off Georgetown, the capital of British Guiana. Anything in the shape of land is very refreshing after even a short sea voyage; and I thought I had never found anything half so sweet as the rank odor from the typical vegetation growing on this low, wet coast. The tall and graceful palm trees are almost the first thing to catch the eye as you approach the shore, and help to convince you that you are indeed nearing a strange land.

Georgetown being under English rule, and nearly all the people there speaking English, you feel more at home than when landing on one of the Spanish or French islands a little way to the north. The population is very mixed, negroes and coolies predominating; you will also meet Chinamen and East Indiamen, the latter black as night. They have a saying that one can find a representative of every race under the sun on the main street in Georgetown; but as my travels have not as yet been world-wide, I cannot vouch for this. Each nationality wears its native costume, and some are very light and airy. Native Indians come in from the interior once or twice a year to absorb a little civilization. They are short, well-formed, copper-colored and not bad looking. When they arrive they are not burdened with clothing. A strip of cotton stuff a few inches wide and not over a yard long makes up their entire wardrobe, and their tailor bills are not heavy. As their wives adopt the same style of dress the saving in dressmakers' bills must be considerable. They present a novel and interesting spectacle to the stranger as they stroll through the town, but they soon fetch up at a general supply store and trade off their hammocks and other articles of their own make for a shirt and perhaps a straw hat, when they consider themselves dressed as smart as anybody.

The coolies are imported by the shipload from Calcutta, under contract, to work the large sugar estates extending for a number of miles inland on the banks of the river. The ships that bring the coolies also bring rice as cargo, this being about the only food that class eats, each individual receiving a daily ration of so much rice, according to a contract made with them before they leave India. They generally work three years; when their time is up most of them go back to their native land, so that a fresh lot is arriving nearly every month in the year. The coolies are docile and frugal, and make good laborers. Some of the women are so heavily loaded with bracelets and anklets of solid silver that they can hardly walk. Nearly all their savings are invested in this way.

The sugar estates have to depend entirely on the coolies for their labor, since the negroes, although very numerous, cannot be relied upon for steady work, but the majority prefer to work about the town and on the vessels in the harbor. They are a happy-go-lucky lot of beings, a few cents a day being all they really require to eat, and by sleeping out of doors all the year round they save rent and home expenses. As all the policemen in Georgeton are negroes, the blacks can rest undisturbed and are not ordered to "move on" if found peacefully sleeping in a doorway. Many of them work on the ships that lie moored in the stream taking on or discharging their cargoes. These vessels very often work all night to save time, generally working two gangs, one forward and one aft. I was told it was impossible to get any work out of them unless they were allowed to sing, so one in each gang is told off to furnish the music, and is paid extra wages for this accomplishment. When they come to the chorus all join in and heave with a will, and the 2,000lbs. or more hogshead of sugar comes up out of the lighter and over the side in a hurry. In the night this racket can be heard for a long distance, and with the swarms of mosquitoes that abound it effectually murders sleep.

A large proportion of the vessels trading here are large iron ships. They take a cargo of sugar to England or the continent, from there manufactured goods to Calcutta, and from the latter port a cargo of rice and coolies to Demerara, making the round voyage inside of a year with full cargoes. Vessels arriving from the United States (or "the States" as they are called there) bring breadstuffs and take return cargoes of sugar; most of them large brigs or schooners, with few small barks. Several cargoes of ice are received each year from Maine. It is stored when landed in a large ice house, where it can be bought in large or small lots for about two cents per pound.

Raising sugar cane and making and refining the sugar is the main business of all this section of country, and little else is thought of or talked about. Some of the sugar estates are very extensive. One I rode over had over 1,000 acres under cultivation, nothing but cane being raised. All the large estates have immense sugar houses costing thousands of pounds, with their expensive machinery all imported, where the cane is ground and partially refined ready for shipment.

Georgetown is considered very unhealthy. All the country around is low and wet, and fevers are very prevalent. But although warned not to go out of doors after dark and so expose myself to the heavy dews, I went about as I would if at home and took a walk every evening without suffering any inconvenience. Altogether my trip was a very delightful one, free from accident, with enjoyment of good health, and the days full of novel experiences. From Georgetown we ran up to Porto Rico, to finish loading, and after a stay there of three weeks, reached home again in just nineteen days, the time of our outward passage. G. BENEDICT FRISBIE.

NEW YORK.

Natural History.

THE BIRD HOSTS.

Editor Forest and Stream:

For some time past it has not been convenient to pay much attention to the interests of the Audubon Society or to the habits of the birds; but I wish to say that it seems to us that our feathered friends are now increasing yearly in their numbers, while three or four years ago I was confident that they were diminishing. This means something, and I can only explain it by my belief that a healthier public sentiment has been inaugurated throughout this region since the incorporation of the above named society.

It was particularly observed this spring that the birds came earlier than usual, although the season was backward, and even while the snow lay deeply on the ground, they cheered us with their songs. I noticed a heron on April 11, while still the lakes were full of ice. Barn swallows appeared a month later, and our first hummingbird was seen on May 20. The Tompkinses (as we call a pair of house sparrows in which we are interested) built their nest as usual just under the edge of our piazza, and upon some vines, but two of their eggs, by some mischance, fell from the nest, which they then deserted, and built another castle about three feet distant. Our house wrens came early, and as we encouraged the cats to keep at a distance, they (the birds) seemed quite happy. So with the robins and yellowbirds. The English sparrows are increasing in numbers, and have become annoying. The brown thrashers are also more numerous each year, and we are glad of their society. The scarlet tanagers, which have been rarely noticed, came this spring in numbers greater than I have elsewhere seen. They were remarkably tame, and some were even taken by hand, while others were easily approached within two or three feet. They soon disappeared and I have seen none since.

I last spring sought information through your columns concerning parrots. The gentleman at whose instance I made the inquiry, sent for one to Philadelphia. It lived eight days after reaching its new home.

To me the parrot is a weird and uncanny bird, much more so than the owl. I like owls, and am sorry to see their numbers apparently diminishing. KELPIE.

CENTRAL LAKE, Mich., Dec. 3.

THE WAYS OF SNAKES.

Editor Forest and Stream:

I believe the snake subject is not yet quite exhausted. I have never yet been able to find a snake charming a bird, although I have been on the lookout since I was a child. A few years ago, however, I was witness of a scene quite the opposite.

Every one who has visited this picturesque town of Willington, Conn. (the birthplace of the renowned scholar President Jared Sparks), will remember the cold brook watering trough on the road from the railway station to the hill where the little village is situated. This watering-place is known by all the horses far and near, and they will prick up their ears and quicken their pace as soon as they hear the ripple of the brook that comes singing down through the woodland, to rest for a little in a deep, dark, mossy pool, before filling the great dripping wooden trough that extends a deep and broad, if cool, welcome to all thirsty comers, summer and winter, making a grateful little halting place at the foot of the long hills. Tall alders lean over and nod at their reflections in the shining pool, and it is a question if the birds who love to build their nests there amid the quivering leaves are not made vain by over-much noting of their mirrored grace and beauty. All summer a pair of blackbirds had made themselves at home in this thicket. They had talked, chatted, scolded and protested every time a thirsty horse had paused at the trough to drink, and their trepidation and manifestation of it when a frolicsome dog dashed through the bushes were amusing in the extreme. One brood had been raised and sent out into the world and another was just hatched, when one August afternoon we neared the watering trough and heard a great to do among the birds; they were flying about and dashing themselves into the alders below the nest in the strangest and most excited manner. "What can it be?" I said to my friend, Mrs. Taylor, who was with me, "I never saw anything like that." The question was soon answered, for a huge blacksnake was unwinding himself from the alder in which the nest was built and making the best of his way to the ground. The birds gave him not a moment's peace, but hurried his ignominious retreat with renewed efforts. I stopped the horse, and his snakeship zigzagged his way across the sandy road in front of us. Fully 7ft. long, thick and sinuous; but what haste he made! He was really under fire. The blackbirds were as active as he. They flew from his head to his tail. They pecked at his eyes. They beat him with their wings. They lighted upon him, and they hopped along beside him, pecking him continually. One caught his slim tail in its bill and lifted it several inches from the ground. Their motions were almost incredibly rapid. All the great, loathsome, mischievous, cowardly reptile could do was to make haste to get away, and as the end of his slim tail disappeared in the tall grass by the brookside, the two blackbirds whirled up in a delighted spiral of joyous chattering and fluttering wings, and went back to plume themselves upon their victory in the graceful alder bush above the pool. ANNIE A. PRESTON.

MAPLE CORNER, Willington, Conn.

Editor Forest and Stream:

Col. T. B. Hooker, a gentleman who lives in Coahoma, told me he once saw a live snake coiled upon or near a dead one of the same size and species, which had been killed and left in the road. The live snake showed great reluctance to leaving the dead one. The obvious inference is that they were mates. COAHOMA.

TURKEY BUZZARDS AND COWBIRDS.

I WISH to relate two incidents which recently came under my observation, and which are suggestive of points in natural history. The first is this: A short time ago, while riding along a country road in Coahoma county, Miss., I saw a turkey vulture, commonly called "turkey buzzard," alight near a pond. I stopped my horse to see what had induced him to alight. After a moment's pause the buzzard walked to the water's edge and took four swallows exactly in the manner of the domestic fowl. He then arose and soared about in the usual manner. Did any of your readers ever see a buzzard drink water? With many years of close observation of nature, this is the only time I ever witnessed the incident.

Number two: Yesterday, while riding along the levee in Tunica county, my attention was attracted by the peculiar conduct of a flock of blackbirds, ten in number. These birds were what I suppose are called "cowbirds." They had the gloss and metallic lustre of the crow blackbird or bob-tailed grackle, but were only about half the size of that bird. All of them except two appeared to be males; the two females were smaller, of a dull brownish black, speckled with gray.

The peculiarity I observed was their close attendance upon a cow that was grazing near the levee, in company with several other bovines. But the birds confined their attention to this one. They clustered closely around the cow, following her in all her movements. They walked about her feet and around her nose as she ate the grass. When in danger of being trod upon or in coming in contact with her nose, they would suddenly flutter a foot or two out of the way. When part of the flock was left a yard or two behind by the cow's movements, they would hasten to collect again about her feet. At the same time the birds appeared to be intent upon pecking at the ground and at the grass, never picking at the cow's legs or feet, and there was no apparent reason for their close attendance except a desire for her society. The cow paid no attention whatever to the birds. When I had watched them for nearly a quarter of an hour the cow suddenly walked away some dozen yards, when the birds, perceiving my proximity, flew into a neighboring tree.

COAHOMA.

RANGE OF THE WILD TURKEY.

Editor Forest and Stream:

Knowing your kind readiness to help on every scientific investigation, I beg to be allowed space in your columns to ask the readers of FOREST AND STREAM for information in a matter of historical ornithology. It is well known that in early times the range of the wild turkey was much greater than it is now. Its bones have been found in the kitchen middens as far east as the coast of Maine, and more than one writer has described its abundance in Massachusetts at the time of the arrival of the first colonists. Nowadays the story is a very different one, and the region that it still inhabits is much more limited.

I desire to get as exact knowledge as possible of the northern boundaries of the bird's habitat at the present time, and should like to ask every hunter, sportsman and farmer who can speak from his own experience, to give me any evidence which will help to determine just where it is yet found. Is it to be met with anywhere in the State of New York? And where does it still remain in Ohio, in Michigan and elsewhere east of the Mississippi? It is said to be abundant in the mountainous parts of Pennsylvania; can any one tell me just where in that State it does and does not occur? I shall be very grateful to every one who, having information to contribute, will write to me on the subject, and I hope that in this way I may be enabled to record exactly the present distribution of the wild turkey.

I am also very desirous of obtaining some specimens of wild turkeys from Pennsylvania to preserve for scientific purposes. If any one can send me some in the flesh, perfect, and in good condition to stuff, I will gladly pay a fair price for them, and assume all express charges.

CHARLES F. BATCHELDER.

7 KIRKLAND STREET, CAMBRIDGE, Mass., Dec. 3.

NOTES ON NEW MEXICAN SHRIKES.—I see by the Check List of the American Ornithologists' Union that in mentioning the extreme southern limit of the migration of the northern shrike (*L. borealis*), New Mexico is not included. Now, this bird occurs here at Fort Wingate, N. M., every year regularly, making its appearance about the middle of November. Specimens I have shot of it appear to differ in no way from those I have collected in northern North America. The white-rumped shrike (*L. l. excubitorides*) is a resident species throughout all suitable localities in the region of New Mexico to which I have referred above.—DR. SHUFELDT.

CHESTNUT-RUFFED GROUSE.—Arlington, N. J., Dec. 3.—*Editor Forest and Stream:* On a shooting trip in the neighborhood of Lake Hopatcong, N. J., Nov. 30, I secured, among my bag of six ruffed grouse, two birds that differed very materially from the others. The strangers were shot from the same cover and apparently in company with the others. They were both male birds, full grown and in fine condition. I send you feathers from the ruff, neck and tail of one of them, also feathers from the grouse already familiar to me. The specimens are from a male bird in each instance. The following is a description of the strangers, which I hope you will find sufficient to identify them. They were about 1in. longer than the others, darker in plumage, darker in flesh, intestines darker in color, and I imagined not so fine flavored. There was also a difference in the formation of the breastbone and the contents of their crops. Those of the unknown were filled with leaves, unknown, and the others with buds and berries. The ruffs on the necks of the strangers were brown, while the others were black. My attention was called to the difference in the markings of the bird by a gentleman who lives near where the birds were shot and to whom the birds were familiar. The question I would like to have answered is: Are they our regular grouse in a new dress or are they a cross between our birds and the English grouse? I am told there was, or is, a game preserve near there that has some of the imported birds in it.—F. W. [Grouse with the chestnut ruff, like the one sent in by our correspondent, are not very uncommon and we have often seen them killed in different parts of the country. While the ruff of the grouse is usually glossy black, it is not always so, but runs through dull black to chestnut brown and almost to the color of the cherry wood used in cabinet making. It is simply a question of individual variation. To this also must be attributed the other supposed unusual qualities of the birds under discussion. These were our ordinary ruffed grouse.]

GAME IN TOWN.—Denver, S. C.—Some time in October last I was in the city of Anderson, which is the seat of Anderson county, and heard the familiar whistle of "Bob White." After looking about to see where he was, I saw him sitting on the very top of the block of buildings known as "Brick Range," which forms the southwestern part of the public square. There he sat some twenty or thirty feet from the ground whistling as big as if in his native haunts. Shortly afterward I saw a little negro on the street with a timid, wounded, fluttering bird in his hands. The deadly sling shot had got in its work.—BLUE RIDGE.

ARRIVALS AT THE PHILADELPHIA ZOOLOGICAL GARDEN IN NOVEMBER, 1888.—Purchased—One rhesus macaque (Macacus erythræus), one peba armadillo (Tatusia peba), two Baltimore orioles (Icterus baltimore), three banded rattlesnakes (Crotalus horridus), and four slow worms (Anguis fragilis). Presented—One bonnet monkey (Macacus radiatus), two flying squirrels (Pteromys volucella), one brown mink (Putorius vison), one purple finch (Carpodacus purpureus), four screech owls (Scops asio), one red-tailed buzzard (Buteo borealis), one herring gull (Larus argentatus), four alligators (Alligator mississippiensis), one painted terrapin (Chrysemys picta), and fifteen salamanders (Diemyctylus miniatus).

Game Bag and Gun.

GOATS AND GLACIERS.

SO much has been said pro and con about the wariness of the mountain goat that I feel a desire to add my mite to the mass of matter already written on this subject.

Last week while passing through the Rockies westward on the line of the C. P. R. R. I met Mr. Perley, the genial proprietor of the Glacier House, which is situated in the heart of the Selkirk Mountains. Mr. Perley informed me that a party of miners had discovered a valley southward from the hotel, which in some respects fairly outrivaled the far-famed Yosemite, and that goats and other large game were to be found there in abundance; and finally, that a four or five hours' tramp over the miners' trail would take one to their camp in the upper part of the valley. This information caused me to stop at the glacier. The next morning I was provided with a guide and companion in the person of Mr. H. D. Hume, who was accustomed to mountain and ice climbing, though he had not been in this valley; in fact, at that date probably not over half a dozen persons had ever been in there, that is to say, in the upper part of the valley.

The trail for about two miles led through a heavy forest, following up a glacier stream. Then it came out on a large morain facing two glaciers, one to our right and the other directly in front of us. We followed up the trail between the glaciers for another mile, then took to the ice at the left hand. The glacier was in many places full of seemingly bottomless fissures, but by careful work we proceeded without any mishap. We saw on the ice a couple of lynx and a wolverine; but they kept out of range, though the wolverine followed us for half a mile. After a mile and a half of ice work, we arrived at the top of the pass, where to the southward we had a view of the grandest and the most terrific mountain scenery that man ever beheld.

We were at an altitude of fully eight thousand feet, flanked by mountains on each side. In front, from our feet down to the valley three thousand feet below, the steep mountainside was covered with green grass and a few low bushes and stunted trees, interspersed with deep ravines and foaming torrents. Coming down the valley to the left, and ending opposite to us, was an immense glacier nearly a mile wide and a greater width above—a frozen river of ice showing all shades of color. The glacier completely filled the valley, and the ice was of great thickness. For less than two miles from its lower end there were what we named the Giant Stairs, four steps that extended across the glacier, and each step at least five hundred feet in thickness. From the lower end of the glacier, through an archway a hundred feet wide, a foaming river of discolored water rushes out and winds down the green valley for ten miles before it is lost from our view. Across the valley and far above us tower mountains, peak after peak, and from near the top of the highest one, and directly in front of us, a glacier starts and runs straight into the valley. We count eight large glaciers, all in sight from the pass. A short distance down the valley, along the perpendicular sides of one of the mountains, are three waterfalls, each at least fifteen hundred feet high. A measurement has been taken of the speed of the large glacier in the valley, and it moved or traveled at the rate of eleven feet in ten days, and has piled up at its foot a high morain—but this is not goat, so we will return to our mutton.

We had lain for an hour in the warm sunshine on the green grass a short distance below the top of the pass, oblivious to all but the awe-inspiring view before us. I then began to scan the grassy pastures for goats, and soon saw one across a ravine to our left and about 600 or 700yds. away. It stood in a grassy nook between two spurs of ledge, watching us. With a strong field glass we had a plain view of him, and could see that it was a large "Billy." Here was a chance to see if this kind of game could be easily stalked. I gave my rifle to Hume, requesting him, if possible to do so, to cross the ravine and get a shot by creeping up behind the nearest point of rock, and I would watch the goat and note its action.

The animal stood intently watching my companion as he started down the cliff, which was an almost perpendicular descent from the top to the stream below. Mr. Hume soon came to a stopping place; he could not return, and it looked like sure death to attempt to proceed. As Hume clung to the naked wall of rock looking for a way out of his difficulty, the billy goat began feeding with an air that seemed to say, "That man is in a safe spot and will require no more watching." Mr. Hume, however, by working away to one side, found a place where he could descend, and was soon down to the rivulet and over it and up within 50yds. of the point of rocks. Here he sat down to recover his breath. At this moment the goat looked up, and, not seeing the man where he last saw him, he started to look for him, and walked up on to the highest point of the rocks, nearly over Hume. much to that gentleman's astonishment, who afterward declared that the goat looked as large as a horse as he stood there peering down at him. Up goes the rifle, but the aim is unsteady and the bullet goes wide of the mark. The goat still stands there. Another cartridge is pumped in and another shot fired. The goat stands for a moment, then deliberately turns and ambles away. As he comes again in view, some 300yds. up the mountainside, he is again under fire, and a lucky shot lays him low. In answer to our shots we heard a rock-blast from the miners, who were working in the valley below us. The goat was a very large male and would weigh at least 300lbs. He was quite as fat as a stall-fed sheep. The head, skin and one hindquarter were as much of a load as we could pack down to the miners' camp, where we arrived before dark. Mr. Tilton, of Victoria, B. C., owner of the camp, gave us a warm welcome. Mr. Tilton is a sportsman, as well as the proprietor of several silver mines. He said that caribou, silvertip and black bear were abundant in the valley, and that wolves and goats were also quite numerous, and that very day a large goat had been quite near their camp and was not disturbed by the blasting in the mine.

One of the miners, old Ben, had had an encounter with a large billy goat a few days before our visit there. Ben was coming down the mountain with his pack on, when he met the goat, who did not "run worth a cent." Ben was near a small tree. He picked up a stone and hit the goat. This excited the creature's ire; he elevated his mane—and at this point there is a break in the old man's story. He admits picking up his pack some distance down the mountainside five or six hours afterward, but refuses to admit that he sat perched up in the branches of that tree all that time with an enraged wild goat for guardian; we must draw our own conclusions, for Ben's lips are sealed on that subject.

The next morning as we were preparing to return we saw up on the mountainside near the trail a goat feeding. The wind was blowing up directly toward it, so I did not expect to get within range; but as we neared it a small ridge hid it from view. We walked up within fifty yards of the spot, and then mounted the ridge. The goat lay there chewing its cud, and was not frightened by us nor by the dog. Knowing that I had it safe I fired a shot over its head. It gave me a surprised look, arose, stretched itself, then moved slowly away. I then fired at its neck. The bullet struck a little low and cut the jugular veins. It then turned and jumped out on to the edge of the cliff, where I caught it with another shot which knocked it over. Within a minute's time we were on the edge of the cliff, and saw our game laying fully a third of a mile down in the bottom of the deep ravine. It must have rolled down there over and over like a large ball, and there was life still in it, for with our glass we could see it move its head and make a feeble attempt to rise. This goat was a female, and would weigh somewhat over 200lbs.

Several mountain goats have been killed this season with revolvers but a short distance from the line of railway near Donald, British Columbia.

So far as my limited experience goes, leaving the hard climbing out of the question, there is about as much sportsmanlike sport in killing or shooting mountain goats as there is going into a calf pasture and bagging young veals; you walk up openly until within range, then blaze away.

This valley that we were in is a perfect paradise for sportsmen. A few miles down the valley below the glacier in the eddies of the stream large trout were seen, and besides the large game already mentioned as being found there, we saw on the mountainside near the pass, blue grouse, magpies and large numbers of mountain marmots, whose shrill whistling was heard on every side. In the valley a few weeks since one of the miners had the extraordinary good luck to kill three silvertips—a she bear and two nearly full grown cubs—with three shots, the rifle used was a .44 Winchester carbine loaded with cartridges made by the Dominion Cartridge Co., of Montreal. These bears were eating a goat that they had captured. The old bear was shot through the heart and the others through their heads. A few days afterward the miners found their tent knocked down and a large male silvertip standing on it with his head in the flour sack. With the same rifle they killed him on the spot, and his dying struggles mixed tent blankets, flour and bacon into "a gory mess." We arrived at the hotel about 4 P.M., well pleased with our trip.

The next morning I saw and had a shot at a black bear within a quarter of a mile from the hotel.

I am fairly well acquainted with the mountains and know of no more favorable spot for large game than in the vicinity of the Glacier House. I believe that two miles south from the hotel there is another pass into that valley much lower than the one now used. The great objection to the present trail is that when the early snow comes it makes the glacier the more dangerous, though with Mr. Hume I would attempt to cross it on a clear day at any season of the year, with the aid of a light strong rope and alpenstock. STANSTEAD.

VICTORIA, B. C., Sept. 24.

CHICAGO AND THE WEST.

CHICAGO, Ill., Dec. 1.—There is weeping and lamentation among the shooters of this section, for it begins to be forced upon even the dullest comprehension that the duck season of 1888 is a thing of the past. Members of the different clubs look glum, and have only the same story to tell of marshes with little water, of frozen ponds, and ducks most conspicuous by their absence.

Last week a few members of the Mak-saw-ba Club met at their club house near Davis Station, Ind. Mr. Kinney, vice-president of the club, was down, also Messrs. Sloan, Randall, Brown and Miller, accompanied by Mrs. Sloan, Mrs. Brown and Mrs. F. P. Taylor. As guest of the club, I had the pleasure of meeting all and sharing the sports of the day. Mr. Ira Pease, the club superintendent, insisted that there were no ducks on the ma'sh, but when the boats got out in the morning we found quite a number of mallards working around. Mr. Kinney brought in four that day, Mr. Miller eight and myself eight. Mr. Sloan was credited with a rabbit, Messrs. Brown and Randall got a few quail. The latter three gentlemen went out after ruffed grouse, of which there are a few on their grounds.

This week the Mak-saw-bas hold a big trap-shoot at their grounds, and it will, I warrant, be a successful and enjoyable affair.

I was much interested last week by a personal confirmation of the statements made in last week's paper by Mr. F. A. Howe, president of the Tolleston Club. I do not think I exaggerate when I say that there were thousands of ducks on the Tolleston Marsh on the 26th and 27th of November. They were mixed ducks, mallards, bluebills, ringbills, a few redheads and widgeons, and a great many teal. The marsh was very low. It is only twenty-eight miles from Chicago. It is not, on the face of it, any better marsh than those of the Kankakee. Yet here were numbers of ducks, when elsewhere the complaint of scarcity was general. The efficacy of protection and feed for the wild ducks became very apparent to me, at least.

ENGLISH LAKE, Ind., Dec. 3.—Yesterday a German came down from the big prairie slough and reported thousands of mallards hanging about in the rushes. This morning Mr. John Taylor, the superintendent, and I investigated, but the ducks had departed. We saw only half a dozen. Mr. Taylor yesterday made a run up Bogus Creek, and saw only two. The season seems ended. The water is rising rapidly on the marsh, and the latter is higher now than it has been all season. I shot a squirrel which poked its head out of a knot hole in an oak this morning. It fell back, and lodged 4ft. down, inside the tree. Fishing for it blindly with a split stick, I caught it fairly by the tail, and pulled it out of a crack barely big enough for its passage. I should think one might try a thousand years before he could repeat the performance.

There are three bevies of quail here, but members of the club do not shoot at them. Five years ago a very severe winter nearly put an end to the quail of this section, and their gains have been very slow since then. There are a few rabbits and squirrels here, and a number of woodcock in season. On Thanksgiving day Mr. C. E. Hayden bagged three ruffed grouse. There would seem to be a good many in the woods not far from here. There were three otters near here last season. I saw one on the Mak-saw-ba grounds last week. Hathaway, my pusher there, killed one last winter with an axe, by the aid of an old hunting dog.

Mr. Taylor tells me the fish are being exterminated here by constant netting, seining and spearing. Pickerel nearly exterminated by gill nets. Dynamite has also been used by law-breakers below here. The club should see to such violations, equally with duck trespassers.

The F. P. Taylor party in the Indian Territory are having a grand time. The last letter from them showed that they were leaving the Cimarron, and working down to the Canadian. They have sent in about 100 wild turkeys. Billy Pierson sent in 40 last week.

In the interval between now and extremely cold weather the tendency will be toward trap-shooting. A few shooters will go out after ruffed grouse, and a few others have already gone or will go further south in pursuit of the fleeing wildfowl, which appear to have notice of some impending storm.

The weather at date is mild. The water is running everywhere here, and no signs are apparent of any immediate freeze. We saw two gangs of Canadian geese on the meadow skirting the marsh to-day.

DEC. 4.—Mr. W. N. Lowe, president of the Illinois State Sportsmen's Association, tells me that they are doing everything that can be done to further the interests of game protection in this State, and can see marked acknowledgment of the effectiveness of the work. Game Warden Billy Minier is on South Water street, the great game market of the city, nearly all the time, with a sharp eye to violations of the law. It is to his patient efforts in ferreting out evidence that the association relies for success in a certain big test case, which it is hoped will now be reached on the docket very soon. This is the case of the State vs. Fred Smith, a South Water street game dealer, in whose possession some $2,000 worth of quail and prairie chicken were found during close season, February last. The defense set up that they purchased the game in season and held it over into the close season; they further claim that the game once lawfully purchased became their property, and as such was not subject to subsequent investigation. A case has recently been decided, in Michigan, I believe, which gives good color to this defense, and leaves it necessary only for it to be competently proven that lawful ownership has been acquired. The Michigan case is quite against the association. The prosecution, however, rely upon what is known as the Magner case of the Illinois reports. In the Magner case the Supreme Court held that the only title which can be acquired in game is a *quasi* or trust title, and one subject to any conditions the State may see fit to impose; it being the theory, as held in this case, that game is the property of the State, and not subject to private control except as permitted by the State. It will at once be seen that there

is a very pretty question involved in this case. Defense may seek to evade the Magner case by setting up that they purchased this game in St. Louis, or other point outside of Illinois jurisdiction. It is to be hoped that this contingency will not arise, for should it not, it will be almost a question only of the Michigan decision against the Illinois decision. in which event our court must of course follow the State decision, and should therefore decide for the prosecution. This is much to be hoped. An example is needed here.

Mr. Henry Sloan is a game dealer of this city, but one who buys no game out of season and violates no law. Mr. Sloan is a generous and enthusiastic sportsman and a member of the Mak-saw-ba Club. I met him at the club grounds a week or so ago, and I may have mentioned in an earlier letter something of what he said about the Michigan game laws. He told me that he knew of some game dealers here who have deer shipped to them from Michigan, which is quite against the law of that State. The consignors evade the law by having the game marked for "Detroit, Mich.," or some other point in the State—while the way bills read to Chicago. Wisconsin game comes into this city marked "Milwaukee, Wis.," and billed through in the same way. Violations of State laws in this way are constant. The great bulk of the venison sold in this market comes from Michigan and Wisconsin.

Mr. J. M. Law, of Cincinnati, one of the Ohio State Fish and Game Commissioners, was lately down at the English Lake club grounds, in Indiana. He says that they have more quail in Ohio this year than at any time for twenty-five years. This is due to the rigid enforcement of a very rigid game law. Mr. Law reports that they collected $700 in fines in one township during the past year. Under the provisions of the law, these funds so raised are applied to further prosecutions. The Ohio law is a holy terror, and I should be glad to see it published for other States to copy. It has, however, the defects found in all game laws, and I believe I know law enough myself to throw a house and lot through some of its strictest clauses. The Granger legislator is a willin' creature, if you get him headed right; but he can't write English close enough to hold water. He isn't built that way.

The general tone of the Granger element of legislative bodies, however, is against game laws and against the clubs who buy and preserve tracts of land for shooting purpose. Chicago capital, ever generous, ever enterprising, and never doing anything by halves, has purchased thousands of acres of Indiana lands, which are worthless for agricultural or mineral purposes, and annually expends thousands of dollars among the natives of Indiana. What does glorious and noble-minded Indiana do in return? Why, she sets about, and at the last term of the assembling of her mighty wise men enacts a law which states that no person can acquire title against trespass to any overflowed lands! In other words, the duck marshes bought up by our clubs are not private property, and any one can shoot on them who chooses. That is a generous and praiseworthy step toward game protection, is it not?

The Tolleston Club will perhaps be in the lead in abolishing spring shooting in this section. I hope the others will follow, so that on all the marshes, for a term of at least a year or two, the ducks may not be disturbed during the spring. Let this be done, and some feed be put out on the marshes, and I for one believe with Mr. Taylor, the English Lake superintendent, that it will be only a question of high water to bring the ducks back again in as great abundance as ever. The third year this English Lake country had as good shooting as ever in its history. Eight years ago, during a low-water time like this of late, there were no ducks, and everybody thought the end had come. I do not think the end has come. Under the usual natural conditions the marshes below Chicago, extending down into Indiana and the center of this State, are the finest natural home for the wild ducks in the world. Give them a dog's chance and they will come there.

A great many geese nest on the Kankakee marshes. Mallards and teal hatch each summer in sufficient numbers to make a regular flight of their own. Singularly enough, at the end of August these ducks, more especially the mallards, leave and go north. It is thought that they bring numbers of other ducks down with them on their return. Woodducks hatch in exceptionally great numbers near English Lake.

I have received several letters bearing upon a casual mention, made in a late issue of FOREST AND STREAM, of the canvas blind used by Fox Lake duck shooters. I should be glad to write to each gentleman separately, but believe that will not be necessary, as I intend in a week or two to make full mention, not only of the canvas blind, but also of a number of other blinds and similar contrivances used by the members of our different duck clubs. Some of these are very ingenious and effective, and I believe will be interesting in the description. They were so to me in the seeing, at least.

DEC. 7.—Shooters are beginning to turn their attention to smaller game than ducks. An occasional ruffed grouse is brought in, and a few quail are killed in Indiana. George and Ed. Klehm, florists, of State street, returned yesterday from a four days' hunt in central Indiana. They bagged sixty-seven rabbits, five quail and three ruffed grouse. I got a few squirrels and rabbits near the Cumberland Lodge Wednesday last. The Diana Club, of the Kankakee, claim they have a few mallards left on the river yet, but nobody is bringing in any ducks. Word from the once famous Sangamon says they have had no ducks this fall. Two experienced hunters worked a day last week on the Hennepin Club grounds and only got one duck. Yet no better duck country lies out of doors than those Illinois bottoms. A Kankakee River hunter claims to have word (yesterday) that there are still plenty of ducks in Michigan. How is this?

I wish some one would tell me why it is that everybody feels privileged to beg ducks of a shooter, if he happens to get any. Last week I started into the city with twenty-two ducks. They vanished gradually under requests of different sorts, till when I got within ten miles of home I had only fourteen left. At Englewood, as I was waiting at the station for a train, I was approached by a well-dressed man, who wore a plug hat and parted his whiskers in the middle. He looked at the birds a moment, and then said, "Ah, my man, give me one of those ducks, won't you?" Now, I don't suppose I looked very distinguished. My friends tell me that I should not, even in my wildest and most sanguine moments, consider myself justified in being proud of my beauty. But I don't like to be called "my man," because I am not anybody's man but my own. I didn't know what to do about this fellow. I wanted to kill him, but I was afraid he had a family. At length the ludicrousness of the affair struck me, and I laughed, and handed him the mallard he coveted. "I like you," I said; "you've got more nerve than anything I ever saw. If you think this duck is the kind of diet your nerve needs, why take her along, and God bless you!" He took the duck, too. In common with most shooters, I like to give game to my friends; but fellows like the above ought to remember that it costs about $8 a day to go duck hunting here, and that ducks are consequently worth about $8 apiece. I don't doubt many shooters have had their eyes opened by the freedom with which comparative strangers will "tackle" them for game.

The Mak-saw-bas have a big pigeon shoot down on their grounds to-morrow. E. HOUGH.

RIFLES FOR ALL-AROUND WORK.

Editor Forest and Stream:

I read with interest the communications on all-around rifles in your issue of Nov. 8, but beg leave to pursue the subject a little further and ask for more light.

Conceding as I do to "Iron Ramrod" a greater knowledge of the various points of the modern rifle than I am likely ever to attain, it is possible that his practical experience with large game is limited, and that he looks upon the shooting of deer and bears with the eye of a Massachusetts sportsman. I did, once. I hunted all over that State long ago, and still knew nothing to speak of about bears.

Since those days times are changed. I see that they hunt red squirrels now in the old Commonwealth. I do not blame them, but in the old days nobody that was anybody ever thought of shooting these creatures for sport. Gus Hilton and I shot some for breakfast one cold morning, over back of Bald Mountain, in Piscataquis county, Maine; but then we had nothing else to eat. That was thirty years ago this month. Then I recollect killing a few about seventeen years ago, for my Thanksgiving dinner. Pork and red squirrels, with hunger sauce, was the menu, and deuced glad I was to get them. There wasn't a turkey within many miles, and as for plum pudding!

I should not be surprised to find myself shooting red squirrels yet for sport. The game is going fast, and if this sort of thing keeps on, we shall one day come to regard the bat as a game bird. There is a fair supply of them left.

No one can teach me anything of the advantage to be gained by putting a bullet in the right place. The difficulty is to get it there. A man walks into a gun store and buys an outfit. He takes all the sportsmen's papers, belongs to a rifle club, makes a capital score at the target, and has the theory of bear killing to perfection. He packs his possibles and starts, full of anticipation, on his first trip to the haunts of the deer and bear. Give him a Ballard rifle, .32-cal., with 165 grains of solid bullet, and he is ready to guarantee instant death, by planting the missile in the brain of the biggest bear in the North Woods. It does not occur to him that he has, after all, only mastered the most rudimentary points in the varied acquirements which go to make up the qualifications of a skilled hunter; or that the feat of putting a bullet in a bear's brain will be much facilitated if the animal be previously chained to a post. Well, when he reaches the home of the bears, what does he find? Not the bears—not often, that is—though a good guide, well paid, may find them for him; but he finds just what he has often read of in FOREST AND STREAM, but of which, nevertheless, he had formed but slight conception, a dense, dank, mossy, swampy, impracticable wilderness—impracticable that is, for the tenderfoot, without good guidance. Well, when he has fallen over a few scores of fallen logs, smirched his hunting toggery in a "burned piece," been lost in a few swamps and wormed his way through some miles of cedar brake, and seen but the track of a bear on the river bank, and the white flags of a few deer in the dim distance, and when the new rifle is beginning to lose the brilliancy of its polish, he comes to a like conclusion with "Sparrowgrass," after a three months' sojourn in the country, following a lifetime spent in town, and says to himself that "some preconceived ideas have to be abandoned."

I have passed many years in regions where the bear is not uncommon, and I have never yet known a bear to be shot in the brain, unless it was up a tree or fast in a trap. People expect too much of the bear, when they imagine that he is going to sit up and look at them long enough to draw a fine bead on his left eye. The bear, as a rule, knows very well how to take care of himself. So does the deer; and although there is an occasional exception, these but prove the rule.

Now, only last week, my friend Konan was going into camp after dark. Close to the road was what he supposed to be a stump, though it looked like a bear, yet kept perfectly still. He did not move the rifle from his shoulder, but passed on, though the stump looked so much like a bear that he noted the spot, and the next day passed it again, when to his surprise and mortification there was no stump there. The bear knew that its safety lay in keeping still. Had it been daylight it would not have been in that place.

I once jumped a bear in some briers which bordered a wood road, and within six feet of me. I did not fire, having only a fishing rod. Had it been a .32cal. rifle with any ammunition in common use I still should not have fired. I would rather a dozen bears should go free than to get one "wipe" from the paw of a wounded one.

I have known two good deer hunters to shoot at separate bears (standing shots) in a berry patch and within sixty yards. The bears got away. On returning one of these men started a deer and shot it between the eyes.

I have known no hunters who preferably pursued the bear with the rifle alone. All use the trap if possible. I have known bears killed in all sorts of ways, and my conclusion is that they are very uncertain in their habits. Only if a man understands them, and wants a bear, he will generally get one in some way, most probably unsportsmanlike.

Your correspondent in Elizabeth, New Jersey, does not believe in the possibility of a good all-around rifle. I doubt it myself, yet not so very long ago the best sporting authorities scouted the idea that the breechloader could ever be made practically useful, and Colonel Hawke believed religiously in the flintlock.

The best all-round gun I know has shot and rifle barrels side by side. Its weight is its only objection. But if a bullet of .32-cal. can be made which will answer as well as a .44 or a .50 for snap-shooting in dense covert at large game, then one step will be gained. I still doubt the efficiency of the 165grs. ball of that caliber, and if some one who has used explosive bullets would give his experience we might learn something. "H. P. U." ought to have some ideas about it, and some of those fellows who are always experimenting might try a few on some worthless animals. KELPIE.

CENTRAL LAKE, Mich., Nov. 20.

Editor Forest and Stream:

I quite agree with "W. W. B." (in your issue of this date) that the .22-cal. rifle, with the 15-45 C. F. cartridge, is a most excellent weapon for hunting small game, as I well know from experience; but when it comes to shooting ducks at a range between 150 and 200yds., with the wind blowing, (and that was the proposition laid down by "N. Orleans") I think he will find the 45-grain bullet too light, and that the wind will carry it wide of its mark. In calm or comparatively still weather that cartridge works (in a good rifle) like a charm, and comes within the range indicated by "N. Orleans;" but it stands little chance in a gale of wind in shooting over that distance. It is as much as a 115-grain bullet, backed by twenty grains of powder, can do to hold its own under such circumstances.

Again, as for the presentable appearance of the game shot with the .32-cal. bullet advocated by me under the conditions given by "N. Orleans," the fact is, that less mutilation results from the use of a single bullet of that caliber than from an ounce of No. 4 shot fired at fairly close quarters. The bullet does its work effectually, it is true, but (except in rare cases) with less exterior mangling or disfigurement than shot fired from a chokebore at from 20 to 40yds. Of course, I would not be understood as advising the use of .32-caliber rifles for duck shooting under ordinary circumstances, but under the peculiar conditions referred to by your correspondent, "N. Orleans," I am still of opinion that he will find a .32-cal. rifle the most satisfactory weapon. LOUIS BAGGER.

WASHINGTON, D. C.

BULLETS.

Editor Forest and Stream:

I noticed a communication from Mr. Roosevelt relative to the Keene bullet. I have never seen one of that name, but last year came across the description of Lord Keane's cross-cut bullet, and after endeavoring to obtain a few without success, I adopted the following plan. Taking a loaded .40-82 cartridge, which is the caliber I am most attached to, I fixed it in a vise and with a common scroll-saw quartered the bullet as far as the shell. These I used on deer and elk in Wyoming and Montana this fall and their performance was entirely satisfactory. In no case did they fail to open and in some cases split, tearing the flesh around. I consider them superior to express bullets and the small cut does not interfere with any parts of the gun, while the short time it takes to prepare a quantity is greatly in favor of this method. I have even done this way with .22 cartridges when using them against prairie chickens and sage hens. R. H. W.

PHILADELPHIA.

MICHIGAN'S NORTHERN PENINSULA.

LAKE LINDEN, Mich., Dec. 1.—The deer hunting season in the peninsula is closed and the merciless slaughter has ceased. This season the woods swarmed with hunters, many of whom came from the Middle States. Many came, too, not only for sport, but to supply a ready market for venison. They would come in parties numbering as many as thirty, with camping equipage, rations, etc., and would make deer killing a regular business. As a member of one party from Indiana was heard to remark: "We've got through harvesting, and venison is worth fifteen to eighteen cents a pound down our way, so we thought we would come up here and kill some deer. There are twenty-seven of us here, and we want to get one a day apiece." His sanguine expectations were probably not fulfilled, as a well informed sportsman judged that there were at least three hunters to every deer running in the woods. They were so numerous that most of the land-lookers and lumbermen wisely decided to vacate the woods during the siege, for fear of being taken for deer by some of the "green 'uns."

As the Mackinaw & Marquette passenger train was coming along one day last week, a two-year old doe bounded out from the woods at a point south of Indian River and ran along ahead of the train for some distance. It finally stopped short, as if to meditate which side to jump to, and was struck by the pilot of the locomotive and thrown from the track. On being picked up both its hindlegs were found to have been broken.

State Game Warden Wm. Alden Smith reports that during eighteen months about 900 convictions of violation of the game laws have been made, and that the fines more than defray the expenses of his 189 deputies.

An explorer for iron ore in the southern part of Ontonagon county has discovered what he terms an ink spring. The liquid, which bubbles from a crevice in the side of a rocky hill, is of a blackish hue, and when applied to cloth or to the human skin leaves an indelible stain. Though a very small stream he traced its course for over a mile, and noticed that it was death to all vegetation, its tracks being perfectly bare, while the earth is stained a deep blue-black to a depth of several inches. Given internally to a dog it produced instant death.

A hunter who had been out with a party in quest of deer and bear, relates a singular incident connected with his experience in the woods, which occurred a few weeks ago. He came upon a beaver dam in course of construction, and spied a large beaver gnawing down a tree near by. He shot it, and on examination, found the animal dead from its effects. Just as he was going to depart with his prey he saw another in the water, and, moving about five paces away in order to get a better shot, fired four times, but without success. On looking back to where the dead one was, to his astonishment it was gone, neither could the most diligent search disclose its place of concealment, and he arrived at the conclusion that some of its comrades must have carried it away under his very nose. LAUBE.

MAINE AND ITS BIG GAME.

IT IS LIKELY to prove that the number of deer killed in Maine this fall, in the open season indeed, will prove to be larger than ever before. The fact of the abundance of deer in that State has drawn the attention of hunters, especially in Boston, and they have gone into that State to hunt the noble game. The weather has been very bad, and in some respects thus favorable to the life of the deer, but in others it led to their destruction. There have been a great many storms of snow in the wooded sections of that State, and this has made the still-hunting of the deer easier than ever. There has followed this still-hunting a good deal of success—a feature in hunting that animal heretofore considered rather difficult and uncertain. Not only has the zest been felt by sportsmen from out of the State, but the hunters in the State have taken up the hunting of deer with a gusto almost unknown. They have also met with success most remarkable, not only because there are a great number of deer to hunt, but also because the hunting has been easier by reason of the frequent early snows. As has already been mentioned in the FOREST AND STREAM, Maine sportsmen have killed a great many deer in the Narragaugus region. One party of three hunters killed nine deer there in October; all the law would allow them. But it is in the vicinity of Moluncus, some eight miles from Mattawaumkeag, in Aroostook country, that the deer hunters have had the greatest success. From perfectly reliable sources, I learn that five deer were killed on the first day or two of the open season within a short distance of Coburn Camp at that point. Two of the deer were shot by Mr. Coburn himself, and since that time he has killed another, making up his quota allowed by the law. Indeed, thirteen deer have been killed this season thus far at Coburn Camp. The first deer shot were those that come out into the field to feed. The sport has been remarkably good, but those who have been there say that the deer are getting wild from excessive hunting.

Mr. Henry B. Moore, better known as Harry Moore in the flour and grain trade of Boston, has just returned from a very successful deer hunt in Maine. He was accompanied by his brother, Mr. Geo. C. Moore, of Chelmsford, Mass. They went to the celebrated Moluncus region also, which by the way has a lake by that name. They were in the woods seven days with Ernest Coburn as guide. They came home happy, with two deer, a buck and a doe. The buck was a yearling and did not support a very handsome set of antlers. They staid all the time they could afford, but the weather was simply terrible, though there was generally snow enough for tracking the deer. They obtained one or two shots that were unsuccessful. Their method of hunting was that of still-hunting, pure and simple. Hunting with dogs is not tolerated in that section. They followed up the deer by their tracks in the snow. Sometimes they would follow a track all day, and yet they made as a rule very little distance from the camp. Mr. Moore says it is wonderful how a deer will wind in and out of a swamp and "singular how they will wander around without any perceptible purpose, but just to wander around." The woods were full of water and terrible walking. They killed their deer with rifles. The day they left they had come upon a very large track, but did not find the deer. The guide, Ernest Coburn, urged them to stay another day, but they were unable to do so. A letter has since followed Harry to Boston from his guide, saying that on the day following their departure from Moluncus he had killed the finest buck ever killed in that region. Harry believes this buck to be the one he was after and wished that he might have stayed another day.

This same guide told the Moores the strongest moose story; and the fun of the thing was that he appeared to believe it, too. By the way, they heard but little about actual moose in that region. These animals are all further into the woods. But the story is told of Moluncus Lake in the days when there were more moose than at present. It seems that a celebrated logger and moose hunter was one morning going up this lake with his two horse team. The lake had frozen over only a night or two previous, and it was as glare as new ice knows how to be. But his horses were but recently sharpened as to their shoe caulks. They were making good progress up the lake, when behold! two moose attempting to cross the terribly smooth ice. The way those great fellows paddled, hobbled and slid around was a funny sight to see. They had taken alarm at the team and were jumping and trying to run, only to slip, slide and fall down again. The woodsman put his horses into the run and soon he came up with the moose. When close upon the ungainly creatures the old bull turned and showed fight. This caused the running horses to sheer, but the sled slewed and knocked all four of the legs from under the bull moose and he fell sideways upon the sled. But this was not all. In falling he struck upon a sharp, short stake of the sled, which penetrated his side and completely pinned him there. Here the driver was able to cut his throat. But this was only half the story. The cow moose, in her fright, had fallen on the ice and so injured her hip that she could not rise, and the teamster easily dispatched her also. He succeeded in loading the cow moose on to the sled—the bull was already handsomely pinned there—and he drove back to his home a happy hunter.

Another Boston merchant, together with his friend, has lately returned from a successful caribou hunt in the vicinity of Eagle Lake. They also report the woods full of water, making it almost impossible to move about, even with the best and tallest of rubber boots. They succeeded in getting three fine caribou. They also saw a great moose as they were paddling up the West Branch. They saw him swimming across the river, where it is some 200yds. wide. He was a long distance off, but the Boston merchant is an excellent marksman and has killed his moose. He commenced to "pepper away" with his rifle. There was nothing to shoot at but the smallest portion of the moose's head and his muzzle above the water, and somehow several shots seemed to skip over him without the least harm. The guide shouted for the hunters to take the moose as he went on shore, which point he was headed for as fast as possible. At the same time he begun paddling the canoe with all his might, in order to give them as near a shot as possible. This rather served to complicate matters, for the motion of the canoe was very decidedly against shooting straight. The great body of the moose came out of the water, but three shots by experienced sportsmen went under and over him as though he held a charmed life. The last shot fired struck in the trees just before and over the moose, and frightened him so that he turned and swam the river again; but this time so far off that their rifles would not reach him, even if they had been loaded and ready for shooting. Nothing has been done in the way of calling moose in that section this fall; the weather has been such that there has scarcely been a night when that sport could be followed. SPECIAL.

The Belfast *Journal* reports: "The hunters returned to Belfast in the afternoon of Nov. 28, having been absent nearly two weeks, and Friday Mr. John Twombly, of Monroe, the driver, brought to town nine deer, the result of the hunt. Mr. Twombly had two of his own which he left in Monroe, making a total of eleven, the largest lot of deer ever brought into the city by a single hunting party. In the lot were two large and handsome bucks, the larger being between six and seven years old, and all the others were full grown. The deer were landed on the walk in front of Emmons & Sanborn's store on High street, where they attracted much attention. Each member of the party took one deer home, leaving the two large bucks to be otherwise disposed of. One was cut up and retailed for fifteen cents per pound for roasts and twenty cents for steak, and the other was disposed of by ticket.

"The party this year consisted of Judge Geo. E. Johnson, Dr. S. W. Johnson, Geo. T. Reed, E. E. Bradbury, M. R. Knowlton, Elisha Sherman and W. H. Sanborn, of Belfast, and John Twombly, of Monroe. They left Bangor Friday morning, Nov. 16, in Mr. Twombly's four-horse team, and traveled over the road described last year, reaching Beddington the first day, and stopping at Mrs. A. Schoppies. The camp on the borders of Cranberry Lake, occupied by the hunters of last year, was reached on the second day. On leaving Beddington, Dr. Johnson and Mr. Bradbury walked ahead, and four miles from town the doctor killed a handsome buck, which was hung up in the woods and taken on their return.

"Monday morning the party started out and one deer was killed by Dr. Johnson. Plenty of deer were seen and many shots fired without result. Wednesday a majority of the party went to Sabio Lake and visited the boarding camp of Mr. Chas. F. Corliss, the guide of last year. Mr. Corliss has a new camp in one of the best hunting districts in Maine, with sleeping accommodations for ten people, and boards hunting parties at $1 each per day. Wednesday the party killed five deer. The weather was very cold, freezing over the lake, and before the party left, the ice was strong enough to allow crossing on foot. Friday the old camp was deserted and the company went over to Corliss camp. Saturday's hunt yielded three deer. The game was found in swamps. Parties drove the swamps and as the deer ran out they were shot. As all hands fired it was impossible to tell whose rifles were the most successful.

"Mr. George T. Read had a hard experience on that day. He fired at a handsome doe and brought her down. As the animal lay upon the ground the hunter thought of walking up and dispatching it by cutting its throat, but remembering the stories of the evening before concerning the kicking of an apparently dead deer, Read approached with great caution. The wounded animal got on his feet, and when standing not over ten feet Read brought his rifle to bear and snapped. There was no cartridge in his rifle, and the deer made its escape. Dr. S. W. Johnson shot another deer Monday. M. R. Knowlton was seized with buck fever, otherwise more game might have been killed."

Editor Forest and Stream:

On the 8th day of October last, C. Fenton and L. Wetmore, of Number Four, N. Y.; E. Seitz, of Troy, N. Y., and the narrator hereof, left Lowville on the Utica and Black River Road for an outing in the wilds of Maine. The two former and myself having tried the Moose River country one year ago last fall with poor success—owing to the choosing of a bad location—thought we could better our luck by trying it a second time. After reaching the C. P. Railroad it soon transferred us to within ten miles of camp, which we reached by trail, having to make two trips in with camp duffle and provisions suitable for a month's stay in the woods. The 20th of October but barely found us ready to commence hunting. Now and then the head of a ruffed grouse had been snuffed off, when one of the party opened up by bagging a fawn that showed itself near camp. Shortly after this two of us, while following up some caribou trail, came so near a moose that he rose from his bed and stood long enough to receive a shot from a Winchester rifle, when he started off on a good trot down a shallow ravine. But before he had traveled 50yds. he had four more balls through his body, when he tumbled over. Upon going up we found a three-year old, estimated to weigh about ten hundred pounds, with a small set of antlers. We rolled him upon his back, dressed and hung up the meat, taking the head with us to camp as trophy number one.

One week later a bull caribou with a nice set of antlers containing some twenty points fell to our lot, pierced through by a ball from a .38-cal. Later on another bull and cow were added to the list. The three latter animals would average when dressed about 1,200lbs. each. We saw several different tracks, however, made by caribou that would weigh—judging from the size of the imprint left in the snow—at least twice that amount.

All along the river bottoms and lowlands the deer signs were plenty. But as we were in pursuit of large game, deer were left to gambol off without molestation. Scarcely a day passed but that some one of us could have taken fair shots at them had we felt so disposed. The weather continuing warm, we thought it best to break camp and save the specimens already secured rather than try for more. Three days were occupied in packing out the meat, hides, heads and camp duffle, when we took the cars for home, arriving safely on the 15th ult. Hoping the Maine Legislature will keep the present game law intact and the Commissioners see its provisions strictly enforced, is the best wish of CAP LOCK.

FREWSBURG, Dec. 7.

Editor Forest and Stream:

I have nothing pleasant to write, for my business did not admit of an outing on my part this season. I see others who have returned from their annual deer hunts, some in luck and others not. All report most uncomfortable weather for camp life, and that the game is not in its usual haunts, as we should expect in such a wet season. An unusual number of visiting sportsmen have been in our county, and I learn that the average luck has been fine. During the last two years the destruction of large game in this county has increased rapidly, for poachers have everything about as they please; hunt the whole year, kill all they can and smuggle out of the State. I do not say this to find fault with the Commissioners or wardens, for the last Legislature tied their hands. To legislate and not appropriate is nonsense. I see no indication of better things in the future. I judge from the past game must go shortly. I know it is on the decrease, deer in particular. Small game is now almost extinct in localities where but a few years ago it was abundant. I expect this humbugging nonsense to be kept up by guides and poachers "that all kinds of game are on the increase." I know better, but it will continue until the last deer is slaughtered. Will the Forestry Commission help us at the next Legislature? Why should not the protection of forests and game go together? Let us have wise legislation this winter, with an ample appropriation, and I will warrant success. SABAO.

MACHIAS, Maine.

SOUVENIRS OF POND QUOGUE.

AMONG the most cherished recollections of many cheerful outings in years gone by, my recent visit to Pond Quogue (or Ponquogue, as is probably the correct spelling) stands out like a silhouette on a white sheet of paper—as a pleasant summer dream, with a taste of the brine still on my lips and the fragrance of the pines still in my nostrils, as I am writing this by my cosy fireside many miles away. I fancy I still hear the roar of the surf as it pounds the beach at the "Old Inlet" near the life-saving station; I see, in my mind's eye, the broad beam of light thrown like a bridge of gold across the bay from the Fresnel lens high up in the tall lighthouse; and, as we sail gayly over the rippling waves while the moon is rising high in the starry heavens, comes as music to my city-worn ear the softly enunciated warning cry from the lips of Captain George of "Hard a-lee!" as the boom swings over our heads and we go about on another tack, steering for the light which twinkles so merrily in "Van's" cabin.

But where is Ponquogue? Well, it is not difficult of access for a New Yorker; cross the ferry at the foot of East Thirty-fourth street, take the Long Island Railroad (Montauk division) to Good Ground, and a walk or ride in a stage of two miles over a good though sandy road (but all roads, including the railway, are sandy on Long Island) will bring you to the time-honored Foster House, of which Mr. Isaac Edwards is now the genial host and proprietor. There you will find cosy rooms, good beds, and abundant fare; and if you come in the right season you can indulge in sailing, surf-bathing and "sniping" to your heart's content.

"Sniping" is the vernacular used in those parts for shooting snipe—mostly small snipe. But, what of that; if the game is small the sport is great, and oxeyes, ringnecks, yellowlegs and willet are by no means to be despised in the *menu*; especially when flanked on one side by a dish of delicious salt-water eels, freshly caught; or on the other by a ditto of soft-shell crabs, just in from the water; and in part, a small plate of clams, just dug off the point, as an appetizer. Such a *déjeuner*, when set off by an excellent cup of Java coffee and hot corn muffins, is apt to bring one into right good humor, even if one did make an awful lot of misses and waste a couple of boxes of cartridges the day before on the empty air.

And such air! It makes me draw a long breath to think of it. It was not the inflated air of Washington, turgid and tumid with the bombast and buncombe of political speeches in and out of Congress on the eve of a Presidential election, but the pure God-given ether, free from taint and corruption, and spiced with the salt of the broad Atlantic. It was a life of sound and healthy sleep, lulled by the muffled pounding of the breakers across the bay, an enjoyable digestion, unlimited salt-water sailing and plenty of shooting, both with the rifle (at loons or water witches) and shotgun (at snipe) to keep you busy between meals.

"Not very romantic!" I hear the esthetic reader soliloquize. Think you not? Then you have no romance in your soul. Look out of your window in the morning before the first cock-crow, and long before the lantern has been extinguished in the tall lighthouse over there; watch the narrow band of crimson stretching along the beach in the east; see how slowly and lightly the mists rise from the pastures as the crimson line grows brighter and brighter; listen, and you shall hear the tuneful trill of the skylark as he wings his way high up in the gray dawn to greet a new-born day; and then breathe that air through the open window, and you will know the joy of living for life's sake, and when the sun rises in all his glory in a canopy of roseate hues you will feel like new-born yourself, without care or care, and in first-rate condition to enjoy the eels which I see brother George is bringing up from his boat yonder as the result of the night's catch.

It added not a little to my comfort and pleasure to have Captain George E. Foster for my constant companion. He is not only the most trusted and best known boatman on Shinnecock Bay, from Quogue to Southampton and miles beyond, but is the best shot, and the best of fellows generally. He will go out with you in all kinds of weather, stay as long as you please, pole you home if the wind dies out (as it sometimes will at Shinnecock Bay), and never grumble for the loss of a dinner or supper. Genial and good natured at all times, his jolly face, merry laugh, soft "H-ard lee," and astonished "Well, I swan!" when an uncommonly tough fish story was bandied about in the boat on the way back from the bathing station, was a sight to behold, and would have been a pleasure, perhaps a cure, for the worst hypochondriac that ever lived.

My bags of game at Ponquogue were not large, but they were the cause of much excitement and happiness nevertheless. The snipe shooting is fairly good—probably as good as, if not better, than at any point on the Long Island coast. Though small, they are quick and wily birds, and afford excellent sport as well as good eating. I should advise sportsmen contemplating a visit to the south shore of Long Island always to carry a rifle along; I had a .32cal. Colt repeating rifle and found it very useful, in addition to my No. 12 Westley Richards shotgun. I also carried a .22cal. Colt lightning magazine rifle for target practice, when I desired a change, and for snapshots at stray snipe when they came across the bay

in the afternoon to feed or dig in the sand among the seaweed at low tide.

I bade the Foster House and its inmates farewell with sincere regret, and long shall I remember the happy days I passed there. Nor shall I soon forget that jolly little "cabin by the sea," presided over for the time being by Mr. Martin Van Buren Squires and his spouse, whose pretty little grandchildren were a delight to behold. The clambakes, with proper "belongings," were fit for an emperor (if emperors ever ate clams); and when to this was added one of "Van's" fish stories, or a song with a good rousing chorus, the charm was complete.

But I have written much more than I intended; it is after midnight, and the fire on the hearth is nearly out. A cricket is chirping merrily; it is time to go to bed. Therefore, I will close with a good-night, good friends, *au revoir*, and hurrah for Shinnecock Bay.

WASHINGTON, D. C. LOUIS BAGGER.

THE WOODCOCK SUPPLY.

Editor Forest and Stream:

In looking over the articles regarding the flight of woodcock in the late numbers of FOREST AND STREAM, I am convinced that the difference in opinion results from a difference in the ground shot over. From my observation I am led to believe that the flight of woodcock was as large this year as any one of the last five. Owing to the cold season the birds began to move very early; about Sept. 18 we had a large flight in this section, and the local gunners, not expecting it, got left. In the issue of Sept. 27 "X. Y. Z." asks where his woodcock were; they had previously started on their annual flight, and what he saw was the work of flight birds. In the number for Nov. 15 Mr. E. H. Lathrop mentions his finding woodcock on very wet ground and none on high ground, and asks if the habits of the bird are not changing. My theory for this is that we had very cold weather; in fact, a freeze on the flight, and the woodcock had to go to wet ground. I always get the best shooting from Oct. 10 to Nov. 10, and always find the birds in low, wet places—in the alder runs and swamps. Brother hunter, when you go looking for woodcock next season, if the weather is cold and the ground slightly frozen, look for the birds in the mud and water. SANDPIPER.

READING, Mass., Dec. 4.

Editor Forest and Stream:

I wonder that it has not struck more of your correspondents on the woodcock supply that the decrease in their number is likely owing to the increase in late years of guns and gunners. When I came to this town, some twenty years ago, I might say that I was the only sportsman in it; I certainly was the only man that owned a doublebarreled gun. At the present time we have upward of one hundred or more men in town who shoot and carry guns. Then again, as the country becomes more settled it follows that more land is cleared and the coverts become, one by one, chopped down and lost to the sportsman forever. Twenty years ago and up to 1879 my dogs have flushed for me of a short afternoon 40 or 50 woodcock. 1879 was the last season the birds were plentiful here. I see by my record on Aug. 15 I killed 24 birds from two o'clock in the afternoon until five, of that year. Aug. 15, 1880, records only 6 birds; 1881, 8 birds, and so on up to 1886, varying from 6 birds to 12. In 1887 there was an increase; the record shows Aug. 15, 19 woodcock, and for the season 105 woodcock. Up to 1879 the record shows from 150 woodcock to 200 per season; 1880 up to 1886 from 50 to 70 woodcock per season. Aug. 15, 1888, 6 woodcock, and only 23 for the season.

In 1879 the woodcock took their departure on Oct 23; 1880, Oct. 21; 1881, Oct. 10; 1882, Oct. 26; 1883, Oct. 23; 1884, Oct. 30; 1885, Oct. 12; 1886, Nov. 1; 1887, Oct. 25; 1888, Oct. 25. In 1887 there was a large flight of birds in the middle of October, in 1888, the present year, no flight at all.

We will suppose that the covert is a large one, and one hundred birds frequent this covert in the season, the sportsmen and those that are not sportsmen come and kill all but ten birds; these ten birds are lucky birds, nothing happening to them, and they get back safely the following year to the same covert. Five of these are males and the other five are females, each of these females lay four eggs, hatch them, and raise to maturity two young birds (I have never seen more than four birds in a clutch of woodcock, the two old birds and two young birds). The covert will have now twenty birds instead of the one hundred it had the year previous. I do not find it a very difficult matter to arrive at the reason for the decrease of our woodcock supply. Give them a two years' rest and Mr. and Mrs. Woodcock will answer the question themselves. H. B. N.

COOKSTOWN, Ontario.

Editor Forest and Stream:

Having read with interest the articles on the woodcock flight on your side of line, I give your readers what they have been doing here. Owing to the wet season the birds on the opening day, Aug. 15, were not on their usual grounds, wet bottoms, but in the open grounds and thickets near by. Birds were scarce until nearly October, when they were fairly plenty. From the 20th until Nov. 1 some good bags were made, but after that date have not heard of a bird being seen. C. B.

LONDON, Ont., Dec. 3.

DENVER, South Carolina.—Wing shooting in this section is confined to small game such as partridges, doves, larks, etc. In fact all game about here is small, partridges, quail and rabbits being the game most hunted, although squirrels and possums are tolerably plentiful in some localities. Some fine packs of foxhounds used to be kept for fox hunting, but they are gradually getting scarcer as the foxes disappear. Thanksgiving day was generally kept by sportsmen in the field. Early in the morning the bang bang of the shotgun, the deep baying of the foxhound (after rabbits though), the finer voice of the beagle, the yep yep of the mongrel cur and fice could be heard on every side. One party of bird hunters bagged fifty partridges that day.—BLUE RIDGE.

SWANSBORO, N. C.—Our woods abound with deer, quail, squirrels and other wild animals, while in our sounds and river are found ducks and other wildfowl in abundance.—C. B. F.

AFTER BLACKTAIL IN MONTANA.

OH, how cold it was, the morning Ed and I started after blacktail deer. Even the recollection is chilling; but we had been talking of and planning the trip for nearly a month, and now at last the day had come. We started from the ranch on the Upper Tongue on horseback, as we didn't propose to do any more walking than was necessary. So Cayuse Billy and Kid Dun had been driven up and stood at the rack saddled. Our costume should have scared all the deer out of Custer county, but it was warm and comfortable. Ed wore about three shirts, a buckskin vest, heavy ulster and Dutch socks, and carried a .45-70 Marlin. I wore heavy underclothing, a buckskin hunting shirt, Indian leggings, overcoat, and the inevitable felt boots with overshoes, while to secure game or scare it, as the case might be, I had a Winchester .40-82. We both used express bullets. After many sarcastic inquiries from Nat as to how many and what time he should send the wagons, and tearful entreaties from Johnny Z. to spare the fawns, pulled our freight up the Tongue, intending to go as far as Cañon Creek and make Dan Harris's winter shack our headquarters. *L'Homme propose, Dieu dispose.* We had hardly gotten to Frank Heman's when, meeting him, we were told that he had seen a small bunch of blacktail deer on the divide, between Bull and Cook creeks. Off we started, and had hardly reached the top of the divide when Ed spied the deer about half a mile directly in front of us, and on looking through his field glass he declared they were grazing our way. To turn around, withdraw to the nearest "coolie" and there picket our horses, was the work of a few minutes, and then carefully divesting ourselves of the heavy ulsters, rifle in hand, we crept cautiously forward to a point where, from behind some rocks, we could watch the deer. By this time they had approached to about 300yds. or so, and seemed uneasy; and as they did not seem to be coming any nearer, but rather about to move off at right angles to their former direction, Ed whispered to me to try a shot. So, adjusting the sight, I slowly raised the gun, resting it on the rock in front. Just as I was about to pull the trigger a most vicious kick from Ed nearly caused me to press it; lucky, indeed, I did not, for here coming up the other side was a buck and two does, not 50yds. away. The buck carried the handsomest horns I ever saw. To swing the rifle round, drop the sight and aim at his heart did not take me long; and as I heard the rifle crack, he gave one jump in the air, ran perhaps 20yds. and fell. The does meanwhile, apparently stupefied at what had happened, gazed around; but Ed let drive at the nearest and down she went, while the other bounded down the hill, apparently untouched by the bullets I sent after her. At any rate, there was no blood on her trail. I of course ran up to the buck I had killed, and plunging my knife as far down his neck as I could, bled him in true hunter style. Then I stood and looked at him as he lay there. I really felt as if I had done something wrong; even in death he was handsome. I could but feel glad that my bullet had gone directly through his heart, and probably he did not feel much pain. Then the task of skinning and cutting up was begun, and I carefully took off his entire head for a trophy. Ed meanwhile had finished his doe, which he had shot through the backbone. So, lighting a cigarette, I held a consultation as to our movements, and we determined to pull out for home. We had plenty of meat, and I didn't feel like shooting another deer, especially in mere wantonness. We led up the horses and packed the meat on them and started back. Arriving at the ranch about 4 P. M., the boys voted my antlers the handsomest and most symmetrical they had ever seen, and the expressions, "Well done, Tenderfoot," and "Bully for you, Doc," were very common.

Thus ended my first deer hunt in Montana, and when time comes to me I will try and tell of others I had and about a trip after elk in the Big Horns. R. H. W.

COVERS NEAR NEW YORK.

Editor Forest and Stream:

Gunning is not what it used to be along the New York and Northern R. R. In fact, it is not what it was last fall; last spring's blizzard having evidently killed off the birds. There being so many gunners nowadays, too, I don't think the birds will increase again so as to make good shooting, unless, indeed, the law rigidly protects them.

Wednesday, Nov. 28, I went on the evening train to Lake Mahopac, where I have always enjoyed good shooting previous to this fall. Thanksgiving morn I started out with two of the best hunters in that town, and in a long day's hunt we saw only four partridges, getting two. The next day we took a different direction. We killed a rabbit in the morning, and our dogs not finding any birds we supposed that would be our bag for the day. In the afternoon, while getting over a stone wall, we discovered fresh quail tracks; we counted seven in all. Our dogs followed them for half a mile before raising them. We got five, two getting away. My friends said they were the only covey of quail they know to be near the lake. They were both disgusted at the scarcity of game, as indeed were a number of sportsmen in that town with whom I talked. Several of them said they would be willing to put away their guns for three or four years if the law would rigidly protect all game during that time. If the native gunners are willing to aid the lawmakers, there is no reason why this should not be done.

Talking with the conductor of the train on my way back to the city he said it was surprising how few birds the sportsmen brought home with them this fall. In seasons past they nearly all had large bags, but this year they all complain of the scarcity of birds, the same being said of those who went far into Connecticut. B. L. L.

CENTRAL LAKE, Mich., Dec. 3.—Ruffed grouse have been very numerous here the past season. Ducks rather scarce. We have had but one tracking snow, which fell about 3in. deep on the morning of Nov. 16. Only a very few deer have been killed.—KELPIE.

A LARGE WOODCOCK.—Captain William Bingham, of Cold Spring Harbor, L. I., killed a woodcock on Friday, of last week, which weighed ten ounces.

PINE HILL, N. Y., Dec. 7.—Hunter Ennist shot a fine silver-gray fox near this village a day or two ago. Foxes of that species are rare in the Catskill Mountains.

BLACK RIVER FISH AND GAME PROTECTIVE ASSOCIATION.—Utica, N. Y., Dec. 10.—*Editor Forest and Stream:* A meeting of sportsmen interested in the better protection of fish and game in Oneida and Herkimer counties, and more especially in that portion of the North Woods embracing the headwaters of Black River, was held in the village of Holland Patent, Dec. 8, for the purpose of organization. The attendance was good and the plans of work proposed met the hearty approval of all. Simeon R. Fuller, of Holland Patent, a gentleman who has hunted and fished in the Adirondacks for forty-five years, was made chairman, and W. E. Wolcott, city editor of the Utica *Herald*, secretary. An organization was formed, to be known as the Black River Fish and Game Protective Association and the following officers chosen: President, Simeon R. Fuller, Holland Patent; Directors, E. A. Klock, Forestport; Friend Bristol, Remsen; Wm. P. Dodge, Prospect; F. C. Wolcott, Trenton; W. L. Fowler, Holland Patent; W. E. Wolcott, I. C. McIntosh, Utica. These officers will hold over until their successors are chosen at the annual meeting, which occurs on the second Thursday in January. The Board of Directors has the power of appointing a vice-president, secretary and treasurer. W. E. Wolcott was empowered to act as secretary and treasurer until the annual meeting. The president and board of directors were authorized to have the association incorporated. The association adjourned to meet at the same place Thursday, Jan. 10, 1889, at 2 P. M.—FORTSA.

DEATH OF ROBERT TRIMPER.—Albany, N. Y., Dec. 10.—*Editor Forest and Stream:* Robert Trimper, proprietor of the hotel at Kinderhook Lake, Niverville, Columbia county, died at his residence on Sunday evening, Dec. 9. "Uncle Bob's" place was a famous resort for anglers and pigeon shooters, and by the latter he was held in such high esteem that he was made an honorary member of the Elm Grove Gun Club of this city. Mr. Trimper was a kindly dispositioned old gentleman who will be sadly missed, and his death sincerely mourned by the sportsmen who frequented his hotel at the lake side.—H. B. DERBY.

ARREST OF HUNTERS IN INDIAN TERRITORY.—Topeka, Kan., Dec. 8.—About two weeks ago twenty of the leading business men of Coldwater went down into the Indian Territory on a hunting expedition. Word has been received here that the whole party has been captured near Camp Supply, and are now awaiting transportation to Wichita, where they will be held to answer the charge of trespassing in the Indian Territory. S. H. Neisewhonger of Avilla was one of the party, but managed to get away from the guards in the night and walked home, a distance of twenty-five miles.

BOZEMAN, MONTANA, Dec. 2.—A great many inquiries are being made as to the increase or decrease of large game in Montana. In reply I beg to say through the columns of FOREST AND STREAM that since the sale of game was prohibited by an act of the Legislature, two years ago, large game has become so plentiful that I have succeeded in finding elk and deer for all my hunting parties the first day out, and that under the present law and with the National Park as a feeder, Montana can reasonably expect to have an abundance of game for years to come.—IRA DODGE.

Camp-Fire Flickerings.

"That reminds me."

246.

WE have a worthy old scout named Jock McNally, a true sportsman with rod and gun, a strict member of the "auld Kirk" and always truthful and reliable as what follows will show:

He and his friend Geo. Morn were on the moor for a day's grouse shooting. They had bad luck and only secured three grouse between them. The following morning a friend met George with, "Well, what luck had Jock and you yesterday?"

"Oh, very fair; we killed six brace." And so they parted. Half an hour later the friend met Jock and congratulated him on his good luck.

"Who tell'd ye?"

"Oh, George told me."

"How many did he say we had?"

"He said ye had six brace, and I think it capital sport so late in the season."

"I'm sorry to say that George has tell'd ye a lee and I didna think he'd a done it. We only had sax bairds."

HARBOR GRACE, Newfoundland. B.

NEW CATALOGUES.

Von Lengerke & Detmold, 8 Murray street, New York, have just issued their catalogue for 1889. It is a handsome and profusely illustrated volume of 97 pages, and when compared with the one sent out by them six years ago, furnishes an excellent proof of the growth of their business. The cuts and descriptive matter convey much valuable information to intending purchasers of guns, fishing tackle, shooting suits, boots and shoes, athletic, base ball and bicycling goods, and a host of other things. A special feature is the addition of various rules for trap shooting, viz.: The Hurlingham, the National Gun Association, the Old and New Long Island and the Jersey City Heights rules. In view of the frequent demands for a compilation of these rules, this will make their catalogue doubly valuable and worth preserving.

Thos. H. Chubb, the fishing rod manufacturer of Post Mills, Vt., is also on deck with a new catalogue, the front cover of which depicts himself seated in his commodious office, answering his correspondence by means of dictation to a type-writer. Between the covers anglers will find illustrations and price lists of all kinds of angling paraphernalia, from rods, reels and flies, to rings, keepers and stoppers. Sent free on receipt of stamp.

STATE OF CALIFORNIA,
Adjutant General's Office,
Sacramento, Nov. 27, 1888.

The United States Cartridge Co., Lowell, Mass.:

GENTLEMEN—It affords me pleasure to inform you that the fifty thousand rounds of ball cartridges recently purchased from you through Messrs. Chas. Sonntag & Co., of San Francisco, were used in the annual target practice of the National Guard of this State. They gave perfect satisfaction, the powder was good, the balls of uniform weight, and the shells strong and suitable for reloading. The percentage made was higher than that made in the preceding year. Our most experienced officers have informed me that they were the best cartridges ever used here. Very respectfully, your obedient servant,

—*Adv.* (Signed) R. H. ORTON, Adjutant General.

Sea and River Fishing.

TARPON FISHING AT CEDAR KEYS.

"FIVE O'CLOCK, get up, Boss!" and we tumble out and into corduroys and flannels. "Hark! there she blows," for Capt. Joe Crevasse, the best pilot and most genial captain of the Florida coast, is punctual to a minute, and the music of the chime whistle of the Medea fills the air of an ideal morning. Hurry, for the tide serves, and we are off for a trip into the heart of the great cedar swamp of Florida, from which the wood for the pencils of the world comes, and we have had an invitation to accompany the agent. So with Winchesters, rods and cameras and with visions of 'gators, deer and tarpon dancing through our heads we bid adieu to Cedar Keys. The bay, lit with the blush of rose from the rising sun, was a sight to be long remembered, and our "A. P. F." (amateur photographic fiend) sighed that he could not reproduce the effect with his "detective." As we pass the reef thousands of snipe, pelicans and cormorants fill the air, and we give them a salute at long range from the rifles, more to make a noise and relieve the exuberance of our spirits than with any hope of success.

Swiftly we speed along, for the Medea shows eleven knots per hour, and presently we are on the great St. Martin's Reef, noted for its sponge fisheries, and as the water is like glass, we get a view of the sponge in its native state on the rocks below. After a few hours' run we enter the mouth of the river, where the agent leaves the yacht and where we are to enjoy the finest of fishing. As we slowly steam up the narrow channel, bounded on either side by bars black with birds, suddenly there is a gleam of silver, and sheer 15ft. in the air springs the noblest of the game fish of the Gulf—the tarpon. Rods and reels are at once brought out, and the praises of the different makers are sung as we slowly steam to the anchorage. The sea air has sharpened our appetites, and as the dusky Delmonico says "Terrapin ready, boss," we tumble into the cabin and do ample justice to his skill in his art. After a row up the river and a try at the black bass (of which we caught a fine string which boasted a 10-pounder) and many a look at 'gators, we turned in early to be ready for the work on the morrow. Our "photographic fiend" nearly drove us wild with the flash of the yacht's port light in our eyes, changing plates, discoursing on the beauties of his developer, etc., until we smothered him, camera, plates and all, under our blankets, after which we slept the sleep of the just.

Now, listen, ye disciples of Izaak Walton, to the tale I am about to unfold, and answer me, ye fishermen of Punta Rassa, if you can equal the record of this little river of the north coast. Having had no experience with tarpon, it was thought that large hooks were imperative, and so, armed with a good supply and plenty of bait, we rowed down the river to a small island, to try first the channel-bass or redfish, for the tide was not right for the big game. Almost on the instant the bait reached the bottom the good split-bamboo nearly doubled, and we found our time and skill fully occupied with a twenty-pounder. Two hours of this sport yielded to two rods forty-seven channel-bass, weight from 9¾ to 35lbs. each, and although the tide was right we hated to give it up for a try at tarpon. The baits were changed, however, and we are all expectation, for the noble game are showing themselves every minute. "Look out," sings the man in the bow, and as we look, up springs a monster twenty feet in the air, and we see the line in his mouth. A quick movement of his jaw, a gleam of silver, a splash, and the "king" is gone, and our friend reels in to find a broken hook, the shank only remaining. Fifteen times during the next two and a half hours was this scene enacted, with what heart aches and tension of nerves you may better imagine than I can describe. Hooks all gone, and by the time we reach the yacht for a fresh supply the tide is too late for fishing that day. A little later and our friend the agent returns with the genial Hon. H. T. Lykes, a true sportsman and the most successful "cedar man" of the coast, and a true type of the Southern gentleman. He gives a pressing invitation to supper, which we accept, much to the delight of the "A. P. F.," who is armed with enough Obrig flash powder to set the river afire.

Of our stay of a week in camp among the cedar men and deer, more anon, if you wish it. After ample justice was done to possum and taters, and to the music of the quaint songs of a couple of negro raftsmen, who beat time with their push-poles, we at length reach the Medea and turn in. At daylight the next morning we are aroused by a tremendous splash which throws water not only, but a scared darky cook, headlong into the cabin, and after a hearty breakfast, we vow vengeance on that fish, and armed with 5-0 Kirby Limericks we bid defiance to the "King." Steady, he is hooked this time, and the hook is well set, as he makes leap after leap, rising full twenty feet into the air, amid the shouts of the gang of raftsmen who have stopped the raft to see the struggle, we are treated to the grandest sport that ever falls to the lot of any fisherman. After a stubborn fight of an hour and forty-five minutes, and a run of nearly five miles, the "king" at last lies gasping beside the boat, which has been superbly handled by Sexton, the colored deck hand. The gaff is handled with skill by Capt Joe, and with a timber hitch of the painter around his tail, we lift in our first tarpon. Mutual congratulations are exchanged and a pipe smoked, and we are off for another, and we not only get him but his mate as well. Three tarpon, all taken with rod and reel in less than six hours, with a fifteen thread line and 5-0 hooks, weight, 128, 135 and 147½lbs., photographs of which, Mr. Editor, I send you with the compliments of the "A. P. F.," and if any of your readers are sceptical, they can see the big fish in the dining room of the Staten Island Athletic Club at West Brighton, Staten Island, a pleasant memento of the trip.

The run home was safely made, and after a visit through the great cedar yard and mill of which our friend is agent, and a sail on the crack yacht Nannie, of the Cedar Keys Field and Marine Club, and many other courtesies extended by its members, we bid adieu to the quaint city. If any sympathetic soul yearns for a like experience they will always find the latch string on the outside of the club house door, and the members, a jolly set of boys and keen sportsmen, ready to do all in their power to give them a good time, and the commodore ready to bait their hooks for tarpon.

LANCEWOOD.

TARPON CAUGHT AT CEDAR KEYS.

Note by the Commodore.—There has been no yellow fever in Cedar Keys this year, or in fact for fifteen preceding years. The place can be reached by steamship and rail direct at a cost of $50 the round trip. Come and see us, brother sportsmen.—LEWIS MORRIS, Com. C. K. F. and M. Club.

[The illustration is from a photograph furnished us by the Obrig Camera Company. The relative sizes of fish and man are correct, but the picture of the man is not to be taken as a portrait.]

Editor Forest and Stream:

Perhaps some of your readers who propose taking an early trip to Punta Rassa, nor St. James City, would like to know that the Mallory line of steamers leave New York every Saturday for Key West, arriving there on Wednesday. The Morgan line of steamers leave Key West for Punta Gorda on Wednesday, if on time. The steamer Alice Howard leaves Punta Gorda every Tuesday, Thursday and Saturday for Punta Rassa and St. James City.

W. H. WOOD.

DEC. 10, 1888.

"WHERE THE TROUT HIDE" is the enticing title of a *brochure* by Kit Clarke, soon to be published by the Brentanos. It will be illustrated by Matt Morgan and Frank Taylor, and something of the spirit of the text may be gathered from this neatly turned preface: "When Marc Antonio discovered his friend Raphael engaged upon the Sistine picture he exclaimed, '*Cospetto!* Another Madonna?' Raphael gravely replied, '*Amico Mio*, my friend, were all artists to paint her portrait forever, they could not exhaust her beauty.' The exclamation applies with full cogency to the valorous brook trout, than which God never created a more beautiful object."

CROPPIE FISHING.

Editor Forest and Stream:

The Louisiana (Mo.) Fishing Club, composed of Edward Glenn, captain, J. Will Gunn, Nebraska Kingston, John Glenn, Frank Buffum, Tom Rule, Joe Reid and Henry Kuhlman, extended an invitation to their St. Louis friends, John W. Gunn and Fielding Mansfield, to join them at their annual fishing camp on the Suy. The route was via Louisiana, thence across the Mississippi River and then by buggy eight miles down the river to the camp, which had been pitched the day previous. The route lay along the celebrated Suy levee, and the drive was slow and tedious, as the rains had made the bottom roads very soft. Finally the point was reached at which the camp wagon had turned from the road into the woods. There was nothing to indicate the turnout and the subsequent trail, execept the wheel tracks of a single wagon. For a distance of two miles this trail was followed, winding about between the trees and logs. As the land there was high and dry and covered with leaves the wheels left no marks in the ground, except in the occasional gullies and low places. To follow such an indistinct trail requires a good eye and experienced woodcraft. By keeping the eye fixed upon the ground at a point fifty or sixty feet ahead it is easy to distinguish where the leaves have been ruffed up by the horses and mashed down by the wheels, when by looking directly below at the ground it is impossible to determine where the leaves have been disturbed. After reaching the camp the teamster started back for Louisiana, but he "got turned around" in the woods and again turned up in camp, evidently much disgusted.

The location of Camp Glenn was all that could be desired, being in the woods on a high bank overlooking the Suy, which at this point is fully 300yds. wide. The Suy is a sheet of deep, clear and still water, about fifty miles long, at one time the bed of the Mississippi River. The

camp consisted of one large tent with comfortable sleeping accommodations for fifteen men, and a second but smaller tent, filled with commissary stores. Outside was the dining table constructed by the side of a large log, which served as a seat. The camp-fire for cooking was made by laying two green logs, about 4ft. long and 8 to 10in. thick, parallel to each other and about 12in. apart. The two logs are placed in the direction of the wind, and the fire is made of dry wood between them. In this way a camp-fire can be regulated almost as well as by means of a modern stove. The camp was pitched under the direction of Nebraska Kingston, who is a first-class boatman, an experienced fisherman, as well as a capital camp cook.

When the fishermen returned to camp, tired and hungry, Kingston pulled up the boat, secured the minnow buckets in the water and transferred the fish, mainly croppies, from the boat to the live-box, while the fishermen washed, and lighted their pipes. It was remarkable how complacently the smokers silently followed with their eyes every nimble step and handy move of Kingston, as he swung the coffee-pot over the fire, warmed the frying-pan and dropped in the fish and bacon. When the cheery voice sings out "Supper is ready," Henry Kuhlman treated his companions to an Indian war-whoop, which went singing out over the water until it struck the further shore, and the echo came floating back into the silence of the grand old forest. "Fall in," and Great Cæsar! how they did fall in with a vigorous attack upon the eatables, amid a silence only broken by "Pass the fish." Supper over, the entire party gathered around the camp-fire, and in the enjoyment of their pipes exchanged fishy stories until the time came to turn in to sleep. Such sleep can only be enjoyed in camp, in the sweet purity of nature hushed for the rest of man and beast.

With the break of day they began to crawl out and with hearty "good mornings;" around the glow of the fires, the camp was soon astir. Tackles were overhauled, boats put in order, breakfast over and pushed off for another day's sport. By sunrise the beautiful mottled croppies were drawn from the water, amid a silence which is only broken by "Ah, that is a fine one," followed by, "I lost that fish and I know that it weighed five pounds at least."

The catch consisted principally of croppies of an unusually large size, and a number of fish caught reflected considerable credit upon the skill of the entire party. A few days of this company out in the bracing air, with all cares and worry of business miles away, gave them a new lease upon life. After a promise to enjoy the hospitality of the same genial gentlemen next fall, the St. Louisans regretfully turned their faces homeward.

ST. LOUIS, Mo., Dec. 8. UNSER FRITZ.

EFFECT OF SAWDUST ON TROUT.

Editor Forest and Stream:

As regards the information your correspondent from Canada wishes on the effect of sawdust on anadromous fishes, what I know of the subject I will gladly contribute. I do not agree with your correspondent, nor Mr. Fred Mather, that sawdust is harmless, although some sawdust will kill fish quicker than others. Pine sawdust, for instance, when it gets into the gills, is almost sure to kill them, and the reason I give for its being so deadly is that the formation of it is different from spruce, or any other sawdust, being of a rather long thready shape, owing to the soft nature of the wood. Spruce, although a soft wood, is much harder than pine, and the sawdust from it is of a different formation, being nearer to a square in shape.

When spruce sawdust gets into the gills of a fish, it being of a harder and smaller nature than that of pine, the fish have some chance of getting clear of it; but when the pine sawdust gets there, it being of that soft, stringy nature, it lodges there and drowns the fish. That is one evil effect that sawdust has on fish. Another is, it undoubtedly kills the young by covering the spawning beds. And still another, as truthful if not more so than any of them, is the accumulation of sawdust in rivers and streams. It collects year after year, and of course rots, covering the once clear sandy or stony bottom with a mass of stench-emitting matters that drives the fish forever away from the place.

Any person who has had occasion to pole a boat or canoe across a river or stream where a mill has been in operation for some years, can testify to the truth of what I write.

After sawing pine in a mill I have gone along the stream and picked up dead trout, and upon examination found their gills to be full of pine sawdust, which without a doubt killed them. I can name several persons who have witnessed the same thing. SPORTSMAN.

KINGSTON, N. B.

SOME FUN IN SEINING FOR CARP.

Editor Forest and Stream:

Last summer while visiting my brother, on his stock farm, near Bonner Springs, Wyandotte county, Kansas, I became interested in seining for German carp in the farm fish pond. We caught a number, weighing from 3 to 12lbs. each. One rainy day, in company with a neighbor, Kempton and his man John, I started for Wolf Creek and set the net in its mouth, and then by wading through the mud, often so deep and slimy that we had to call for help to keep from going down altogether, we beat the fish before us for about a quarter of a mile into the net. The drive made, we swept the net around so as to scrape in as many as possible, and in this way secured a good quantity of catfish, suckers, buffalo, and a hideous creature, round and snaky, called a pike, which Kempton always stuck, head first, deep into the mud. At last, after a hard half-day's work, we attempted to clean the net by bringing it out from the Kaw or Kansas river's bank, for we were fishing where the Wolf Creek empties into the river. The creek bank was so muddy that in bringing the net out we would also bring a large amount of mud, and this we would avoid by coming out from the river. I stood "pivot" while John made the sweep. The moment he struck the river's current it swept the net about his feet, dragged him down, and in going to his help I was pulled under and was unable to get away. Finally, when about exhausted, we got clear of the net and got safely to shore, glad enough to be there and to lose our twenty-five-dollar net. TRAMP.

LYSANDER G. HILL.

Editor Forest and Stream:

Died, in Grand Rapids, Mich., on the 2d inst., Lysander G. Hill, of pleuro-pneumonia, aged sixty-five. Mr. Hill was the senior member of the firm of L. G. Hill & Co., dealers in fishing tackle and sporting goods. The deceased leaves a wife and one child, who is the wife of Clark D. Spalding, junior member of the firm.

Mr. Hill was modest, industrious, upright, honest and honorable in all his dealings, a model husband, kind parent, an accommodating neighbor and an agreeable companion. He was a mechanic of more than ordinary ability, the inventor and patentee of the well-known trolling spoon bearing his name; he could make an excellent rod, put up the best of snells or tie a taking fly with the most skilful.

He was one of those who liked to go afishing and was always willing to contribute his share toward making such trips a complete success in every respect. Genial, jolly, good-natured and fairly bubbling over with cheerful chat, pleasant stories and laughable reminiscences. Did one break a rod, the kind old man would mend it or pass out another. Was a line, reel, leader, hooks, swivel or sinker wanted from out of the depths of a capacious book, the old gentleman would fish another and hand it over free as air. He will be missed and kindly remembered by a large number, young and old, in this section for a long time. May your sleep be peaceful, tranquil and serene, old friend. May He "who tempers the wind to the shorn lamb" sustain, cheer and care for your immediate relatives in their hour of trouble is the sincere wish of one who has enjoyed your companionship around the camp-fire, under the tent, in the boat and on the tramp, and who will cherish its remembrance until he, too, makes the final cast. A. W.

A CHEAP ROD.—At a recent fly-casting tournament a young man asked us to look at a split-bamboo rod, which he had recently bought, and to give him an opinion of its casting qualities before he used it in a contest. We confess to have never seen such a rod before, nor one so worthless. It was a lank, slimsy affair, one that "Nessmuk" would describe as a "limber-go-shiftless," and the ferrules were marvels of looseness and seemed to be made of tin. On inquiry we found that he had bought it at a fancy goods bazaar and had paid six dollars for it. For the benefit of other young men who might incline to make a similar purchase we will repeat what we told the owner of this remarkable tool. We advised him to borrow a rod to cast with that day and to bury or burn his own, and that if he could not afford to buy a good split-bamboo to get a wooden rod, which would do him some service, for he had thrown his money away. Also that the place to buy good rods was in some reliable fishing tackle house and never in a fancy goods bazaar, for such a worthless piece of work we had never seen, and did not know anything like it was on the market. He took our advice kindly and said that as long as it was a "split-bamboo" he thought it must be all right. We afterward saw him examining the ferrules on some good rods and no doubt a great light dawned upon him.

BLACK BASS IN LAKE GEORGE.—Long Island, Lake George, Dec. 10.—*Editor Forest and Stream:* There have been so many catchers of bass that weighed six pounds, and ounces upward, that we were without a champion bass taker until Oct. 25, when that veteran sportsman George Pardo, "Mine host of the American House, Glens Falls," (and he is a host) caught a plump seven-pounder, weighed by Rosa Phelps, Minard Ward, War. Harris and others. The fish was caught not far from where the A. C. A. held forth the past summer; and, speaking of that event, what a jolly lot of fellows they were! A. C. A. stands for "Always Charming Always." Tell the boys, if they ever go to Lake George, to be sure to call on D. S. SANFORD.

CENTRAL LAKE, Mich., Dec. 1.—I intended making some investigations into the movements of the herrings, on their annual visit to our rivers, but they got the start of me, being first seen on the night of Oct. 31. Being Halloween it looks as if there might be something uncanny about the matter. No gulls accompany the shoal this year, which is unusual. Later: It is reported that an unusual number of gulls have lately appeared on the waters of the lakes below. This may mean that the herrings have been in motion thereabout, thus attracting the birds.—KELPIE.

CROPPIE, CRAPPIE OR CROPPY.—This fish, or these fishes, for there are two species called by these names, the *Pomoxys hexacanthus* and *P. annularis*, have several local names besides those given at the head of this paragraph. Norris spells it crappie, in the reports of the Illinois Fish Commission it becomes croppy, and a correspondent from St. Louis spells it croppie. It would be of interest to know the derivation of the name and thereby get at the correct spelling. We would like to hear from those who have a knowledge of this subject.

UNLAWFUL SMELT FISHING IN NEW BRUNSWICK.—St. John, N. B., Dec. 1.—The close season for smelts expired yesterday, but the fishing began some days ago. Several tons of smelts have been seized at the different railway stations, which were consigned to New York dealers. A few were seized at this place, and also at Fredericton and Bathurst, but the officers found the largest lots at the smaller stations.—S.

Fishculture.

TERRAPIN CULTURE.

Editor Forest and Stream:

Having been for the past four years interested and engaged in the propagation of the Chesapeake Bay diamond-back terrapin, it affords me much pleasure to contribute to your columns the results of said enterprise, and also any information that I have acquired as to the habits of the terrapin.

Being a native of Maryland, I have been familiar from childhood with this greatest and costliest of American delicacies; but it never occurred to me that it could be propagated until once, while on a ducking expedition on Mobile Bay in the winter of 1883, I happened to go ashore at a place called Cedar Point, located about thirty miles below the city of Mobile, and there saw the propagation of the terrapin in full operation. This terrapin farm belongs to a man named Dorlon, a brother, or uncle, of the Dorlons of Fulton Market, New York. He has had this propagating farm in operation some twelve or fifteen years. The terrapin that he raises are diamond-backs, but grow to a size considerably larger than those of the waters of Chesapeake Bay, which makes their meat coarser, tougher and more stringy than their Chesapeake brothers, and less delicate.

These Southern terrapin command only about one-fourth or one-third of the price per dozen for those of the Chesapeake Bay. I would here remark that the diamond-back terrapin is found as far South as Texas, and as far North as the waters of Long Island Sound. The further South, the coarser and larger they grow, and the less they are worth. Mr. Dorlon's pond is a small one, and is separated into three divisions, in one division are placed the young terrapin, say 4in. long on bottom shell; in the next division those running from 7 to 9in. on bottom shell. These are the ones from which he breeds and which he sends to market. He has a convenient sand bank in which they lay from 6 to 15 eggs to each female and deposit them in the sand in the night time during the month of June. They hatch during August and the small terrapin which are about as big as a twenty-five cent piece, immediately disappear in the mud, and remain there an indefinite time. Mr. Dorlon was uncertain about this, "thought they staid concealed about a year, but they might remain in the mud a much longer time up to several years." This is a most singular fact about these reptiles; in fact I have seen native fishermen on Chesapeake Bay, who stated that they remained in the mud until they were 3 to 5in. long on the bottom shell. The length of time it takes them to grow to 6 or 8in. long seems to be unknown, Mr. Dorlon had one in a glass jar which he had carefully fed from the time it was hatched, and at the expiration of three years it was about 4½in. long.

After carefully examining this breeding place I became satisfied that they could be propagated on the Chesapeake Bay, and about a year later I selected a large pond or inlet, located in Talbot county, Maryland, on a farm belonging to my kinsman, M. T. Goldsborough, Esq., and situated on the Chesapeake Bay, about six miles from Easton, Md. This pond is about one and one-half acres in extent, and has an inlet through which the tide freely flows. Its bottom is muddy and it has a sandbar on one side, which is used by the diamond backs to lay their eggs in. There is also a small stream of fresh water which empties into the pond. We inclosed the whole with a stout board fence, and included in the inclosure about one-quarter of an acre of upland. We found by experience that fresh water is a necessity to the terrapin; they cannot live without it, and the lack of it was probably the cause of the failure of the enterprises which you have already described in your columns. When all was ready in May, 1885, we placed about a thousand terrapin in the pond, males and females; of these about 200 were laying terrapin. We fed them almost entirely on hard shell crabs, of which there is an abundance in the bay. Our man in charge catches about 2,000 crabs weekly and grinds them up in an ordinary feed cutter. This machine is located on a wooden platform alongside of the pond, and the moment it is heard in operation the terrapin appear in all directions, flocking to it, and seizing their food like chickens in a barnyard; in fact, they have become so tame that they readily come to the call of the keeper. We find that they come out of the mud the last of April and early in May, and immediately begin feeding and feed all summer. They bed themselves in the mud about the time of the first frost in October, and remain bedded all winter. They become very voracious just before bedding time, and of course get very fat and in fine condition for their winter's nap. It may be well to say, of course, that they eat nothing from the time they bed themselves in the mud until the following spring.

And now about their growth. I am sorry to say we have gained little information on this item. The second year, and in fact in September of the first year, we discovered numerous young terrapin of that year's hatching. We rarely or never found them swimming around the pond with the larger terrapin; they were always found hidden under a bunch of grass or under an old board, but hidden always. I took one, and placing it in an aquarium carefully fed it all summer and it gained ¾in. on the bottom shell, being about 1½in. the first year. I am sorry to say that it died, and my belief is that its death was caused by its being subjected to the light, for I experimented with a second one, and by keeping it in a dark place all winter it emerged from the mud all right in the spring. Further experiments have demonstrated the fact that terrapin will live in a dark place all winter, but if exposed to the light will certainly die. This is but as nature made it, for when they bed themselves they seek a deep and dark hole in the mud in the river's bottom. We have dragged the pond for three successive autumns, and after carefully weighing and measuring all the terrapin have found that their growth is extremely slow, not to exceed ¼in. in length per year for the larger ones, though those that go from 3 to 5in. on the bottom shell make perhaps ¾ to 1¼in. per annum. It is our belief that it takes from ten to twenty years for a terrapin to grow to be the commercial size known as "counters," which the market requires to be not less than 6½in. on the bottom shell. The Chesapeake Bay diamond-backs rarely exceed 8in. on bottom shell, and a terrapin of that size must be at least thirty to forty years old.

We found that the natives had attempted to keep them in pens a few feet square, but when penned up in this manner they are constantly scrambling and struggling to escape, which causes them to wear the ends of their claws off, and frequently to wear the skin off their feet. These struggles cause them to become very poor and worthless, and a penned terrapin can be detected instantly by examining its feet, and it is not wanted in the New York or Baltimore market. Our own ponds being large with an abundance of deep water, this trouble is avoided; for the terrapin are as perfectly at home as if at large in the waters of the Bay. They seem perfectly contented and make no effort to escape, and therefore their claws or feet are never worn away or injured. In addition to the crab food we occasionally give them a few fish, and there is plenty of grass in the pond, but they seem to thrive best on crabs, which we believe is their natural food, though we have been informed that when wild they feed upon snails, worms and other small aquatic inhabitants. There is a terrapin pond located in the suburbs of Atlantic City, or it was there some four or five years ago, owned by a gentleman whose name I think is Gardner. He has made a closer study of the habits of this animal than we have been able to make, and if any further information is desired he can doubtless supply it.

It is asserted that terrapin are rapidly becoming extinct, but statistics will show that about the same quantity is caught and marketed to-day, as has been for every year for many years past. The terrapin that reach the markets are generally caught by the fishermen early in October, just before they disappear in the mud, and are held until marketed early in November or December. But there are certain favored spots located in the bottoms of the creeks along the Chesapeake Bay, which are known as "terrapin beds," for every year a certain number of the diamond-backs seem to go there in preference to other spots, and bed themselves for the winter. It is thought that this is caused by warm springs of water issuing from the bottom, which attracts them. At any rate these beds have a regular value, for they are certain to produce several dozen terrapin every year. This is all I know about the terrapin. ROBT. C. LOWRY.

NEW YORK, Dec. 8.

SALMON CULTURE.

THE United States Fish Commission has been making experiments with salmon at Orland, Me., in keeping them a year before planting them, and this year released nearly 100,000 yearlings in the Penobscot River, in addition to the usual amount of fry. Col. McDonald thinks favorably of this plan, and proposes to enlarge the works at Orland in order to keep more of the fry to turn out at a year or more old. The Maine Commissioners have obtained many salmon eggs from the United States, and will place a portion of the fry in the Kennebec River, which has all the qualities of a salmon stream, but over-fishing has depleted it. No doubt the Kennebec can be again replenished with salmon, but it takes time and money to accomplish it. Other rivers of the northern Atlantic coast will also receive plants of salmon, the southernmost being the Hudson. In this river the results are very encouraging, and it is understood that a complete report of the work done and of the catches made will soon appear.

In Canada a fair crop of eggs has been gathered, fully up to the average of the past few years, and the hatcheries are giving promise of a good number of fry for the spring planting. At the Fraser River hatchery Mr. Mowat breeds both the quinnat and the suckeye salmons of the Pacific coast, but the Atlantic species is the only one hatched at the other stations. The United States has two hatcheries on the Pacific coast, one at Clackamas, Oregon, and one at Baird, California. Both are doing well and have a good supply of eggs.

The Kennel.

FIXTURES.

DOG SHOWS.

Dec. 3 to 8.—Dog Show of the Northern Illinois Poultry and Pet Stock Association, at Rockford, Ill. A. H. Currier, Secretary.

Jan. 1 to 4.—Fourth Dog Show of the Meriden Poultry Association. Joshua Shute, Secretary, No. 430 Pratt street, Meriden, Conn.

Jan. 15 to 19, 1889.—Seventh Annual Dog Show of the Southern Massachusetts Poultry Association, at New Bedford, Mass. F. W. Dean, Secretary.

January, last week.—Western Pennsylvania Poultry Society's Fourteenth Annual Show, Pittsburgh, Pa. C. B. Elben, Sec'y.

Feb. 5 to 8, 1889.—First Annual Dog Show of the Columbus Fanciers' Club at Columbus O. Thos. R. Sparrow, Secretary.

Feb. 7 to 12.—First Annual Show of the Hudson River Poultry, Dog and Pet Stock Association, at Newburgh, N.Y. J. H. Drevenstedt, Secretary, Washingtonville, N. Y.

Feb. 12 to 15, 1889.—Fifth Dog Show of the New Jersey Kennel Club, at Jersey City, N. J. Geo. L. Wilms, Secretary, 142 Monticello avenue, Jersey City, N. J.

Feb. 19 to 22, 1889.—Thirteenth Annual Show of the Westminster Kennel Club, New York. James Mortimer, Superintendent.

Feb. 26 to March 1, 1889.—Second Annual Show of the Rensselaer Kennel Club, Troy, N. Y. Alba M. Ide, Secretary.

March 5 to 8, 1889.—Second Annual Dog Show of the Albany Kennel Club, at Albany, N. Y. Geo. B. Gallup, Secretary.

March 12 to 15, 1889.—Second Annual Show of the Fort Schuyler Kennel Club, Utica, N. Y. James W. Dunlop, President.

March 19 to 22, 1889.—First Annual Dog Show of the Maryland Kennel Club, at Baltimore, Md. W. S. Diffenderffer, Secretary.

March 26 to 29, 1889.—First Annual Dog Show of the Massachusetts Kennel Club, at Lynn, Mass. D. A. Williams, Secretary.

April 2 to 5, 1889.—First Annual Show of the Rochester Kennel Club, at Rochester, N. Y. Harry Yates, Secretary.

April 2 to 5, 1889.—Annual Show of the New England Kennel Club, Boston, Mass. J. W. Newman, Secretary, No. 6 Hamilton Place.

April 9 to 12.—First Dog Show of the Worcester Kennel Club, at Worcester, Mass. Edward W. Doyle, Secretary.

April 9 to 12, 1889.—First Annual Dog Show of the Masconutah Kennel Club, at Chicago, Ill. John L. Lincoln, Jr., Secretary.

April 16 to 19, 1889.—The Seventh Dog Show of the Philadelphia Kennel Club, at Philadelphia, Pa. Wm. C. Child, Secretary.

May 22 to 25.—Pacific Kennel Club Show, San Francisco, Cal.

FIELD TRIALS.

Dec. 10.—Second Annual Field Trials of the American Field Trials Club, at West Point, Miss. C. W. Paris, Secretary, Cincinnati, O.

Jan. 14, 1889.—Sixth Annual Field Trials of the Pacific Coast Field Trial Club, at Bakersfield, Cal. N. P. Sheldon, Secretary, 320 Sansome street San Francisco, Cal.

A. K. R.—SPECIAL NOTICE.

THE AMERICAN KENNEL REGISTER, for the registration of pedigrees, etc. (with prize lists of all shows and trials), is published every month. Entries close on the 1st. Should be in early. Entry blanks sent on receipt of stamped and addressed envelope. Registration fee (50 cents) must accompany each entry. No entries inserted unless paid in advance. Yearly subscription $1.50. Address "American Kennel Register," P. O. Box 2832, New York. Number of entries already printed **6776.**

THE SOUTHERN FIELD TRIALS.

THE DERBY.

THE trials began on Monday, Dec. 3, at Amory, Miss., a small town containing about one thousand inhabitants, situated 121 miles west of Birmingham, Ala., and 130 miles east of Memphis, on the Kansas City, Memphis & Birmingham R. R., and is the junction of the Aberdeen branch. The town is only a year old, hence has an unfinished appearance. The surrounding country is very favorable for field trial work, being level in its general aspect. The large plantations were divided into corn and cotton fields, with sedge fields, pine woods and thickets intervening here and there, affording ample cover for the birds. The weather was mild and pleasant. The birds were not evenly distributed, their haunts being near the thickets. With few exceptions, they went to cover at the first flight. Sometimes there would be an abundance of birds found, at other times there would be long searches before finding. The quality of work in the Derby was very good considered as a whole; considered in particular, it was of a mixed character, some of it excellent and some not above mediocrity. A great deal of enthusiasm was manifested by the management. The time limit was enforced in this stake, and the sentiment appeared to coincide with that developed at High Point, that is a fixed time under which a brace could not be ordered up, but no further restrictions. When heats were ended, a signal was sounded on a foxhorn, thus informing those who were to run next that they were wanted for the start. This innovation could be profitably adopted by other clubs, as it would avoid many wearisome delays in sending messengers when the wagons are left some distance to the rear. The rules were found to have some flaws, but these can be easily avoided.

The interest in the trials was well sustained, the spectators following each day with undiminished attention. Among those present were J. Shelly Hudson and Mr. Snedburg, Covington, Ky.; Capt. C. E. McMurdo, Charlotteville, Va.; T. M. Brumby, Marietta, Ga.; S. G. Porter, Chattanooga, Tenn.; W. McAffee and A. J. Warmpler, St. Paul, Minn.; W. R. Holliday and B. T. Holliday, Aberdeen, Miss.; W. H. Joyner, Memphis, Tenn.; H. A. Renfroe, Cole City, Ga.; F. F. Myles and P. H. Bryson, Memphis, Tenn.; F. J. Waddell, Chattanooga, Tenn.; Col. James Gordon, Pontotoc, Miss.; R. Pitts, Cherry Creek, Miss.; R. L. McCook, Red Bank, N. J.; F. I. Stone, Chattanooga, Tenn.; Whyte Bedford, Memphis, Tenn.; Col. W. C. Sherrod, Florence, Ala.; T. L. Sargent, Olive Branch, Miss.; T. H. Poindexter, Stanton, Tenn.; Major J. W. Renfroe, Atlanta, Ga.; J. L. Anthony, Netherwood, N. J.; and several more whose names your correspondent cannot recall to mind. The judging gave satisfaction and was well done on the whole. The judges were Dr. R. I. Hampton, Athens, Ga., and Messrs. H. B. Duryea, New York, and T. L. Martin, Lexington, Ky. Professor W. W. Legaré, Marietta, Ga., judged on Monday forenoon, Mr. Martin not arriving until afternoon. The dogs were drawn to run as follows:

CAPTAIN BETHEL (J. M. Foster), black, white and tan dog (Gordon—Blanch), January,
against
LINDO (S. L. Boggs), black, white and tan dog (Gladstone—Flounce), January.

YAZOO (Whyte Bedford), black and white dog (Bob Gates—Hustling Hannah), January,
against
COUNT PIEDMONT (Edward Dexter), black, white and tan dog (Count Noble—Belle of Piedmont), Aug. 9.

FASHION (J. F. Hart), black, white and tan bitch (Count Noble—Lit), June,
against
DUKE OF MAINE (H. F. Farnham), liver and white dog (Beppo III.—May F.), June.

DIMPLE (Fred Myles), black, white and tan bitch (Gordon—Blanch), January,
against
KESWICK'S DAN (J. R. Dougherty), liver and white dog (Osborn Ale—Keswick II.), May.

TUBEROSE (W. E. Venable), black, white and tan bitch (Count Noble—Lit), June,
against
BOB'S BOY (C. L. Stewart), black and white dog (Bob Gates—Hustling Hannah), January.

HOPE'S LASS (J. O'H. Denny), black, white and tan bitch (Gath's Hope—Lady May), July,
against
OLIVER TWIST (B. F. Wilson), black and white dog (Count Noble—Fannie W.), January.

MILDRED (Edward Dexter), lemon and white bitch (Dashing Rover—Muriel), Feb. 25,
against
FELIX M. (G. Knapp), lemon and white dog (Gath's Hope—Daisy F.), April.

FLORENCE GLADSTONE (J. I. Case, Jr.), black and white bitch (Gladstone—Florence), January,
against
SANCHO (John A. Greenleaf), liver and white dog (Beppo III.—May F.), June.

BASS (C. E. Michel), liver and white dog (Osborn Ale—Keswick II.), May,
against
GLAMORIGAN (L. A. Biddle), liver and white dog (Robert le Diable—Tuck), June.

THE CORSAIR (B. M. Stephenson), black, white and tan dog (Don Gladstone—Haidee),
against
MILLIE GATES (C. R. Jones), black and white bitch (Bob Gates—Hustling Hannah), January.

BLOOMO II. (Jas. L. Anthony), liver and white bitch (Lad of Bow—Bloom), March, *a bye.*

CAPTAIN BETHEL AND LINDO.

They were started at 8:26 about one mile north of town, in a large open field. The weather was mild and cloudy; the temperature was about right for work. There were indications of rain, and toward night a light drizzle set in. R. P. McCargo handled Captain Bethel; C. Tucker handled Lindo. The heat was rather inferior in merit, both dogs making errors in pointing false and flushing. Each backed well and was steady to shot. Captain Bethel had a great advantage in speed, range and style and work on birds, Lindo not getting a point. Down 45m. Captain Bethel won.

COUNT PIEDMONT AND YAZOO.

Captain McMurmo handled Count Piedmont; R. P. McCargo handled Yazoo. They were cast off at 9:20 in an open field. Count's execution on birds was decidedly superior in quickness, accuracy and staunchness. Yazoo was not steady on his points or backs, and broke in occasionally. At the end of 30m. Count Piedmont won easily. The range of either was not wide.

FASHION AND DUKE OF MAINE.

Fashion was handled by S. L. Porter; Duke of Maine by H. M. Short. The heat began at 9:52, and was a very tame one throughout, the pace being slow and the range limited, although both were in favor of the setter. While being led through a cornfield, the presiding judge not considering the ground sufficiently promising, a bevy was flushed by one of the horsemen. Why the dogs should be ordered up for such a reason in such short heats is difficult to account for, as it does not tend to establish the relative endurance, in such short heats, even in a limited degree. On birds, the pointer showed the better performance and this determined the heat in his favor. Down 1h., and they covered less ground in that time than could well be done again.

DIMPLE AND KESWICK'S DAN.

Dimple was handled by R. P. McCargo; Keswick's Dan by N. B. Nesbitt. The heat began at 10:55. Both dogs showed good pointing capabilities on birds, Dimple being quicker in execution but not always accurately pointing, and she flushed more times than were admissible in good work. Both backed well. They were steady to shot and wing. The presiding judge, toward the last of the heat, had ordered up the dogs to be led, the grounds not being sufficiently promising for birds; they were good enough however to determine a dog's judgment in hunting his ground and pace and range. While the dogs were up, a bevy was seen a few yards ahead on the road as the dogs were led along. The dogs were cast off on it, the bevy flushed, was shot at and the puppies were steady notwithstanding the great temptation to chase. Dimple had an advantage in speed, range and style, and won. Down 1h. 15m. Dan's work was the best pointer work in the stake.

TUBEROSE AND BOB'S BOY.

S. L. Porter handled Tuberose; C. L. Stewart handled Bob's Boy. The heat began at 12:26. This heat was inferior in the grade of work displayed in every particular. Several flushes were made which were not excusable; in fact, both showed inferior noses. They backed well and were steady to shot and wing. Their range was narrow. Tuberose won. Down 45m. The party then went to lunch.

OLIVER TWIST AND HOPE'S LASS.

Oliver Twist was handled by C. Tucker; D. E. Rose handled Hope's Lass. The heat began at 2:00, and was by far the best one of the day. Mr. T. L. Martin, the regular judge, having arrived, he began judging with this heat. Prof. Legaré judged during the forenoon. The heat of 30m. was nearly all on birds. Oliver showed great quickness and precision in pointing, and superior ability in finding. In the beginning of the heat Oliver pointed; Lass refused to back, drew past him, flushed and broke in. Both were steady to shot. Oliver won. He had better style on point and ranged with better judgment. There was not much difference in speed.

FELIX M. AND MILDRED.

D. E. Rose handled Felix M.; Capt. McMurdo handled Mildred. They were cast off at 2:44. The heat was a long one, lasting 1h. and 1m. A great deal of ground was worked over, and but few birds found. Felix false-pointed several times. They ranged well and showed good speed, Felix the better; style about equal. Mildred pointed well. They were steady to shot and wing. Felix won.

FLORENCE GLADSTONE AND SANCHO.

Charles Barker handled Florence; H. M. Short handled Sancho. The pointer was slow in speed and narrow in range. Both backed well. Sancho pointed a bevy and Florence pointed twice on single birds. They were steady to shot. Florence had great speed, style and range. The beat began at 4:04 and lasted 45m. It was resumed the next morning at 8:00. The morning was very favorable, mild, a little foggy, but it cleared up as the sun rose higher. A start was made about a half mile from town. Florence opened the work by pointing a bevy in heavy sedge; the birds flushed wild. On the scattered birds Florence roaded nicely across wind to a point; as she drew carefully along, the birds flushed wild ahead of her. While following the birds Florence, going down wind, wheeled instantly to a point on a single bird. At the end of 30m. Florence won. She had better speed, style, and slightly better range, although she did not work her ground with good judgment, not staying out at work as she should.

GLAMORIGAN AND BASS.

The heat began at 8:47 in an open weed field. D. E. Rose handled Glamorigan, N. B. Nesbitt handled Bass. The heat was a close one both in quality and quantity of the work. The handlers flushed a bevy in the open weed field. In sedge in pine woods each made several points on singles and each drew closer on the birds than was correct for good work. Glamorigan backed with greater promptness and trueness, although Bass backed well. Bass flushed once or twice, while Glamorigan showed a disposition to potter at times. They were steady to shot and wing. Glamorigan had the better range and slightly better pace. Both were well trained. Glamorigan won. Down 30m.

THE CORSAIR AND MILLIE GATES.

The Corsair was handled by B. M. Stephenson, Millie Gates by R. P. McCargo. The heat began at 9:04. So far as work on birds is concerned it was a very poor exhibition. Millie began by running willfully through a bevy in the open sedge and displayed some anxiety as to whether she had done it thoroughly. On the scattered birds she flushed repeatedly and was only steady to order. Neither worked the ground intelligently or stayed out at work in proper form. The Corsair won by the demerits of his competitor. Down 30m.

Bloomo II. had a bye. The first series resulted as follows:
Captain Bethel beat Lindo.
Count Piedmont beat Yazoo.
Duke of Maine beat Fashion.
Dimple beat Keswick's Dan.
Tuberose beat Bob's Bob.
Oliver Twist beat Hope's Lass.
Felix M. beat Mildred.
Florence Gladstone beat Sancho.
Glamorigan beat Bass.
The Corsair beat Millie Gates.
Bloomo II. a bye.

Second Series.

BLOOMO II. AND COUNT BETHEL.

Bloomo was handled by B. M. Stephenson. She whipped out and in to her handler in her ranging after running a few minutes. While she went very fast at first, she was not hunting; she was merely racing about without any idea of birds, yet she pointed well when she happened to run across any. She watched her competitor and was not independent. Count had a decided advantage in conducting his range more intelligently, maintaining a fast, uniform rate of speed, and staying out at his work. Bloomo flushed some birds which she should have pointed, and once refused to back, and drew by the pointing dog and flushed. She was not steady to wing or shot at all times. Count also was unsteady, and once wilfully flushed a bird and sprang at it in the air. His errors in flushing were wilful, for he showed good scenting powers. Bloomo false-pointed soon after the heat began, and had more flushes than Count. Both were disobedient; Count was prompter and steadier in backing, and had better style. It was an uneven heat in work done, with the lesser merit decidedly on the side of the pointer. Down 45m. Bloomo II. won.

COUNT PIEDMONT AND DUKE OF MAINE.

The heat began at 10:57. Duke began by flushing a bevy in sedge in some sassafras bushes. The birds went into bad cover. Duke pointed, made two points on single birds. The cover was so thick it was abandoned; the dogs were sent on to find another bevy. After going a short distance Duke flushed a bevy while going down wind, and the birds went to very thick cover. Count pointed a bevy well and was steady to shot. The pointer showed superior capabilities in roading slowly and pottering in thick cover. Both were steady to shot. Count had a decided advantage in range, more uniform speed, better style, and showed superior work on birds. He won. Down 46m.

DIMPLE AND TUBEROSE.

At 12:02 they were cast off. Dimple was feeling in excellent spirits and ranged merrily and with judgment. The temperature was quite warm. Tuberose was outclassed in every quality, and made some wilful errors, which made her score lower than was necessary. Dimple was better in range, speed, style and execution on birds. She won with something to spare in 45m.

OLIVER TWIST AND FELIX M.

They were cast off in the open field after lunch, at 1:20. This proved to be the sensational heat of the stake. The work on birds began early in the heat and was continued to the end. Oliver began in great form and sustained his high performance throughout. He went to his birds quickly, with precision and rare judgment, pointing in fine style and backing with equal grace and certainty; in short, all his work was done with accuracy and elegance. Felix did well in pointing, backing, ranging, and showed good style, but he was outclassed. In any of the other heats his work would not have been overshadowed. It was one of those heats which a dog can run only when birds, grounds and highest capabilities are in proper combination. His work in this heat far exceeded his performances at the Eastern Trials. At the end of 30m. Oliver Twist won.

FLORENCE GLADSTONE AND GLAMORIGAN.

The heat began at 2:00. It was a very close one in the quality and quantity of work done, the former being inferior and the latter meager considering the opportunities. Many flushes were made. The grade of work throughout was not of a high order, notwithstanding there were many opportunities. Florence was superior in speed and style; she carries too low a head for gracefulness. Her range was irregular, whipping out and in, and it was not conducted with the best judgment. On the whole it was a close heat, with a very narrow margin in favor of the setter. Down 1h. The Corsair had a bye in this series. The summary was:
Bloomo II. beat Captain Bethel.
Count Piedmont beat Duke of Maine.
Dimple beat Tuberose.
Oliver Twist beat Felix M.
Florence Gladstone beat Glamorigan.
The Corsair a bye.

Third Series.

DIMPLE AND BLOOMO II.

The heat began at 4:11 in a cornfield. Dimple started off with great dash, ranging wide, fast and with judgment. Bloomo was chiefly engaged in trying to keep up with Dimple and running back to her handler. It was a very one-sided heat from the start. Bloomo pointed very prettily and was well backed; nothing to the point. Dimple roaded a bevy just inside of the woods, located and pointed it, dropping to her point. She was steady to wing. Dimple pointed one of the scattered birds in a fallen pine treetop. Moved on and each secured a point on separate birds. Next Dimple pointed a bird, Bloomo backed for a moment, broke the back and stole the point. Sent on, Bloomo merely followed Dimple about and showed no independence or self-reliance. They were sent on to find another bevy. Dimple pointed just up wind of the bevy. The handler abandoned the search to the point after failing to find, thinking it false. After they had gone a few yards the birds were seen on the ground in cover by a horseman. The dogs were brought around again. Dimple pointed the bevy nicely. Both were steady to shot. On the scattered birds Dimple secured another point. The 30m. were up and Dimple won with much to spare.

OLIVER TWIST AND FLORENCE GLADSTONE.

They were started Wednesday at 8:22 in a cornfield. The weather was clear and mild. A gentle wind blew at times. Oliver showed better range, hunting his ground more intelligently. His work was not of as high character as on the previous day, not being as prompt and accurate. He made a false point in the beginning of the heat. Both were steady to shot. Florence made some bad flushes on bevies, and her work on single birds was not equal to that of Oliver. Both were steady to shot and wing. On point and back Oliver had the better style; in motion, Florence was superior. Down 45m. Oliver won. The running in this series was as follows:

Count Piedmont beat The Corsair.
Dimple beat Bloomo II.
Oliver Twist beat Florence Gladstone.

Fourth Series.

DIMPLE AND COUNT PIEDMONT.

At 9:34 the heat began. Count Piedmont's style and pace did not contrast favorably with that of Dimple. He had a long, slow stride, and did not gather quickly; yet he worked diligently. Dimple ranged merrily and intelligently. Her style in going was superior; on point she had a slight advantage. Count did very correct work, pointing accurately without errors, but he was far behind in quantity and dashing performance. Dimple won easily in 45m. Oliver Twist had the bye in this series.

Dimple beat Count Piedmont.
Oliver Twist a bye.

Final Heat for First Place.

DIMPLE AND OLIVER TWIST.

An interval of twenty minutes was allowed to give Dimple a rest. It coming to the knowledge of Mr. F. F. Miles, the owner of Dimple, that Oliver Twist had not run a side heat as the rules required, he entered a protest against running at that time. The judges did not require Oliver Twist to run at that time, their intention being to establish fairness. Oliver had already run one heat, and if he ran while Dimple was resting he would then have run two heats, and the final for first would make three. On the other hand he was resting, while Dimple was running in a warm part of the day. Under the circumstances it was impossible to establish equality of conditions. The letter of the rule stated specifically that the bye must run a side heat in his series, hence the protest was well taken under the rules. It was agreed that the running in the Derby be postponed until after lunch, thereby giving the dogs a chance to rest. Thereupon the protest was withdrawn. In the interval the All-Aged Setter Stake was begun. At 1:20 they were started in an open field. They began with dash and spirit, Dimple the more spirited and stylish in motion. Each made a false point and a point on a rabbit. The atmosphere was warm and there was only a faint breeze at times. Dimple found two bevies, making a bad error on one—pointing it, then jumping in and flushing. She, however, redeemed herself on the single birds, pointing them accurately and quickly. During the latter part of the heat Oliver showed signs of distress, he being hot and tired, while Dimple went on with her work as lightly and cheerfully as in the beginning of the heat. Oliver had a slight advantage in style on point; in all other qualities Dimple excelled, considering the heat as a whole. It was a good heat, Dimple ending with some skilful work on single birds. She won. Down 1h. 30m. The running for second was postponed till the next day, Thursday.

Ties for Second Place.

OLIVER TWIST AND COUNT PIEDMONT.

The heat began at 8:49. Count Piedmont was selected as the best dog previously beaten by Dimple. He made an interesting race for Oliver and the latter did not have a very wide margin when he won at the expiration of 45m. Count maintained a more uniform pace and his work was of a more uniform quality. He was running better than he had at any time during the trials. Oliver's work was of a superior character and his style better although the heat was light in the quantity of work done.

Third was awarded to Count Piedmont without further running. Summary:

First Series.

Captain Bethel beat Lindo.
Count Piedmont beat Yazoo.
Duke of Maine beat Fashion.
Dimple beat Keswick's Dan.
Tuberose beat Bob's Boy.
Oliver Twist beat Hope's Lass.
Felix M. beat Mildred.
Florence Gladstone beat Sancho.
Glamorigan beat Bass.
The Corsair beat Millie Gates.
Bloomo II. a bye.

Second Series.

Bloomo II. beat Captain Bethel.
Count Piedmont beat Duke of Maine.
Dimple beat Tuberose.
Oliver Twist beat Felix M.
Florence Gladstone beat Glamorigan.
The Corsair a bye.

Third Series.

Count Piedmont beat The Corsair.
Dimple beat Bloomo II.
Oliver Twist beat Florence Gladstone.

Fourth Series.

Dimple beat Count Piedmont.
Oliver Twist a bye.

Final for First Place.

Dimple beat Oliver Twist and won first prize.

Ties for Second Place.

Oliver Twist beat Count Piedmont and won second place.
Count Piedmont was placed third.

THE ALL-AGED SETTER STAKE.

The All-Aged Setter Stake had eighteen starters. The quality of the dogs and work was very good. The grounds, being open, gave an opportunity for full display of range and speed. The weather, being warm after early morning, was an element in testing a dog's endurance. The judges were Prof. W. Legaré, Marietta, Ga.; H. B. Duryea, New York, and T. L. Martin, Lexington, Ky. The judging on the whole was excellent. The interest continued unabated to the end. Following is the order in which they were drawn to run:

DASHING LADY (W. H. Colquitt), black, white and tan bitch (Dashing Rover—Trinket,

against

PET GLADSTONE (West Tennessee Kennels), black, white and tan bitch (Gladstone—Sue).

BOHEMIAN GIRL (W. G. Mellier), black and white bitch (Count Noble—Mollie Belton),

against

LADY C. (West Tennessee Kennels), black, white and tan bitch (Coleman's London—Belle of Hatchie).

MAY QUEEN (F. F. Myles), black and white bitch (Dan J. —Lady May),

against

LASS O'BUCK (Olive Branch Kennels), black, white and tan bitch (Buckellew—Ida).

BOB H. (A. J. Crovat), black and white dog (Count Noble —Belle Boyce),

against

DIMPLE (F. F. Myles), black, white and tan bitch (Gordon —Blanch).

KING'S MARK (J. I. Case, Jr.), black and white dog (King Noble—Belle Belton),

against

BANG BRADLAUGH (Olive Branch Kennels), lemon and white dog (Buckellew—Jolly Daisy).

BRANDON (J. O'H. Denny), lemon and white dog (Royal Rock—Lewis's Nellie),

against

BOB (F. F. Myles), black and white dog (Oberlum—Bess).

TOLEDO BLADE (J. E. Dager), black, white and tan dog (Roderigo—Lillian),

against

RUBICON (West Tennessee Kennels), black, white and tan dog (Ben Hill—Zoe W.).

DAN GLADSTONE (J. W. Renfroe), black, white and tan dog (Gladstone—Sue),

against

LITTLE GIFT (Bert Crane), black, white and tan bitch (Roderigo—Queen Bess).

CINCINNATUS (J. E. Dager), black, white and tan dog (Count Noble—Dido II.),

against

MAUDE (Bert Crane), black, white and tan bitch (Dogwhip—Harrison's Juno)

First Series.

DASHING LADY AND PET GLADSTONE.

C. Tucker handled Dashing Lady, B. M. Stephenson handled Pet Gladstone. Lady had a bad habit of occasionally pointing and flushing her birds, which impaired the quality of her work, although she showed good finding qualities. Both retrieved well. There was not much difference in their performance on birds, barring Lady's unreliability at times. Lady had the better style; there was not much difference in speed or range. Most of the work was done in thickets. Down 30m. Pet Gladstone was the winner.

BOHEMIAN GIRL AND LADY C.

The former was handled by W. W. Titus, the latter by B. M. Stephenson. The heat began at 12:22, the hottest part of the day and the most unfavorable for finding. Both ranged wide and fast, Bohemian Girl having a decided advantage. Lady C. pointed a bevy nicely, and retrieved well. Bohemian Girl made a nice point on one of the single birds, and made a neat retrieve. They were sent on to find another bevy. Lady C. false-pointed twice, and Bohemian Girl backed well. This was all the work done. Bohemian Girl had the advantage in pace, range and style and was awarded the heat.

MAY QUEEN AND LASS O'BUCK.

The heat began at 3:30, after the heat for first place in the Derby had been run. R. P. McCargo handled May Queen; C. L. Stewart handled Lass O'Buck. The latter ran a very poor heat, trotting about indifferently a few yards from her handler. It was said that ordinarily she was a fine ranger, but that the presence of the crowd intimidated her. The heat was one-sided, May getting a point on a bevy, and a point or two on single birds. Lass pointed one of the birds. She backed well. May Queen won. Down 30m.

DIMPLE AND BOB H.

They were started at 4:06. D. E. Rose handled the latter, R. P. McCargo the former. Bob showed a disposition to false-point. Dimple found a bevy and pointed it well; Bob backed. Dimple made a good back to Bob's point on a lark. They were ordered up at 4:46, and the heat was undecided. Thursday was clear, bright and calm, just cool enough for work. A gentle breeze blew from the northwest. The unfinished heat between Dimple and Bob H. was begun at 8 o'clock, about a half mile from town. Each made a false point in the early part of the heat. Bob's nose appeared to be off, as he worked on his birds bunglingly. Dimple started with less vim and range, but as the heat progressed she improved in her pace. Dimple pointed very well. Bob retrieved. He showed a disposition to false-point and was slow in locating his birds accurately. Dimple had the better style, and, taking the heat as a whole, some superiority in range. Dimple won. Down 45m. The heat for second place in the Derby was run after this heat.

KING'S MARK AND BANG BRADLAUGH.

They were cast off at 9:39 in a cornfield. King's Mark was handled by Charles Barker; Bang Bradlaugh by C. L. Stewart. King's Mark had better speed, range and style, hunting for his birds with good judgment comparatively. He showed a disposition to false-point at times. Soon after the heat began he was lost for a few minutes and found on a point on a bevy. Each showed reliable backing. Bang showed merit in locating and pointing single birds, but had no speed in ranging or quickness in locating, besides showing unsteadiness to wing. King's Mark won easily in 30m.

BRANDON AND BOB.

D. E. Rose handled Brandon; R. P. McCargo handled Bob. The heat began at 10:16. The pace or range was not very fast or wide in this heat. The style was in favor of Brandon. Bob was not staunch on some of his points. The work done was light in quantity. Brandon retrieved. He won easily in 30m.

TOLEDO BLADE AND RUBICON.

C. Tucker handled the former; B. M. Stephenson handled the latter. They were cast off at 10:56. A full half hour was gone before birds were found. Rubicon pointed a bevy by a ditch and was steady to shot. Toledo Blade pointed a single bird; Rubicon backed, but broke the back. Each had made a false point. They were down 1h. Just after they were ordered up Rubicon was found pointing a bevy; Toledo Blade backed. Rubicon had a slouchy style of going, was heavy in pace and was listless on his points. Toledo showed a much higher grade of work, and had better speed, style and a more uniform range, and won.

DAN GLADSTONE AND LITTLE GIFT.

Dan was handled by Porter; Gift by Nesbitt. The heat began at 12:03, and was run until 12:39 without finding. The running was discontinued and the party went to lunch. At 1:15 the heat was resumed. The heat was not a good working one, both dogs making errors and not pointing as quickly and accurately as they should considering the opportunities. Each made a good retrieve and both were steady to wing and shot. Dan had a slight advantage in pace, range and style. Dan made two points on single birds and made three flushes; Little Gift made two points and one flush. The heat was awarded to Dan Gladstone. Down 1h.

CINCINNATUS AND MAUD.

Tucker handled the former; Nesbitt the latter. Cincinnatus was very disobedient and self-willed. He paid little heed to the whistle or commands. His range and pace were superior. There was hardly a breath of air stirring, and the temperature was warm. Each retrieved well. Cincinnatus made the greater number of points and was quicker and more determined in his work on birds. Down 30m. Cincinnatus won. Summary:

Pet Gladstone beat Dashing Lady.
Bohemian Girl beat Lady C.
May Queen beat Lass O'Buck.
Dimple beat Bob H.
King's Mark beat Bang Bradlaugh.
Brandon beat Bob.
Toledo Blade beat Rubicon.
Dan Gladstone beat Little Gift.
Cincinnatus beat Maud.

Second Series.

BOHEMIAN GIRL AND PET GLADSTONE.

The heat began at 2:23. Bohemian Girl took a wide cast soon after starting and was found pointing a bevy. The judges were looking for her, and had requested some others to assist. She was found by a spectator pointing a bevy. He called to one of the judges, stating that she was on a point. The judge called to a reporter requesting him to inform the handler of the Girl that she was pointing. Titus killed and the Girl retrieved nicely. Mr. Stephenson then came up and stated publicly to the judges that the reporters were talking entirely too much, and that it must be stopped. Notwithstanding the dogs were several times ordered on by the judges, he did not cease till he delivered himself of his full measure of bombast. The explanation that the handler was informed at the request of the judges appeared to neither appease his anger nor call to his mind that he was not running the affairs of the club. Pet pointed a single bird and retrieved nicely. Bohemian Girl backed well. She had a decided superiority in pace and range, and better style. Although there was little work done, the difference in the quality of the competition was so palpable that it was unnecessary to continue longer, and the heat was awarded to Bohemian Girl. Down 30m.

KING'S MARK AND MAY QUEEN.

They were started at 3:04. May pointed first and was steady to shot. Mark pointed a single and Barker asked permission to waive the retrieve, the bird having fallen in an unfavorable place. His request was granted. May retrieved the bird shortly afterward, which did not meet Mr. Barker's approval. He insisted on throwing out the bird and having his dog retrieve it against the order of the judges. Mr. Duryea gave him a very salutary reprimand, which acted beneficially on his handling thereafter. Each pointed separately on single birds; Barker killed and Mark retrieved. On stubble both made game, and roaded and pointed alternately. May was first to the birds and pointed them; Mark backed. May retrieved tenderly, but did not seek properly for the bird. Each made a point afterward. King's Mark won. Down 30m. The work was not of a high grade. The heat was close in the quality of merit shown.

BRANDON AND DIMPLE.

They were started at 3:39. The work done was mostly on scattered birds of two bevies marked down by spectators. On the single birds Brandon got a slight lead, although his work was not very quick and not always accurate. Dimple's nose appeared to be somewhat off, as she did not do as well as in previous performances. She was superior in pace, range and style. The heat was a close one, taking all the qualities into consideration, and could have been decided either way on the work done. Brandon won. Down 1h. This ended the running for Thursday.

TOLEDO BLADE AND DAN GLADSTONE.

The weather was much the same as on the previous days, clear and pleasant, the morning being cool. They were cast off at 8:27 on new grounds, about three or four miles from town. Dan opened the work by pointing a bevy, Toledo Blade backing to order. Porter shot and Toledo Blade broke in badly and showed some unsteadiness afterward on a single bird which he pointed, flushed and was anxious to gain possession of. Each then made a point on single birds. Toledo retrieved tenderly, but searched with awkwardness and without judgment. Dan had Toledo Blade well beaten until the latter part of the heat when the Blade redeemed himself and snatched victory out of the fire. He made six points on single birds in succession and one flush, his work being both rapid and accurate. He had slightly better style on point; in motion they were about equal. Neither ranged as wide as was desirable, the better speed and range being a little in favor of Toledo Blade. Cincinnatus did not run a bye in this series. The running resulted:

Bohemian Girl beat Pet Gladstone.
King's Mark beat May Queen.
Brandon beat Dimple.
Toledo Blade beat Dan Gladstone.
Cincinnatus a bye.

Third Series.

BOHEMIAN GIRL AND CINCINNATUS.

The heat began at 9:10. Bohemian Girl soon found and pointed a bevy and was backed by Cincinnatus. They were steady to shot. The Girl showed better work and more of it on the scattered birds, finding and pointing quicker than her competitor. Cincinnatus was not always reliable on his points. He retrieved tenderly, but found the dead bird with difficulty. After the work on the first bevy was ended they were sent on, working toward some woods about 300 yds. away where some birds had been marked down. The Girl took a long cast ahead, caught scent in the open field and gave an exhibition of first-class work in locating and pointing a bevy. She took quick casts on the scent, each bringing her nearer to the birds which she quickly located and accurately pointed. Titus killed one of the birds and the Girl retrieved nicely. She won. She had a decided advantage in speed, range and style. Down 30m.

BRANDON AND KING'S MARK.

The heat began at 9:48. A wide detour was made and the dogs were worked back to where the birds of the last bevy were scattered in pine woods, and on these the heat was settled. Brandon retrieved well. He also performed better on the scattered birds, both in respect to quantity and quality. The pace of each was ordinary and the range not very wide. At the end of 30m. Brandon won. The dog having the bye was required to run a side heat. The running was as follows:

Bohemian Girl beat Cincinnatus.

Brandon beat King's Mark.
Toledo Blade a bye.

Fourth Series.

BOHEMIAN GIRL AND TOLEDO BLADE.

This heat was begun at 10:40. The heat was a good working one and was well contested. No birds were found in the first 30m. Bohemian Girl was lost for a few minutes, and found on point a short distance away in sedge grass in pines. She was steady to shot and wing. On the single birds, Toledo Blade had some advantage in quickness and quantity but none in accuracy. On ranging and pace the Girl was decidedly superior and was awarded the heat. Her style in ranging was the better; on point there was but little superiority. The running in this series was as follows:
Bohemian Girl beat Toledo Blade.
Brandon a bye.

Final Heat for First Place.

BOHEMIAN GIRL AND BRANDON.

They were cast off at 12:40. Quite a long hunt was made without finding. A bevy was marked down by some spectators. Brandon pointed it; Bohemian Girl backed. The bevy was flushed and lighted about one hundred yards away. On the scattered birds Bohemian Girl made two points and two flushes, Brandon two or three points and three or four flushes. Bohemian Girl had a decided advantage in range, speed and style. Brandon retrieved well. Titus did not kill. Brandon had a sore foot and was wearing a boot. The injury cut down his speed and range perceptibly. Down 30m. Bohemian Girl won. She has a fine disposition and was elegantly trained.

Ties for Second Place.

TOLEDO BLADE AND BRANDON.

They were cast off at 2:16. Toledo Blade had the advantage in speed, range and style. Brandon was limping slightly on his injured forefoot. Toledo pointed a bevy and Brandon backed. Blade retrieved. Brandon flushed going up wind of the bird. Next he pointed single and Toledo backed, and broke in when the bird flushed. Toledo Blade won second. Down 30m.

Brandon was awarded 50 per cent. of third; Cincinnatus and Dan Gladstone each 25 per cent. of third. Dimple had run a very superior race and was worthy of consideration in the division of third. Following is the summary:

First Series.

Pet Gladstone beat Dashing Lady.
Bohemian Girl beat Lady C.
May Queen beat Lass O' Buck.
Dimple beat Bob H.
King's Mark beat Bang Bradlaugh.
Brandon beat Bob.
Toledo Blade beat Rubicon.
Dan Gladstone beat Little Gift.
Cincinnatus beat Maud.

Second Series.

Bohemian Girl beat Pet Gladstone.
King's Mark beat Dimple.
Toledo Blade beat Dan Gladstone.
Cincinnatus a bye.

Third Series.

Bohemian Girl beat Cincinnatus.
Brandon beat King's Mark.
Toledo Blade a bye.

Fourth Series.

Bohemian Girl beat Toledo Blade.
Brandon a bye.

Final Heat for First Place.

Bohemian Girl beat Brandon and won first prize.

Ties for Second Place.

Toledo Blade beat Brandon and won second prize.
Third was divided, one-half to Brandon and one-quarter each to Cincinnatus and Dan Gladstone.

THE POINTER STAKE.

The Pointer Stake began on Friday, immediately after the All-Aged Setter Stake was ended. The judges were Dr. R. I. Hampton, Messrs. B. P. Holliday, Prairie Station, Miss., and T. L. Martin, Lexington, Ky. The weather was pleasant; in fact, pleasanter weather never favored a field trial than that of the week of the running. Birds were fairly plentiful, but not in sufficient numbers to run off several stakes in the best manner when the dogs are of mixed quality, the poor dogs always consuming the most time. The trials on the whole were ably conducted and were a success. Everything passed off pleasantly and satisfactorily, barring some discontent at decisions, more or less of which is always present at field trials. Some of the decisions in the Pointer Stake were not well received, but on the whole the judges handled it very ably; in fact, the judges in each stake conducted the running skillfully and placed the dogs with correctness. They were painstaking and industrious. Col. Sherrod and Mr. J. Shelly Hudson were marshals. The stake had twelve starters, as follows:

OSSIAN (P. T. Madison), liver and white dog (Croxteth—Aminé),

against

LEBANON (Lebanon Kennels), lemon and white dog (Tim—Peg).

CONSOLATION (C. H. Odell), lemon and white dog (Bang Bang—Grace III.),

against

GRAPH (W. M. Tower), black and white dog (Brown Stout—Clytie).

GRAPHIC (Chas. Heath), liver and white dog (Bonus Sancho—Fursdon's Juno),

against

LADY ZEAL (John E. Gill), liver and white bitch (Croxteth—Aminé).

DUKE OF HESSEN (F. R. Hitchcock), liver and white dog (Luck of Hessen—Blarney),

against

BLOOMO II. (Chas. Heath), liver and white bitch (Bang II.—Belle).

ROGER WILLIAMS (C. H. O'Dell), lemon and white dog (Bang Bang—Lalla Rookh),

against

LASS OF MAINE (H. F. Farnham), black and white bitch (Graphic—Zitta).

SALLY BRASS II. (E. P. Dortch), liver and white bitch (Graphic—Mealy),

against

BEAU OF PORTLAND (H. F. Farnham), black and white dog (Graphic—Zitta).

OSSIAN AND LEBANON.

The heat began at 3:13. Ossian was handled by D. E. Rose; Luke White handled Lebanon. Both roaded a bevy down wind about 200yds. Both pointed and roaded alternately. Each pointed the bevy. Rose shot and killed; Lebanon broke in. Ossian got two points on single birds, and one flush. Lebanon did not secure a point on birds, but had some flushes to his score. Down 30m. Ossian won.

CONSOLATION AND GRAPH.

Luke White handled Consolation; S. L. Porter handled Graph. The heat began at 3:50. Consolation showed superiority in pace, range and style, but was disobedient. He found two bevies and made some points on singles, making one point at a bird in a tree, several feet from the ground. Graph pointed a bird nicely in the woods, and was steady. Consolation retrieved a bird which was thrown out by one of the judges. Consolation won.

GRAPHIC AND LADY ZEAL.

Graphic had a very lame forefoot and was withdrawn. Lady Zeal ran a bye.

DUKE OF HESSEN AND BLOOMO II.

C. Tucker handled Duke of Hessen; B. M. Stephenson handled Bloomo II. They were cast off at 4:27 and ran till 4:52 without finding any birds. The running for the day then ended. Saturday was a little cloudy. A mild southwest wind blew. The heat was continued at 7:45. Duke pointed a bevy, Bloomo refused to back, drew in and shared the point for a moment, then flushed the bevy. At the end of 30m. Duke won. He had better range, and stayed out at his work better.

LASS OF MAINE AND ROGER WILLIAMS.

Roger was handled by Luke White; Lass of Maine by H. M. Short. Roger presumably flushed a bevy as he was at work close to it when it flushed. Lass pointed a single bird, and also found and pointed a bevy; she was steady to shot and retrieved well. Roger backed reliably, and made two points on single birds, and retrieved well. He had better range and speed. Lass won.

BEAU OF PORTLAND AND SALLY BRASS II.

Sally Brass was handled by W. T. Mitchell; Beau of Portland by H. M. Short. They were run one hour without any satisfactory work on birds. They were taken up and put down again at 11:00 and run 30m. Each made two flushes. Beau had the better pace and range, and won. The running of the first series resulted as follows:
Ossian beat Lebanon.
Consolation beat Graph.
Lady Zeal a bye. Graphic withdrawn.
Duke of Hessen beat Bloomoo II.
Lass of Maine beat Roger Williams.
Beau of Portland beat Sally Brass II.

Second Series.

OSSIAN AND CONSOLATION.

The heat began at 10:20 and lasted 30m. Ossian pointed a bevy which was worked down near a thicket. On the scattered birds in thick cover Ossian made several points; the handlers were separated and worked on different ground while work on the scattered birds was being done. Consolation made some points on singles and was under better control than when he ran his previous heat. He had an advantage in pace and range. Both were steady to shot and wing. Ossian did more work on the birds and won.

LADY ZEAL AND LASS OF MAINE.

They were cast off at 11:47. Lady Zeal pointed a bevy and Lass backed. Lady broke shot and retrieved the dead bird. Going down wind she flushed a bevy and made one point on the single birds and two flushes. Lass backed well. Down 1h. Lass won. The party then went to lunch.

BEAU OF PORTLAND AND DUKE OF HESSEN.

They were cast off at 1:25. This heat was the best of the stake, considering range, speed and clean work on birds. Beau was first to find a bevy, and he retrieved the dead bird nicely. On scattered birds Beau outworked Duke, showing better nose and judgment. He again found and pointed a bevy; Duke backed; Short sent Beau on and the bevy flushed around him. Duke made some good points and retrieved well. The style on point was about equal. Duke had a slight superiority in range. Beau's performance was a surprise considering his performance in his previous heat. He won. Down 30m. The second series was as follows:
Ossian beat Consolation.
Lady Zeal beat Lass of Maine.
Beau of Portland beat Duke of Hessen.

Third Series.

OSSIAN AND LADY ZEAL.

They were started at 2:02. On scattered birds Ossian pointed a single bird; Lady was kept steady by command. Rose shot and missed; Ossian, when ordered on, resumed his point, and Rose flushed another bird; Lady backed indifferently. At the expiration of 30m. Ossian won. Beau of Portland had a bye but did not run a side heat. Summary:
Ossian beat Lady Zeal.
Beau of Portland, a bye.

Final for First Place.

OSSIAN AND BEAU OF PORTLAND.

They were started at 2:45 and drew a large area without finding. At the end of a half hour they were ordered up and the party went to other grounds. Beau found and pointed a bevy in a run; Ossian backed. Ossian roaded and pointed a rabbit, Beau backed. Beau pointed twice single birds in sedge, and found and pointed a bevy. Ossian made two or three points on single birds. There was not much difference in style. Beau had some advantage in range and maintained a more uniform pace. The heat ended at 4:27 and Beau of Portland won the heat and first place.

By consent of all concerned, the judges were allowed to place the dogs second and third without further running as the heat for second place would have to be postponed till Monday, if run. The judges placed Ossian second, Duke of Hessen fifty per cent. of third. Consolation and Lady Zeal, each twenty-five per cent. of third. The latter was not a good selection as there was nothing in her work to commend her for a place. Roger Williams had shown better work, and a higher quality of field capabilities than Lady Zeal. This ended the inaugural trials of the Southern Field Trial Club, a successful meeting.

SUMMARY.

First Series.

Ossian beat Lebanon.
Consolation beat Graph.
Graphic (withdrawn) Lady Zeal (a bye).
Duke of Hessen beat Bloomo II.
Lass of Maine beat Roger Williams.
Beau of Portland beat Sally Brass II.

Second Series.

Ossian beat Consolation.
Lady Zeal beat Lass of Maine.
Beau of Portland beat Duke of Hessen.

Third Series.

Ossian beat Lady Zeal.
Beau of Portland a bye.

Final for First Place.

Beau of Portland beat Ossian and won first prize.
Ossian was awarded second prize.
Duke of Hessen, 50 per cent of third; Consolation and Lady Zeal, each 25 per cent of third.

MASCOUTAH KENNEL CLUB.—Dec. 6.—*Editor Forest and Stream:* At a meeting last evening of the Board of Directors of the Mascoutah Kennel Club, Norman Williams, Esq., was elected president of the club. The resignation of Mr. Cobb was due to business engagements which necessitate a long sojourn in Europe.—JOHN L. LINCOLN, JR.

THE ST. BERNARD PRIZES.

Editor Forest and Stream:

In your issue of Dec. 5 is an article headed "St. Bernard Prizes," signed "Essex," which would lead a novice to believe that American-bred St. Bernards possessed little merit and had almost no chance at all of winning any of the specials offered by the St. Bernard Club of America. Will you kindly publish the following for the benefit of breeders, exhibitors and admirers of St. Bernards?

The St. Bernard Club of America offers twenty-six cups to be competed for at the shows of 1889, and while the entire twenty-six are open to American-bred dogs, fourteen of the cups are for American-bred exclusively, four for stud dogs, four for brood bitches, and only eight for dogs irrespective of breeding.

By referring to the prize winners of 1888 "Essex" will notice that, if these prizes had been competed for this year, not one of the cups would have reverted to the club for lack of American-bred dogs of merit.

At New York the cup for the best American-bred smooth-coated dog would have been competed for by Petrarch, second prize open class, and Lord Hector, first prize puppy class. The cup for the corresponding bitch would have had three competitors: Daphne from the champions, Thisbe, first prize open class, and Myrtle, first prize puppy class. The rough-coated dog cup would have been won by champion Otho or Lando Hector, first prize puppy class. The corresponding bitch class would have found one worthy of the cup in Dorothy, first puppy, and perhaps one in the open class. (I have forgotten the prize winners in that class and cannot say positively).

At Boston the cup for the best American-bred smooth-coated dog would have had Petrarch, first prize open class, and Duke of Brunswick, first puppy class, as competitors. The cup for corresponding bitch would have been competed for by champion Daphne, Apollona, first open class, and Myrtle, first puppy class. In the rough-coated dog class there would have been champion Otho and Melrose Prince. I am not positive about the latter's breeding, but if he is not an American dog, Prince Leo would have competed in his place. In the corresponding bitch class Princess Gilder would have taken the cup.

This disposes of eight cups. Of the remaining six, four are offered at the New Jersey Kennel Club show and two at Chicago. As neither club held a show this year I cannot prove what would have happened to these cups if the clubs had held shows, but I have no doubt that worthy competitors will be presented in 1889. The Board of Governors intend to offer handsome cups and believe that a dog, to win one, should possess some merit other than being bred in America.

Don't you think American dogs are protected sufficiently when fourteen out of twenty-six cups are set apart for them exclusively? They can also win the remaining twelve if they have sufficient merit. W. H. JOECKEL, Jr.

Editor Forest and Stream:

Though "Essex," as a member of the St. Bernard Club, has a perfect right to disagree with the decisions taken by the Board of Governors in regard to specials in the shape of club cups, it shows very bad taste on his part to drag the matter before the public. If "Essex" has reasons for being dissatisfied, why did he not write on the subject to one or the other of the officers of the club, with several of whom he is personally acquainted? "Essex" knows full well that had he pursued this course and privately called the attention of the Board to what he considers an injustice to the individual members of the club, his views would have received due consideration and the Board would have had reason to appreciate his action. Does "Essex" not think that family matters are best adjusted at home? Do they concern the public at large? Most emphatically, no! The same with club matters. The Board of Governors is supposed to manage the affairs of the club and to act for the benefit of the club as a whole, and not for private ends. I do not intend to touch "Essex's" insinuations, which would imply the contrary. They are entirely uncalled for and not worthy of being noticed.

According to him the home-bred dogs have no chance of winning any of the cups at all, and yet out of the twenty-six cups fourteen are for American-bred dogs exclusively and the other twelve are for dogs irrespective of breeding. The club members who own valuable imported stock have as many claims on the club as the "average American breeder" (member of the club of course) who sends his bitch to the imported dog. Both need to be encouraged if the breed is to be improved.

The action of the meeting of Nov. 12 is well understood by "Essex." It was taken purposely to prevent members of the club from winning a trophy with undeserving specimens. Such a course, naturally, is not gratifying to those who own stock whose only qualifications are, first, that it is owned by a member of the club and second, that it was born in America.

It is not very likely, however, that the case will occur where a cup for best American-bred will revert to the club, because the best dog (American-bred) failed to win a prize in its respective regular class. Still, it might occur. Here is an instance: At the last St. Paul show a dog which had won two firsts at previous shows in the West was turned out of the ring by Chas. H. Mason, who was judging, because it was a St. Bernard in name only. It is an American-bred dog and is owned by a member of the club.

"Essex" says: "The American breeders need protection." Yes, and so does the club in its endeavors to improve the breed. It (the club) needs to be protected from dogs like the above.

"Essex," I know, has a better opinion of our home-bred dogs, and, as a breeder and owner of prize winners, he can certainly not countenance the giving away of specials to specimens simply because they are bred at home, but are no credit either to the club or to the breed.

It is true that, possibly, a good dog shown in the open class might be handicapped from competing for the cup for best dog or bitch (irrespective of breeding) owned by a member of the club, but the restriction would affect the imported dogs as well as the home-bred ones. For instance: Three imported cracks, A, B and C, not belonging to members of the club, take 1st, 2d and 3d. The reserve goes to another very good dog called D, and owned by a club member. This dog could easily win a second and might, in the future, win some firsts, when not in such hot competition. Now, according to the restriction, this dog D cannot compete for the cup for best dog or bitch (irrespective of breeding) owned by a member of the club. I admit that, on the surface, this does not seem right nor just, but the line has to be drawn somewhere, and it is not judicious to make flesh of one and fish of the other.

Besides it is not very likely that the case above referred to would occur, for owners of cracks, not already members of the club, will not neglect to join before showing their dogs. There is another point which has escaped the criticism of "Essex." It is this one: In the same class (rough-coated, open) the dog E takes the first vhc., he is a good specimen, that, like the dog D, can win in a fair class. He is American-bred and belongs to another club member, and hence ought to be entitled to compete for the cup for best American-bred rough-coated dog. However, because he failed to win a prize in his regular class, he is debarred from competing, and the cup goes to the dog puppy F, which may be a poor wretch, but happens to have been born in America and to be owned by a member, and managed to get a third in the puppy class, because the competition was of the poorest.

(The winners of first and second, though being far ahead of F, cannot compete for the cup, because, though also bred in America, they are owned by non-members.)

A case like this would be a greater injustice yet than the one of the dog D, and this ought to, and certainly will, be remedied by "those who govern the club." I was present at the meeting, and I do confess that a case like the foregoing did not come up in the minds of any of those present. It is not always easy, especially at a meeting, the time for which is limited, to foresee how far-reaching a decision may possibly be. K. E. HOPF.

ARLINGTON, N. J., Dec. 11.

MASTIFF PRIZES.

Editor Forest and Stream:

At the thirteenth annual show of the Westminster Kennel Club, to be held Feb. 19 to 23, 1889, the American Mastiff Club offers the following prizes:

1. The Westminster challenge cup, value $300, for the best dog or bitch, under three years of age, owned by a member of the American Mastiff Club.

2. The Taunton gold challenge medal, value $50 (breeders' prize), for the best American-bred mastiff, the contestant to be under two years of age; entries to be made before Feb. 1, 1889, with the secretary of the American Mastiff Club; entry fee, $5; the aggregate of the entry fees to go to the exhibitor and the medal to be held until the next competition by the breeder.

3. The club's silver challenge cup, value $150, for the best American-bred dog or bitch.

4. The club's two challenge cups, value $100 each, one for the best mastiff dog, one for the best mastiff bitch, the property of a member of the American Mastiff Club.

5. Silver medal to the winner of each of these three cups.

6. Mastiff puppy sweepstakes, open to all comers, a sweepstake of $5 each for mastiff puppies born on or after Feb. 1, 1888, in the United States or Canada. Entries close Feb. 1, 1889.

For further particulars address SECRETARY AMERICAN MASTIFF CLUB, 9 West Thirty-fifth street, New York city.

BREEDER AND EXHIBITOR.

Editor Forest and Stream:

It is always a difficult thing to write about other peoples' dogs without giving dire offense to their owners, for it is acknowledged on all sides, and the kennel journals teem with evidence in support of the statement, that a slight or anything which is even imagined as a reflection upon any dog renders its owner more indignant than anything written about himself. In what I am about to say I therefore desire most emphatically to assure all concerned that such a wish is furthest from my thoughts, and my sole object is to draw the attention of breeders in general, and if possible, of the outside public, to what is doing a good deal of harm to the interests of the fancy.

I will mainly confine my remarks to collies as a breed with which I am more intimately concerned, and, therefore, one on which I can speak more by the book and with less liability to error than on any other. Of late years, and particularly within the past two or three, the desire of one or two exhibitors has been to obtain a monopoly of the prizes, the result of which is undoubtedly to deter a goodly number of others from taking up the breed and rendering others chary of entering into competition with the big exhibitors. I do not think any one will dispute the statement that Mr. T. H. Terry (now Hempstead Farm Co.) and Mr. Mitchell Harrison, of the Chestnut Hill Kennels, have both occupied in the order named the position of leading exhibitor of the day. It is neither necessary nor desirable to describe the merits of their dogs, that not being a factor in the point of view I propose taking of the subject. It is sufficient to say that the Hempstead Farm Co. advertises that their dogs have won 150 prizes in England and America, and that Mr. Mitchell Harrison can lay claim to his dogs having carried off, with but few exceptions, the prizes at all the leading shows during the past two years. That is all that concerns the prospective dabbler in the breed, and in many cases the breeder who desires to add to his kennels. Now what I want to draw attention to is that there is a very wide difference between the winnings of these exhibitors and say, for instance, those of Messrs. McEwen and Gibson, of Canada. I willingly admit that we are all much indebted to the first two named for the increased interest developed in collies, and to look at it from a commercial point of view, the enhanced value of good specimens. Beyond that I will not concede that such exhibitors are doing good to the fancy. Very decidedly I am of the opinion that the men who breed the dogs are the ones whose merits and claims are overlooked by this monopoly of prize winning.

Let us take up the catalogue of the last New York show. The largest exhibitor of collies was the Hempstead Farm Co., with six entries in the champion classes, two open dogs, five bitches, two dog puppies and four bitch puppies, a total of nineteen. Of these Robin Adair was not for competition, Tweed II. was absent, as were also Zulu Princess and Lady of the Lake, but that does not affect the facts I want to adduce, which are that with all the presumed advantages of possessing a kennel the members of which had won 150 prizes, the Hempstead Farm Co. could not produce one of their own breeding which took a prize, except Sable Lassie, second in bitch puppies. In fact, it is only possible to find the great credit mark "breeder, owner," attached to six puppy entries, of which Glenlyon was vhc. in dogs and Sable Lassie, just referred to, caught the eye of the judge. Nor can it be said that any dog was exhibited at New York bred at the Hempstead Farm or got by one of their dogs that won anything. The record for this exhibitor stands as follows: Second in champion bitches with Lady Ellis, bred by John Ellis; first in open dogs with Bendigo, bred by J. and W. H. Charles; hc. in open dogs with Gilford, bred by S. T. Mercier; vhc. with Glenlyon, breeder, owner; and second with Sable Lassie, breeder owner, in dog and bitch puppies respectively.

The Chestnut Hill Kennel has a far better record in all respects than this. Mr. Harrison made three champion entries, two open dogs, three bitches, one dog puppy and two bitch puppies. Out of this total of eleven, only one was entered "breeder, owner," and that was Roslyn Vera. Champion dog prize was won by Scotilla, breeder, Mr. S. T. Mercier; champion bitch prize by Flurry II., breeder, W. R. Dockrell; second, dog class, Roslyn Sensation, breeder, Robert Buckle; high com., David, breeder, A. R. Kyle; first, bitch class, Bertha, breeders, J. & W. H. Charles; second, Roslyn Vera, breeder, owner; reserve, Priscilla, breeder, Dr. John P. Gray; second, dog puppies, Roslyn Sensation, breeder, Robert Buckle; first, bitch puppies, Roslyn Vera, breeder, owner; second, Priscilla, breeder, Dr. John P. Gray. A great record for any kennel, but the list of breeders demonstrates the fact that a good bank account was the "open-sesame" to the prize list. On the other hand credit must be given the kennel as being the owner of the sire of Roslyn Sensation, David, Thistle (hc. dog puppies) and Jennie M. (reserve, bitch puppies) all by Strephon; of Lorna Thorpe (hc. bitch class), by Nullamore, and of Priscilla, Volunteer and Robin Gray, all by Dublin Scot out of Effie Dean II. Volunteer was third and Robin Gray reserve in dog puppy classes.

I think I have pretty conclusively shown that while ample means is one very safe way to make up a prize winning kennel, it is a widely different thing to breed the winners, and I venture the prediction now that the young entry of 1889 will show no change whatever from the record of 1888. Hence I can only repeat in public what I have so frequently done in letters to those complaining to me of the uselessness of exhibiting against monopoly kennels, "Do not be discouraged; you have only to look at the names of the breeders of the winners to see that you are on an equal footing as a breeder with any man in the country."

A man to be successful as a breeder must look a little deeper than the name of the prize winner. It is what follows that tells the story—the strain that produced the winner. If your own dog cannot produce winners after a fair trial don't waste time over him but go to the dog that is getting winners. Above all remember that the Arabs do not sell their choice mares, and if you possess a bitch that has thrown winners you are only slaying the goose that lays the golden egg if you sell her before your end is attained.

JAS. WATSON.

THE SPANIELS.

Editor Forest and Stream:

"An Onlooker" a short time ago said he would meet my dogs under any judge, but he backed down when I "called the turn" on him. He now says he has an "extreme" that can beat any of my dogs for "a hundred or a thousand yards." I accept his challenge. I will meet him half way. To go 1,000yds. is no test of endurance. Make it 2,000 and I will allow you 50yds. Make it ten miles and I'll give you one mile and a beating. After the race I'll run the same dog against any other extreme you own; then I'll give you a whirl after ruffed grouse. If I do not get two birds to your one I lose the marbles.

My dogs are not whippets, and a race is not a good test of the working qualities of a spaniel; but "An Onlooker" is afraid to meet my dogs on the bench, so I will give him a chance on the race track.

I do not think he ever saw the dogs he writes of, or else he would never compare the two extremes in cockerdom—Mike and Baby Obo; and I did not "slump over" when I gave Mike first at Philadelphia. Neither Mr. Watson nor "An Onlooker" can alter the records.

My brain never ferments nor do I ever change my style, as I know the style you must have to do the work that is required of a cocker; but it is my misfortune to be poor, and my dogs must pay for their keep, so I am forced to breed a few "crocodiles" for "fancy" judges and dude sportsmen who only hunt on paper or at their writing desk. These dogs I call show spaniels.

The work of the dog is too slow, but as sure as bricks, we know,
And we must not forget, when the ground is wet,
To leave him at home, don't you know?
When the winds of winter blow his little short legs cannot go,
And April showers they tax all his powers
To crawl through the mud, don't you know?
You will find that it ever is so, that he only is fit to show.
For fine weather you'll wait, or as sure as fate
You will carry him home, don't you know?

When we have the race "Onlooker" will be a long way after J. OTIS FELLOWS.

HORNELLSVILLE, N. Y., Dec. 3.

[Is it not about time to cease vexing the muse, and to confine this discussion within the limits of plain prose?]

SALISBURY'S PEDIGREE.

Editor Forest and Stream:

Really, in spite of your P. D., I don't believe I am responsible for the blunder in my last to you. However, for the correct reading of pedigree of Peeress, please read "Lion by Mr. Hanbury's Prince out of his Peeress," not Duchess, as you have it. Further, I note that Mr. Mason makes a slight mistake in writing of Bosco II.; the dog he refers to was Bosco without the II. Bosco II. (E. 12,815) was another dog, by Emperor, and owned by Mr. G. H. Jones of London, and was first at Birmingham in 1882; Bosco III. was a litter brother to Hero II., owned by Calder of Aberdeen and imported to this country, owned here, I think, by Mr. Laban Pratt. It was the stud card of this Bosco III. on which that "Official Stud Book of the American Kennel Club, Sir!" pedigree of Corsair was built, for in this stud card we had "Masson's Salsbury," which was repeated in "The Official" pedigree. I suppose it was this younger half brother of the original Bosco being III. that led Mr. Mason to call the original II.

There is a bit of inside history about the original Bosco. His dam, Venus (dam of Hero II.), visited Mr. Exley's Victor in his extreme old age, and the dog's infirmities promised to defeat all prospects of progeny, but Mr. Exley would not give it up, saying to his kennelman, "We must get another litter from the old dog before he dies," and at last their efforts were rewarded with success and the sole result of the service was one pup, and that pup was Bosco, by very far the best that Victor ever got. Mr. Exley described Bosco as by far the best dog he had ever seen, and deplored his early death as a great loss to mastiff interests. Under other circumstances I would feel called on to resent the somewhat stinging remarks Mr. Mason makes on me, but as I freely admit that my hasty judgment led me to perpetrate a most cruel wrong toward Mr. Mason, he is fairly entitled to this, the first sting he has given me on the matter. While I do not feel warranted in going into the question of who the real forger of that pedigree was as fully as Mr. Mason has done, I may say that I ransacked Bradford, Leeds and England generally when I was digging at this pedigree, and from parties thoroughly posted I received accounts not conflicting with Mr. Mason's statements.

Mr. Mason omits the names of several mastiff men who would have tripped him up in a minute if he had perpetrated the bare-faced swindle he is charged with. Capt. Cautley still took interest in mastiffs at that time, so did John Turner, and what they didn't know of mastiffs and mastiff pedigrees in their neighborhood wasn't worth knowing. Mr. M. B. Wynn knew all about the line of dogs represented in Salisbury's pedigree, and knew every mastiff man that Mr. Mason or I have mentioned, and I do not think that he and Mr. Mason were very friendly at that time, yet he never said that there was any reason to suppose that Mr. Mason was cognizant of the bogus character of the pedigree. Many thanks to C. W. C., *re* Waterton. W. WADE.

HULTON, Pa., Dec. 8.

THE AMERICAN FIELD TRIALS.

[*Special to Forest and Stream.*]

WEST POINT, Miss., Dec. 10.—The American Field Trials began here to-day with the Derby. Of the 50 nominations there were 15 starters drawn to run as follows: Hope against Betty, Zack against Wee Daisy, Lottie C. against Daisy Fisher, Mary Mead against Orlando, Rod's Gal against Count Piedmont, Cecil against Sonnie, Flossie Noble against Roi D'Or, Tennie a bye. In the first series Betty beat Daisy's Hope, Wee Daisy beat Zack, Lottie C. beat Daisy Fisher, Orlando beat Mary Mead, Count Piedmont beat Rod's Gal, Cecil beat Sonnie, Roi D'Or beat Flossie Noble. In the second series the heat between Betty and Tennie was unfinished. The judges are J. H. Gilbert, H. B. Duryea and R. L. McCook. There was severe rain last night, making the ground very heavy. The weather to-day is clear. The grounds are good and birds are fairly plentiful. The cover is of rank growth, making it rather difficult to see the work of the dogs.

THE HEMPSTEAD RABBIT BUSINESS.

Editor Forest and Stream:

There is something so farcical in the proceedings connected with the prosecution of August Belmont, Jr., his man William and others, on the charge of rabbit coursing, that the real merits of the question supposed to be at issue—the legitimacy of coursing—is apt to be lost sight of in the ridicule with which both prosecutors and accused have covered themselves. Coursing is a sport of vast antiquity, dating from as remote a period as the early settlement of the Aryan peoples in Persia. The term is not generally applied to fox hunting, or to pursuing a hare on scent with harriers, the pursuit by scent, whether of the stag, the fox or the hare, being spoken of as hunting, while the term coursing is confined to running with greyhounds or gaze hounds on sight.

The pastime of coursing deer and antelope is very popular among the Persian nobles to this day, and very considerable care is taken in maintaining their breed of greyhounds, the best dogs of which are valued at a very high price. The sport is scarcely less popular in England, where it is confined to hares. Small dogs are sometimes taken out with the greyhounds to find and start the hare, and sometimes the animals are turned out by men who have located their forms; in either case the greyhounds are held in leash until the hare has secured such a start that the powers of the dogs are taxed to their utmost efforts, and the results undecided until the hare be thrown into the air or the dogs be called off. The pleasure of the pursuit is found in the keenness and uncertainty of the contest; its legitimacy rests on the fact that it is an unobjectionable and natural method of securing possession of *feræ naturæ*.

In the ardor of the chase neither pursuer nor pursued pauses to think of consequences. In the pursued there is perhaps an undercurrent of trepidation when the pursuer is close at hand, but until an animal begins to get exhausted the mind is concentrated on the exercise of the physical powers, or in contemplating a double to which it trusts its salvation, and when at length, doubling upon one pursuer, it runs straight into the jaws of another, is flung up, is caught and its back broke with a single shake, the catastrophe is so sudden, and the end achieved with so little suffering to the pursued, that it may be fairly doubted if any other method of killing the hare is as merciful.

But what relation does coursing properly so called bear to the rabbit baiting of August Belmont, Jr., and his confreres? Coursing has been introduced into this country and promises to become very popular in California, where there are plenty of jack rabbits that will tax a greyhound's powers to the utmost, and an open country fit for coursing; but catching cotton tails in traps, turning them loose in strange country so benumbed with fright that they sometimes refuse to run, and then setting fox-terriers on them to worry them, is certainly a very reprehensible pursuit and may possibly constitute an offense against the law; but in Heaven's name let FOREST AND STREAM and all true sportsmen repudiate all connection between legitimate coursing and the contemptible parody of it indulged in by the members of the so-called Hempstead Coursing Club, whose assumption of the style of sportsmen is only calculated to reflect discredit upon a pursuit worthy of kings and true men.

ST. HUBERT.

PATSY.

Editor Forest and Stream:

A few days ago I had the pleasure of giving Patsy, Mr. E. O. Damon's recently imported Irish setter, a careful examination. As this young dog is almost certain to make a mark, especially in the stud, I will give your readers a brief description of him. Skull well formed; muzzle somewhat too light; ears set a trifle high; eyes a shade too light in color, but well set and with fine expression; a head full of quality and character, but rather effeminate; neck better than average and would be improved by less bulk and by a little more length; shoulders beautifully laid on; chest very nearly perfect; back firm as a rock and truly formed; loin symmetrical and strong; hindquarters showing much strength; tail of correct length, beautifully fringed and always well carried; stands on a superb set of legs and feet; coat and color perfect; feather of best quality and sufficiently abundant. A graceful, stylish and easy-moving dog whose most prominent defect is a lack of size. His late owner considers him one of the most promising field dogs he has ever owned—fast, stylish, and steady to wing and shot. Mr. Damon says: "He is fast, covers his ground thoroughly, carries a high head, has an exquisite nose and is remarkably steady on his points, also to gun and wing." We want some new Irish blood in this country and as Patsy is well bred (Frisco—Nellie IX.) and possesses those great stud dog essentials, bone and substance combined with quality, it is almost certain that he will be heard of in the near future. His record is: First and cup Strabane, 1887; first and cup Strabane, 1888, and challenge cup for best red setter in the open classes both these years at the Strabane shows; also first prize and specials at Kells, 1888. CHAS. H. MASON.

THE ETHICS OF FOX HUNTING.

Editor Forest and Stream:

In a recent issue of FOREST AND STREAM may be found an enthusiastic account of New England fox hunting under the auspices of the "Western Massachusetts Fox Club." Your correspondent commends the "enterprise and pluck" of the club managers, describes the shooting of seven poor foxes, which, he remarks, were "honestly killed," and winds up his report by declaring the meet a success and giving a list of club members.

To my mind the shooting of foxes before hounds is a murderous, unsportsmanlike amusement, if amusement it can be called.

If foxes must be destroyed as enemies of New England poultry yards, then the Massachusetts style of hunting is perhaps defensible; but to take such an unfair advantage can hardly be called sport. The only fox hunting worthy of honorable mention is where the hounds kill and where the fox has a clear chance of escape. Anything less than this is not legitimate, because fair play is barred out. The New England fox shooting is not quite so outrageous as coyote coursing on inclosed ground, but it is open to the same objection and justly despised as a wretched burlesque of the glorious sport of fox hunting when carried on in a decent sportsmanlike manner.

In conclusion, if people cant hunt foxes *secundum artem*, let them engage in some other field sport where the use of gun or rifle is admissible. TALLYHO.

COLORADO SPRINGS, Nov. 29.

NED B.—Bridgeport, Conn., Nov. 26.—*Editor Forest and Stream:* I note F. E. Clark of this city advertises for sale two pointers in this week's issue of your paper, and says of one of them: "Torry won first in puppy and all-age class at Danbury, Conn., over a dog that won first at Boston, Mass., beating such dogs as Ned N." As the owner of Ned B. I must state that this is most decidedly a misstatement. Mr. Clark's Torry was shown this fall at Danbury, Conn., only two pointers in the entire show, said Torry and Spot Dash. Spot Dash has never beaten Ned B., as the show records will substantiate. While all of this is perhaps of small importance, I feel a comparison of this kind to be most misleading to the public as well as unjust to my dog, as he has won in strong competition first and special Hartford, 1887, first New York 1887, third New York and first Richmond, 1888. It is to be hoped the other statements in this advertisement approach more nearly to the truth.—S. S. BANKS.

NIGHTS WITH THE COONS.

ST. LOUIS, Mo., Nov. 25.—*Editor Forest and Stream:* The second annual coon and possum hunt of the King's Lake Club took place last Saturday night, in the vicinity of the club's preserve in Lincoln county, this State. King's Lake is 53 miles from this city on the St. Louis, Keokuk and Northwestern Railway; a short ride from the depot is necessary to reach the club house, and there every convenience awaits the weary traveler. Saturday morning's train carried up a delegation of members and invited guests to indulge in the hunt. The night prowlers were reported very plentiful in the heavily timbered bottom land. The report proved true; the hunt netted the hunters for the little while they were out three coons and two possums.

It was noon when the party arrived at the club house and they were invited by superintendent A. C. Grimes to partake of a splendid dinner. After dinner some took rods and minnow buckets and tried to entice a bass or croppie on their lines, but poor success attended their diligent efforts, not a fish was taken. The water was high and muddy and the fish were not inclined to be caught. When the water is clear King's Lake is a famous place for angling, and during the past month some large strings of bass and croppie were brought to this city from there. The club has placed in the lake a large quantity of young bass and croppie for stock which no doubt will afford most excellent sport in a few years.

King's Lake is from 200yds. to 300yds. wide and about 9 miles long, and is known to every one in this part of the country. The country between the lake and the Mississippi River is a low timber bottom, quite numerously covered with sloughs which at times afford magnificent sport at mallard ducks. A few years ago mallard were so plentiful in King's Lake bottom that bags of 100 or 150 a day were quite common.

Other members chased themselves back into the timber in quest of ducks, but when they returned, weary from a long tramp through mud and water, a few brought in "game" (*i. e.*, a plentiful bag of woodpeckers.) Not discouraged in the least, they pinned their hopes upon the event of the trip, the coon and possum hunt.

Darkness was beginning to cast its shadows over the country and the hearts of the hunters were bouncing with joy at the prospects of a grand battle between the coon and hounds.

As soon as supper was over preparations were begun. Heavy clouds shut off all view of the sun all day, and now they were going to do the same thing for Luna. This had no discouraging effect upon the enthusiastic hunters. The plans for the attack were laid and the captain of the hunt, Major David W. Caruth, gave strict orders that it must go on without fail. The natives who were to go along as guides and choppers began to arrive, and they brought their coon dogs. At 8:30 some one wanted to know why the command was not now on the move. He was answered by Major Caruth that they were waiting for old Sol. Who was old Sol? asked a dozen of the party in chorus. Why, old Sol was the chief guide, and was to act as captain of the natives and was to direct the charge. Without him the hunt would prove a flat failure. About a year ago a similar hunt had been arranged and carried through to a successful termination, and the club officers were determined that the present one should be more successful than the former.

Old Sol made his bow to the party in the sitting room. As soon as he was inside all pressed forward to get a look at the old fellow and take him by the hand and inquire how the rheumatics were. Sol has lived in the neighborhood all his life. When asked how old he was he replied that he supposed that seventy years would not miss it very far; that he had three brothers living who were older, and that his mother was alive and enjoying good health. After hunting up axes, torches and all had supplied themselves with staffs and the seven dogs were collected, Sol took the lead, and with a long drawn out whoopee, the dogs were given the word to dash off and do their level best.

The party numbered fully thirty-five and they entered the bottom. In a short time some one said, "Listen, the dogs are trailing," and the prospects of some fun made all in the party feel happy.

"Dat am old Rambler and Snider," said old Sol," and dey's got a coon sho and right in 'mongst dem big trees in de bottom."

All haste was made toward them, and there up one of the biggest trees the outline of a coon could be seen plainly. Some one proposed giving 50 cents if any one could climb the tree and shake the coon out, but as the tree was barren of branches for a long way up, the offer was declined by the natives, consequently there was nothing to do but to put the choppers to work and lay that forest giant on the ground.

Four big strong willing hands came forward and the chips were soon flying in a lively manner. During the time that the choppers were cutting into the heart of that three foot oak old Sol was busying himself lighting fires at a respectable distance around the base of the tree, with a fire brand which he brought with him from the club house.

"Look out, she is cracking," some one was heard to exclaim, and the next moment down came that monster oak and the coon of course came with it. As soon as it began falling the dogs dashed toward it with a mad rush to pounce upon the coon.

The hunters did some tremendous shouting and the dogs joined in, making a noise that was almost deafening. The coon was a big one and made a magnificent fight. He sent some of the green dogs howling away with pain, and they gracefully retired to the rear, not caring to take any further interest in the affair except as onlookers.

A circle was formed, and everybody was saying something to the dogs by way of encouragement. Old Rambler was true blue and showed wonderful pluck. There was a young dog called Snider, only a year old, and he proved to be a remarkable one for his age. He was crippled when a puppy and had only the use of three legs, his left foreleg being of no account whatever, but this did not lesson his work as a coon dog, nor put him behind the other dogs in the hunt. He was always in the front, and when there was any fighting to be done he was right there all the time.

Twice the coon managed to drive the dogs back, and when he did he tried to break through the crowd and get away. It was amusing to see how suddenly the circle would part at the point the coon was making for. At one time a dozen or more of the party were piled in a heap while trying to escape from the coon. The fight was a grand one; some of those present said it was the hardest battle they had ever seen a coon make. Old Rambler and Snider saved the day; without them that coon would never have been brought home as a trophy of the hunt. At last, however, he succumbed.

Old Rambler and Snider were petted by nearly every one for the splendid work they had done. After commenting upon the fight for a few moments Old Sol gave his whoopee whoop-em-up and the party started in quest of more game. Presently Rambler's voice was heard giving the welcome intelligence that he was trailing again. Sol said it was another coon. He could tell from the way Rambler gave the alarm that it was a coon he was trailing. When the party came up with the dogs it was found that in place of one coon they had two, up different trees. Well, coons were plentiful to a certainty. This was more than the most sanguine of the party had hoped for. The first thing old Sol did was to light fires around the trees; they were only a short distance apart. Then the choppers were set to work, and as the tree was a small one, it was soon felled. But before the dogs could catch the coon he was up another tree. This was cut; while it was falling the coon jumped and landed into another tree. This was soon cut down and the dogs nailed him. He was a young one and was soon dispatched. The attention of the party was then centered upon the other fellow, who was by this time no doubt nearly frightened to death by the fearful noise.

The tree was a small one and was cut in short order. When the coon struck the ground Snider was there to receive him. This also proved a young one and the rest of the dogs were held, so as to give Snider the opportunity of winning the battle by himself. He made short work of the coon.

It now began to snow a little and Sol said that unless the track was very fresh it would be impossible for the dogs to trail them. As it was past midnight and all were satisfied, it was decided to start for the club house. Some remarked that it was ten miles to the club house. This caused several loud "Oh's" to be heard from some of the party. Old Sol was appealed to; he replied about three miles. This came as a great relief to many of the party, who were enjoying the pleasures of their first coon and possum hunt. As predicted by old Sol the snow did spoil the sport so far as the coons were concerned, because the dogs failed to find another one on the way home although they passed through some beautiful country for coons and had there been no snow would undoubtedly have found a few more. Shortly after the last coon was caught the dogs treed a couple of possums which were soon added to the party's bag.

The club house was reached about 2 o'clock; and although quite weary from the ten miles or more they had tramped around in the bottom none was willing to go to bed until the hunt was gone over again. The grand battle the first coon made was commented upon at great length. Many who took part in the hunt said that they had been on many a coon hunt but they had never seen such a fight as the first coon made. The following from this city were present and participated in the sport: C. A. Cunningham, E. H. Cunningham, E. T. Jester, C. E. Halliwell, F. W. Stockton, F. B. Agler, E. O. Hunter, L. Tomkins, Mark Taylor, J. K. Hayward, L. D. Dozier, F. P. Day, J. H. Crawford, J. F. Perkins, R. J. Medley, R. U. Leonori, Jr., Maj. D. Caruth, P. H. Degnan, Emmet Degnan and Mortimer F. Taylor.

UNSER FRITZ.

AUGUSTA DOG SHOW.

AUGUSTA, Ga., Dec. 8.—*Editor Forest and Stream:* The Augusta Poultry and Pet Stock Show, in connection with the Exposition, closed to-day. The display of poultry was the finest ever seen. The dog department had not as many entries as the show of last January, but the dogs were of a very high order. The judging was done by Mr. T. F. Rackam, of New Jersey, and the benching by Spratts Patent. The award of prizes was as follows:

MASTIFFS.—*Dogs:* No entry. *Bitches:* 1st, Fountain City Kennels' Juno; 2d, B. F. Perry's Dot. *Puppies:* 1st, Fountain City Kennels' Queen; 2d, B. F. Perry's Ben Perry.

ST. BERNARDS.—ROUGH-COATED—*Dogs:* 1st, A. A. McDuffie's Major Prince. *Bitches:* 1st, A. A. McDuffie's Aggie. *Puppies:* 1st, withheld; 2d, A. H. Vonderleith's Rex.—SMOOTH-COATED—*Dogs:* 1st, A. A. McDuffie's Wando.

NEWFOUNDLANDS.—1st, E. Collins's Doc; 2d, H. C. Hall's Dave.

GREYHOUNDS.—*Dogs:* No entry. *Bitches:* 1st and 2d, W. F. Thomas's Purity and Jess.

POINTERS.—CHAMPION—Fountain City Kennels' Rosa.—OPEN—LARGE—*Dogs:* 1st, T. B. Legare's Meteor, Jr. *Bitches:* 1st, T. B. Legare's Pansy.—SMALL—*Dogs:* 1st and 2d, Fountain City Kennels' Spot S. and Button; 3d, H. Gregg's Wright. *Bitches:* 1st, Fountain City Kennels' Rosa May; 2d, H. C. Britton's Jessie Underhill. *Puppies:* 1st, Fountain City Kennels' White Lilly; 2d, H. Gregg's Spot.

ENGLISH SETTERS.—*Dogs:* 1st, J. A. Graham's Rex G.; 2d, E. M. Booker's Bob Toombs. *Bitches:* 1st, J. A. Graham's Whisper San Roi; 2d, H. May's Berne West. *Puppies:* 1st, W. E. Scofield's Blitz.

IRISH SETTERS.—*Dogs:* 1st, Dr. McHatton's Jumbo. *Bitches:* 1st, Dr. McHatton's Nora O'Neill.

BLACK AND TAN SETTERS.—*Dogs:* 1st, J. McIver's Bellman; 2d, J. Butler's Trimmer. *Bitches:* 1st, J. McIver's Beauty.

COCKER SPANIELS.—F. E. Collins's Rose.

COLLIES.—CHAMPION—*Dog:* Chestnut Hill Kennels' Scotilla. *Bitch:* Chestnut Hill Kennels' Flurry II.—OPEN—*Dogs:* 1st and 2d, Chestnut Hill Kennels' Strephon and Roslyn Bruen. Very high com., O. H. P. Scott's Cubeb. High com., J. L. Boardman's Shepherd. *Bitches:* 1st and 2d, Chestnut Hill Kennels' Metchly Surprise and Gem. Very high com., O. H. P. Scott's Lady Neph. High com., J. L. Boardman's Queenie. *Puppies:* 1st, Chestnut Hill Kennels' Roslyn Bruen.—SMOOTH-COATED—1st, Chestnut Hill Kennels' Lady Bird.

IRISH TERRIERS.—1st, Chestnut Hill Kennels' Breda Jim.

FOX-TERRIERS.—1st, withheld; 2d, W. F. Thomas's Zip.

PUGS.—*Dogs:* 1st and 2d, Miss M. Bannister's Jumbo, Jr., and Saxon. High com., J. E. Kerr's Beauty. *Bitches:* 1st and very high com., Miss M. Bannister's Fussy and Daisy; 2d, J. E. Kerr's Nellie. *Puppies:* 1st and 2d, Fountain City Kennels' Joe and Girlie.

SPECIAL PRIZES.

Kennel collies, Chestnut Hill Kennels; pointers, Fountain City Kennels; setters, J. A. Graham; pugs, Miss M. Bannister; terriers, H. Madden.

AUGUSTA.

SCENT.—Commenting on the recent articles in these columns about the dog's scent and their following wagons, the Indianapolis *People* says: "Will P. Wallace says on this subject that in his opinion the dogs follow the scent of the master, horses, buggy and wheels and gives the following as a case in point: A few years since, Mr. Joseph Becker was a confectioner, on West Washington street, and the possessor of a few Gordon setters. One evening his delivery clerk had cause to deliver with his horse and wagon a freezer of ice cream quite a distance in the country, on the Central avenue road to Broad Ripple. One of these setters followed the wagon, which was driven out on the Meridian street extension to the first cut off road to the right, beyond Fall Creek—leading to the Central avenue pike. During the delivery of the goods, Mr. Becker and his wife drove out the same road, past the cut off and straight ahead to the end of the Meridian street extension. About twenty minutes afterward the driver of the wagon returned by the road he had selected when driving out and no sooner had the setter reached Meridian street than he placed his nose to the ground and immediately left the driver and pursued the course taken by his master and eventually found him. The dog in this case obtained scent from the wheels and horses only. Speaking about dogs, Will P. Wallace also cites the following case where a dog displayed more sense than scent. An old German gardener, living about four miles south of this city, on the Three Notch Road, was the possessor of two large animals, a cross between all the dogs in the county. One of these animals on every Thursday morning did all the churning for the family by means of a treadmill, while the other one generally spent the day in barking at the one in the mill or making social calls in the neighborhood. One Thursday morning the master changed dogs, much to the delight of the steady worker and to the great discomfiture of the idler. Matters ran along in this way for about three weeks, when, lo! one Thursday morning the newly initiated dog was found missing and the old stand-by was again put to work. In the evening the truant returned, giving the family a hearty welcome. He pursued this course for four consecutive Thursday mornings, whereupon his master, becoming very much discouraged, chained him every Wednesday in order to have him on hand the following morning to do the churn act." The churn dog's absenting himself was not an unusual trick at all, as churn dogs go. It is a common thing for them to make off the night before churning day unless chained up.

DOG TALK.

MR. A. E. PITTS, of Columbus, O., has recently imported from the kennel of Mr. George Raper, Prestwich, Eng., the young for-terrier dog Ruby Signal, by Raby Mixture and out of Olivebud. He will be exhibited at the coming shows, and his owner expects to make it warm for some of the cracks.

Mr. C. Ormsby, Secretary A. P. D. C., advises us that the names of Mrs. M. A. Rives, and Messrs. Chas. P. Holmes and James Mortimer were incorrectly included in the list of petitioners given in the item relating to the Pet Dog Club in our last issue.

Mr. R. B. Sawyer, proprietor of the Riverview Kennel, at Birmingham, Conn., has disposed of his pugs, and in future will keep only bulldogs. His kennel at present contains champion Merry Monarch, Portswood Tiger, Soudan and Beatrice, all well-known.

Mr. R. W. Craig has removed to Omaha, Neb., and all communications for him or the Wacouta Kennels should be forwarded to that place, in care of the Omaha *Herald*, the management of which he has assumed.

Mr. A. R. Kyle, of South Norwalk, Conn., has sent his collie bitch Heather Belle to England, to be bred to Metchley Wonder.

CHESAPEAKE BAY DOGS.

TWENTY-THREE years ago, on the Gunpowder River I saw a Chesapeake Bay dog. I had never seen one before, but had been told by men who had shot on the Chesapeake, that they were wonderful dogs. There was something about the dog that had attracted my attention, and being a lover of a good dog and also very fond of duck shooting, I naturally asked a great many questions about the Chesapeake Bay dogs. I had shot a great many ducks on the New England coast and had always used setters and spaniels to retrieve my birds. Very cold, rough weather was hard on the setters, and a setter that was good for woodcock, snipe and partridge, I disliked to use for a duck dog, as two or three years would use them up.

Soon after I was on the Gunpowder River, I came west into northwestern Iowa. Here I found fine duck and goose shooting. But I had the same trouble with my retrieving dogs I had had in New England. The ice, snow, cold water and rough weather of northwestern Iowa were very severe on my duck dogs. In one severe, cold storm at Ruthvan, Iowa, I nearly ruined one of the best setter dogs I ever saw. He was in the cold water most of the time for six hours, retrieving redheads and canvasback ducks. A friend and myself shot two hundred and fifty that day on the pass, and the dog had to retrieve most of them.

Soon after this I received, through some friends who had shooting points on the Chesapeake and Currituck, a very nice pair of Chesapeake Bay dogs. Their hair was straight but very thick. The bitch was wavy coated. They were very fine looking dogs and about eight months old when I received them. Neither of them had had any training.

About two or three months after I received them, the ice broke up in our river and the ducks began to come north. I got up at daybreak one morning and took the dogs with me to the river to see how they would like cold water and the gun. I found that they were fond of both. I shot a number of ducks and the dogs brought them to me. They did not seem to care for ice, but would go anywhere after a duck. It was so cold that they would frost over as soon as they came out of the water. I gave them several mornings' work afterward, that spring, and found that I had as fine a pair of duck dogs as one could wish. They got many ducks, when I thought they were lost in the floating ice.

They are active and will come on the run with a duck in mouth. They handle game with great care and I have never seen any teeth marks on a bird that was retrieved by my dogs.

One morning, the first of this month, I was about twenty miles northwest of here with my brother and a friend after ducks and geese. I had my Chesapeake Bay bitch with me. We had had a fine morning's shoot, near a large slough, where there were quite a good many ducks and geese. About nine o'clock we thought the flight was over, so we gathered up our birds and started for the wagon. The country around us was all burnt over. We got out of the slough on to the high ground, and were walking slowly along when we saw a large Canada goose making for the slough. We sat down on the burnt ground and I called. The goose answered and turned directly toward us. I called again and the goose came on until he got within about 50yds. of us. I told my friend to shoot as he would come no nearer. He shot and the goose fell almost to the ground. When within about 4ft. of the ground he seemed to recover, and I told the bitch to go. Away she went after him. They went over a ridge about one-half mile from us. I ran quickly to the top of the ridge, and when I got there I found my bitch coming out of a large slough with the goose in her mouth. The goose weighed fifteen pounds.

If a duck or goose ever falls to the ground, the Chesapeake Bay dogs are sure to get it. They are very powerful in the water, and do not seem to fear anything when in the water. They swim very high and very fast, and no dog that I have ever seen seems as much at home in the water as the Chesapeake.

They have a fine nose and are very sure to get birds in the bad sloughs of the Northwest, where the grass grows very high and the mud is almost impassable.

My bitch has had three litters of pups, and the pups have the same love for the water and the gun as the old dogs. I also bought two Chesapeakes from another strain, and they are fine retrievers. One of them is out in the country with a man that shoots a great many ducks. He thinks her work is perfect. The color of all my dogs is sedge brown. They show but little in the grass in the hunting season.

I like the Chesapeake Bay dog very much for a house dog. They stay at home and mind their own business, and are not roaming over the country doing mischief for their owner to pay for. They are kind to children. I have never known my Chesapeake Bay dogs to bark at a child. My bitch stays in my house nights, and I do not think it would be good for any one to try to break into the house.

They stand the winters of the Northwest well, and will play out in the snow when the mercury is 30 or 40 degrees below zero.

J. G. SMITH.

ALGONA, Ia., Nov. 24.

WORCESTER KENNEL CLUB.—Worcester, Mass., Dec. 4.—*Editor Forest and Stream:* At a meeting of the Worcester Kennel Club, held at the Bay State House, Monday evening, Dec. 3, 1888, the following officers were elected: President, Harry W. Smith; First Vice-President, Col. Rockwood Hoar; Second Vice-President, Frederic Kimball; Secretary, Edward W. Dodge; Treasurer, Fred W. White; Executive Committee—Levi Lincoln, Chas. A. Parker, Waldo Sessions, Charles Crompton, A. B. F. Kinney, F. M. Harris, Capt. E. A. Harris, H. F. Littlefield, G. W. Patterson. Bench show dates, April 9, 10, 11 and 12.—EDWARD W. DODGE, Sec., 426 Main street.

Dogs: Their Management and Treatment in Disease. By Ashmont. Price $2. Kennel Record and Account Book. Price $3. Training vs. Breaking. By S. T. Hammond. Price $1. First Lessons in Dog Training, with Points of all Breeds. Price 50 cents.

AMERICAN KENNEL CLUB MEETING.

THERE was a large and enthusiastic meeting of the American Kennel Club, Dec. 6, at 10:30 A. M. The clubs represented were: St. Paul, H. F. Schellhass; St. Bernard Club, S. F. McFarland; Washington, F. C. Webster; American Field Trial Club, A. P. Vredenburgh; Baltimore, H. Malcolm; Cincinnati Kennel Club, P. H. Obl; American Gordon Setter Club, H. Bennett; New Jersey, C. J. Peshall; Westminster Kennel Club, F. R. Hitchcock; Collie Club, T. H. Terry; Beagle Club, H. F. Schellhass; Mastiff Club, C. C. Marshall; Philadelphia, J. H. Winslow; Pacific Kennel Club, Elliot Smith; Cleveland, L. G. Hanna; Hartford, C. J. Peshall.

The Columbus, O., Rochester Kennel Club and the New England Kennel Club were admitted as members. The application of three other clubs for membership, the Connecticut State Kennel Club, the Toledo Kennel Club and the Rensselaer Kennel Club, were laid over under the rules. The protest of Mr. C. T. Thompson, made at the Richmond dog show, against the award of the special prize for the best setter that has run at a field trial was sustained. Mr. J. F. Campbell was suspended for one year and ordered to return the prize won. In relation to the request of the Gordon Setter Club for a class for Gordon setters in the stud book, Mr. Peshall gave suggestions as to an amicable arrangement, which were adopted, and a class was made for the registration of black and tan setters under head of American Gordon Setters.

It was voted to adopt the plan of associated membership. It was also voted to establish a Gazette to be published monthly. The committee appointed to confer with the *American Kennel Register* reported progress and the matter was laid over for action of the advisory committee. Regarding the conference with the National Dog Club the matter was placed in the hands of the president with power.

The changes in the rules, with some unimportant alterations, were adopted. Messrs. Peshall and Schellhass endeavored to have the rule granting power to bench show committees to refuse entries rescinded, but without success. In accordance with previous notice Mr. Peshall resigned as member of the Stud Book Committee and also as delegate.

ANNUAL MEETING OF THE SOUTHERN FIELD TRIAL CLUB.

THE meeting was held on the evening of Dec. 6, 1888, in the Amory Hotel, at Amory, Miss. J. W. Renfroe in the chair. Eleven members were present. The minutes of the inaugural meeting were read and approved. The report of the treasurer was read and approved. The second annual meeting of the club will be held on the first Monday in December, 1889. The following gentlemen were elected to membership: Thos. L. Martin, Lexington, Ky.; H. B. Durfea, J. L. Anthony and R. L. McCook, New York; C. D. Smedburg, Covington, Ky. The following prizes were arranged for the Derby of 1889—$800, divided as follows: $350 to first, $250 to second, $200 to third. Mr. Anthony gave $100 to be given to the best pointer in the stake. Messrs. P. H. Bryson and W. Bedford gave $100 to be given to the best setter. A committee of three was appointed to revise the running rules: they were F. I. Stone, T. M. Brumby and D. H. Bryson. A vote of thanks was tendered to Dr. Bell, Mr. Dillworth and Messrs. Wright for courtesies extended to the club. The officers were re-elected. The meeting adjourned to the next evening, Dec. 7. Mr. P. H. Bryson and Col. Sherrod were appointed a committee to select grounds for holding the trials of 1889 and to arrange to have the birds protected. Entries to Derby close June 1; All-Age Stake Nov. 1. A vote of thanks was tendered FOREST AND STREAM.

"OUR PRIZE DOGS."

THIS book all true lovers of the dog have been anxiously awaiting. Mr. Mason is, unquestionably, the best judge of dogs in this country, and a work from his pen upon the subject will command the widest attention and carry with it the highest authority. He possesses by nature, it is only simple justice to say, the qualities that eminently fit him for the task he has undertaken, and his innate gifts in this direction have been trained and supplemented by life-long study. If any man in America is entitled to speak of dogs *ex cathedra*, he is the man. His standpoint is always that of the thoroughly impartial and scientific critic. The work before us proves that he wields a ready and dexterous pen.

Mr. Mason visited all the bench shows of any importance held in this country during the past year, and has described in patient detail every winning dog in his work. The points given are color, markings, sire, dam, date of birth, height at shoulder, weight in show condition, and names of breeder and owner; besides which the book contains a complete record of the show winnings for 1887, in America and abroad. The labor involved in such an undertaking must have been simply enormous. Nearly a thousand specimens are thus described. In addition to this, however, Mr. Mason gives in each case his original criticisms, pointing out the merits and defects. These criticisms alone, of course, would render the book one of inestimable value to all interested in improving the dogs of our country. The value of such a treatment as he has given to the subject lies in the accuracy and exhaustiveness of the details, and the competency of the judgment, and for these the name of the author will vouch with every *connoisseur* of dogs.

Of the mechanical presentment of the book any publisher might feel proud. The composition and press-work are of the best known description; the paper is of high quality; the binding in green and gold, with a portrait of the collie Scotilla stamped on the cover. And this brings us to one of the strongest points about the work—the illustrations—allusion to which we have purposely left to the last. They are artotypes, or permanent photographs, beautifully executed, and, of course, exact reproductions of their subjects. We have had in the past many books upon the dog which their authors or publishers have attempted to illustrate, but the cuts or plates have been of the roughest and coarsest description, hardly recognizable likenesses of the animals whose appearance they were designed to reproduce.

Of the illustrations in "Our Prize Dogs," in every respect, it is hardly possible to speak too highly. They leave practically nothing to be desired. When, in addition to their fidelity and finish of execution, the fact is considered that the subject chosen are the dogs that, among all those in America, are nearest to the true type, their wide and inestimable value becomes evident. There are comparatively few people who have more than a very vague conception of what are the truest types in the different breeds of dogs. One of the chief values of this work, particularly with regard to its illustrations, will be to supply this defect. With it before them, it will be easy for even the most inexperienced to form correct ideas upon this subject—as, for instance, that a long nose in a mastiff is a thing not to be desired—and thus to cultivate taste and judgment. "Our Prize Dogs" not only is an indispensable work to every breeder and dog-fancier, but will possess interest and value to every one who is in any way interested in dogs.—*Boston Journal of Health.*

NAVAL OFFICE, Port of San Francisco, Dec. 1.—*Editor Forest and Stream:* As an old staunch friend of yours let me congratulate you and all lovers of good dogs upon the appearance of that splendid book "Our Prize Dogs," from the pen of my valued friend Charles H. Mason. A few days ago he very kindly and generously sent me a copy, beautifully bound. It was indeed a welcome surprise, and I am grateful for Mr. Mason's thoughtfulness. The book was long in being born, but what a magnificent creation it is; full of frank, manly, courageous criticism; full of valuable information, and brimming over with instruction to all who care to improve the breeding of our four-footed friends and companions.

His criticisms are undoubtedly just. They are pungent, fearless, forcible. They cannot help doing good. Even the owners of the dogs which have not found favor in the eyes of this accomplished and honest judge, should feel glad there is one man in America who knows what he is writing about, and who can tell them convincingly of the demerits of their pets. So can they profit and improve in breeding; or in future purchases look for greater symmetry, grander quality, for points of utility hitherto escaping observation, and thus be happier in the knowledge of canine perfection.

I keenly regret that Mason did not go a little more into details when he criticised some breeds. For instance, I would have loved to see the complete measurements of all the large dogs—the mastiffs and St. Bernards. In his next book he will, I am sure, supply the deficiency.

And in the interest of all lovers of dogs he ought to take up at once that graphic pen of his and give us a book that will be a standard work on all breeds, and take the place of "Stonehenge," Vero Shaw, Dalziel, or "Idstone." There is plenty of room for it. The literature of dogdom is voluminous. He could make it luminous.

How fortunate he was in getting some splendid pictures! And how beautiful and stylish the printing and binding of the book. Some of the pictures are matchless in merit. Revel III. seems about to speak to us, and presents a picture of grace and style and character, that makes me long to own and caress the original. Minting, the unmatched mastiff, looks so massive and majestic and so full of all the good qualities I have sought in my favorite breed, that if Mr. Cleveland had been happily re-elected, I would have worried Mr. Moore to part with him. I wish Beaufort's unbeaten head and figure had been there to gladden the sight. But Graphic's portrait is lifelike, full of vigor, of quality, and all over he looks a pointer.

Tim, whose ancestral blood comes from the land whose eloquence, melodies and mirth have waked the world to wonder, looks the Irish gentleman all over—stylish, upstanding, muscles of steel, and just the fellow I would love to own. There are two or three pictures, had I been Mason, I would have left out. That wretched looking, long-eared Homer! Three cities, they say, claimed the original great Greek dead, which had spurned him living! Well, the picture of Homer, the mastiff, certainly would never make a village clown go wild over him. Let me advise his owner to have him sit again. I have never been much enamored of collies, but Scotilla's artotype gives me a shepherd craze. What a majestic mien! He looks the tireless guardian of uncounted flocks, and none but he to know their number.

Yes, it is a splendid book, splendidly gotten up, and it is a credit to its author and its progressive publishers, the Forest and Stream Company. To each all honor and rich reward. And with countless good wishes for a glad, bright Christmas and a New Year laughing with joy, I am, faithfully yours, STUART TAYLOR.

THAT RABBIT BAITING.

MR. C. J. PESHALL, a well-known sportsman, who is President of the New Jersey Kennel Club, and also a member of the Society for the Prevention of Cruelty to Animals, was seen by a reporter of FOREST AND STREAM and asked for his views as to the position Mr. Bergh has taken in trying to stop the Hempstead Coursing Club coursing with fox-terriers and rabbits. He said:

"Mr. Bergh merits the thanks of all sportsmen for his efforts in preventing all kinds and classes of cruelty, and surely this is cruelty."

"Then you regard this running rabbits with terriers as different from that coursing which is allowed and recognized in England?"

"Why, certainly, there are regularly organized coursing clubs, and the gentlemen and sportsmen of England course the hare with the greyhound. These meetings are usually well attended, and even the ladies grace them with their presence. The Long Island coursing claims to be governed by the English rules. It decidedly is not. This Long Island coursing with the terriers is called and designated by gentlemen and sportsmen in England as rabbit baiting, and is only practiced by what are called pit men and miners, or the lower classes. It is prohibited by law, and the Royal Society prevents it whenever they find it out, the same as they do rat baiting or dog fighting. Rabbit baiting, rat baiting and dog fighting are usually attended by the same class. I have here the rules of the Hempstead Club and it says 'from Stonehenge.' But if you look through the Stonehenge or English rules of the coursing club you will not find the fox-terrier mentioned once. You see that there has been one leaf added by this Long Island club; and it is only in their bye-laws that this fox-terrier rabbit coursing is mentioned. In California and Kansas and some other Western States you will find they are governed by the English rules, and that this fox-terrier baiting is not once mentioned in the rules. In the West the coursing is with the greyhound and what is known as the jack rabbit, which is similar to the English hare, and the hare often escapes from the hounds."

"Then you do not consider this Long Island rabbit coursing a legitimate sport?"

"Why, no, certainly not. No sportsman would shoot a quail on the ground or deprive it of its natural means of escape before he fires. Besides, this rabbit baiting is not only cruel but an unmanly sport, and if Mr. Bergh were to permit it on Long Island why should he prevent Mr. Gillhooly of the Bowery from renting Madison Square Garden, charging an admission fee and then baiting some fifty rabbits during an evening. I cannot see any difference or distinction.

"It is true that they do sometimes in England use the fox-terriers and rabbits, but it is always done secretly, because forbidden by law. I will read you this from the English *Stock-Keeper* of Nov. 23 last:

"By invitation of the genial and sporting spirit known in kennel circles as Lord Love'e, we attended a fox-terrier coursing meeting last Saturday afternoon. It was a cold windy day, and Tottenham Hale did not appear in a comforting aspect as we wended our way from the station to the Ferry Boat Inn. 'This course constitutes a lap,' said his lordship, and we entered the well-known resort of Lea fishermen for a warming lap. Then we picked our way in the soft ground along the riverside, shuddering at the gaunt, lonely look of the naked poplars. The river itself looked so cold and miserable that we think had we been a fish we should not have kept that lonely angler waiting so long while we made up our mind to get out of it.

"Arrived on the ground—a large treeless field—we found a small paying inclosure, and beyond it another for members. There were several book-makers present, who conducted their business in the usual noisy manner, in spite of the notice on the card that 'No betting is allowed.' In a small building to the rear of the members' enclosure the competitors were tied up in little compartments, built one above the other. The terriers were 'rugged,' and after each course were rubbed down and the rug put on again. We were told the rabbits were an exceptionally strong lot, and we certainly considered the slipping very efficient; but in spite of these favorable facts we were unable to get up any feeling of excitement over the business. The rabbits had no chance; only one got away, and that was because he was not wanted, but we think the prancing greyhound we noticed on the other side of the palings accounted for this runaway.

"Most of the coneys took their death noiselessly, but one poor little wretch squealed piteously. When a rabbit is put down that is weak or sick, and only just makes a few nervous hops, a man runs up to it, and with his heavy boot gives it a dull-sounding kick, and throws it back in the basket. This scene is so painful that we would rather see a single terrier slipped on it. The light was getting dim before the stakes were finished. We met a well-known wire-haired man on the ground, Mr. W. A. Nickalls, and heard that he takes a great interest in this pastime. Mr. Frank Redmond also rode up on horseback to watch the proceedings. Mr. Redmond told us he had bought a coursing fox-terrier for an American friend, and as he had been told that his purchase could beat Cardigan, he wanted to see this dog's performance—Cardigan won the first stakes on the card. We hear that Mr. Redmond afterward joined the club."

"Now you will often find that the lower classes indulge in this so-called sport, but there are very few gentlemen who would witness it, and ladies never attend. Dalziel speaks of this illegal sport as the poor man's coursing. I don't think that this rabbit baiting will ever be practiced or become a popular sport in this country. Cruelty publicly practiced and the Society for the Prevention of Cruelty to Animals cannot live in the same country. And you may rest assured that the Society is going to live. Unmanly sports can never flourish in America, except among the low and debased, and will never receive the sanction of the law's approval."

ST. BERNARD IMPORTATION.—*Editor Forest and Stream:* Mr. Harry L. Goodman, who has lately been in England with a commission for me, returned on Thursday last on the steamer Wyoming, bringing with him the St. Bernard dog, champion Burns, and the bitches Gloriana, Miscabel and Chieftainess, all winners at the late shows, and in addition to these the 4mos. smooth-coat St. Bernard St. Michael, by Austin Friar. All are now at my kennels, Oakhurst Kennels, Auburn Park, Ills., in charge of Mr. Goodman, and as soon as recovered from his long journey Burns will be placed in the stud.—R. P. H. DURREE.

SOUTH CAROLINA PET STOCK ASSOCIATION.—The first step toward the organization of a pet stock and poultry association for the State was taken at Charleston, Nov. 28. A call had been made by Mr. G. T. Graham, of Lexington, for all who were interested. A large number of gentlemen answered the call, and a temporary organization was effected by requesting Mr. Graham to take the chair and Mr. H. C. Caughman to act as secretary. Mr. Graham, upon taking the chair, stated the object of the call, which was to form an association which would be especially interested in the development and improvement of the poultry and pet stock of the State. He reviewed the advantages which would accrue from such development and improvement, and the increased pleasure to be derived from the possession of a high grade of domestic animals. The following names were then enrolled: F. W. Dawson, B. McInnes, W. P. Colson, Rudolph Siegling, M. F. Reynolds, E. Blodget, J. C. Hemphill, E. P. Welch, Charleston; John A. Graham, Chester; G. T. Graham, H. C. Caughman, H. A. Meetze, J. H. Coutts, J. K. Davis, A. L. Nunnamaker. At a meeting the next day the following gentlemen were appointed a committee on organization: F. F. Chapeau, L. W. Bicaise, W. P. Colson, B. McInnes, Eber Blodget, J. Alwyn Ball, G. T. Graham, T. W. Reynolds, F. W. Dawson, E. Willis, R. M. Solomons, J. O. Lea, F. C. Cunningham. On motion of Mr. Bicaise it was resolved that the meeting adjourn until Dec. 12.

KENNEL NOTES.

Notes must be sent on prepared blanks, which are furnished free on receipt of stamped and addressed envelope of large letter size. Sets of 200 of any one form, bound for retaining duplicates, are sent for 30 cents.

NAMES CLAIMED.

☞ **Notes must be sent on the Prepared Blanks.**

Pride of Wyoming. By Wyoming Kennels, Melrose, Mass., for orange tawny, correct markings, rough St. Bernard dog, whelped Sept. 19, 1888, by Phlinimmon (Pilgrim—Bessie II.) out of Lady Wellington (Duke of Wellington—Henly Juno).

Dashing Nellie. By Joe Lewis, Cannonsburg, Pa., for lemon belton English setter bitch, whelped July 4, 1884, by Dashing Monarch (Llewellin Dash II.—Countess Moll) out of List (champion Lincoln—Petrel II.).

Natlia. By Mount Waite Kennels, South Framingham, Mass., for black cocker spaniel bitch, age and pedigree unknown.

BRED.

☞ **Notes must be sent on the Prepared Blanks.**

Juno L.—Nebo of Nesseldown. Geo. L. Rockwell's (Ridgefield, Conn.) collie bitch Juno L. (Gelert—Field's Juno) to A. R. Kyle's Nebo of Nesseldown (Sefton—Mavis), Dec. 1.

Dot—Red Rover. Curry & Parks's (Beason, Ill.) collie bitch Dot (A.K.R. 2709) to their Red Rover (Red Gauntlet—Brenda), Aug. 26.

Queen Victoria—Red Rover. Curry & Parks's (Beason, Ill.) collie bitch Queen Victoria (A.K.R. 2610) to their Red Rover (Red Gauntlet—Brenda), Oct. 12.

Lassie Jean—Red Rover. Curry & Parks's (Beason, Ill.) collie bitch Lassie Jean (Ben Lomond—Dot) to their Red Rover (Red Gauntlet—Brenda), Oct. 15.

Smoke—Red Rover. Wm. Morphis's (Atlanta, Ill.) collie bitch Smoke (imported Scot—Belle Clifton) to Curry & Parks's Red Rover (Red Gauntlet—Brenda), Oct. 9.

Belle Clifton—Red Rover. Curry & Parks's (Beason, Ill.) collie bitch Belle Clifton (A.K.R. 1561) to their Red Rover (Red Gauntlet—Brenda), Dec. 4.

Polly H.—Paul Gladstone. Mount Washington Kennels' (Pittsburgh, Pa.) English setter bitch Polly H. (Roderigo—Lit) to S. L. Boggs's Paul Gladstone (Gladstone—Lavellette), Nov. 20.

Dashing Novice—Paul Gladstone. Joe Lewis's (Cannonsburg, Pa.) English setter bitch Dashing Novice (Dash II.—Novel) to S. L. Boggs's champion Paul Gladstone (Gladstone—Lavellette), Nov. 13.

Dashing Nellie—Paul Gladstone. Joe Lewis's (Cannonsburg, Pa.) English setter bitch Dashing Nellie (Dashing Monarch—List) to S. L. Boggs's champion Paul Gladstone (Gladstone—Lavellette), Nov. 29.

Victoria Lavcrack—Gun. Chas. York's (Bangor, Me.) English setter bitch Victoria Laverack (Tempest—Lilly) to his Gun (Gladstone—May B.), Nov. 13.

Fanny—Albert. E. M. Byers's (Pittsburgh, Pa.) Blenheim spaniel bitch Fanny (Jim—Nellie) to B. F. Wilson's Albert (Sir Michael—Lily), Nov. 23.

Floss B.—Pete Obo. Quannapowitt Cocker Kennels' (Wakefield, Mass.) cocker spaniel bitch Floss B. (A.K.R. 3446) to A. S. Johnson's Pete Obo (champion Black Pete—Miss Ginger), Dec. 8.

Frantic—Sancho G. Mount Waite Kennels' (South Framingham, Mass.) cocker spaniel bitch Frantic (A.K.R. 6281) to their Sancho G. (A.K.R. 6100), Dec. 5.

Natlia—Pealer. Mount Waite Kennels' (South Framingham, Mass.) cocker spaniel bitch Natlia to H. C. Brondson's Pealer (champion Black Pete—Faunie Obo), Dec. 3.

Tiny—Bradford Harry. G. E. Richards's (Bangor, Me.) Yorkshire terrier bitch Tiny (Tug, A.K.R. 2704—Mistress Mary, A.K.R. 2705) to P. H. Coombs's Bradford Harry (Crawshaw's Bruce—Beale's Lady), Nov. 13.

WHELPS.

☞ **Notes must be sent on the Prepared Blanks.**

Dot. Curry & Parks's (Beason, Ill.) collie bitch Dot (A.K.R. 2709), Oct. 26, ten (six dogs), by their Red Rover (Red Gauntlet—Brenda).

Minnie. Howard Bros.' (Columbus, O.) pug bitch Minnie (Cricket—Pansy), Dec. 4, seven (four dogs), by A. E. Pitts's Kash (A.K.R. 6032).

Nun Nicer. A. E. Pitts's (Columbus, O.) pug bitch Nun Nicer (Douglas II.—Daisy II.), Dec. 7, three (one dog), by his Kash (A.K.R. 6032).

Bessie Glencho. Chas. Medler's (Brooklyn, N. Y.) Irish setter bitch Bessie Glencho (champion Glencho—Flame), Dec. 1, fifteen (twelve dogs), by Prof. L. P. Braive's Royal Ruby (champion Glencho—Lady Edith).

SALES.

☞ **Notes must be sent on the Prepared Blanks.**

White Heather. White, with little sable, collie bitch, whelped Oct. 20, 1888, by Royal Monarch out of Cora Belle, by A. R. Kyle, South Norwalk, Conn., to W. Yardley, Norston, Conn.

Lady Catherine. Orange, white markings, St. Bernard bitch, whelped April 28, 1887, by Duke of Lancaster out of imported Doris, by Chas. D. Cugle, Hartford, Conn., to E. B. Sears, Melrose, Mass.

Gun (A.K.R. 1538)—Victoria Laverack (A.K.R. 4677) whelp. White, black and tan English setter dog, whelped June 11, 1888, by Chas. York, Bangor, Me., to W. F. Penniman, North Woodstock, Conn.

Topsy. Black cocker spaniel bitch, whelped April, 1888, by Shady out of Pet Obo, by Mount Waite Kennels, South Framingham, Mass., to Mr. McCulloch, Malden, Mass.

Natlia. Black cocker spaniel bitch, age and pedigree not given, by H. C. Brondson, Boston, Mass., to Mount Waite Kennels, South Framingham, Mass.

Donna Dolores—Donna Inez.—Editor Forest and Stream: Please correct error in your issue of Dec. 6, in Kennel Notes—Sales. Instead of Donna Inez we should have reported Donna Dolores sold to Mr. Whipple. They are litter sisters and the same color, so the entry is all right but the name. The error was an inadvertence on our part in writing the name.—WILSON FISKE.

Petross Bros. received the following letter from Richard Butler & Co., wholesale produce and commission merchants of Kansas City: "Kansas City, Mo., Nov. 23, 1888. Petross Bros., Springdale, Ark. Gents: There are several large banquets coming off here this winter and we are requested to procure some bear meat for them. We presume the price no object and if you can get us any, have no doubt we can make you some money. If you can get it ship or write at once and if not and know any hunter who gets such game please hand him this and much oblige, Yours truly, Richard Butler & Co. Shipping directions: Draw entrails and ship whole carcass." Owing to the heavy demand for this kind of meat the supply was exhausted some twenty-five years ago, and consequently Petross Bros. are unable to fill the order, but if Richard Butler & Co. should want some of the best patent roller flour for their coming banquets that is manufactured they are knocking at the right door.—*Springdale (Ark.) News.*

New Publications.

CHAPTERS FROM JANE AUSTIN. Edited by Oscar Fay Adams Boston: Lee & Shepard. Cloth, 75 cents. Contemporary with Sir Walter Scott, Jane Austin is the only woman writer of the first decades of the century whose works have stood the test of time. She never figured as a popular novelist, but there is a certain excellence in the quality of her work, which has won her the appreciation of the highest and most competent critics. Thackeray among others spoke of her writings in terms of unmeasured excellence. Her heroes and heroines are commonplace people, wise and otherwise, moving in good society, loving and acting as such people love and act in real life without any great display of chivalry or self-sacrifice. The characters are not idealized, her heroines are not girls like Scott's Rebekah, or Thackeray's Ethel, or Dickens's Florence, creations of the imagination, but the sort of girls that sensible cultured women would like to have for friends and neighbors, and sensible men select for their wives. Jane Austin is an artist and her admirers dwell emphatically on the artistic excellence of her work, but although the treatment of her subject is artistic her characters are in no sense creations. No criticism of her work can be juster than her own estimate of it when she compared it to that of miniature paintings on two square inches of ivory, displaying extreme attention to minuteness of detail. Every course of literary culture should involve an acquaintance with the writing of Jane Austin, and the present volume affords all that is necessary to a thorough appreciation of her life and labor.

Has the Bible anything to say about political economy? This question will be discussed in "The Bible and Land," shortly to be published at Morristown, Tenn., by its author, the Rev. James B. Converse.

Rifle and Trap Shooting.

RANGE AND GALLERY.

ST. LOUIS, Mo., Dec 8.—*Editor Forest and Stream:* On last Wednesday evening the St. Louis Pistol Club held its annual meeting for the election of officers and also made arrangements for another tournament to begin next Wednesday and continue twenty-one weeks, thirteen shoots being necessary to constitute an average. The old officers of the club were unanimously re-elected: L. V. D. Perret, President; W. Bauer, Vice-President; W. J. Lord, Secretary and Treasurer; E. C. Mohrstadt, G. W. Alexander and J. G. Schaaf with the officers constitute the Board of Managers. The coming shoot is to be a handicap. There will be a prize for the member having the highest handicap average, and a gold medal for the highest general straight average. The first shoot will take place next Wednesday evening on the new tourney. Messrs. Lord and W. Hettel were appointed a committee to secure the medal and also to select a prize. The two latter gentleman with Mr. Perret constitute the handicapping committee. The standard American target will still continue in use for the proposed shoot and a three pound pull of pistol will have to be used by all the club's members, which now makes the conditions of the shooting of the St. Louis Club just the same as practiced in the East. When the motion of the adoption of the three pound dull was made, only one of the thirteen who were present objected, consequently it went through with a rush.—UNSER FRITZ.

BOSTON, Dec. 8.—Perfect fall weather greeted the shooters today at the rifle range, and many were present to enjoy it. The wind was light from 9 o'clock, and shooting was very lively, each of the matches being well patronized. Following are the best scores made to-day:

Victory Medal Match.

H L Lee	10	9	8	10	9	6	8	8	8	10—86
J A Frye	8	9	10	9	8	7	8	10	9	8—86
A Maynard	9	8	9	7	10	5	8	10	10	6—82

F Browne	9	8	8	7	9	7	8	10	8	8—82

WILMINGTON, Del., Dec. 4.—The winter shooting at Healdmoore Rifle Range to-day was made enjoyable by the addition of a good warm stove to the shooting house, so that the marksmen will enjoy their pastime through the cold winter days in as much comfort as though they were at their own homes. The shooting to-day, although favored by a perfect light, was rendered difficult by a tricky fish-tail wind, but some excellent scores were made. The monthly badge of the Wilmington Rifle Club was won by J. F. McCafferty. E. J. Darlington made an advance on his previous record at revolver practice, narrowly missing the goal of all marksmen's ambition—a score of 80 points.

Revolver Match, 30Yds., Standard Targets.

E J Darlington	10	8	10	10	7	6	8	9	6	4—78
J F McCafferty	10	6	10	8	9	5	3	4	5	—68

C W Reynolds	9	5	6	7	7	8	6	8	4	6—66

NEW ORLEANS, La.—The New Orleans Rifle Club enjoys life as it goes and takes family wife, youngsters, and all to the club's own grounds, the Magnolia Gardens. The principal features are prize shooting and prize bowling for a very large number of handsome peizes; games for children and distribution of toys; the whole concluding with a dance. The members of the Rifle Club comprise the best German and Swiss citizens. The different committees of the club consist of 120 gentlemen.

SAN FRANCISCO, Dec. 2.—The target ranges at Shell Mound Park were occupied to-day by the military companies and the Independent Rifles. Fair scores were made by all teams, as shown by the following list, 10 shots per man, Creedmoor target:

Company A, Fifth Infantry.

W H Perkman	42	S C Warner	41
G F Whitcomb	38	W F Osmond	39
R J Covasso	39	O Klengel	41
G E Shuey	40	C H Ellis	35
W J Downey	40	Geo Guston	41

Company F, Fifth Infantry.

J M Morrison	29	Pvt C G Webern	35
Pvt Tyrell	31	Pvt M C Boyer	34
Pvt Beaver	35	Pvt H Hayes	37
Pvt Cobbesdick	29	Sergt Hunt	27
Pvt A Bungle	32		

Company F, First Infantry.

	200	500		200	500
H L Pendleton	42	43	J T Eggert	37	40
R J Loughery	42	40	Chas Specht	34	36

Battery A, Second Artillery:

Fohlers	45	Spotts	43
Darcy	47	Speyer	39
Kennedy	36	Hickey	45
Beatty	41	Wickenbauson	42
Smythe	47	Carlile	45
Muller	42	Classen	40
Fabri	45	Geary	47
Russell	43	Hanly	44
McAvoy	30		

Independent Rifles:

J G Wintjen	36	P Eckhoff	32
J Wurtman	39	J Fallings	23
H Tonnemacher	40	L Hofman	22
J D Heisse	35		

Union Guards, Company B, Third Regiment, 200yds. range—Captain Kennedy 40, F. W. Ostrich 39, W. Busker 35, F. Hayes 36, J. Donohue 35, A. P. Bailey 31. J. Corbett 31, S. Pettills 29, F. R. Young 29, J. G. Gray 31, J. Seidenberg 30. After the marksmen's regular competition several pool shoots took place. That between Messrs. Schultz and Wurtsman attracted the most attention. It was a close match and was won by Schultz.

MIDLAND, Ont., Dec. 1.—The following match was shot by Newtonbrook and Midland rifle clubs each on their own range today. Both clubs are members of the Ontario Small-Bore Association. The match was shot under Association rules:

Newtonbrook.	100.	200.	Tot'l	Midland.	100.	200.	Tot'l
T S Humberstone	38	22	60	W Stewart	48	38	86
Jos Smith	41	17	58	Jas Gregg	37	15	52
Chas Holmes	37	28	65	C Clarkson	40	24	64
J Gilyeart	44	8	52	H F Swizer	36	38	74
A Muckle	41	40	81	T Elliott	29	29	58

Jas. Nicol	39	16	55	Peter Clark	40	26	66
	395	220	615		386	263	649

Majority for Midland, 34 points.

STOLEN TROPHIES.—Providence, R. I., Dec. 7.—E. Harrison Sandford, ex-director of the National Rifle Association of America, has met with, to him, a serious loss. His elegant summer home at Narragansett Pier was entered by thieves on November 23 last, and a large collection of jewelry and medals—the latter trophies of his prowess as a marksman—was carried off. The most prized objects among the stolen goods were the *Spirit of the Times* badge of 1876, and the championship badge of the National Rifle Association of America, 1876. Inspector Coogan, of Boston, early this week arrested a man whom Detective Parker, of this city, recognized as an old thief and jail-bird named Thomas Knott, and on the latter's confession of the place of concealment about half of the plunder, including the *Spirit of the Times* badge, was recovered from a desolate spot near Point Judith.

DEPARTMENT REPORTS.—The reports of the Secretary of War and of his subordinates, so far as they refer to small arms, are more than usually interesting. Secretary Endicott says that all the States and Territories now have an active militia sufficient under the regulations to entitle them to receive ordnance and quartermasters' stores from the United States, excepting the State of Arkansas and the Territories of Arizona, Idaho and Utah. It is hoped that soon practical instruction in sea coast defences and the handling of heavy artillery may be given to the militia, and the officers of the army may be relied upon to give a zealous and cordial assistance. "By a generous supply of ammunition for target practice, to colleges where army officers are serving as instructors," the Secretary says, "it is possible that competitive contests in rifle shooting might in time become as popular with some of these inland colleges as boat racing is now at the universities of our seaboard." Discussing the operations of the Ordnance Department, the report states that during the fiscal year ended June 30, 1888, 41,150 rifles and carbines were manufactured at the national armory, and that investigations have been completed to determine the charge and projectile for an arm of smaller caliber than the present service piece. It is the intention to use compressed and perforated cartridges, but as yet the powder workers have not succeeded in producing a satisfactory powder, the desired velocity being accompanied by too great a pressure. This matter of a suitable powder is still under study and trial. The results obtained in France with the Lebel rifle seems to point to a radical change in the manufacture of powder for small arms.

Commodore Sicard, Chief of Ordnance in the navy, reports that a contract has been made with the Colts Arms Company, of Hartford, Conn., to manufacture for the navy 5,000 revolvers of a new design. This arm combines simultaneous extraction with a chamber cylinder which revolves sidewise by a hinge motion, permitting convenient and rapid loading. It is somewhat lighter than the old naval revolver and is considered in every respect much superior to it. The sample revolvers, on which the inspection of the rest of the contract is to be based, are very nearly finished, and a considerable amount of preliminary work on the contract has been done. The bureau has found it necessary to purchase 1,500 small arms for immediate use in the ships which are now approaching completion. The Lee magazine rifle of the latest construction has been selected, and a contract has been made with the Lee Arms Company. The bureau orders as few small arms of .45cal. as possible, believing that a reduction of caliber will soon take place.

THE TRAP.

Scores for publication should be made out on the printed blanks prepared by the Forest and Stream, and furnished gratis to club secretaries. Correspondents who favor us with club scores are particularly requested to write on one side of the paper only.

NEW JERSEY CHAMPIONSHIP TROPHY.

SPRINGFIELD, N. J., Dec. 1.—*Editor Forest and Stream:* The return match for the New Jersey State championship trophy given by the Atlantic Ammunition Co. was shot on the Union Gun Club grounds here this afternoon, and resulted in a victory for E. D. Miller by a score of 90 to Johnson's 88. The match was shot at 50 bluerocks and 50 Ligowsky clays. A high west wind, nearly a gale, prevailed during the whole time and carried the birds in all manner of ways and at unknown angles, but the shooting of both contestants from first to last was excellent. Johnson shot an uphill race, and at the 18th bird tied Miller amid unbounded enthusiasm from the crowd. At this point it was any one's race, but the pace proved too fast for Johnson and he dropped two out of the next 20, while Miller broke them all. Johnson at once challenged Miller to shoot another match for the trophy, and it is to take place on Dec. 15, on the same grounds, at 100 Keystone targets each.

In the team race between Miller, Sickley and Sopher against Johnson, Roll and Conover much fun was made by the rivalry between Roll and Sopher, and whenever a bird was missed each would try to explain to the other how it happened. The shooting of Sickley was tip-top, and he evidently knows how to handle his 10-gauge Parker, and his wood powder shells seem to get there about every time; result, a badly used up clay-pigeon. Conover had been away in the Far West hunting deer, elk and the like and seemed to think a clay-pigeon pretty small game to catch on to. Following are the scores of both events.

Match at 50 bluerocks and 50 clay-pigeons, for the Atlantic Ammunition Co.'s championship trophy State of New Jersey, National Gun Association rules to govern. Benjamin Pudney, referee; J. Martin, roll scorer; time of match, 40 minutes:

E D Miller	11111111111111101111111—24
	11111111111111111111101—24
	11101111101111111101111—22
	00110011011111111111111—20—90
C H Johnson, Jr	11101011111111111111111—23
	11111111011111111111111—24
	10011111111100111111111—21
	11011011010101111111111—20—88

Miller used a 10-gauge L. C. Smith hammerless, rival shells loaded with 3¾drs. dead-shot powder and 1¼oz. No. 9 chilled shot for bluerocks and 1¼oz. No. 8 chilled for clays. Johnson handled a 12-gauge L. C. Smith hammerless, U. S. Cartridge Co.'s first quality shells loaded with 3drs. of Schultze powder, 1¼oz. No. 9 chilled for bluerocks and 1⅛ No. 7 chilled for clays.

After the above match had been shot the race for three bags of shot was called. Miller's team, composed of himself, A. Sickley and W. Sopher won, breaking 123 to the other team's 112. Following is the score, conditions, 50 Ligowsky clay-pigeons per man, thrown from 3 screened traps, National rules to govern. Benjamin Pudney, referee; Geo. Pudney, scorer:

E D Miller	00110011011111111111111111111111111111111110—43
A Sickley	11101111111111111111111111111111111111111110—42
W Sopher	11011101001010110111110101111101111111111111—38
	123

Dr Conover	10111110011011011010110101010111111101111010110—54
	112

SPRINGFIELD, N. J., Dec. 3.—The Union Gun Club, of Springfield, held its twelfth and last monthly prize shoot for 1888 on its grounds here this afternoon, and although not many of the boys showed up, still there were enough present to make it very hot, and extremely pleasant for the interested parties until the last shot was fired. The main event of the afternoon, after the prize shoot was finished, was the shoot for the turkey supper. Teams were chosen from the members present by Captains Roll and Haines. Roll won the first choice and chose the following team: Miller, Sopher, Conover and Sayre. Captain Haines looked after Johnson, Sickley, Williams and Parker. Haines's team led off, and from the first to the last shot all was excitement, as both teams were very evenly matched, notwithstanding Roll had the champion of the State. At the finish it was found that Haines's team had won by two birds, so Captain Roll called on his men to step up to the captain's office (his large pocket) and settle, which was promptly done. Following are the scores and conditions; prize shoot, 25 bluerocks per man, 3 screened traps, National rules; Ben Pudney, referee:

E D Miller	1111111111111111111111111—25
C H Johnson, Jr	11101011111101111111111—22
J M Roll	11111011011011111111110—21
W Sopher	11111110011111111100001—19
A Sickley	11111101011011011111111—21
Dr Conover	11111111011111111111011—23
D H Sayre	10111011101101011000101—16
W Parker	11011011110111010101011—18
W Haines	11001110101110011010111—17
R Williams	11110111111111111011100—21
D Newton	11011101011010100001103—14

Miller first, Conover second, Johnson third, Roll, Sickley, Williams fourth, Sopher fifth, Parker sixth, Haines seventh.

Turkey shoot, 15 bluerocks per man, thrown from three screened traps, National rules to govern. Losers to pay for the supper, B. Pudney referee:

Haines's Team.		Roll's Team.	
C H Johnston	111100110110110—10	E D Miller	111111111111110—14
A Sickley	00011110101110— 8	W Sopher	11111011110010l—11

Wm Parker	01010111101111—11	D H Sayre	10001101010101— 8
W Haines	11111100011111—12	J M Roll	00011101010101— 8
	54		52

At 6:15 P. M. all the members assembled at Blodgett's Hotel, about a mile from the club house, and sat down to one of his famous suppers. The tables were loaded down with all the delicacies of the season, and the boys did ample justice to the good things thus displayed. After the inner man had been satisfied a vote of thanks was tendered to our worthy host, and all united in saying that if any one is looking for a turkey supper Blodgett's is the place and Blodgett is the man that knows how to cook and serve it. After dinner the members adjourned to a parlor kindly put at our service by Mr. Blodgett, and a business meeting was held. The following officers were unanimously elected for 1889: J. M. Roll, President; C. H. Johnson, Jr., Secretary; E. D. Miller, Manager; Ben Pudney, Boss Trapper. The next thing in order was to give out the prizes for 1888, as follows: E. D. Miller, first, diamond badge; Johnson, Jr., second, gold badge; Roll third, silver badge; Conover fourth, corduroy hunting coat; Haines fifth, leather gun case; A. Sickley sixth, corduroy pants; and Sayre seventh, canvas hunting coat. Miller also wins the $10 gold piece for best average for any six shoots, having broken 149 out of a possible 150, or nearly 100 per cent. For the coming year the club offers 13 prizes in merchandise and gold, also four prizes for the best averages on any eight regular monthly shoots. 12-BORE.

CANADIAN TRAP NOTES.

MONTREAL, Dec. 1.—The third shoot in the "club" series came off to-day with a good attendance. The interest in these shoots seems to be on the increase, and considerable excitement was shown as the competition drew to a close, Alexander, Paton and Cowley leading. The gun was won by E. A. Cowley after a tie and shoot off with A. Alexander. Paton having unfortunately gone to pieces at the most critical moment, left Cowley and Alexander with 17 points each. Contrary to expectation, Alexander failed to come up to his average on the shoot-off, while the secretary-treasurer was shooting in good form. A gusty wind affected the shooting materially. Two sweeps were shot at 5 birds each, the winners in the first being: James 1, Williams 1, and Cowley 3. The second sweep resulted as follows: Cowley first, James second, Taylor third. Mr. F. G. Verity refereed, in his usually able manner. It was cold work, but it did not affect the refereeing. The score stood:

Conditions, 20 Peoria blackbirds, 18yds. rise. Mr. F. G. Verity, referee; Mr. G. Oliver, scorer:

H James	10111100111110001001—2—14
E Sharp	11100100001100100000—4—11
E A Cowley	01001011111100110111—4—17
W Mack	00301010110010,0000—4—10
J B Robertson	01110103000000010001—4—11
J Paton	01111001111110001—2—15
A Alexander	11011111001011011110—3—17
A Lockhart	01001000011000161011—2— 9
N Parker	01110001110111001o1—2—14
F Orr	00010111111101111111—3—16
W Henry	11000000110000010010—8—14

Cowley and Anderson tieing with 17. The shoot-off resulted as follows:

Cowley	01111011111000—10	Anderson	00010010000100— 3

A sweep at 5 birds then followed:

James	11111—5	Parker	11111—5
Sharp	00001—1	Mack	00100—1
Cowley	01011—3	Taylor	10010—2
Lumsden	00100—1	Williams	11011—4
Alexander	01101—3	Capt Douglas	00110—2

James, first; Williams, second; Cowley, third.

Second sweep at 5 birds:

James	11001—3	Williams	00101—2
Sharp	10001—2	Mack	11000—2
Cowley	10111—4	Parker	10001—2
Lumsden	01000—1	Taylor	01010—2
Alexander	03010—1		

Cowley, first; James, second; Taylor third.

MONTREAL, Dec. 1.—At the present rate of shooting it will take some time to decide the ownership of the Horsely gun, which is put up for open competition by the Dominion Gun Club. There have been five shoots so far, and each has been won by a different person; and as the gun must be won three times before becoming the property of any one it would take a good prophet to say who will be its ultimate possessor. Much interest is being taken in the shoots. Following is to-day's score. Open shoot for the Horsely gun, at 20 Peoria blackbirds, 18yds. rise:

J Jones	11111101011111101111—17
Parizeau	11111111010111111111—17
W Ferg's	n1011101111001111111—16
Shackwell	11001111011111101110—15
Redmond	11111110000010101111—13
Dr Tolley	11001010111110101101—13
G Brault	11111000111001101110—13
C Horsely	10001010111111010111—13
D Fox	01101011100001100111—11
Doig	10011011110010110100—11
M O'Rell	10 0101011100101100—11
J Smith	00100010101011101000— 9

Ties: J. Jones 3, Parizeau 1. Previous shoots.—1. D. Robinson 17. 2. W. L. Cameron 17. 3. H. Fergusson 19. 4. C. Horsely 17. 5. J. Jones 17.

TORONTO, Dec. 4.—A grand two-days' pigeon shoot commenced at Dave Beldam's grounds, Malvern, this morning. The gun clubs were all well represented, nearly 30 competitors entering the first event, Josh Wayper took the lead with 15 straight, killed in a masterly way; Dan Blea, Charles Ayre, W. Heatherington and W. McDowall following him close with 14 each. The birds were strong and flew well, although the snowstorm, which

prevailed during the afternoon, caused a few to be somewhat sluggish. Match 1 opened but did not finish on the first day.

Dec. 5.—Dave Beldam's big shoot was closed this evening, after two days' good sport. Dave is noted for getting quick-flying pigeons. Nobody knows where they come from, and it is very hard to keep track of them when they leave. The traps are scarcely open when they are out and off like bullets. The birds on this occasion were no exception. They flew well and were very strong, many being hit hard with both barrels would drop dead outside the boundary flags. The city gun clubs were well represented, and quite a number of sportsmen were present from a distance. Mr. Josh Wayper, of Haspeler, brought his Greener into play for the three first prizes, killing 39 out of 40 strong pigeons, and used his second barrel but two or three times. Mr. Dan Blea also shot in very fine form, and followed Josh very closely. Mr. Rennie refereed the shoot to the satisfaction of all, and Mr. Beldam may be heartily complimented. The score:

Shoot No. 1, 15 pigeons, 26yds. rise, 100yds. boundary, prizes $35, $25, $15, $12, $8, $5:

J Wayper	111111111111111—15	G Morley	111111110011100—11
D Blea	111111111101111—14	W H Jackson	111101010110111—11
Heatherington	101111111111111—14	F Peterman	101101111010110—10
C Ayre	111110111111111—14	T Sawdon	110111010101001—10
W McDowall	011111111111111—14	J Iredale	111100011010100—9
J Bell	111110111111111—13	W Jefferson	001011111011010—9
D Beldam	111110111110111—13	T Wilson	100000110011011—7
T Morcroft	111111111110110—13	R Meldrum	000001110101011—7
D Chapman	100111111101111—12	N. Burton	010011000011110—7
G Henry	010111110111101—11		

Ties at 14—Blea 5, Ayre 4, Heatherington 4, McDowall 3. Ties at 13—Bell 5, Beldam 4. Ayre and Heatherington div. third and fourth prize.

Shoot No. 2.

Same conditions and prizes as No. 1 shoot:

J Wayper	111111111111111—15	J Walton	101011111111010—11
G Henry	111111110110111—13	D Beldam	111000011011111—10
D Blea	110101101111011—12	T Wilson	011011011101101—10
F. Mallett	001111001111111—12	C Ayre	000101100111111—10
J Bell	001111111101101—11	R Adams	101111000111110—10
W McDowall	111111010111100—11	T Taylor	100101100111010— 8
Geo T Smith	101101111011110—11		

Blea and Mallett divided third and fourth prizes. Ties at 11: Bell 4, McDowell 3, Smith 2, Walton 1.

Sweep at 10 pigeons, four prizes, ties divided:

Wayper	0111111111—9	Adams	0110111110—7
Henry	0111110111—8	Miller	0001111011—6
Blea	0111111011—8	Wilson	1011101001—6
Ayre	1111001110—7	Bell	1001110001—5

Double shoot, 10 pigeons a side:

Beldam	11111—5	Morley	11111—5
Heatherington	11111—5	Paul	10110—3

Sweep at 5 Peoria blackbirds:

G Morley	11111—5	D Grant	10111—4
W Hobbs	11111—5	J Walton	11100—3

Morley won tie.

OTTAWA, Dec. 7.—The St. Hubert Gun Club were duly on hand to shoot for the silver cup with the Ottawa Gun Club. The latter defaulted and the St. Hubert's team shot, and now claim the handsome cup according to the conditions. The following were the team scores at 15 Ligowskys, 18yds. rise, 5 traps: E. White 12, R. Dalton 11, P. Thomson 11, G. White 11, A. Throop 10, J. Desiauriers 9.

CLEVELAND, O., Dec. 6.—The East End Gun Club grounds at the head of Cornell street presented a lively appearance to-day, when over thirty sportsmen assembled to take part in the bluerock prize contest, the East End shoot, and the sweepstake events which followed. The bluerock contest was the first of a series of twelve shoots for money prizes, and the local shooters showed their appreciation of the donor's generosity by entering in the first shoots. The conditions were 25 single bluerocks at 18yds, haziness of the atmosphere alone was to the disadvantage of the rise, 3 traps, the rules of the club on the grounds on which the contest occurred prevailing. The conditions were most favorable. The wind did not interfere with the flight of the targets and the contestants. Messrs. Maggo and Phare tied for the first badge, but on account of darkness they postponed shooting off the tie. Paul North won the second badge, with a score of twenty-three. The score follows:

Story	1111101111011011110000110—17
Paul North	1111111111111111101101—23
W Sweetman	1110111010111111111101110—20

C Calhoon	1111110111101111111111111—23

A sweepstake event, the conditions of which were 9 single bluerocks sprung from 3 traps at 18yds., followed. The entrance fee was fifty cents, the purse being divided into three moneys. The totals follow: C. H. K. 7, Keith 7, North 7, Upson 8, Forrester 7, Held 8, Keyes 4, Story 7, Jones 6, Wherry 6, Sweetman 6, Kilby 8, Phare 7, Burns 8, Bell 7, Cross 7, June 7, Coggswell 9, Calhoon 9, Coggswell and Calhoon divided first money, Burns outshot Kilby, Held and Upson, who tied with him for second money on 8, and for third money North beat Keith, Story, C. H. K. and Phare, who grassed 7.

HUTCHINSON, Kan.—The H. G. C. held a Thanksgiving shoot, and Commodore Young did the boys up great with the little Greener. There were but a few members present on account of the weather, but we built a bonfire and had quite a good time. Inclosed find scores.

First match, 12 single bluerocks:

Taylor	10110101100—7	Conklin	100101001100—5
Young	10111111100—9	George	011111011001—8

Club match, 15 singles and 5 pairs:

Taylor	101101101111111	11 11 11 10 10—20
Young	111011111101011	11 11 01 11 10—20
Conkling	100101100111110	11 00 11 11 10—16

Fourth match, 10 singles:

Young	1111101111—9	George	1111001001—6 -110
Allen	1011001110—6—101	Will Allen	1011001110—6—101
Taylor	0010101111—6—111	Forsha	0111010010—5

STICE VS. CARTER.—J. R. Stice, of Jacksonville, Ill., and L. S. Carter, of Hammond, shot a pigeon match at Decatur, Ill., Wednesday, Dec. 5, for the championship of the United States and $250 a side. The terms were 50 live pigeons, 30yds. rise, ground traps, and privilege of using both barrels. Stice won by a score of 43 to 42. Stice used a Parker gun, 7lbs. and 14oz., while Carter used a Smith gun, 7lbs. and 8oz. A few days ago Carter wrote to a Cleveland sportsman telling of his preparation for the match, and saying that he expected to defeat his ambitious rival. In writing he said that he always had his shells loaded with Schultze powder, shooting No. 9 soft shot in the first barrel, and No. 6 in the second. He claims that this combination is the best for live bird races and he has always used shells loaded as above in all live bird matches in which he has taken part. The general rule among live bird shots is No. 8 chilled in the first barrel and No. 7 in the second. Carter was never beaten prior to his trial of skill with Stice. W. A. Henninger, a Chicago sportsman, refereed the match. The shooting was scarcely over when Charles Budd, of Des Moines, Ia., challenged the victor. It is worthy of note that in this match Stice shot the new Parker hammerless, the very first one of these new guns turned out from the Parker works. His success with it demonstrates the merits of the new make and is doubtless a source of satisfaction to the manufacturers.

NEWARK, N. J., Dec. 12.—The special attention of all gun clubs in Essex county is called to the meeting of the Essex County Gun Association, to be held next Friday evening at Von Lengerke & Detmold's. A permanent organization will be effected, and every club is requested to send two representatives.

SLATINGTON, Pa., Dec. 4.—Inclosed find score of some shooting matches held at Copley, $50, between Dye, of Easton, and Lewis, of Copley:

Dye.....1110100101110010110—11 Lewis.....1111101011111110011—15

Second match between Hankee, of Slatington, and Kern, of Copley, $50 a side:

Hankee..001110110110011111101—14 Kern.....110000011110111111111—15

Match here, live birds, between Hankee, of this place, and Kern, of Copley. $100 a side, 31 birds, 21yds. rise:

Hankee.....0110111111001101111110111011—23

Kern.....1110111111101111110011110101100—22

Sweepstake:

Keichline	11110—4	Nettles	11011—4
Berkemeyer	10011—3	Buchwalter	11111—5
Hankee	10111—4	Sieger	11101—4

Ties on 4, miss and out, Hankee 7, Nettles 8.—JOHN WERT.

CHRISTMAS AT WALNUT HILL.—*Editor Forest and Stream:* Owing to an existing spirit of generous rivalry between two prominent New England trap shots, of no inconsiderable repute, viz., Messrs. H. G. Wheeler, of Marlboro, Mass., and O. R. Dickey, of Boston, as to which is the better man at the trap, and in order to determine the matter, a match has been arranged between the parties, at 100 single clay-pigeons each, from 5 traps, to take place at Walnut Hill Tuesday, Dec. 18. Each contestant has evidenced confidence in his own ability by risking a given amount of his pecuniary substance on the result of the contest. The match is creating a large degree of local interest, as both contestants are well and favorably known, and thought to be very nearly equal in ability—champions of each being about evenly divided—and a close and exciting contest is expected. It is reported that considerable amounts are being staked on the results of the contest. Herewith please find programme of minor events—open to all—which have been arranged for the enjoyment of any who may wish to witness the match and participate in the pleasures of the day, entrance from 25 cents to $5: First, 5 clay birds, 5 traps; second, 6 standard targets, 3 traps; third, 6 standard targets, 21yds., straightaway; fourth, 10 clay birds, 5 traps; fifth, 10 standard targets, 3 traps; sixth, 25 clay birds, 5 traps; seventh, 3 pair standard targets; eighth, 50 clay birds, 5 traps; ninth, 10 standard targets, 3 traps; tenth, (at 1:30 P. M.), match between G. H. Wheeler and O. R. Dickey; eleventh, 10 standard targets, 3 traps; twelfth, 6 standard targets, 21yds., straightaway; thirteenth, 6 standard targets, 3 traps; fourteenth, 3 pair standard targets; fifteenth, miss and out. Dinner served, and loaded shells for sale, at the range.—H. S. HARRIS, Secretary, Equitable Building.

WELLINGTON, Mass., Dec. 8.—There was a good attendance at the grounds of the Wellington Club to-day, and some good scores were made in the badge and merchandise matches. In the badge match the following scores were made: Snow 14, Bond 15, Webster 11, Grimes 15, Schaefer 10, Baker 16, Conant 10, Scott 10, Melcher 10, Bradstreet 17, Savage 15, Blake 15, Chapin 10, Frank 13, Hincks 12, Perry 12, Earnest 8, Stanton 16, Swift 14, Edwards 17, Moore 14, Bert 18, Pete 13, Stone 8, Nichols 12, Chase 14. The scores in the merchandise matches were as follows: Snow 15, Bond 15, Webster 12, Grimes 13, Schaefer 16, Baker 15, Conant 14, Melcher 14, Bradstreet 16, Savage 17, Chapin 14, Herrick 14, Perry 19, Stanton 19, Swift 12, Edwards 12, Bert 15, Moore 18. In the other events first moneys were captured as follows: Six pigeons, Moore and Herrick; 10 pigeons, Schaefer, Bradstreet, Bert and Perry; 10 bluerocks, Baxter; 10 bluerocks, Perry; 6 pigeons, Snow, Chase, Bert and Schaefer; 6 bluerocks, Swift, Perry and Schaefer; 6 bluerocks, Bert and Schaefer; 6 bluerocks, Bert, Moore, Snow and Perry; 10 bluerocks, Perry; 10 pigeons, Bradstreet, Stanton, and Melcher. The club will hold an all-day tournament Dec. 20, at which the individual badge of the Massachusetts Shot Gun Association will be contested for by A. W. Gore. It is now held by M. C. Poor.

TRENTON, Dec. 7.—A live pigeon match was shot at Trenton, N. J., between Messrs. Houston, of Trenton, and Meeks, of Riverside, N. J., for $25 a side. Miles L. Johnson was trapper:

Houston .....1111111111111—15 Meeks.....1111111100110—12

Meeks will shoot a match with "Curley" Sampson as soon as the latter is able to shoulder a gun.

Canoeing.

Canvas Canoes and how to Build Them. By Parker B. Field. Price 50 cents. Canoe and Boat Building. By W. P. Stephens. Price $1.50. The Canoe Aurora. By C. A. Neidé. Price $1. Canoe Handling. By C. B. Vaux. Price $1. Canoe and Camera. By T. S. Steele. Price 1.50. Four Months in a Sneakbox. By N. H. Bishop. Price $1.50. Canoe and Camp Cookery. By "Seneca." Price $1.

Secretaries of canoe clubs are requested to send to FOREST AND STREAM their addresses, with name, membership, signal, etc., of their clubs, and also notices in advance of meetings and races, and report of the same. Canoeists and all interested in canoeing are requested to forward to FOREST AND STREAM their addresses, with logs of cruises, maps, and information concerning their local waters, drawings or descriptions of boats and fittings, and all items relating to the sport.

WESTERN CANOE ASSOCIATION.

Commodore—J. R. Bartlett, Fremont, Ohio.
Vice-Commodore—D. H. Crane, Chicago, Ill.
Rear-Commodore—C. J. Stedman, Cincinnati, Ohio,
Secretary-Treasurer—O. H. Root, Cleveland, Ohio.
Executive Committee—C. J. Bousfield, Bay City, Mich.; T. P. Gaddis, Dayton, O.; T. J. Kirkpatrick, Springfield, O.

AMERICAN CANOE ASSOCIATION.

OFFICERS, 1887-88.

Commodore: H. C. ROGERS, Peterborough, Can.
Secretary-Treasurer: GEO. W. HATTON, Peterborough, Can.

	Vice-Com.	*Rear-Com.*	*Purser.*
Central Div.	W. R. Huntington.	E. W. Masten	T. H. Stryker, Rome, N. Y.
Atlantic Div.	W. P. Stephens	L. B. Palmer	F. L. Dunnell, 186 Jerolemon St., Brooklyn.
Eastern Div.	H. E. Rice, M. D.	Maxton Holmes	H. D. Marsh, Springfield, Mass.
N'thern Div.	Robert Tyson	S. S. Robinson	Colin Fraser, Toronto.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of $2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp shall pay $1.00 for camp expenses. Application sent to the Secy-Treas. will be forwarded by him to the proper Division.

Persons residing in any Division and wishing to become members of the A. C. A., will be furnished with printed forms of application on by addressing the Purser.

A SLIDING SEAT FOR CANOES.

Editor Forest and Stream:

The article by "C. A. G." interested me, because in the fall of 1887, after the meet at Lake Champlain, I fitted a boat with a sliding seat and tested it thoroughly to see if an increased speed could not be gained with the same expenditure of strength. Having done considerable shell rowing, and knowing the great power brought into the stroke by the use of the great muscles of the leg, I hoped that the same power could be utilized for fast paddling. The results that season were not especially satisfactory, so during the winter designed and had built by Ruggles the present Narka, a boat for the sliding seat, as near the dimensions of a shell as the existing rules would allow her to be; but after a thorough trial I abandoned the idea as not a practical one for canoe racing.

The greatest objection to its adoption being the vertical motion given the boat, an alternate raising and dipping of bow and stern, making the boat drag or bury constantly, and so very seriously interfere with the headway. The condition does not obtain in a shell because of its greater length.

Another objection to it is the slowness of the stroke required; for while a man in fast paddling will stroke 30 or 40 times a minute, he can work the slide not more than 20 times at most; and although he catches the water 15in. further forward and pulls a more powerful stroke, yet he loses speed, one reason for this being that he has to hold his paddle up and pull himself up the slide, against the wind, by a decided outlay of strength instead of the easy recover in rowing, when he slides with the wind and merely pushes his oar from a fixed fulcrum. This takes strength and, what is even more important, wind, and all this counts in a hot race for a thousand yards or a mile. The actual speed was tested thoroughly over a measured course, then compared with the speed of the same boat fitted with my own high seat and foot brace, and found to be several seconds slower when the slide was used.

It does however give a man an advantage at the start of a race, the leg thrust making the first stroke a very important one, and I think I should have used it for that purpose during the past season, had it not been for the existing prejudice against special appliances for racing. I had a seat made with smooth surface on which I could slide four or five inches and so use the leg muscles, an expedient which I found very useful. That the use of a sliding seat will give a man much more general exercise no one can deny, and for that purpose it is well worth the trial for pleasure paddling.

I should say it might be very useful also in reducing the weight when that is an object, but for racing it seems to me that the quieter a man sits in his boat and economizes strength and wind, with feet well strapped to a footboard, shoulders square, and leaning from the hips only, the greater speed he will attain. Paddling is a grand sport, and brings health and muscle if properly indulged in, and if the sliding seat will bring out more good paddlers, let us have it. I am but one of the mighty host of canoeists and may be wrong in my views of the mattter.

NARKA.

THROUGH BULL'S FALLS TO HARPER'S FERRY

LEAVES FROM THE LOG OF THE FRANKIE.

[*Concluded from page 399.*]

THE night passed quietly and comfortably. George's blankets were drenched of course, so I gave him part of mine and took part of his, and we made up a very good bed in our canoes by laying the wet blankets first and covering them with our rubber sheets before putting in the dry ones.

The morning broke bright and fair and we were early astir. Our canoeing costumes were stowed away and other clothing procured from our navy bags and donned, and while disposing of our breakfasts—our last meal on the cruise—our friends the mountaineers again appeared on the scene, and after dickering awhile with them, a bargain was struck in which they agreed to put the canoes in the express office, across the river, so the tents were speedily struck and the boats packed and carried a quarter of a mile further down the river.

We were still nearly a mile up the river from the ferry, just above the Potomac where the final landing was made, and our camp was just opposite the worst of the reefs, over which the river fell in foaming cataracts, whose deep heavy roar sounded in our ears all night.

I launched the Frankie below the reefs and paddled across and down the river, past the ferry landing and under the bridge, out of the Shenandoah into the Potomac, where I beached my boat under the railroad bridge, and then paddled back up to the ferry again, and waited for George, who soon appeared, crossing in the large ferry skiff with our assistants, towing the Rosa, and in a few minutes the canoes were beached, the ferryman duly and inevitably squabbled with over his fares—for we were strangers and he did the best he could to take us in—and the boats were soon lying securely packed, closed and duly labeled in the express office.

We climbed the heights back of the picturesque and dilapidated old village, and as we stood on Jefferson's Rock and looked down the grand vista through the world-famous gorge at the united waters of the Shenandoah and Potomac breaking among and over the rocks and ledges and debris of the scooped-out mountain, the great waves plainly visible, though over a mile away, their foam-crested summits flashing in the bright golden midsummer sunlight, floating everywhere around us; and turned and looked up the deep, narrow gorge through which we had come upon the whitened, tossing, flashing waters of the Shenandoah, we realized that we were through it all, and had reached our destination, and that our long, difficult, but withal pleasant and successful cruise of 192 miles and two and a half weeks was ended. I say pleasant advisedly; it was not all hardships and dangers, for while it had its hardships and trials and actual perils, it had its pleasure also; and the memories of still shady reaches of smooth water mirroring the superb mountain landscapes in its placid bosom, alternated with swift exhilarating rapids, not so rough as to be unpleasant or hazardous, inspiring mountain views and lively pastoral prospects, pleasant days and nights in camp—the uneventful, unrecorded, every-day enjoyable features which really constituted the greater part of the cruise—will occupy a cherished place in our recollections long after the trials and discomforts and the hardships, if not the actual dangers, have been forgotten.

F. R. W.

"SAIL AND PADDLE"—"AMERICAN CANOEIST."—The many friends of the *American Canoeist* will be glad to hear that its late serious illness has not terminated fatally, as some had begun to fear, but that it is once more up and about, though in new hands. The paper has been purchased by Mr. W. E. Pentz, who will publish it monthly under the title of *Sail and Paddle*, the old name appearing as a sub-title. The first number, for January, 1889, is out, and the other numbers are promised by the first of each month. The initial number presents a very neat appearance, the size being reduced to 6×8¼in., or uniform with the last A. C. A. Year Book. The number is quite interesting, though we notice several familiar old friends among the cuts. The next number will be edited by Mr. C. B. Vaux, the former editor of the *Canoeist*, who will henceforth look after the editorial department, Mr. Pentz managing the business of the paper. Under two such able managers it is likely to attain that success which it deserves at the hands of canoeists.

A. C. A. SECRETARY-TREASURER'S REPORT.—*Editor Forest and Stream:* In the balance sheet published in your last issue is an item, "Com. Gibson, incidental expenses 1888, $45.80." Will you please supplement this item with the following explanation of how it was spent:

For camp carptenter work and man in attendance	$35.33
Lanterns and kerosene	7.10
Steamer Ticonderoga, freight for A. C. A. tent	.75
Stamps at camp post-office	.52
Rushton for cordage	2.10
	$45.80

R. W. GIBSON.

"HOW SIX WENT DOWN THE SEVERN."—The handsome Christmas number of the Toronto *Globe* contains a very good cruise under the above title by Vice-Com. Tyson of the Northern Division. It is illustrated by Mr. Kelly of the Toronto C. C., some of whose work was seen in the FOREST AND STREAM last week.

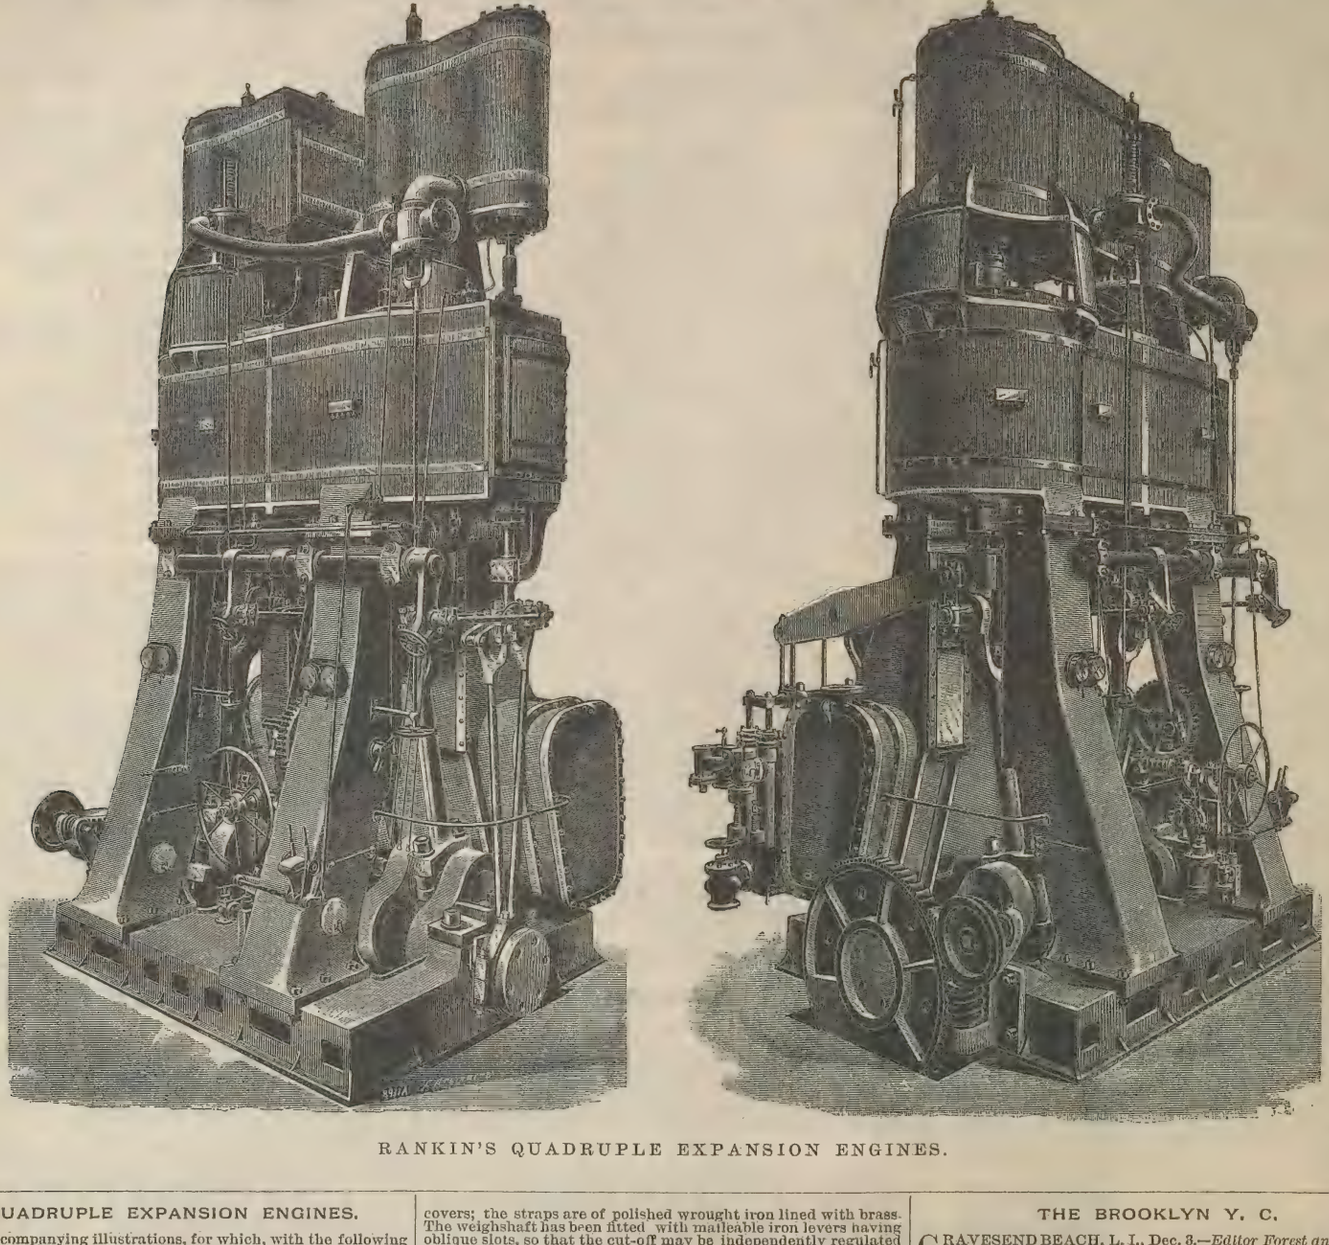
OFF FOR FLORIDA.—Com. and Mrs. Munroe will sail for Florida on Dec. 15 on the steamer Lampasas from New York. Com. Munroe will take with him the new yacht just compieted at Tottenville.

BRITISH CANOE ASSOCIATION.—The site for next year's camp will be on Lake Windermere, a beautiful sheet of water somewhat similar to Lake George.

Yachting.

CAT YAWLS.

Editor Forest and Stream:



The lines of the Empress in your last issue are full of interest. They show how widely we have departed from the American sloop and how completely the "cutter ideas," advocated exclusively through your paper, have been accepted. As a writer recently expressed it in the San Francisco *Chronicle*: "The American sloop is as extinct as the dodo."

You are hardly exact in giving the Herreshoffs credit for the introduction of the cat yawl rig. Several years before their Consuelo came out, Mr. Buchanan Henry, of New York, had given the rig a trial, and the same practice has long pertained in Block Island boats. I have also seen the regular main and mizen frequently adopted in decked sharpies here and in Key West sponge fishers. The credit of drawing the attention of the yachting public to the handiness of this peculiar rig belongs to the FOREST AND STREAM, which in time gone by devoted considerable attention the subject. But being years ahead of the rest of the public your efforts in behalf of the rig have been forgotten and fresh claimants have arisen, as is the case with nearly all the improvements in American yachts and yachting methods. The public is only now catching up with your journalin the matter of cat yawls, just as it is beginning to accept without reservation the "cutter ideas" against which the same public fought tooth and nail ten years ago.

OLD HAND.

THE 70FT. CLASS.

NEGOTIATIONS are now pending for a series of matches to be sailed next season between Katrina and the rest of the 70ft. class. Messrs. Auchincloss, the owners of Katrina, have issued separate challenges to Bedouin, Shamrock and Titania for a series of three races with each, and one challenge has already been accepted.

RANKIN'S QUADRUPLE EXPANSION ENGINES.

QUADRUPLE EXPANSION ENGINES.

THE accompanying illustrations, for which, with the following description, we are indebted to *Engineering*, show the latest form of quadruple expansion engines, Rankin's patent disconnective. Though built for a cargo steamer, these engines are substantially the same as the smaller ones built for the steam yacht Myrtle by the same firm. The engines of the Myrtle had four cylinders, 12, 17, 24 and 34in. ×24in. stroke, the working pressure being 180lbs. These engines were put in last year in place of a two cylinder compound engine, 21½ and 39×21in., the pressure being 50lbs. The vessel to which the engines here shown are fitted is the Falls of Inversnaid, built of steel by Messrs. Russell & Co., of Greenock and Port Glasgow, and is 312ft.×40ft. 4in.× 19ft. 7in., carrying 4,000 tons on a mean draft of 21ft.

The four cylinders are 18in., 26in., 38in. and 52in. in diameter respectively, with a stroke of 39in., arranged tandem fashion over a double-throw crankshaft. The high-pressure cylinder is placed above the first intermediate, and the second intermediate cylinder above the low pressure, so as to make two virtually separate engines, either of which may be operated independently at sea in the event of the other breaking down. In furtherance of this important facility a reducing valve has been fitted to the low-pressure half of the engines to supply steam direct from the boilers, and a special exhaust pipe has been led from the high-pressure half to the waste steam pipe. This valuable principle of duplication has been carried into effect throughout the engine department, as there are two separate main boilers instead of one of the double-ended type, so commonly employed, and there are two donkey boilers in place of the usual single one. Then again the forced draught system is operated by two independent fans and engines, so that the chances of a possible complete breakdown have been reduced to a minimum.

When designing the engines of the Falls of Inversnaid, the makers, Messrs. Rankin and Blackmore, of Greenock, earnestly laid themselves out to make them their ideal of a most perfect type for a cargo steamer, combining the greatest possible simplicity with compactness and sweet working. That the design is simple goes without saying, as the most superficial glance at the engravings will show, for there are only two engines in place of the three which form the ordinary triple-expansion engine, and as will be seen a very special feature is presented by the extreme ease and rapidity with which all the various parts can be examined or overhauled. Then these engines are so compact that they take up 3ft. less room fore and aft than the makers' triple-expansion engines of equal power.

With regard to the working of these engines this was the subject of hearty congratulation from the engineers present at the trial, as the uniform smoothness and absence of vibration quite surprised those who were prepared to judge this matter from the usual standpoint of the old-fashioned two-crank compound type, forgetful of the fact that with quadruple expansion the steam can be economically used during a much longer portion of the piston stroke, and further, that the high-pressure steam in the two upper cylinders affords admirable cushioning to the under cylinders with their comparatively low pressures. The upper cylinders are connected to the lower by strong cast iron brackets arranged so as to permit the lower cylinder covers to be lifted for examination of pistons (and removal if need be) without disturbing the upper cylinders. To save friction and trouble and also to enable the under cylinder covers to be raised high enough to give ample room for overhauling, there is only one piston rod stuffing box (bolted and in halves) between each pair of cylinders. These stuffing boxes are fitted with a combination of elastic and rigid metallic packing and the glands can be easily adjusted while the engines are running, so the advantages of tail rods are secured without the trouble of leaky glands, which have given rise to so much complaint with the high pressure cylinders of triple-expansion engines.

The reversing gear is arranged with a small steam engine actuating a wormwheel on the "all round" principle, and has double-barreled link motion of ample strength made adjustable at the wearing parts. The eccentric rods are of best forged scrap iron with double jaws fitted with brass bushes and malleable iron covers; the straps are of polished wrought iron lined with brass. The weighshaft has been fitted with malleable iron levers having oblique slots, so that the cut-off may be independently regulated for each half of the engine. The air pump is single acting and the circulating pump double acting, and they along with the feed and bilge pumps are worked by strong malleable iron levers, coupled at one end to the connecting rod gudgeon of the after engine, and at the other end to the pump crosshead by double links fitted with adjustable solid brasses secured by double nuts. The crankshaft is of the built description of best forged iron made in two interchangeable pieces. The turning gear consists of a large wheel fixed on the after end of the crankshaft, actuated by a worm held by a strong cast iron bracket, bolted on the sole-plate, and it can be worked either by hand or by means of rope gearing driven by the ballast donkey engine.

There are two main boilers constructed of steel to Lloyd's requirements for a working pressure of 180lbs., and the dimensions, viz., 13ft. in diameter by 11ft. long, were purposely made so as to insure an ample command of steam with natural draught in the event of anything going wrong with the forced draught apparatus which has been fitted on an improved closed ashpit plan with automatic valves to admit air both above and below the furnace bars. As an aid to the very important matter of economy, the fan engines (Chandler's patent "silent") were ordered compound instead of the single high-pressure type generally employed, and further, these have been made to exhaust into the low-pressure casing of the main engine, thus virtually constituting them triple-expansion engines. To assist in keeping the boilers in good order Weir's well-known hydrokineters have been provided for circulating the water thoroughly when getting up steam; also one of their new evaporators, by means of which a plentiful supply of fresh water will be assured, thereby completely getting over the trouble attendant on the use of the usual auxiliary salt water feed.

On Wednesday, Oct. 17, the Falls of Inversnaid proceeded down the Clyde on her official trial trip fully loaded with a cargo of cast iron pipes of 4,040 tons dead weight. The working of the machinery left nothing to be desired, but, unfortunately, owing to the foggy nature of the weather it was impossible to test the speed of the vessel on the measured mile, as the posts could not be distinguished, so she just cruised about in mid-channel until dusk, when the guests went ashore, and the ship lay at anchor at the Tail of the Bank waiting for the fog to lift, preparatory to a lengthened run for testing the coal consumption. Shortly after midnight it cleared a little, and the Falls of Inversnaid steamed down the Firth at full speed, doing the distance between Cumbrae Lighthouse and Ailsa Craig at the rate of close on 9½ knots with a coal consumption equal to about 13 tons per day of Nixon's navigation coal, including steam used by the steering engine, when suddenly the fog became so dense that further progress was impossible, and the ship was obliged to heave to until daylight, when she set out on her voyage to Bombay. The owners were highly satisfied with the economical results attained, but as the firemen were not accustomed to forced draught or the use of Welsh coal, it may reasonably be expected that even better work may yet be recorded, so that the outcome of the voyage will be looked forward to with interest.

THE LAWTON 40-FOOTER.—The lead keel of this cutter is now in place, the wood keel bolted down, and the stem and sternpost set up. The frame thus far shows the outline of the later Itchen boats or wide English cutters. The bow has a long overhang, just below the loadline is a quick turn, then the keel runs down with a very moderate curve to the lowest point of keel, a few feet forward of the heel of sternpost. The latter has about 60 degrees of rake, and the overhang is quite long. The forefoot is, of course, very much cut away, and the whole contour is suggestive of a condensed Thistle. The lead keel is about 30in. deep, 12in. wide on bottom and 18in top. The sawn frames are 2½ sided, 5 to 2½ moulded, with a steamed frame between each. The boat will be built as light as possible.

A NEW SCHOONER.—It is reported that Rear-Com. Morgan has ordered from Mr. Burgess a steel schooner, 106ft. l.w.l. and 12ft. draft, with board beneath the floor.

THE BROOKLYN Y. C.

GRAVESEND BEACH, L. I., Dec. 3.—*Editor Forest and Stream:* The Brooklyn Y. C., whose club house and headquarters are located here, has now enrolled 16 catboats, measuring 17 to 25ft.; 3 jib and mainsail boats, 20 to 25ft.; 23 cabin sloops, 25 to 55ft., and one schooner, 60ft. The membership is 130. Several applications for membership will come before the meetings of this month and next, which will add to the fleet 3 catboats, 6 jib and mainsail boats and 5 cabin sloops; so this club will open the season of '89 with an enrollment of upward of 60 boats, the majority being "singlehand" craft. The club's aim has been for some time past to cater to small yachts, and in consequence it has been steadily growing in size of fleet and membership. It has open water for sailing, which with handling by owners is making the members good boatmen. The gentlemen connected with this club love to be active sailors, hence the predominance of small boats; they also believe there are already more than enough clubs of large yachts in and about New York waters. For the next season it is proposed to publish a list of excursions for some time ahead with the view of having several yachts participate in each trip, selecting different ports, so that all may have a chance to visit their favorite resorts and each have the company of boats of his club in so doing. To give some idea of these excursions I make the following extracts from the report of the captain and owner of the catboat Homing, 23ft., just handed in:

"The outings of the Homing for 1888 commenced on May 19 and terminated Oct 29, a period of 163 days, in which she was underway 74 times; 33 of them were excursions within all points of the compass, northerly to Glen Island, easterly to Ruffle Bar, southerly to Navesink Highlands, and westerly to Great Kills, Princes' Bay and around Staten Island; covering distances of 7 to 68 miles and aggregating 628 miles; 41 were short sails, upward of 8 miles, in lower bay, around club race courses and out to sea, which amounted to 324 miles." The owner keeps a faithful and honest log of all excursions; the sum of these excursions for 1888 being 952 miles, in 1887, 1,100 miles; the average distance was about 13 miles, and the mean speed over 13 knots; on 19 occasions it was necessary to handle reef points. Here is a sample of his log of a run around Staten Island:

"Sept. 30.—Weather overcast, barometer low and rising, indications clearing, wind N. by W., fresh, puffy, velocity about 25 miles. With Mr. S. as crew, double-reefed, started at 9:15 A. M., tide waning ebb, course N. W. W. to northward of buoy 15, thence S. W. by W. under lee of Staten Island; off Great Kills shook out reef, fetched Ward's Point in strong flood and under bright sun, course thence northerly through Sound, wind growing light and from N. W., long and short leg beat from Rossville, passed Elizabethport 1:15 P. M., course thence to south'ard of Shooter's Island, carried strong flood into Kills, through which wind drew to westward very fresh and puffy, compelling an easing away of peakhalliards; entering upper bay found steady fresh N. W. wind, crossed to Bay Ridge in search of young ebb, course thence southerly through Narrows to club house, arriving at 4:24 P. M."

This excursion would be reported to other members at once, and the times and sets of tides, changes of wind, etc., would be booked by each man in memory for use whenever he made the trip. Many of the members are fully as enthusiastic and studious boatmen as the gentleman mentioned, and in this fact lies the enjoyment of small-boat sailing, the assured success of the club and a promise of a fine season's sport next year.

R. C. H., Fleet Captain B. Y. C.

SCUTTLING THE DAUNTLESS.—That never-failing resource in the dull season, the old Dauntless, comes to the front again, now that yachting news is scarce. The latest yarn is that two auger holes have been discovered in her bow, under the copper, and that they were made in order to scuttle her on the last ocean race with the Coronet.

SAY WHEN.—On Dec. 8 when off Bristol Ferry a steam pipe burst on board the Say When, scalding Chas. Newman and Chas. Horton. The latter was taken to the Rhode Island Hospital.

A CRUISE IN THE SYLVIA.

MY perusal, over the post-prandial pipe, of Knox's exquisite "Devil of a Trip," has fired me with a desire not to imitate his inimitable style, but to help him and your very excellent paper in exciting in the breasts of our overworked and overworried people a desire to engage in that most healthful and manly of sports, yachting, by a little sketch of the incidents of a cruise on that most magnificent and least known of our great water stretches—Lake Superior. The little three-ton yawl Sylvia, enrolled on the books of the Thunder Bay Y. C. and flying then the burgee of its vice-commodore, lay alongside the L of the Government pier at Port Arthur one bright, breezy day in the end of June, her white duck hanging loosely from the half-peaked gaff, the cockpit lumbered with loaves of bread, fishing rods, coal oil cans, and other articles too numerous to mention, but which every yachtsman will picture to himself, and the blue peter streaming from the masthead. And it was the skipper and aforesaid vice-commodore who ceased his labor of stowing away miscellanies in the cabin from time to time to thrust his head out of the cabin hatch, gaze townward and mutter "cuss words" to himself. He is expecting his crew and steward, and they are behind time.

Presently his countenance clears as a navy blue serge coat and pants appears at the shore end of the pier—They incase the noble and somewhat portly form of the Com., the jovial postmaster of Port Arthur; may his shadow never grow less. Under one arm is a fishing rod, and under the other a box of cigars; and in the starboard side of his jaw is inserted a brierwood pipe filled with myrtle navy. Close behind him comes the steward, of lighter form and less majestic gait, who soon ranges up alongside his confreres, his pockets distended with beefsteak and sugar, and his hands full of tar, marline and manilla.

A good-humored apology and a gruff absolution from the skipper follow, then the mickles are passed aboard, the steward nimbly, and the crew more ponderously follow; the former dives below, and the latter receives the warp from a willing "dock-worloper," and shoves off the Sylvia's nose with the spinaker boom. Then he mans peak and throat, the snowy sail bellies out with the northwest breeze, the skipper sheets home and puts the helm hard up, the Sylvia careens slightly, nods gently to the light swell as if bowing acknowledgment to the waving hands on shore, and then as a sharper gust comes over the warehouse tops she settles down to business and goes tearing out across the harbor, past the lighthouse and out on to the broad expanse of Thunder Bay with a howling breeze on the starboard beam, and her lee rail awash.

The crew then tackles the jib, and the Sylvia answers with a little more heel and a little louder roar from her starboard bow, the gaff topsail yard is lashed in the seething lee scuppers and the crew comes aft with the satisfied smile of a man who has done his duty and done it well, to take the stick from the skipper and allow the latter to fill his pipe. The steward pauses from his nearly finished labors and remarks, "We're just a hummin'," and as the smoke begins to stream out to "loo'ard" from the freshly lighted pipes, a great satisfaction and delight steals over us and we realize that our trip has fairly begun. The sun sinks in the west, the breeze lightens, and as we range up abreast the great bluffs of Pie Island we have the mizen and foresail on her, and are standing almost on an even keel, though making fair progress.

As the excitement lessens appetite increases, and wistful glances are cast at the steward and his coal oil stove—whence appetizing odors come from time to time—by the expectant denizens of the cockpit. For a long time he is Sphinx-like and moves only to jab a fork into this or put a pinch of salt on that, but just as patience is almost worn out he puts out the cups and plates on the lee bunk, takes his teaketrle from the stove, and yelling in clarion tones which echo from the lofty cliffs abreast of us, "Supper is now ready in the dining car," crawls out to take his spell at the helm and cool his fevered brow.

Supper over the pipes are again in requisition, and we lounge about in the gathering twilight, discussing the probabilities for to-morrow, the destination of the steamer towing the scow over there under the land, the kind of life the exile in the mining cabin under the Pie leads, and whether we shall have breeze enough to carry us out into the open lake, or whether we had better come to at Jarvis Island.

Nine o'clock, and still some daylight is left as we steal gently into the rough little homemade wharf at Jarvis Island and answer the cheery hail of the manager of the mine: "Does anchorage round here?" "Yes, on the other side of the island." "Sheltered?" "No, not from the lake side." We listen to the booming of the surf on the other side, and conclude that we do not want to lay rolling scuppers under in that swell all night. So borrow the manager's corkscrew, draw the cork from a bottle of beer, have a glass together and prepare to put to sea again. Yes, Mr. Editor, we were amateur sailors and fishermen off for a holiday trip, and the only thing we forgot to take with us which was really essential to our comfort was a corkscrew—speaks well for the innocence of our enjoyment and the severity of the ship's discipline, does it not?

Out into the gathering darkness, the booming surf, glancing white from the dark rocks on either hand, just sufficient wind to fill the sails and keep them from slatting as the yacht plunges into the swell. It seems foolish to lose a night's rest when we might have tied up alongside the wharf, but we are not sleepy and will not turn back, and as we draw clear of the land there is more weight in the light breeze, and the swells get larger in the back, and a little murmur comes from the lee bow again. The binnacle lamp is lit, and the chart is consulted, but there is little need for either; we have only one point of land ahead, the southwest point of Isle Royale, with its outlying reefs and shoals, and it will be three or four hours before we come abreast of them. Now we are crossing the international boundary, and an extra glass of grog is piped and a stanza of Yankee Doodle sung in honor of Uncle Sam.

It is now about 11 P.M. The moon rises in majesty over the dark mysterious wooded heights of Isle Royale to leeward and lights up the tops of the broad-backed swells and reveals the canvas soaked with dew and standing as if made of sheet iron. Silence reigns on board save for the occasional creaking of a block aloft and the surging of the waters under our forefoot. The white star of Victoria Island light has been brought well on our quarter. The steward takes it all in for the last time and with a stretch and a yawn turns in to his sung berth and is soon enshrouded in blankets and slumber, but the crew still keeps watch with the skipper for the dreaded Rock of Ages, the outlying spur of Isle Royale which was the last resting pace of the ill-fated Cumberland on just such a night as this thirteen years ago. We never see it and when the first gray streaks of dawn appear in the east at 2 A.M. we are a long way to windward of the reef and well out to sea.

At 4 A. M. the red ball of the sun shows dimly through the mist on the horizon, the breeze dies to nothing, and what a scene of calm and solitude is revealed. Not a sail or a puff of smoke visible anywhere; only the waste of gently undulating water, the great mass of Isle Royale looming up on the port quarter, and the jagged outline of the north shore astern, stretching off league after league until the sky, land and water all merge into one in the west. There is not a cloud in the sky, and the only ones on the spirits of skipper and crew are the sense of intense littleness, the want of wind, and a apology of the steward to our appeals to him for breakfast. In desperation the crew at length lights the coal oil stove himself, and the steward, no doubt impelled by fear that he will poison himself and the skipper and that the ship will be left in charge of himself at the mercy of wind and waves, and that, like Coleridge's ancient mariner, he will drift away for years in a floating coffin with the corpses of his late comrades around him, rather than by any sense of duty or qualms of conscience, at length arouses himself and sets to work.

Breakfast over, a light air springs up from the southwest, our course is laid for Houghton Lighthouse, and quietly but steadily the north shore disappears and the mighty bulk of Isle Royale becomes more and more like a cloud in our wake. Hour after hour steals quietly along, and after lunch some dark shapes ahead are pronounced to be the heights of Keewenaw Point, but turn out to be only fog banks. A dot appears on the waste of waters ahead, and soon we come alongside a large pine log, and then another and another, lazily rolling in the languid swell. The smoke of a steamtug is made out, and soon her hull and an attendant towboat, and we see she is engaged in picking up and reuniting the constituent members of a large raft which has been broken up off Ontonagon or Ashland and scattered over the lake. Other streaks of smoke and indistinct shapes appear on either hand, and we are soon in the track of commerce; and about 2 P. M. a great ugly three-masted propeller passes close ahead of us, so close that we can read her name, the Martha Smith, or something of that sort, of Buffalo, and hear the thud, thud, thud of the propeller and engine, while the grimy soot from her smokestack falls for a few seconds on our bright deck and white sails. We guess she is bound for Duluth with coal from Cleveland, to return with grain or iron ore.

Evening draws on again, the breeze dies out again and then comes up dead ahead, but steady and freshening; shapes appear ahead which are unmistakably land, and as another propeller, followed by three great schooners in tow, goes past our bows we hail the last in nautical tones and inquire, "How does Houghton Light bear?" "Right abreast of us now," comes back the answer, and we settle down to supper and a long beat to windward.

As darkness closes down the breeze comes up fresher and fresher, and we run along merrily, every board bringing the outlines of the land out sharper and clearer, but still we cannot make out to a certainty Houghton Lighthouse, and with good reason, it is still below the horizon. Nine o'clock and quite dark, and at last the keen young eyes of the steward decry a flickering point of light, and he sings out joyfully, "There it is." The breeze is piping up lively now, accompanied by a short, angry chop of a sea. All hands stow mizen and jib, and the bowsprit is reefed. Under the shortened sail Sylvia dashes eagerly along as if she too sees the light and is anxious to come to a halt and have a rest after her long run of over one hundred miles. Soon another and smaller light appears close to the first. We hold on until we get the two in line.

"Ready about?" "Ready," comes the response. "Helm alee," yells the skipper. And there is a flapping of dewy canvas and a rattle of blocks and cordage, but only for five seconds, for the Sylvia is quick in stays as a catboat and far surer, and is off again as eagerly as before on the starboard tack. We stand in for ten minutes, and the sea has sensibly diminished in size. "Ready about," and again we look up the range a second and third time. The anchor is got up from below and bent to the cable, the sea has decreased to a mere ripple, though the wind still whistles through the shrouds and backstays, and the great staring eye of the lighthouse seems to be almost over us. "Down foresail" Down she comes, and down goes the helm at the same time; and the crew sees stars as the mainboom comes amidships and introduces the mainsheet block to his frontal bone. The hurrying bubbles alongside slacken their speed, stop, begin to retrograde. "Let go anchor," a plunge and a rattle of iron chain, a slight "snub" and we have got hold of American soil and are holding on to it. A few minutes suffice to get the mainsail stowed and the riding light rigged, and at midnight the weary skipper and crew turn into the snug little brightly lighted cabin and settle down for a well earned sleep, while the steward, in company with a blanket and a pipe, curls up in the cockpit to keep an anchor watch for the few remaining hours of darkness.

The crew gives his first snore, when "crack!" every one is wide awake and alert. "Crack!" again followed by a shriek through the rigging which cannot be mistaken for wind, and that again by a "Hallo," which comes unmistakably from human lungs. "Hallo! What's the matter? Don't shoot again," yells the steward. "Take in that light," comes the voice again across the water. Never did steward obey an order with more alacrity or promptitude. A minute's sleepy reflection convinces the skipper that the voice and revolver belong to the lighthouse keeper, that he fears the bright solitary light in the little roadstead will be taken for a range light and lure some entering vessel to a bed on the beach, and that this is his forcible and distinctively western way of arguing with us and communicating his views; and another two or three seconds show him that in 10ft. of water, on a lonely shore, and a bright moonlight night, a riding light is more a matter of form and style than use. The light is consequently blown out. The tired denizens of the bunks roll over, and in five minutes silence and Morpheus reign.

SKIPPER

YACHTING IN AUSTRALIA.

THE recent visit of an Australian yacht designer, Mr. Walter Reeks, and his proposition to build a yacht to challenge for the America's Cup, has called the attention of American yachtsmen to the fact that in that far distant corner of the world the sport is generally popular, and that yachts and yacht racing abound. To those who wish to learn more of Australian yachts and yachting, and also to all who delight in a sailorman's story of rough-water cruises in small craft, we recommend the book, "Twenty-five Years of Australian Yachting," by W. H. Bundey, Esq., for fourteen years an officer of the South Australian Y. C., during ten of which he flew the commodore's pennant. Not only is Com. Bundey a most enthusiastic sailor and possessed of a keen appreciation of those details of sea life which go to make up an interesting log, but the surroundings of the Australian yachtsman are such that a great part of his work is in very rough water and strong and squally winds. Consequently in the first half of the book, which is made up of extracts from the logs of many cruises, there is little of the idle dawdling which too often takes up the greater part of yacht cruises, but the record deals most with long bouts against stormy seas, and such adventures as fall to the lot of those who cruise in small craft in open waters. The writer, besides a keen enjoyment in both branches of yachting, racing and cruising, is a staunch upholder of the importance of all hearty outdoor sports, and a chapter of the book is devoted to a discussion of the subject in an advanced and liberal spirit. A part of the book is devoted to a history of yachting in Australia, the origin of the sport dating back to the early "sixties," though it was not until about 1873 that it was firmly and permanently established. The yachts are mainly cutters, keel boats of the older English type, with a proportion of about four beams, and though the centerboard is by no means unknown, it has not come into favor. Besides the strictly yachting episodes in the book, it contains several miscellaneous papers relating to travel and outdoor sports, the most interesting being an account of a trip from England to Australia by the way of China and Japan, made by the writer in 1881. One of the most striking features of the book is the kindly mention of all his old sailing companions, both paid hands and guests, by the author, and many evidences of the existence of that hearty good-fellowship such as should always exist between yachtsmen.

BUILDING NOTES.—Lawley & Son have the cabin partly finished in the Richardson 45ft. boat, and will begin a similar craft for Mr. Ellis of Philadelphia next week. Mr. Forbes's schooner will be laid down next week....Williams is busy over a design for a 40-footer for the Lakes, to be built on fresh water. He is also building a handsome little craft for Com. Corbett of the Bay View Y. C., to be 14ft. 11in. over all, 14ft. 3in. l.w.l., 5ft. 8in. extreme beam, 4ft. 6in. l.w.l. beam, 2ft. 9in. draft, with 625lbs. of iron in keel. She will carry 205 sq. ft. in mainsail, 82ft. in jib, and 185ft. in spinaker. The model is quite handsome, showing a wineglass section with considerable hollow to floor....Queen Mab is hauled out at Hutchin's to be altered to jib and mainsail rig ...Bayadere, the Scotch cutter, is out at Frisbie's yard, Salem, to be caulked and coppered. Edith, cutter, is at the same yard, her lead keel being removed to be replaced by a new one of 3,600lbs. Bonita, schr., is also in Frisbie's hands for a longer stern....At Bay Ridge Ayers is building several launches for the Ofeldt naphtha engines.. . At Mumm's yard Lagonda is still on the ways, the new compromise model is nearly completed, but has not yet found a purchaser, and the keel of the Lawton cutter is laid, and stem and sternpost in place ...Wallin & Gorman are busy with the lead keel catboat for Mr. Sage previously mentioned....At Poillon's Dauntless is receiving a new piece of rail and some small repairs. The Eureka is at the dock preparing for a trial trip which is expected within a couple of weeks. Isoline, steam yacht, (formerly Gleam) is receiving some repairs. She is greatly changed in appearance by rebuilding, her sides being carried higher. Oneida, steam yacht, is also at the yard for repairs, and alterations to her machinery.

DORCHESTER Y. C.—The Dorchester Y. C. is now comfortably established in its new winter club house at 99 Boylston street, Boston. Here the regular monthly meeting was held last week with Com. Savage in the chair. Twenty-five new members have lately been admitted. A letter was read from Com. Canfield, Seawanhaka C. Y. C., in answer to an invitation to address the club and regretting that he was unable to do so. Arrangements have been made for a class in marlinspike work to be held on each Tuesday, beginning this week, and on Wednesdays the house will be open from 4 to 6 P. M. for ladies accompanied by members, a lunch being provided. The following committees were elected: On nomination of officers for the ensuing year, C. H. Whiting, T. W. King, Francis Gray, Charles L. Perrin, Louis M. Clark; on annual dinner, W. B. McClellan, Jesse S. Wiley, S. G. King, John Dearborn, Charles L. Perrin; on entertainment, E. Howard Gray, W. B. McClellan, John Dearborn, L. M. Clark, E. P. Tilton; on revising the sailing regulations, L. M. Clark, C. H. Whiting, Vice-Commodore Soley.

WINTER CRUISING.—Brunhilde, schr., Mr. J. J. Phelps, was cruising about the Leeward Islands at last advices.—Norna, schr. Mr. Townsend Smith, left Newport last week after several day delay through bad weather, and came through the Sound to New York, sailing on Dec. 5 for the West Indies.—Reva, steam yacht Mr. Pierre Lorillard, arrived at Newberne, N. C., from Norfolk on Dec. 3, and sailed next day. She will winter in Florida waters

CORINTHIAN Y. C. OF NEW YORK.—At the general meeting of the club lately held Admiral Pomeroy read a memorial address in honor of Messrs. Stewart and Lee, which was unanimously adopted by the club. Mr. d'Oremieulx, secretary of the Seawanhaka C. Y C., was present, and with a copy of the memorial lately adopted by the latter club, which was received with appropriate acknowledgments.

NEW YACHTS FOR NEW YORK.—Orders have been lately placed for two new keel cutters for New York owners, both members of the Seawanhaka C. Y. C. The larger cutter will be in th 40ft. class and the smaller in the 30ft. They will be built of wood probably about New York, and will be of the latest design, good draft, clipper stem and long counter, with cutter rig.

PETREL.—This little sloop, built some years since for Mr Howard Paul of Gloucester by Higgins & Gifford, has turned out quite a traveler, having been taken to Melbourne, Australia on a ship's deck, and after racing successfully there, being taken to San Diego, Cal, where she sailed a race on Oct. 21 with the Teaser, beating her easily.

SEAWANHAKA C. Y. C.—The first entertainment of the season a musicale, under the able direction of Mr. J. Dunbar Wright, was given on Dec. 8, a large number of members and guests being present. The evening passed very pleasantly. A model of Sea Fox has lately been added to the collection.

NEW YORK Y. C.—The second subscription dinner of the season will be given on Dec. 22 at the club house. A musical entertainment will be given during the evening.

SPORT.—This craft, which is believed to be the oldest American yacht, went ashore in Dorchester Bay in the late gale.

Notice to Sportsmen and Warning to Infringers.

Having purchased the patents, business and good will of the American Clay Bird Co., we beg leave to advise the trade and sportsmen generally, that the American Clay Bird will not be manufactured any longer. Parties owning American Clay Bird Traps can have in exchange for them the latest improved Blue Rock Trap, on the payment of a difference of $2.50 each. Correspondence from all parties who have been using the American Clay Bird Trap is respectively solicited.

Being now the sole owners of all valid patents covering the pivoted carrier, we hereby give notice that all parties infringing the same, will be promptly prosecuted to the full extent of the law.

The Blue Rock Pigeon and Trap have been greatly improved and will enter the field in 1889 in better shape than ever.

Buy Them Early.

NO present gives so much pleasure or is so lasting as a good book, and none is so thoroughly appreciated by the average man, woman or child. A good book does not get broken or wear out, but remains always a source of pleasure and instruction. Nothing is more annoying or inconvenient than to postpone the purchase of holiday gifts to the last moment, and appreciating this fact we call attention to the following list of standard works suitable for the holidays. These vary in price so as to fit every pocket, and among them all something will be found to appeal to every taste. Any of these books will be sent by mail, postpaid, on receipt of price.

Antelope and Deer of America.

By Hon. J. D. Caton, LL.D. This volume is equally a necessity to the sportsman and the naturalist. It tells of the haunts and habits of our antelope and deer, where to find them, how to hunt them, of their life in the woods and under domestication. The best book on the subject ever written. A second edition. Price reduced to $2.50.

Small Yachts,

Their Design and Construction, by C. P. Kunhardt. This sumptuous quarto volume covers the whole range of yacht designing and care, and it is the only work of the kind yet issued in America. The text occupies 525 pages, illustrated with many engravings, and besides there are 70 full page plates, showing the characteristics of the best modern yachts. Price $7.00.

Canoe and Boat Building

For Amateurs. By W. P. Stephens. A manual for boat building by the canoeing editor of Forest and Stream. Besides the 189 pages of descriptive text, there are 29 plates, working drawings, which enable even the novice to build his own canoe and build it well. Price $1 50.

Our New Alaska.

By Chas. Hallock. In this handsome illustrated volume, Mr. Hallock gives the result of his travels in our northernmost possessions. He found Alaska a great country of almost boundless resources, and tells about it in his own happy style. Price $1.50.

Charley's Wonderful Journeys.

By C. F. Amery. Profusely illustrated. Inimitable fun and most delightful fancies Cloth, handsome gold stamp. Price $1.50. See advertisement.

Training vs. Breaking.

By S. T. Hammond, kennel editor of Forest and Stream. Nearly forty years experience in training and handling dogs has taught the author that these intelligent animals are more easily controlled by kindness than by severity. He tells how to accomplish by this kindness what you cannot with the whip. There is a chapter on training pet and house dogs. Price $1.00.

Canoe and Camp Cookery.

By "Seneca." A little book full of receipts and hints for the camp cook, by a practical man who has tried them. Indispensable to the camper. Price $1.00.

Forest Runes.

Poems by "Nessmuk." With artotype portrait and autobiographical sketch of the author. Cloth, 208 pp. Price $1.50.

Woodcraft.

By "Nessmuk." "Nessmuk" is a Nestor among American sportsmen. In "Woodcraft" he imparts the knowledge of the woods that he has been fifty years in acquiring. No man, however much he has camped out, can read this book without learning something. Price $1.00.

Steam Yachts and Launches;

Their Machinery and Management. By C. P. Kunhardt. With plates and many illustrations. Cloth, 250 pages. Price $3.00.

Uncle Lisha's Shop.

Life in a Corner of Yankeeland. By Rowland E. Robinson. See advertisement elsewhere.

Yachts, Boats and Canoes.

By C. Stansfield-Hicks. With special chapters on model yachts and singlehanded sailing. Numerous illustrations and diagrams and working drawings of model yachts and various small craft suitable for amateurs. Cloth. Price $3.50.

Wild Fowl Shooting.

By W. B. Leffingwell. The contents and illustrations of this volume are detailed elsewhere. Next to a gun this is something to please one whose fancy lightly turns to thoughts of ducks. See advertisement. Price $2.50 and $3.50.

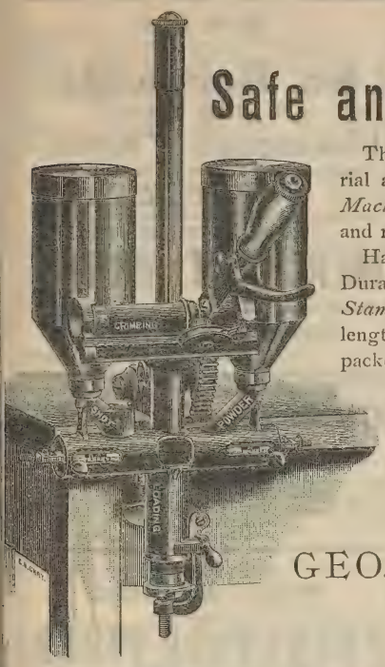
Bird Portraits for the Young.

By W. Van Fleet, M.D. Fourteen photogravure illustrations of familiar birds, with charming text. A magnificent gift book. Price $3.00. See advertisement.

Names and Portraits of Birds

Which Interest Gunners. By Gurdon Trumbull. New edition now ready. Price $2.50.

FOREST AND STREAM PUBLISHING CO., 318 Broadway, New York.



SMALL YACHTS.

By C. P. KUNHARDT.

500 Pages, 73 Plates. Price, postpaid, $7.00

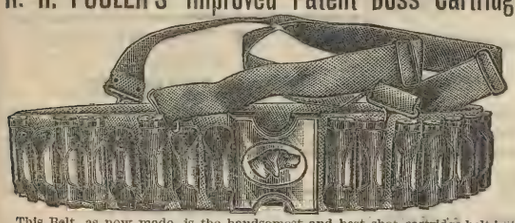
HUNTER'S

Safe and Rapid Loader.

The LOADER is made of the best material and workmanship, combining in *One Machine* every requirement for the loading and reloading of shot gun shells.

Has no Superior in Safety, Rapidity, Durability and Lightness. It *Crimps*, *Stamps* number of shot. Clips shells any length, also caps and decaps. Can be packed in a small valise.

The CRIMPER is also sold separate. Will crimp at least three shells to any other crimping one. Also clips shells any length—caps and decaps.



For prices and full description, address,

GEO. D. HUNTER,

78 EXCHANGE BUILDING,

CHICAGO, ILL.

R. H. POOLER'S Improved Patent Boss Cartridge Holder and Belts.

This Belt, as now made, is the handsomest and best shot cartridge belt in the world. Has 3-inch woven canvas belt, 1½ inch double shoulder straps and large plated buckle. Will wear any sportsman a lifetime. The only practical Cartridge Holder in use. Will carry brass cartridges and positively prevent wads from starting on shot. Suitable for either paper or brass shells. Satisfaction guaranteed or money refunded. **Manufactured by R. H. POOLER, Serena, La Salle Co., Ill.**

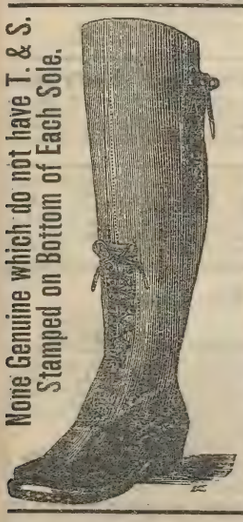
This Holder is for carrying brass or paper shells without being crimped. Has side cut away, showing wad supporter.

Send ten cents in silver or currency for catalogue and sample cartridge holder, also a colored lithograph card of grouse shooting on the prairies.

UNCLE LISHA'S SHOP.

Life in a Corner of Yankeeland.

By ROWLAND E. ROBINSON.



A book that appeals to all who know anything of the old-fashioned New England life. These are some of the chapters:

The School Meeting in District 13. Uncle Lisha's Spring Gun. In Uncle Lisha's Shop. Concerning Owls. Uncle Lisha's Courting. How Zene Burnham Come It on His Father. A Rainy Day in the Shop. The Turkey Shoot at Hamner's. Sam Lovel's Thanksgiving. Little Sis. Sam Lovel's Bee-Hunting. In the Shop Again. The Fox Hunt. Noah Chase's Deer-Hunting. The Hard Experience of Mr. Abijah Jarvis. The Coon Hunt. In the Sugar Camp. Indians in Danvis. The Boy Out West. Breaking Up. The Departure. The Wild Bees' Swarm.

They make a handsomely printed volume of 187 pages, bound in cloth. Sent, postpaid, on receipt of price, $1.00.

PUREST AND BEST.

W. H. Schieffelin & Co. (Wholesale Agents U.S. and Canada) New York

From No. 318 Broadway will be sent out weekly in the year 1889 a paper filled in all its departments with reading matter acceptable to those who find pleasure in the pursuit of field sports. The popularity of these pastimes was never greater than it is to-day; numbers of men who find rational relaxation in the field were never larger; the hold these recreations have on the public has never been firmer than now. It is a pleasure to add that in this measure of public esteem the FOREST AND STREAM shares to the full.

Mr. Henry MacDonald, whose descriptions of "Early Days on the Missouri" were so well received last summer, will supplement them with further

Sketches of Frontier Life.

Pertaining to the same field will be a paper by Mr. J. W. Schultz describing the ancient importance of the Fort Benton Fur Market. The same writer will furnish a continuation of his valuable Blackfoot studies, among the titles of which may be named "A War Party" and "The Origin of the Medicine Pipe."

Rich treasure from this inexhaustible field of

Indian Folk Lore and Life

will be laid before our readers by the veteran "Yo," whose Pawnee legend of The Dun Horse will be followed by others in a like happy vein; and from the same pen will come a rarely interesting—because vivid and racy—account of

The Summer Hunt of the Pawnees,

in the old buffalo days. There will be sketches by the author of "Sam Lovel's Camps," distinguished for the same inimitable character studies of the Danvis folk, the close insight into nature, and delicious vignettes of word-painting. Under the title,

A Breath from the Maine Woods,

will be described the angling experiences of a Boston party at Moosehead, by "W. A. B.," whose sketches of a fisherman's life in Maine have been received with so much favor.

The pages devoted to the delightful subject of Natural History will not be less full and interesting for the coming year than in the past. Among the special papers for which we have arranged are a continuation of the series of illustrated articles on

North American Mammals,

by Dr. R. W. Shufeldt. These will include articles, more or less extended and very fully illustrated by drawings by the author, on the Bats, the Insectivora and the Carnivora.

There will be published during the year extended illustrated articles on the life and habits of some of the large game animals of North America, in which will be brought together all that is known of these creatures, now so rapidly disappearing from off the face of the land. The first of these will be the production of Mr. John Fannin and Geo. Bird Grinnell, and will deal with the rare and little known

White Goat.

A subject which interests sportsmen and naturalists alike is the

Domestication of Game.

We have arranged for a series of articles on this subject, which will, it is believed, be of remarkable interest to every thoughtful reader. The series is expected to contain accounts of the habits in captivity of deer, elk, antelope, mountain sheep, white goats, buffalo, wolves, bears, panthers and other North American *ferœ natura*.

There will be papers on birds by well-known ornithologists, on reptiles by Miss Catherine C. Hopley, two of whose articles, to be published shortly, will be on the

Hibernation of Reptiles and on Snakes' Weapons

Articles on many of the lower forms of life, together with notes and news on natural history subjects from all quarters of the continent will make up an amount of matter for the year that is to come which will be sufficiently varied and attractive to delight all who take an interest in natural history. The investigations and explorations of a naturalist in the Northwest will be described by Edward Howe Forbush in a series entitled

Five Days a Savage.

In the misadventures of Father Christian le Clerc, a seventeenth century missionary, Mr. Edward Jack has found material for an interesting paper,

Lost in the Forests of Acadia.

The descriptive papers of travel will not be confined to North America. Our East Indian contributor, "Shikaree," will give the readers of FOREST AND STREAM some more of his delightful accounts of

Hunting in the Himalayas,

and from another pen we shall have equally entertaining narratives of

Shooting on Mount Olympus,

and other localities in the Far East. A leading feature of our Shooting and Fishing columns will be our

Special Correspondence from the West,

keeping the readers of this journal fully abreast of the events of the times in Western game fields and fishing waters, all of which will make the FOREST AND STREAM

A Journal for Western Sportsmen.

The accounts of big-game shooting will be frequent, and in these respects the FOREST AND STREAM will maintain its long-established popularity. There will be a series of papers from the pen of Mr. J. E. Gunckel, of Toledo, O., entitled,

The Sunset Club,

A continuation of the witty reports of that famous club already known to fame.

The Trap Forest and Stream Reports of 1889

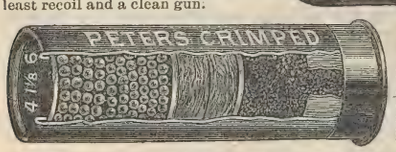
will be given in the best form by the journal's own representative and other competent reporters. They will make good the promises contained in the actual performances of the autumn of 1888, when our full reports of important tournaments were acknowledged to have been the best pieces of special work of the kind ever done. The Trap columns will be kept in the front rank; and because of them the paper will be indispensable to shooters. In our

Kennel Department

will be found, in 1889, reports of all the bench shows, prepared by conscientious and perfectly competent hands. In this strong feature the FOREST AND STREAM is universally recognized as *facile princeps*, and it will be the highest ambition and most zealous care of the editors to continue on the old lines, giving the public show records and reports to be studied with profit. Our field trial reports will be graphic and reliable.

A FULL LINE OF CARTRIDGES.

10-Ga., 12-Ga., 14-Ga., 16-Ga., 20-Ga.



INDENTED - CRIMPED - BLANKS.

The Peters Cartridge Co. is induced by the success achieved the past season to greatly increase its line of manufacture. It now offers the above most complete list of Shotgun Ammunition.

THE
"Indented" Cartridges

Are the most successful ever produced for Trap and fine Wing Shooting. They give wonderful pattern and penetration, with the least recoil and a clean gun.

Peters Crimped Cartridges

Are loaded by the same machinery and with the same materials (including the lubricated elastic felt wads) as the "Indented." The crimp is the best produced by machinery and diminishes the recoil. They shoot strong and leave the gun clean. Price same as for "Indented."

Peters Blank Shotgun Cartridges

(Trade Mark and Patents applied for) are especially appreciated by the "far off" trade, the hunter, farmer, etc. They save freight and the danger of handling bulk ammunition. By their use cartridges for all varieties of game may be quickly produced without the necessity of carrying a full and expensive line of the goods.

ASK YOUR DEALER FOR THEM. LIBERAL DISCOUNTS TO THE TRADE.

The PETERS CARTRIDGE CO.

CINCINNATI, O.

Send for our large 52-page Illustrated Catalogue.

MANUFACUTRERS OF THE

STEVENS PATENT

Breech-Loading, Sporting and Hunter's Pet Rifles, Single and Double Shot Guns, Pocket Rifles.

The Best Scores on Record in America, from 10 to 50 yards, have been made with the Stevens Pistol.

STEVENS TARGET PISTOL.

Known throughout the world as possessing unsurpassed accuracy, perfect of form and finish. The professional shots all unhesitatingly select the Stevens Pistols to perform the most difficult feats of marksmanship.

AUDUBON'S
Birds of America

We have obtained and now offer for sale singly a number of the plates of this magnificent work. These plates are the originals of the edition of 1856, and represent the birds as life size. The sheets are elephant folio, and the paper heavy. The drawings were made from nature, and for accuracy of delineation, fidelity to detail and accessories,

Audubon's Birds have never been equalled.

Any of these plates if framed would make a

Superb Ornament

For a sportsman's dining room, and no more beautiful and appropriate gift could be found for the lover of nature than one of these. The constantly increasing scarcity of this work makes these large plates each year more valuable. Some of the plates are double and can if desired be cut in two and put in small frames.

There are represented many species of Ducks, Gulls, Grouse, Snipe, Heron and small birds almost without number.

These plates are so large that they cannot be sent by mail without danger of being crushed, and the best method of sending them will be on rollers by express.

THE FATE OF CREEDMOOR.

FOR the past few days there has been no end of talk over the proposition to rearrange the control of Creedmoor, and place the National Guard authorities of the State and the officials of the National Rifle Association on a more definite understanding one with the other. The proposition simply stated is that Creedmoor shall repass into possession of the State, but with the proviso that the civilian shooters represented by the National Rifle Association shall have certain rights reserved for them.

A bit of history will make matters clear. Creedmoor owes its origin to the energy of a number of National Guard officers, who saw the absurdity of a Home Guard that could not shoot, and determined to remedy it. There was with it a desire to afford a place for outdoor marksmanship generally, but the desire to make the Guardsmen into marksmen was the main motive. They turned to the State for the money to carry out these very laudable objects, and through the kind offices of D. W. Judd, then a member of the Assembly of New York, a liberal appropriation was made and Creedmoor was purchased and fitted up for its work. The committee having charge of the selection of a site had done its work well, and a careful survey of the entire neighborhood of the metropolis failed to find such another broad plateau for the flight of rifle balls.

The history of this mother range in this country is familiar to every reader of the FOREST AND STREAM. For a time the popular interest in rifle shooting was up to highwater mark. The international matches were shot extending over a series of years, and the popular support of the range and its work could not have been better. Then came the waning period, and to-day the citizen marksman has become almost a memory or tradition. The short-range men find the range inconvenient to reach, and do their outdoor shooting at other ranges nearer town and more accessible. The long-range men reached about the top notch of possibility so far as scores went, and no new recruits came to take the place of the pioneer guard of which Col. John Bodine may be taken as the type. The blame for this change during these past years cannot fairly, or at most only in a very small extent, be lodged against the officers of the Association. They have worked with enthusiastic unselfishness in many instances, and have adopted the suggestions, as far as lay in their power and accorded with their judgment, of the host of advice givers which came to the surface from time to time. Just now these know-alls are particularly rampant.

The range was well fitted up at the start, and for now a half generation the butts have endured the leaden hail which poured into them, but the time has come when the Association managers have to face the question of a complete renovation of the range plant, and the money for it they have not been able to lay aside for the purpose.

They might, were they so disposed, simply let everything go by default. The fences would fall, the butts slide down into a heap of soil, the trenches fill up, the club house decay and tumble, and the Association cease its corporate existence by sheer neglect, but this the Association do not propose shall come to pass. Creedmoor has a history which is worth continuing; the Association has done too good work in the past to die now by any such dry rot process, and it is to preserve, not to obliterate the Association, that the present scheme has been brought forward.

From the day the first shot was fired at Creedmoor by a member of the State Guard down to the last shot fired this season by a member of that same guard, the great bulk of the practice has been done by men in uniform. For years the bulk of the income which the Association enjoyed came from the coffers of the State as payment for the use of the range in the official National Guard matches. In the matches put on from week to week, and at the annual fall and spring meetings, it was the matches open to or specially designed for National Guardsmen which, by their liberal list of entries, brought the outlay for prizes and the income from entries somewhere near a balance. Had the State withdrawn its patronage, as it might have done, had the Adjutant-General, on the recommendation of the Inspector-General of Rifle Practice, been so minded, Creedmoor would ere now have been in the slough of despond, from which it now cries out for help.

What then is now proposed by the bill which is under preparation for presentation to the Legislature, with the sanction of the military authorities? Simply that the State shall take Creedmoor and at once spend a good round sum in securing additional land, putting the entire property in good order, and in general making it for all time the finest range in the world.

The Association would not be stamped out, for the bill provides that it shall come in upon the range and hold the regular fall meeting, and more than that, the Association members will have the use of the range for any sort of practice as often and as freely as the Adjutant-General can see his way to accord the privilege. The troops are not going to crowd upon the range any more when it shall become State property out and out, than they do now when the State holds it only by daily rental. It is a question whether the orders for this ball practice are not already too onerous. The disposition of the authorities is to encourage target practice by civilians, and this is more likely to increase than diminish.

The opponents of the present plan of relief, so far as they can be discovered to have any plan of their own, insist that the State shall absolutely assure them the use of the range on certain fixed days, and the State and its military authorities be placed in a position to be dictated to by private citizens. For these opponents to say that they fear they may be crowded off the range is to say what a moment's consideration of the situation will convince them is a falsity, if they do not already know it, and is it likely that there is to be any sudden rush into rifle practice in the near or even remote future?

After all, it is a sort of Hobson's choice as far as the Association is concerned. It may shut up shop at once and render itself false to the trust which was put in it when the State advanced a large sum on the understanding that it was to be expended in the establishment and maintenance of a range, or the Association may turn its work over in part to the State and yet retain its own life, ready to carry on the work as far as may be and with the assurance that the prestige which already is part of the Creedmoor record will yet cling to it. We hope to see the bill go through, and feel confident that under it the range will enter upon a new term of increased usefulness.

SNAP SHOTS.

THE land of wooden nutmegs appears to be happy in the possession of wooden-headed justices of the peace. The Connecticut Association gathered evidence and caused the arrest of one Albert Goddard, of Simsbury, for having snared ruffed grouse on ground owned by James Laughlin, a farmer. Goddard was caught in the act and made no attempt to disprove his infraction of the law, which provides that any person who "shall, except on his own land, with a trap, snare or net, take, or attempt to take, snare, net or take any woodcock, partridge or quail, shall be fined not more than twenty-five dollars." It was shown that Goddard had been given verbal permission by Laughlin to snare on his (Laughlin's) land; and on this showing the Dogberry dismissed the case, and has made of himself a laughing-stock for people gifted with brains. The officers of the Connecticut Association have clearly made a mistake; they have gone to work at the wrong end; before they can reasonably look for any good to come of the game laws, they must raise up a new crop of police justices who shall have intelligence enough to construe simple every-day English, and administer the statutes as they find them. The Simsbury justice would find ample scope for his intellect in a Browning club.

The current report of the Maine Commissioners of Fisheries and Game is a meaty document, for it touches on many topics, each one of which is suggestive and worthy of attention. The ill effects of the change of the law, by which the incentive of sharing in the fines is taken from the detectives and wardens, has been in a certain measure counterbalanced by an improved local public sentiment strongly in support of game conservation; but the necessity of restoring the old law is urgent and should have the favorable attention of the next Legislature. The increase of moose and deer is accounted for by the authors of the report on the theory of an immigration from over the border. The game has frequented districts where they have been unknown in former years; to be explained, perhaps, by the abolition of hunting with dogs. The report urges the opening of the deer season on September 1st, and the adoption of a clause forbidding the killing of a cow or a yearling moose at any time. Other topics comprised in the report will be reverted to in our next number.

How differently do camp talk and camp yarns sound in the warm glow of the fire from that same talk and those same yarns put into cold type. The inspiration of the moment, the sympathetic attention of comrades, the scene, the surroundings, the sparks of wit that scintillate and coruscate as when steel strikes flint—all these are wanting in the printed page. To hear camp stories aright one must go into camp. There is something in this principle, too, which explains the distinction which surely exists between camp stories and field experiences as related in the FOREST AND STREAM and other but similar reading in journals devoted to general topics. The hunting tale related in a sportsman's paper seems to belong there, to partake more fully of the true spirit of the woods, than when it is sandwiched in news columns with political and social items. Thus it comes to pass that a special journal like the FOREST AND STREAM has a hold on its readers like unto that tie by which camp comrades are bound together in common sympathy.

At Atlanta last week the American Forestry Congress elected officers as follows: President, Gov. J. A. Beaver, of Pennsylvania; Vice-Presidents, H. G. Joly, of Quebec; J. Y. W. French, of Boston; Charles Moore, of Mobile; Hubert Welsh, of Philadelphia, and George H. Parsons, of Denver; Secretaries, J. B. Hudson, of New Hampshire, and N. H. Eggleston, of Washington. The next meeting will probably be held in Philadelphia.

The Sportsman Tourist.

NOTES ON WESTERN FLORIDA.

VII.—IN THE SWAMPS.

[Continued from page 406.]

NORTH of Apalachicola extends for fifty miles a vast wilderness of morass and forest, inaccessible save for the many waterways, and uninhabited except by a race of hardy lumbermen who hew out the mighty timbers to supply the sawmills at the mouth of the Apalachee River.

The land adjacent to the many streams, and in some cases extending back for miles, is subject to overflow, and for six months of the year the water stands several feet deep over great areas, while during the dry season these stretches become pestilential swamps, with a climate almost as deadly as that of the Congo or the Niger. There are also many so-called lakes, really sloughs filled with the backwater from rivers. They are sluggish, semi-stagnant pools, sometimes of considerable size and generally of great depth. More gloomy, forbidding-looking places than these sombre sheets of inky water it would be hard to imagine. Their unruffled surfaces are seldom cut by the prow of a logman's bateau, and save for leaping fish or the occasional splashing of an alligator, nothing ever disturbs a silence that is almost horrible in its intensity.

In the swamps and on the borders of these lakes grow the most magnificent cypress tress in the world, and if one would see the logman at home, he must tread his way along the numerous waterways, through morass and pool, to where that truly amphibious man, often standing knee-deep in the marsh, works day after day at his health-destroying task.

Back from the swamps are stretches of higher, sandy land, on which is found the pine timber that has made Florida so famous as a lumber country. They are melancholy-looking, these sun-dried "barrens," with their endless vistas of tall pines shooting up as straight as columns, and so regularly placed that it seems as if they must have been planted by the hand of man instead of by nature; but they comprise about all of the habitable land of that portion of Florida, and though not so fertile as much of the country in the eastern part of the State, the soil yields well when properly cultivated. A growth of wire grass affords nourishment for cattle, and the numerous jungles of titi bush are the resort of deer.

Strange as it may seem, water is very scarce in many parts of the pine barrens, the streams that flow from swamp to swamp are so sluggish during the dry season that they are almost unfit to drink. Roads are few and far between, the natives preferring to rely upon the waterways as a means of travel; and the hunter or explorer, in going away from the beaten tracks, is too often confronted by a narrow strip of swamp, sometimes only a few yards across, but as impassable with its treacherous ooze as any cañon of the West, and necessitating long detours in order to reach comparatively near points. But the waterways are everywhere, navigable and deep enough to float a navy. They twist and turn to all points of the compass, in places doubling upon themselves until only a few yards of dry land intervenes between points miles distant if the course of the current were followed. In such spots the energetic logmen have in many cases cut canals to establish more direct communication with the main streams and lessen the distance that they have to float their rafts. The true Floridian, who never walks when he can ride, never rides when he can canal, but takes advantage of this wonderful system of water courses and does most of his traveling by boat.

There are a few regular settlers who live in the barrens; true types of the cracker species, with their tall gaunt forms and yellow faces; they dwell, for the most part, in miserable log cabins of only one room, and cultivate after a fashion a patch of corn or vegetable; but hunting and fishing are the principal occupations, and where the woods are so full of game and the streams swarm with fish there is not much need for extensive work in order to obtain a living. So they exist, and happily enough, I dare say, in lazy contentment and blissful ignorance of the rest of the world. Occasionally they will hew down a few pine logs to sell to the mills at Apalachicola, with the proceeds of which they buy such necessaries of life as are not supplied to them by nature. Some of the Jay Goulds among them own a few heads of stunted cattle, which find pasturage on the coarse grass; and the amounts of honey and wax sold in town during the last year shows that they are turning their attention to bee-farming.

Eighteen miles above the Gulf, three rivers, called the Three Brothers, flow into the Apalachee; and adjacent to these is one of the finest timber countries to be found in all Florida. Cypresses and pines are abundant and easily gotton at, owing to the winding nature of the streams, and the many little creeks that flow into the main rivers each opens a territory of its own, and affords excellent floating facilities for the rafts. The whole of the vast swamp through which the Three Brothers wind their ways is one perfect network of navigable water courses. It is from this region that a large portion of the log supply of the Apalachicola sawmills is derived, and though lumbering has been going on there for many years, no serious decrease is noticeable in the almost inexhaustible resources of that vast wilderness.

One March, Bondclipper, Rusticus and I found ourselves in Apalachicola, about to set out on our usual spring hunt. We had cruised down the coast, hunted the great western wilderness, and explored, as we loved to term it, many of the streams to the eastward; so now, longing for new worlds to conquer, our attention was turned to the country north, through which we had partly sped, via steamboat, on the trip down river. The inaccessibility of the region alone caused us some apprehension, and how to reach, in even moderate comfort, those great morasses was a question not easily solved.

After several days in town, during which time we successively rejected sailboats as too uncertain on account of the fitful breezes of forest-inclosed streams, canoes as being rather cramped and uncomfortable, horses and wagons as not available vehicles by which to reach certain sections, and ox carts on account of our horror of the profanity invariable and necessary among the drivers, we finally discovered just the thing in a forty-foot steam launch, a neat little craft with a light roof to keep off the sun and rain, besides being otherwise nicely arranged for comfort. So we at once chartered the Ellen, and one morning, having stowed all baggage the night before, we boarded our craft, blew the shrill little whistle defiantly to let the still sleeping town know of our start, and steamed out from the wharf into the main river on a voyage of hunting and general exploration. We carried a crew of two souls, the captain and Joe, the latter filling the place of engineer and fireman in one.

For an hour we steamed steadily up stream, between low marshy banks covered with long grass, until Old Woman's Bluff, six miles above town, was reached, where we stopped to take on wood. It is hard to understand why this spot was named a bluff; the ground does not rise more than a very few feet above the river, and has not the least of the appearance indicated by its name; but it seems to be the custom to call any place not actually a swamp, or that rises level with low water, either a bluff or a cliff, high ground probably being so scarce that the natives wish to honor it when it does appear by high-sounding names.

At the time of our visit an Englishman had just completed an undertaking that was expected to revolutionize the lumber business. It was a saw mill constructed upon the hull of a steamboat, for the purpose of running up rivers, wherever the supply of logs was best, the intention being to do away with the long floats. But I have since understood that it did not prove a success, and a few months after our visit, the entire plant was destroyed by fire, entailing a severe loss upon the enterprising owner.

A short distance above the bluff we left the main river and entered the equally broad but less swift waters of the tributary streams. At the junction of the two, a rude box nailed to the trunk of a tree attracted our attention. It seems that some years ago, a small schooner came into Apalachicola from certain infected ports, against which a rigid quarantine had been established by the town authorities. The crew were forbidden to enter, but very foolishly one morning they ran past the town, in spite of the protests of the health officers, and under a heavy fire from the Apalachicola people. They ascended the river to this junction, and entering the lesser stream, stayed out their quarantine period in safety. This box, with the words "U. S. mail," was put up by them to receive letters and supplies of food.

As we proceeded alligators became very numerous, lying close to the marshy banks or indolently sunning themselves on the mud flats. When one kills his first alligator he is all enthusiasm, nothing will do but that he must secure the body of his game and hack out with infinite labor some of the teeth as trophies; the nasty wet form of the saurian is dragged aboard, to the amazement of old timers, who watch the gloating ecstacy with which the slayer examines his prize, with much the same feelings an old hound must have when regarding the first efforts of a promising pup. When, after slaying a dozen or so, the novice finds out what useless things alligators are, he pots the beasts with unconcern and does not deem it necessary to interrupt the pleasure of shooting with the labor of securing the game.

A mile above the main river the banks become very heavily wooded, and we steamed between two high walls of green foliage that shut out the view of the surrounding country. Four miles of this brought us to Lake Wimlico, which, though generally very shallow, is a considerable body of water and quite like an inland sea. At the time of our visit a gale of wind raised the white caps in a very angry manner, tossing the frail launch about in a most disagreeable way, and causing Rusticus, who is the worst of sailors, to have serious apprehensions of a repetition of some seasick experiences of the year before. He managed to recover sufficiently, however, at the sight of a flock of summer ducks to grab his gun and make a most excellent right and left as they flew over, dropping two of their number into the lake. These it was no easy matter to pick up, with the sea threatening every moment to wash over us, and the feat was accomplished not without some danger. Steam launches are very safe craft in still water, but when waves begin to run they are not at all as certain of remaining right side up as they should be, the heavy boilers and awkward covers making them rather top-heavy.

All were pretty well drenched with flying spray by the time the five miles of stormy water had been crossed, and it was with relief that we we ran into the calm under lee of the woods. About noon we entered a beautiful little stream named Depot Creek; it was quite narrow, but of good depth, the black waters falling a sheer twenty feet from under the cypresses. How lovely these little Florida streams are; they flow on between great forests of magnolias and a thousand beautiful trees that arch till they almost meet overhead; each stretch of the silent waters is just like the last, the very monotony is enchanting, and though one always looks for something new, no disappointment is felt that the expectation is not realized.

A short distance up the creek a stop was made at an apiary to take a pair of hounds aboard, and we went ashore to see something of this industry that is rapidly attaining large proportions in that portion of Florida. The bee hives, some hundred in number, were situated upon a shell mound that rose out of the swamp and was the only elevated spot for miles around. A shaky walk, consisting of single planks resting on stakes, spanned the 100yds. of slimy ooze that separated the bank of the creek from the bit of *terra firma*, and over this somewhat risky promenade we were obliged to cross with antics strongly suggestive of tight-rope walkers. The mound itself was the most interesting part of the place, being composed entirely of marine shells and rising solitary and alone, 10ft. above the surrounding level. These remains of an ancient race are numerous all down the Gulf coast. I have examined quite a number of them, but never discovered that their outlines bore resemblance to anything in particular, as is the case with similar remains in Ohio and the West. They generally, however, contain relics in the shape of rude pieces of pottery, scrapers or arrow-heads, and not infrequently human bones. We spent an hour searching for curios, but did not find anything of special note. The apiary was attended to by an overseer who looked after the place, keeping wild animals from committing depredations, and taking honey from the boxes at the proper time.

The bees are either caught during swarming time by cutting down trees that contain them, or they may be purchased from other established apiaries. Twice a year is as often as hives should be robbed, in order to attain the best results and insure a steady output. The business is a growing one, requiring very little capital, and yielding, with proper management, considerable profit.

Bears are about the only enemy against which the bee man has to contend, for bruin, though naturally of a most retiring dispositon, has a great weakness for honey. When he discovers a fine lot of hives, his usual caution seems to desert him and he attacks the toothsome morsels with the most utter disregard of consequences. Not content with one feast, he will return night after night, until the honey is all gone or a well-directed bullet from an ambushed hunter settles forever his sweet career. A few nights before our visit, the overseer had shot a great black monster that had been making sad havoc for some time past, and the signs of whose ravages were shown to us in the broken hives. It was here that we first tasted metheglin. The brand found here is made simply of honey and water, shaken up together and left to ferment. As a drink, it is far from bad, having an acidity that is very refreshing when one is hot and tired. So great an impression did its charms make upon our palates that a keg was taken on board for future reference during the hunt.

We steamed six or eight miles up creek from the apiary and at about sundown camped in a pretty little glade of the forest, where dry ground came down to the water's edge and afforded a good landing. In a very short time the A tent was stretched between two saplings, and enough wood piled up near by to last until morning. Each one was his own cook that night, for when a party first starts out it requires some time to get the hang of things, and to know where all the delicacies and conveniences are stowed; but we all managed to get along well enough that night with simply bread, meat and coffee.

What a difference there is between camp bacon and bacon cooked in the legitimate way and served upon a white plate! Never fry when you are in camp. Stick the meat, whatever it is, upon a green branch and broil it by holding directly in the blaze of the fire. No matter if it frequently does fall off the improved fork into the ashes—ashes are clean, and you can wipe them away just before eating. To be sure the meat may be burnt in some places and perhaps a trifle underdone in others, but you will never know the difference, and will vote it the most delicious of morsels, that is if you are a true sportsman—and hungry.

The night was chilly and the circle around the campfire was very contracted, each one pressing as close to the cheerful flames as possible. It is a strange fact, and one that I have often remarked, that hounds will not lie within the light of a camp-fire; no matter how cold the night may be, they prefer to curl up a score of yards away and face the chill wind with no other covering than their own hides. The two that we brought from the apiary were no exception to this rule, but lay behind the tent growling and fighting over their suppers in the way that hounds always have done and always will do in spite of training to the contrary. They were great lean, black and tan fellows, whose long drooping ears were ragged and seamed with the marks of many a contest with wild cat or coon. If there is one thing that stirs the sluggish blood of the cracker it is a chase, and great pride is taken in the hounds, many of which are bred with a care and selection worthy of the best kennels in the land.

The country in which we camped that night was once quite thickly populated, and many years before the war was crossed by a railroad that extended between the town of Iola, on the Apalachee River, and St. Joseph, a sea port that faced the Gulf twenty miles west of Apalachicola. But the track, for some reason, was torn up ages ago, and the country has been on the decline for the last twenty years. Iola now consists of only four or five houses, while St. Joseph, once a place of several thousand inhabitants, was cleaned out by a yellow fever epidemic, and has completely disappeared, leaving not one trace behind, the very houses having been pulled down and transported to Apalachicola. It is hard to realize that this desolate land was once crossed by a railroad, and it is somewhat startling in this energetic Union of ours to come upon a railway embankment in the midst of the forest, upon which pine trees with trunks the size of a man's body have grown since its disuse. Depot Creek was named from the fact of its being crossed by this railroad, and a depot once stood upon its now lonely shores.

The next morning all hands were up by daybreak, and before sunrise we had started out on a deer hunt. Bondclipper and the Captain decided to try still-hunting, so they took one direction, while Rusticus, Joe and I with the two hounds took another; we were all armed with rifles except Rusticus, who disdained to lay down his Scott shotgun, "long range or no long range." The deer in that part of Florida, except when feeding early in the morning or late in the afternoon, seek the coverts of the numerous small titi jungles, and when therein concealed are very difficult to dislodge, as often they will not move though one passes within a few yards, while owing to the density of the undergrowth they are well nigh invisible. We pursued the usual plan, *i. e.*, when we came to one of these thickets we would separate, two going on one side and one on the other; the dogs were then put into the swamp, while we kept up with them on the outside, having our guns ready for any game that might break out. The coverts are generally about half a mile long, but seldom over 200yds. wide, so that we were always within hail of each other, and usually met with the utmost regularity when the circuit was completed; then the dogs would be called out and the performance repeated at the next titi. In this way we hunted all the morning without seeing a single deer. Tracks were wonderfully abundant, but the game either managed to get out of the jungles ahead of us, or lay so closely concealed as to baffle the noses of our dogs. Walking was very bad on account of the growth of Spanish bayonet that everywhere covered the ground, making sad havoc with our unprotected legs, and by noon we found ourselves some ten miles from camp, thoroughly tired out and just a little disgusted.

"Dog gone deer hunting, anyway," said Rusticus, "give me partridge shooting, every time; this thing of tramping about all day and never having a chance to hear the sound of your own gun don't pay. I had rather kill birds over a good dog than hunt deer all day, especially when you never see so much as a rabbit. Blamed if I don't believe that some one has gone ahead making all these tracks with an old deer's foot, just to encourage us," he added, as we came to a place where the number of hoof marks indicated that quite a herd of deer had

been grazing that morning. "Lord, ain't it hot! Wish I had a drink of that 'thugelum' or whatever you call it."

Just at that moment Rusticus's lamentations were interrupted by the sudden and violent baying of dogs in a titi near by; in an instant all weariness was forgotten, and with eagerly strained eyes and fingers nervously twitching gun hammers, we pressed on. The baying grew more and more excited; "Look out over there," yelled Joe from the other side of the bushes, "she'll break out certain somewhere near you." Hardly had the words been uttered when noislessly and without warning, a doe bounded out from the swamp, and clearing a few logs of decayed wood, reached the open about forty yards ahead of us and began to settle down to some pretty hard running. Up went my companion's gun, two reports followed, and the deer, turning a complete somersault, fell over dead. Hastily running up, Rusticus cut the throat of his game, and the first meat of our hunt was brought to bag. It proved to be a young doe of not over three years, that would have weighed about a hundred pounds. We took the hams, saddle and skin, and portioning them out as burdens among the three, began our long march home. Just before getting in Joe and I had a shot at a buck that was galloping through the pines some three hundred yards away, but our bullets did not touch him. We found Bondclipper and the Captain in camp ahead of us; they had killed nothing and were green with envy at our success. Poor Bondclipper was suffering from that most trying affliction of the tenderfoot, a galled heel, but he would insist on wearing high-top boots when starting out in the morning, and although they are quite the thing for a backwoodsman, and make one feel most picturesque and dangerous, it must be confessed that they are not so comfortable as every day shoes, especially when one is just a bit tender from lack of exercise.

That night we had a royal supper; the ribs of our doe were broiled on the coals, and several cans of vegetables stewed up into a sort of *olla podrida*. Then I made some real frontier flapjacks, gaining much renown by my dexterity in turning them in the air with that peculiar twist of the pan that is only acquired after long experience in the West. I quite pride myself upon my camp cooking, and can broil a piece of bacon equal to the *chef* of a grand hotel, while my bread will weigh as much as any man's bread, I care not who he is. ALEX. M. REYNOLDS.

[TO BE CONTINUED.]

OLD-TIME CHRISTMAS UNDER CANVAS

IT was many and many a year ago—so many years ago indeed that all the young men of the period have turned gray or passed in their checks—that I spent a Christmas under the Southern Cross. It was not the first Christmas that I spent in that land of gold and gum trees. The Christmas of 1851 found me in Melbourne on my way to Forest Creek, and the Christmas I propose to tell you about fell five years later, when the glamor of gold digging had ceased to enthral me.

It would tax my memory severely to recall the incidents of the intervening Christmases, but the memory of this one stands out distinctly. I suppose the reason is that I then awoke suddenly from the romance of gold digging to more practical views of life, and that the short period of transition stands out in sharp contrast to that which went before and that which came after.

My five years' career as a gold digger had transformed me from a thoughtful student of eighteen years of age to a hard-handed son of toil with sinews of whipcord. I had been through all the usual vicissitudes of a gold digger's life, had had royal luck, followed by trips to Melbourne, where I spent the proceeds as royally; had had long runs of ill luck, until I had been sometimes driven to clear and work out deserted claims, getting a little gold, which was immediately spent in testing some new ground; had had several brushes with bushrangers, and always come out straight, and although I certainly never paused to think of the matter, I had as keen an enjoyment of life perhaps as any one under the sun. I saw just as much romance in the shadows as in the lights of the picture, and would not have had the bushrangers or any other feature of the scene eliminated on any consideration. The simple explanation of this is that I was young, in vigorous physical health, breathing a pure atmosphere, living beyond the restraints of law, and conventionalities of society, buoyed up by possibilities of immense wealth to be wrung from nature at any moment, and with a consciousness of having developed a capacity to adapt myself to the conditions of my environment.

The last eighteen months of my life as a gold digger were an unbroken period of ill luck. My mate had been a lieutenant of cavalry in the Austrian army, who, taking sides with Kossuth in 1848, had had some difficulty in getting out of the Fatherland with his head on; but he had kept that straight and brought his young wife away with him, and she, too, having adapted herself to the new surroundings and become a notable housekeeper (or, shall I say tentkeeper?) and bread and fancy baker, our camp life was somewhat less rugged than that of most of our neighbors. But, as I said before, luck had been dead against us for eighteen months. Once in that period we had secured a pound of gold for a fortnight's work, but that all vanished before we struck another paying claim. Then we went at old holes; generally got the ounce of gold necessary for food, and if we got two ounces we at once went and sunk a new shaft.

There came a rush to a hill where the bottom was a hundred feet deep, with twenty feet of basalt and several layers of conglomerate to dig through, and below that a clay which had to be timbered. The pioneers of the rush were supposed to have struck it good, and so for the first time we took credit from the store and went in to sink a shaft in the great rush. This occupied about six weeks, and proved a failure, leaving us about a hundred dollars in debt. Under these circumstances it was, of course, no good to go fossicking in old holes for a mere living. We must incur further debt in the effort to extricate ourselves. Sometimes we managed to pay off a little, but there was no settlement, and six weeks before Christmas of 1856 the debt stood at a hundred and fifty dollars, and I began to think seriously.

And so one day in the first week of November, as we returned from our day's work four miles from camp, I threw down my pick and shovel and turned to my mate with the somewhat startling remark, "There, Frank, I have done my last day's work at gold digging."

The young wife could not believe it, and would not be reconciled to my resolve. We had been nearly three years together and owed a great deal to each other, and I was like a member of the family, while all outside were aliens and strangers. Frank and I ate our supper, lighted our pipes and puffed away in silence for a long time without further reference to the subject. "Well, Charley," said he at length, "I know you too well to suppose that anything will turn you from your purpose, but you've hit me hard. Then there's the store debt, too; how shall we do about that?"

"I have thought of that of course," I said, "and my proposal is that we see Sinclair in the morning, and have the whole debt transfered to your account, leaving me to account to you. With neither money nor clothes I cannot of course go to Melbourne. My first step will be to earn thirty or forty pounds; fifteen for my debt, and another fifteen or twenty to take me to Melbourne. The debt I hope to clear off by Christmas. The nearest work is on the Simson road about twenty-four miles off."

And so it was settled. The next day was Sunday and we made it a day of rest, with the exception that I got up betimes and felled a hardwood tree, Frank and I carrying home the fuel between breakfast and dinner. Frank was very gloomy, I felt so too, but I spoke so confidently of returning with fifteen pounds for Christmas that at last the wife brightened with the happy idea that Frank might join me to clear off the debt, and get a few pounds to start afresh with.

"No," said Frank excitedly, "I did not come to this country to work for wages. I have had five years of hard luck at gold digging, and have seen men take out fortunes from holes alongside of mine. My luck will come some day, and I will never wilfully get out of the way and miss it."

And so the next morning I was astir betimes, struck my little tent, and made my pack ready for the start; and a goodly pack it was for a march of twenty-four miles—tent and blankets, frying pan and kettle, axe, adze and spokeshave; tea, sugar and a loaf of bread.

Frank and I talked but little at breakfast, but the little wife talked without intermission, and among other matters made a promise that one of her beautiful young roosters should be slaughtered for the Christmas dinner.

The sun was but just rising as I shouldered my pack. I had made it up into two rolls, lashed together with ropes, which served as shoulder straps, and this I think the best way of carrying a heavy pack—half before and half behind. You can walk upright with it, but it is necessary to use the hand to relieve the pressure on the chest. Jogging along at a steady three-mile-an-hour pace with but few stoppages, I covered the distance in between eight and nine hours, and finding that workmen were in demand I soon had the kettle boiling and tea made, and after a meal and a smoke set out in quest of poles and pegs for my tent and a little firewood. I had everything snug an hour before sunset, and having given so much evidence of my intention to go to work I got crowbar, sledge hammer and blasting tools from the contractor and opened an account with a hindquarter of mutton.

I turned in early and was the first astir in the morning, cooking and eating my breakfast under the twinkling stars and starting for my work just as the dawn broke and before there was any movement in the camp.

About half past eleven I came in to dinner, and then back again to work until I was the last toiler left on the field, but I toiled on as long as I could see, measured my day's work and found I had earned four dollars, and then as the stars came out I threw my tools over my shoulder and went home to cook my supper.
